Conjoint will, joint will, mutual wills, legal phrases often used without much discrimination. Especially — (*a*) A testamentary act by two persons jointly uniting in the same instrument, as their will, to take effect after the death of both. (*b*) A similar instrument to take effect as to each on his or her death. These two classes are more properly termed *joint* or *conjoint.* (*c*) Wills made in connection by two persons pursuant to a compact, binding each to the other to make the dispositions of property thus declared. (*d*) Wills made to bequeath the effects of the one first dying to the survivor. These two classes, and particularly the last, are more appropriately termed *mutual.* The legal effect of such wills is often a matter of doubt.—**Factum of a will.** See *factum.*—**Freedom of the will,** a mental attribute the existence of which is disputed. The phrase is taken in different senses by different thinkers. (*a*) The power of doing right on all occasions. (*b*) That freedom of which we have an immediate consciousness in action. This is, however, only the consciousness of being able to overcome some unspecified resistance to some unspecified extent, which implies and is implied in the fact of resistance, and is in fact but an aspect of the sense of action and reaction. (*c*) The power of acting from an inward spontaneity, not altogether dominated by motives. This is what most of the metaphysical advocates of the freedom of the will specifically contend for. It is a limitation of the action of causality, even in the material world. Some would restrict the spontaneous power of the mind to making particles swerve without variation of their vis viva; but this is untenable, since the law of action and reaction, which would thus be vitiated, is far more securely proved than that of the conservation of energy, the evidence for which is imperfect, while the objections to it are weighty. It is contended on the one hand that such spontaneity is an indispensable condition of moral action; and on the other that, if it exists, it has no direct reference to morality except this that, so far as a being is spontaneous in this sense, he is free from the moral law as well as from that of causation, and that there is neither sense nor justice in holding him responsible for mere sporadic effects of pure non-cause. Responsibility, it is argued, ought to imply that a man's conduct can be regulated by principles as efficient causes, and is not free from the influence of causation.—**Free will,** liberty; freedom; liberty as to choice in faith or conduct; also, the faculty of will as being free, or not absolutely subject to causation.

Certainly there be that delight in giddiness, and count it a bondage to fix a belief — affecting *free will* in thinking, as well as in acting. *Bacon,* Truth (ed. 1887).

We thus, in thought, never escape determination and necessity. It will be observed that I do not consider this inability to the notion any disproof of the fact of *free-will.*
Sir W. Hamilton, Works, p. 611.

Good will. (*a*) Favor; kindness. (*b*) Sincerity; right intention.

Some indeed preach Christ even of envy and strife; and some also of *good will.* Phil. i. 15.

His willes†, of his own will; voluntarily.

A thyng that no man wol, *his willes,* helde.
Chaucer, Prol. to Wife of Bath's Tale, l. 272 (Harl. MS.).

Ill will, enmity; unfriendliness. It expresses less than *malice.* Compare *good-will* and *ill-will.*—**Inofficious will.** See *inofficious.*—**Joint will, mutual wills.** See *conjoint will.*—**Officious will.** See *officious.*—**Register of wills.** See *register*[2].—**Roman will,** a form of ancient Roman will which in later times was allowed in the Eastern Empire, and generally known as the *Roman will,* combining something of the form of the mancipatory with the efficacy of the Pretorian testament. See *testament.* *Maine.*—**Simple will.** See *simple.*—**Statute of Wills,** the name commonly designating a British or an American statute regulating the power to make wills; more specifically, an English statute of 1540 (superseded by the Wills Act), by which persons seized in socage were allowed to devise all their lands except to bodies corporate, and persons seized in chivalry were allowed to devise two thirds: sometimes also called the *Wills Act.*—**Tenant at will.** See *tenant*[1].—**To have one's will,** to obtain what is desired.—**To work one's will,** to act absolutely according to one's own will, wish, pleasure, or fancy; do entirely what one pleases (with something).

For tho' the Giant Ages heave the hill
And break the shore, and evermore
Make and break, and *work their will,* . . .
What know we greater than the soul?
Tennyson, Death of Wellington.

Wills Act, an English statute of 1837 (7 Wm. IV. and 1 Vict., c. 26) which repealed the Statute of Wills, and enacted that all property may be disposed of by will. It required wills to be in writing, signed at the foot, and attested by two witnesses, and declared the effect of certain words and phrases in them. The amendment of 1852 (15 and 16 Vict., c. 24) relates to the position of the signature.—**With a will,** with willingness and earnestness; with all one's heart; heartily.

Mr. Herbert threw himself into the business *with a will.*
Dickens, Great Expectations, xlv.

will[2] (wil), *v.*; pret. and pp. *willed,* ppr. *willing* (pres. ind. 3d pers. *wills*). [< ME. *willen, wilien* (pret. *willede*), < AS. *willian* (pret. *willode*), will, demand, desire; cf. AS. *wilnian,* > ME. *wilnen,* desire, wish (see *wiln*); secondary verbs, from the primitive verb represented by *will*[1]. The two verbs (*will*[1] and *will*[2]) early became confused, more esp. in cases in which the auxiliary verb was used as a principal verb.] **I.** *trans.* **1.** To wish; desire. [Archaic.]

There, there, Hortensio, *will* you any wife?
Shak., T. of the S., i. 1. 56.

A great party in the state

Winthrop, Hist. New England, II. 158.

3. To determine by act of choice; decide; decree; ordain; hence, to intend; purpose.

All such Buttes and Hoggesheads as may be found to serue we *will* shalbe filled with Traine Oyle.
Hakluyt's Voyages, I. 300.

Two things he *willeth,* that we should be good, and that we should be happy. *Barrow,* Sermons, III. iv.

Man in his state of innocency had freedom and power to *will* and to do that which was well pleasing to God; but yet mutably, so that he might fall from it.
C. Mather, Mag. Chris., v. 1.

Man always *wills* to do that which he desires most, and when he does not feel himself obliged by the sentiment of duty to do that which he desires less.
Maudsley, Body and Will, p. 92.

We shall have success if we truly *will* success — not otherwise. *O. W. Holmes,* Essays, p. 118.

4. To dispose of by will or testament; give as a legacy; bequeath: as, he *willed* the farm to his nephew.

Servants and their families descended from father to son, or were sometimes *willed* away, the servant being given, within limits, his choice of a master.
The Century, XXXVI. 277.

5. To bring under the influence or control of the will of another; subject to the power of another's will. [Recent.]

The one to be *willed* would go to the other end of the house, if desired, whilst we agreed upon the thing to be done. *Proc. Soc. Psych. Research*, I. 57, note.

II. *intrans.* 1. To wish; desire; prefer; resolve; determine; decree.

As *will* the rest, so *willeth* Winchester.
Shak., 1 Hen. VI., iii. 1. 162.

You, likewise, our late guests, if so you *will*,
Follow us. *Tennyson*, Princess, v.

2. To exercise the will.

See how my sin-bemangled body lies,
Not having pow'r to *will*, nor will to rise!
Quarles, Emblems, iv. 8.

He that shall turn his thoughts inwards upon what passes in his own mind when he *wills*, shall see that the will or power of volition is conversant about nothing but that particular determination of the mind, whereby barely, by a thought, the mind endeavours to give rise, continuation, or stop to any action which it takes to be within its power. *Locke*, Human Understanding, II. xxi. § 30.

will[3]†, *a.* [Sc. also *wull*; < ME. *will*, *wille*, < Icel. *villr* (for **vildr*), wild: see *wild*.] Astray; wrong; at a loss; bewildered.

Adam went out ful *wille* o wan.
Quoted in *Alliterative Poems* (ed. Morris), Gloss., p. 213.

All wery I wex and *wyll* of my gate.

willed (wild), *a.* [< ME. *willed*; < *will*[1], *n.*, + *-ed*[2].] 1. Having a will; determined as to will: usually in composition, as in self-*willed*, weak-*willed*.

He is *wylled* that comynycasyon and trete schold be had.
Paston Letters, I. 75.

2. Brought under the influence or control of the will of another.

willemite (wil'em-īt), *n.* [Named after *Willem* I., king of the Netherlands.] A mineral of resinous luster and yellowish-green or flesh-red color, a native silicate of zinc. It is of rare occurrence in Europe, but is found abundantly in New Jersey, and there constitutes a very valuable zinc ore. Troostite is a crystallized variety containing some manganese. It fluoresces when exposed to ultra-violet and other radiation.

willer (wil'ėr), *n.* [< *will*[1] + *-er*[1].] 1. One who wishes; a wisher: as, an ill-*willer*.— 2. One who wills.

Be pleased to cast a glance on two considerations—1. What the will is to which, 2. Who the *willer* is to whom, we must submit. *Barrow*, Sermons, II. xxxvi.

The problem can never be solved as long as contact of any sort is allowed between the *willer* and the willed.
Proc. Soc. Psych. Research, II. 10.

willet (wil'et), *n.* [So called from its cry; cf. *pill-will-willet*.] A North American bird of the snipe family, the semipalmated tattler or stone-curlew, *Symphemia semipalmata*. It is a large, stout tattler with semipalmated toes (see cut under *semipalmate*), stout bill, bluish feet, and much-

Willet (*Symphemia semipalmata*), in winter plumage.

variegated plumage, especially in summer, the wings being mirrored with white and lined with black; the length is about 16 inches. It abounds in temperate North America, and especially in the United States; it extends north to 56° at least, breeds throughout its range, and winters in the Southern States. Some related tattlers are occasionally mistaken for the species, and called *willet* by sportsmen. See *Symphemia*.

Across the dune, curlews, gulls, pelicans, water-turkeys, and *willets* were feeding. *Harper's Mag.*, LXX. 223.

willful, willfully, etc. See *wilful*, etc.

willick, *n.* A Scotch variant of *willock*.

willie-muftie, *n.* See *willy-mufty*.

willing (wil'ing), *n.* [< ME. *willing*; verbal n. of *will*[1], *v.*] Inclination; desire; intention.

The evil natures, and the evil principles, and the evil manners of the world, these are the causes of our imperfect *willings* and weaker actings in the things of God.
Jer. Taylor, Works (ed. 1835), II. 13.

willing (wil'ing), *a.* [< ME. *willing*, for earlier *willende*, < AS. *willende*, *wellende*, ppr. of *willan*, will: see *will*[1]. *Willing* in mod. use also represents the ppr. of *will*[2].] 1. Favorably disposed; ready; inclined; desirous: as, *willing* to work; *willing* to depart.

I shall be *willing*, if not apt, to learn.
Beau. and Fl., Philaster, ii. 1.

King Henry, having entred a Throne in a Storm, was *willing* now to have a Calm. *Baker*, Chronicles, p. 157.

If others make easier conditions of blessedness, no wonder if their doctrine be entertained by those who are *willing* to be happy but unwilling to leave their sins.
Stillingfleet, Sermons, II. ii.

I never hear any thing of the Countess [of Oxford] except just now, that she is grown tired of sublunary affairs, and *willing* to come to a composition with her lord.
Walpole, Letters, II. 2.

The 21st day Captain Eaton came to an Anchor by us; he was very *willing* to have consorted with us again.
Dampier, Voyages, I. 133.

2. Voluntary; cheerfully given, granted, done, or borne: as, *willing* service; *willing* poverty.

I raise him thus, and with this *willing* kiss I seal his pardon. *Fletcher (and another ?)*, Prophetess, iv. 1.

Sad Ulysses' soul, and all the rest,
Are held with his melodious harmony
In *willing* chains and sweet captivity.
Milton, Vacation Exercise, l. 52.

The chief is apt to get an extra share [of the spoils], either by actual capture, or by the *willing* award of his comrades. *H. Spencer*, Prin. of Sociol., § 542.

Mount the decks, and call the *willing* wind.
Pope, Odyssey, ix. 655.

4†. In harmony or accord; like-minded.

I am perswaded the Devill himselfe was never *willing* with their proceedings. *N. Ward*, Simple Cobler, p. 22.

=Syn. 1. Minded.—2. *Spontaneous*, etc. See *voluntary*.

willing-hearted (wil'ing-här″ted), *a.* Well-inclined; heartily consenting.

And they came, both men and women, as many as were *willing hearted*, and brought bracelets, and earrings, and rings, and tablets, all jewels of gold: and every man that offered offered an offering of gold unto the Lord.
Ex. xxxv. 22.

willingly (wil'ing-li), *adv.* [< ME. *willingly*; < *willing* + *-ly*[2].] In a willing manner. Specifically—(*a*) Of one's own will, choice, or consent; voluntarily; knowingly.

Heer I swere that never *willingly*
In werk ne thought I nil yow disobeye.
Chaucer, Clerk's Tale, l. 306.

By labour and intense study, . . . joined with the strong propensity of nature, I might perhaps leave something so written to after-times as they should not *willingly* let it die. *Milton*, Church-Government, ii., Int.

(*b*) Readily; cheerfully.

Not . . . as it were of necessity, but *willingly*.
Phile. 14.

Proud of employment, *willingly* I go.
Shak., L. L. L., ii. 1. 35.

They would *willingly* haue beene friends, or haue giuen any composition they could.
Quoted in *Capt. John Smith's* Works, II. 90.

willingness (wil'ing-nes), *n.* 1. The state or character of being willing; free choice or consent of the will; readiness.

I would expend it with all *willingness*.
Shak., 2 Hen. VI., iii. 1. 150.

Satan o'ercomes none but by *Willingnesse*.
Herrick, Temptations.

Many brauado's they made, but, to appease their fury, our Captaine prepared with as seeming a *willingnesse* (as they) to incounter them.
Quoted in *Capt. John Smith's* Works, I. 177.

Constraint in all things, makes the pleasure less;
Sweet is the love which comes with *willingness*.
Dryden, Aurengzebe, ii. 1.

They one after another declared their conviction of their errors, and their *willingness* to receive baptism.
Prescott, Ferd. and Isa. ii. 6.

2†. Good will; readiness.

We, having now the best at Barnet field,
Will thither straight, for *willingness* rids way.
Shak., 3 Hen. VI., v. 3. 21.

=Syn. 1. *Forwardness*, *Willingness*. See *forwardness*.

will-in-the-wisp (wil'in-thē̆-wisp), *n.* Same as *will-o'-the-wisp*.

Willisian (wil'is-i-an), *a.* [< *Willis* (see def.) + *-ian*.] Of or pertaining to Thomas Willis, an English anatomist, famous for his researches on the brain and nerves. Specifically, in *anat.*: (*a*) Noting a remarkable anastomosis of arteries at the base of the brain. See *circle of Willis*, under *circle*. (*b*) Noting the old enumeration of nine pairs of cranial nerves (now counted as twelve pairs).

Willis's disease. Diabetes.

williwaw (wil'i-wâ), *n.* [Origin obscure.] A violent blast of wind descending from the mountain-sides into the fiords of Tierra del Fuego. Such gusts last from 8 to 10 seconds; the barometric pressure suddenly rises 0.08 of an inch, and a calm usually follows: these are the characteristics of the foehn winds.

will-less (wil'les), *a.* [< *will*[1] + *-less*.] 1. Lacking will-power; having no will or volition; not volitional.

A merely knowing, quite *will-less* being.
Du Prel, Philos. of Mysticism (trans. 1889), II. 8.

2. Involuntary.

Your blind duty and *will-less* resignation.
Richardson, Clarissa Harlowe, I. xv.

willock (wil'ok), *n.* [Cf. Sc. *willick*, a young heron, also the puffin.] The common murre or guillemot, *Uria troile* or *Lomvia troile*, a bird of the auk family, abundant on both coasts of the North Atlantic. Also *willcock*. See cut under *murre*[2]. [Local, British.]

will-o'-the-wisp (wil'o-thē̆-wisp), *n.* 1. The ignis fatuus; hence, any person or thing that deludes or misleads by dazzling, visionary, or evanescent appearances. Also *will-in-the-wisp*, *will-with-a-wisp*, and *Jack o' lantern*.

All this hide and seek, this *will-in-the-wisp*, has no other meaning than a Christian marriage for sweet Mrs. Belinda.
Vanbrugh, Provoked Wife, v. 3.

Wicked sea-*will-o'-the-wisp!*
Wolf of the shore! dog, with thy lying lights
Thou hast betray'd us on these rocks of thine!
Tennyson, Harold, ii. 1.

2. A common fresh-water alga, *Nostoc commune*: so named from its sudden and seemingly mysterious appearance. See *Nostoc*.

★**willow**[1] (wil'ō), *n.* and *a.* [Also dial. *willy*; < ME. *wilowe*, *wylow*, *weloghe*, *wilwe*, *wilge*, < AS. *welig* = MD. *welighe*, *wilghe*, later *wilge*, D. *wilg* = MLG. LG. *wilge*, willow; root uncertain. For other names, cf. *sallow*[2] and *withy*.] **I.** *n.* 1. A plant of the genus *Salix*, consisting of trees, shrubs, and rarely almost herbaceous plants. Of the many species a few are of decided economic worth as furnishing osiers (*osier willow*, *crack willow*, *purple wil-*

Black Willow (*Salix nigra*).

low, *white willow*), or for their wood (*crack willow*, *white willow*), or for their bark, which in northern Europe is esteemed equal to oak-bark for tanning. Many are excellent for fixing loose sands, some serve for hedges, while several are highly ornamental. A few plants with some similarity to the willow have borrowed its name. See *osier*, *sallow*, and the phrases below.

Now *wylous*, busshes, bromes, thing that eseth
Let plannte.
Palladius, Husbondrie (E. E. T. S.), p. 81.

2. The wood of the willow; hence, in *base-ball* and *cricket*, the bat.— **Almond** or **almond-leafed willow**, a moderate-sized tree, *Salix triandra*, found in wet grounds in the northern old world, having the leaves white, but not silky beneath. It is much cultivated for basket-making. Also *French willow*.— **Babylonian willow** (of Psalm cxxxvii.), probably a species of poplar, *Populus Euphratica*. The weeping willow was

once supposed to be the tree, fancy associating its pendulous branches with the hanging of the harps. The oleander is sometimes selected as the tree. Compare *weeping willow.*—**Bay willow.** (*a*) *Salix hermaphroditica*, a shrub or small tree of Europe and temperate Asia, having broadly ovate or oblong leaves, which are thick, smooth, and shining, rendering it highly ornamental. (*b*) See *willow-herb.*—**Bedford willow.** See *crack willow.*—**Bitter willow.** See *purple willow.*—**Black willow.** (*a*) A tree of moderate size, *Salix nigra*, widely distributed in North America, commonly found bending over watercourses. The wood is of little value; the bark contains salicylic acid, and is a popular domestic febrifuge. See cut on preceding page. (*b*) *Salix Scouleriana*, found on the western coast of North America, a small tree with the wood light, hard, strong, and tough. (*c*) Same as *bay willow* (*a*). [Local, Eng.]—**Brittle willow.** Same as *crack willow.*—**Crack willow,** a tall handsome tree, *Salix fragilis*, so called because the twigs break easily from the branches. It is native in Europe and Asia, and is often cultivated, affording, with the closely related white willow, the best willow-timber. A hybrid, *S. Russeliana*, of this and the white willow is the Bedford or Leicester willow, whose bark is said to contain more tannin than oak-bark, and more salicin than most of the genus.—**Desert willow,** a small tree of willow-like habit, *Chilopsis linearis*, of the *Bignoniaceæ*, found in arid regions in the southwestern United States and northern Mexico. The flowers, borne in terminal racemes, have a funnel-form corolla swollen out above, an inch or two long, colored white and purplish; the pods resemble those of *Catalpa.*—**Diamond willow,** *Salix lutea* and other closely related species growing on the banks of the Missouri and Yellowstone rivers, having remarkable diamond-shaped scars due to the arrest of wood-growth at the base of atrophied twigs. It is made into unique canes.—**Dwarf gray willow.** Same as *sage-willow.*—**French willow.** (*a*) Same as *almond willow.* (*b*) See *willow-herb.*—**Glaucous willow,** the pussy-willow.—**Glossy willow.** Same as *shining willow.*—**Goat willow,** the great sallow, *Salix caprea.* See *sallow*[1].—**Golden willow** or **osier.** See *white willow.*—**Ground willow,** *Salix arctica*, and other dwarf northern species. See *Salix.*—**Heart-leafed willow,** *Salix cordata*, the most widely distributed and variable American willow, a tall shrub with the leaves narrow but heart-shaped at the base. It is related to the *diamond willow* (see above).—**Hedge willow,** the sallow, *Salix caprea.*—**Hoop willow.** Same as *ring willow.*—**Huntingdon willow,** the white willow.—**Leicester willow,** the crack willow.—**Long-leafed willow.** Same as *sandbar willow.*—**Osier willow.** See *osier;* also *almond willow, purple willow, white willow.*—**Persian willow.** See *willow-herb.*—**Prairie willow,** a grayish shrub, *Salix humilis*, related to the sage-willow, growing 3 to 8 feet high, common on dry plains, etc., in the United States.—**Primrose willow.** See *Jussiæa.*—**Purple willow,** a shrub or small tree, *Salix purpurea*, found through Europe and temperate Asia. Also called *bitter, rose,* and *whipcord willow.* Its bark is rich in salicin, and so bitter that it is not gnawed by animals; hence this willow is specially recommended for game-proof hedges. It is at the same time one of the best osier willows.—**Pussy willow.** See *pussy-willow.*—**Ring** or **ring-leafed willow,** a variety of the weeping willow with the leaves curled into rings.—**Rose willow.** See *purple willow.*—**Rosebay willow.** See *willow-herb.*—**Sage willow.** See *sage-willow.*—**Sallow willow,** the common sallow, *Salix caprea.*—**Sandbar willow,** *Salix fluviatilis*, a small tree often forming dense clumps of great beauty on river sandbars and banks. It is very common throughout the Mississippi basin, and reaches its greatest development in northern California and Oregon.—**Shining willow,** a river-bank shrub or small tree, *Salix lucida*, of North America, closely allied to the bay willow of Europe, the leaves with a long tapering point, smooth and shining on both sides. It is among the most beautiful of willows, and is becoming popular in cultivation.—**Silky willow.** (*a*) The white willow. (*b*) *Salix Sitchensis*, a low much-branched tree of the Pacific coast from California northward.—**Swamp willow,** the pussy-willow.—**Sweet willow,** the sweet-gale, *Myrica Gale;* also, the bay willow. *Britten and Holland.* [Prov. Eng.]—**To wear the willow,** to put on the trappings of woe for a lost lover.

> Tell him, in hope he'll prove a widower shortly,
> I'll *wear the willow* garland for his sake.
> *Shak.*, 3 Hen. VI., iii. 3. 228.

Virginia or **Virginian willow.** See *Itea.*—**Water willow.** See *water-willow.*—**Weeping willow,** a large tree, *Salix Babylonica*, distinguished by its very long and slender pendulous branches, a native, not of Babylon, but of eastern Asia, now common in cultivation in Europe and America. Only the female plant is known in western countries, but it spreads to some extent by the drifting and rooting of its broken branches. It is considered an emblem of mourning, and is often planted in graveyards. The Kilmarnock weeping willow is a remarkable variety of the common sallow. There is an American weeping willow sold in nurseries, which is a partly pendulous form of the European purple willow.—**Whipcord willow.** See *purple willow.*—**White willow,** *Salix alba*, otherwise called *Huntingdon* and *silky willow*, perhaps the most common cultivated species, a fine tree becoming from 50 to 80 feet high, the leaves ashy-gray or silky-white on both sides. Its wood is smooth, light, soft, tough, and not subject to splintering, and is used for a great variety of purposes. It makes a good gunpowder charcoal, for which purpose it is grown in New Jersey and Delaware. An occasional form is *S. alba cærulea*, the blue willow. *S. alba vitellina*, the golden willow or osier, with yellow twigs, is sometimes grown for basket-making.—**Whortle willow,** *Salix Myrsinites*, a low, sometimes closely procumbent shrub, under a foot high, with small round, ovate, or lanceolate leaves, found in the mountains of the northern old world.—**Willow scale.** See *scale*[1].—**Willow span-worm,** one of a number of geometrid larvæ which feed upon willow, as the pink-striped, the larva of *Deilinia variolaria* of the United States.—**Willow tussock-moth,** a North American tussock-moth, *Hemerocampa definita*, whose larva seems to feed only on willow—a peculiar fact, since other tussock-moth larvæ are rather general feeders.—**Yellow willow,** *Salix alba vitellina.* See *white willow,* above.

II. *a.* **1.** Made of the wood of the willow; consisting of willow.—**2.** Of the color of the bark of young willow-wood; of a dull yellowish-green color.—**Willow pattern,** a design in ceramic decoration, introduced by T. Turner in his Caughley porcelain in 1780. The design is Chinese in character, but is not exactly copied from any Chinese original. It is usually in blue on white or bluish-white ground.—**Willow tea.** See *tea*[1].

Willow Pattern.

willow[1] (wil′ō), *v. t.*; pret. and pp. *willowed*, ppr. *willowing.* [< *willow*[1], *n.*] To beat, as cotton, etc., with willow rods, in order to loosen it and eject the impurities; hence, to pick and clean, as any fibrous material; treat with the willow or willowing-machine.

> Fine stuff, such as *willowed* rope.
> *Workshop Receipts*, 2d ser., p. 36.

willow[2] (wil′ō), *n.* [Also *willy, willey;* short for *willow-machine* or *willowing-machine.*] A power-machine for extracting dirt and foreign matter from hemp and flax, for cleaning cotton, and for tearing open and cleaning wool preparatory to spinning. The machines used for these different materials vary in size, but are essentially alike, and consist of a revolving cylinder armed with spikes in a cylindrical casing also armed with spikes. A part of the casing forms a grid or sieve, through which the waste falls by gravity or is drawn by a suction blast. In certain cotton manufactures it follows the *opener,* or is used in place of it, and is followed by the *scutcher.* Also called *cotton-cleaning machine, devil, opening-machine, willower, willowing-machine, willow-machine,* and *willying-machine.*

Willsia (wil′si-ạ), *n.* [NL., named after one *Wills.*] A generic name based on medusoids of certain gymnoblastic hydroid polyps, apparently coryniform, which produce other medusoids

Willsia.

A, the medusa, with budding stolons. *B,* a bud developed on a stolon; *h,* its radial canal; *e,* manubrium. *C,* a stolon; *g,* its free end beset with nematocysts; *b, c, d, d,* four budding medusoids, the last nearly ready to be detached; *e* and *h,* as in fig. *B.*

like themselves by means of proliferating stolons; also, a designation of such medusoids. In the example figured the stolons are developed at the bifurcation of each of the four principal radiating canals of the swimming-bell, each stolon ending in a knob with a bunch of thread-cells, and giving rise along one side to a series of buds which successively, from the free end toward the other end, acquire the character of complete medusoids. *Huxley,* Anat. Invert., p. 132.

Willughbeia (wil-ō-bē′iạ), *n.* [NL. (Roxburgh, 1819), named for Francis *Willughby,* 1635–72, an English naturalist, who wrote on the use of sap in plants.] An untenable name for *Ancylocladus,* a genus of plants, of the family *Apocynaceæ.* It is characterized by climbing stems, flowers in dense cymes with a five-parted salver-shaped corolla bearing its stamens near the base of its tube, and followed by a large globose berry with hard pericarp and abundant pulp, in appearance resembling an orange. By its axillary (not terminal) cymes it is further distinguished from the related climbing genus of india-rubber plants, *Pacouria,* for which the name *Willughbeia* has also been used. The genus includes 8 or 10 species, natives of India, Malacca, and Ceylon. They are sarmentose shrubs, generally tendril-bearing and climbing to great heights. The leaves are opposite, short-petioled, and feather-veined. *Ancylocladus edulis* yields india-rubber, and its fruit is edible.

will-willet (wil′wil″et), *n.* [Cf. *willet, pill-willet.*] **1.** Same as *pill-willet.*—**2†.** The American oyster-catcher: as, "the *will-willet* or oyster-catcher," *Bartram,* Travels (ed. 1791). *Lawson,* 1709.

7. To haul or hoist by or as by a winch, whim, capstan, or the like: as, to *wind* or warp a ship out of harbor; specifically, in *mining*, to raise (the produce of the mine) to the surface by means of a winding-engine; hoist. The term *wind*, as well as *draw*, is often employed in Great Britain, while *hoist* is generally used in the United States. In the early days of mining, ore and coal were almost exclusively raised by hand-, horse-, or steam-power, in buckets or kibbles; at the present time, in both England and the United States, this is done by means of a winding-engine which turns a drum on which a rope (generally of steel wire) is wound and unwound, and by means of which a cage (see *cage*, 3 (*d*)) is raised or lowered, on which the loaded cars are lifted to the surface, and the empties returned to the pit-bottom. The dimensions of engines, drums, and cages in large mines are sometimes very great, as is also the velocity with which the machinery is moved. Thus, in the Monkwearmouth colliery, Durham, England, the winding-drums are 25 feet in diameter, the rope weighs 4½ tons, the cage and load 7½ tons; the vertical distance through which the cage is raised is 580 yards, and the time occupied in lifting it and discharging the cars is two minutes and four seconds.

The Hollanders . . . layd out haulsers, and *wound* themselues out of the way of vs. *Hakluyt's Voyages*, iii. 710.

8. To insinuate; work or introduce insidiously or stealthily; worm.

As he by his bould confidence & large promises deceived them in England that sente him, so he had *wound* him selfe in to these mens high esteeme hear.
Bradford, Plymouth Plantation, p. 171.

They have little arts and dexterities to *wind* in such things into discourse. *Dr. H. More.*

9†. To contrive by resort to shifts and expedients (to effect something); bring; procure or get by devious ways.

Wee'll haue some trick and wile
To *winde* our yonger brother out of prison
That lies in for the Rape.
Tourneur, Revenger's Tragedy, iii. 1.

He with his former dealings had *wound* in what money he had in ye partnership into his owne hands.
Bradford, Plymouth Plantation, p. 301.

10†. To circulate; put or keep in circulation.

Amongst the rest of the Plantations all this Summer little was done but securing themselues and planting Tobacco, which passes there as current Siluer, and by the oft turning and *winding* it some grow rich, but many poore. Quoted in *Capt. John Smith's* Works, II. 89.

There is no State that *winds* the Penny more nimbly, and makes quicker Returns [than Lucca].
Howell, Letters, I. i. 41.

11. To adjust or dispose for work or motion by coiling a spring more tightly or otherwise turning some mechanical device: as, to *wind* a clock or a watch. See *to wind up* (*f*), below.

When he *wound* his clock on Sunday nights the whirr of that monitor reminded the widow to *wind* hers.
T. Hardy, Trumpet-Major, iii.

To wind a ship, to bring it round until the head occupies the place where the stern was.—**To wind off**, to unwind; uncoil.—**To wind up.** (*a*) To coil up into a small compass, as a skein of thread; form into a ball or coil round a bobbin, reel, or the like. Hence—(*b*) To bring to a final disposition or conclusion; finish; arrange and adjust for final settlement, as the affairs of a company or partnership on its dissolution.

I could not *wind* it [the discourse] *up* closer.
Howell, Letters, I. vi. 3.

The Author, upon the *winding up* of his Action, introduces all those who had any Concern in it.
Addison, Spectator, No. 357.

Signor Jupe was to "enliven the varied performances at frequent intervals with his chaste Shakspearian quips and retorts." Lastly he was to *wind* them *up* by appearing in his favourite character of Mr. William Button.
Dickens, Hard Times, i. 3.

(*c*) To tighten, as the strings of certain musical instruments, so as to bring them to the proper pitch; put in tune by stretching the strings over the pegs.

Wind up the slacken'd strings of thy lute.
Waller, Chloris and Hylas.

Hence, figuratively—(*d*) To restore to harmony or concord; bring to a natural or healthy condition.

The untuned and jarring senses, O, *wind up*,
Of this child-changed father! *Shak.*, Lear, iv. 7. 16.

(*e*) To bring to a state of great tension; subject to a severe strain or excitement; put upon the stretch.

They *wound up* his temper to a pitch, and treacherously made use of that infirmity. *Bp. Atterbury.*

Our poet was at last *wound up* to the height of expectation. *Goldsmith*, Voltaire.

(*f*) To bring into a state of renewed or continued motion, as a watch or clock, by coiling anew the spring or drawing up the weights.

When an authentic watch is shown,
Each man *winds up* and rectifies his own.
Suckling, Aglaura, Epil.

Hence, figuratively—(*g*) To prepare for continued movement, action, or activity; arrange or adapt for continued operation; give fresh or continued activity or energy to; restore to original vigor or order.

Fate seemed to *wind* him *up* for fourscore years
Yet freshly ran he on ten winters more. *Dryden.*

Is there a tongue like Delia's o'er her cup,
That runs for ages without *winding-up*?
Young, Love of Fame, i. 282.

(*h*) To hoist; draw; raise by or as by a winch.

Let me see thy hand: this was ne'er made to wash,
Or *wind up* water, beat clothes, or rub floor.
Beau. and Fl., Coxcomb, ii. 2.

Winding-up Act, in *Eng. law*, an act providing for the dissolution of joint-stock companies, and the winding up of their affairs; more specifically, 7 and 8 Vict., c. 111 (1844); followed and amended by 9 and 10 Vict., c. 28 (1846); 11 and 12 Vict., c. 45 (1848); 12 and 13 Vict., c. 108 (1849); 13 and 14 Vict., c. 83 (1850); 19 and 20 Vict., c. 47 (1856); 20 and 21 Vict., c. 49, c. 78 (1857); and superseded by The Companies' Act (1862), 25 and 26 Vict., c. 89.

★**wind**[1] (wind), *n.* [< ME. *winde* (= MD. MHG. *winde*, OHG. *wintā*); from the verb.] A winding; a turn; a bend: as, the road there takes a *wind* to the south.—**Out of wind**, free from bends ★or crooks; perfectly straight. [Colloq.]

★**wind**[2] (wind; formerly and still poetically also wind), *n.* [< ME. *wind*, *wynd*, < AS. *wind* = OS. OFries. D. LG. *wind* = OHG. MHG. *wint*, G. *wind* = Icel. *vindr* = Sw. Dan. *vind* = Goth. *winds*, *winths*, wind, air in motion, = W. *gwynt* = L. *ventus*, wind, = Gr. *ἄήτης*, a blast, gale, wind, = Skt. *vāta*, wind; lit. 'that which blows,' being orig. from the ppr. (cf. Gr. *ἀεί̈ς* (*ἀϝεντ-*), blowing, ppr.) of a verb (Skt. √*vā*) seen in Goth. *waian*, etc., G. *wehen*, blow, Russ. *vieiate*, blow (> *vieterŭ*, wind), etc., Lith. *wejas*, wind, from which is also ult. derived *weather*: see *weather*. From the E. *wind*, besides the verb and the obvious derivatives or compounds, are derived *window*, *winnow*, etc.; from the L. are ult. E. *vent*[2], *ventilate*, *ventose*, etc. (see also *vent*[1]).] **1.** Air in natural motion at the earth's surface with any degree of velocity; a current of air as coming from a particular direction. When the air has only a slight motion, it is called a *breeze*; when its velocity is greater, a *fresh breeze*; and when it is violent, a *gale*, *storm*, or *hurricane*. Winds are commonly named from the point of compass from which they blow, as a *north wind*, an *east wind*, a *southwest wind*. The ultimate cause of winds is to be found in differences of atmospheric density produced either (*a*) by the sun in its unequal heating of different parts of the earth, or (*b*) by radiation producing unequal cooling at night, or (*c*) by condensation of aqueous vapor producing higher temperature in the cloud region. These original differences of density give rise to vertical and horizontal currents of air which constitute and establish the general atmospheric circulation, and determine permanent belts of relatively high and low pressure over the earth's surface. Local differences of temperature produce their own differences of density at the earth's surface, and thereby become a secondary cause of winds. The general system of atmospheric circulation, with respect both to surface-winds and to their correlative upper currents, is described under *trade-wind*. In accordance with the character of their exciting cause, winds may be divided into—(1) *constant*, the *trade-winds* and *anti-trade winds*, which depend upon the permanent difference of temperature between the equatorial regions and higher latitudes; (2) *periodic*, the monsoons, and land- and sea-breezes which arise respectively from a seasonal and diurnal difference of temperature between land and sea; (3) *cyclonic* and *anticyclonic*, winds associated with or constituting progressive areas of high and low pressure, and representing the interchange of air between the upper and lower halves of the atmosphere; (4) *whirlwinds* and (certain) *squalls*, which arise when the air is in a condition of unstable equilibrium, and are developed as a part of the process by which stability is regained (this class includes the most violent winds, such as the tornado, waterspout, and thunder-storm); (5) *special*, winds which logically belong to the preceding classes, but which by reason of special characteristics, arising frequently from local topography, have received special appellations, as the *sirocco*, the *harmattan*, the *mistral*, the *foehn*, the *chinook*, *khamsin*, *limbat*, etc. The winds were personified and worshiped as divinities by the ancients, and representations of them are frequent in ancient art, particularly in Greek sculpture and vase-painting.

And erly on the Tewysday, whiche was seynt Thomas daye, we made sayle, and passed by the costes of Slauony and Hystria with easy *wynde*.
Sir R. Guylforde, Pylgrymage, p. 9.

By reason of contrary *windes* we put backe againe to Prodeno, because we could not fetch Sapientia.
Hakluyt's Voyages, II. 168.

2. A direction from which the wind may blow; a point of the compass, especially one of the cardinal points. [Rare.]

Come from the four *winds*, O breath, and breathe upon these slain. Ezek. xxxvii. 9.

3. Air artificially put in motion by any force or action: as, the *wind* of a bellows; the *wind* of a bullet or a cannon-ball (see *windage*).

Which he disdaining whisked his sword about,
And with the *wind* thereof the king fell down.
Marlowe and Nashe, Tragedy of Dido, ii. 1.

The whiff and *wind* of his fell sword.
Shak., Hamlet, ii. 2. 495.

4. Air impregnated with animal odor or scent.

Else counsellors will but take the *wind* of him.
Bacon, Of Counsel.

5. In musical instruments the sound of which is produced by a stream of compressed air or breath, either the supply of air under compression, as in the bellows of an organ or in a singer's lungs, or the stream of air used in sound-production, as in the mouth of an organ-pipe, in the tube of a flageolet, or in the voice.

Their instruments were various in their kind,
Some for the bow, and some for breathing *wind*.
Dryden, Flower and Leaf, l. 357.

6. Breath; also, power of respiration; lung-power. See *second wind*, below.

Ye noye me soore in wastyng al this *wynde*,
For I haue seide y-noghe, as semethe me.
Political Poems, etc. (ed. Furnivall), p. 79.

My *wynde* is stoppyd, gon is my brethe.
Coventry Mysteries, p. 226.

Woman, thy wordis and thy *wynde* thou not waste.
York Plays, p. 258.

If my *wind* were but long enough to say my prayers, I would repent. *Shak.*, M. W. of W., iv. 5. 104.

How they spar for *wind*, instead of hitting from the shoulder. *O. W. Holmes*, Professor, ii.

7. The part of the body in the region of the stomach, a blow upon which causes a tempo-

rary loss of respiratory power by paralyzing the diaphragm for a time. It forms a forbidden point of attack in scientific boxing. [Slang.]

He pats him and pokes him in divers parts of the body, but particularly in that part which the science of self-defence would call his *wind*. *Dickens.*

8. The wind-instruments of an orchestra taken collectively, including both the wood wind (flutes, oboes, etc.) and the brass wind (trumpets, horns, etc.).—**9.** Anything light as wind, and hence ineffectual or empty; especially, idle words, threats, bombast, etc.

Nor think thou with *wind*
Of aery threats to awe. *Milton*, P. L., vi. 282.

10. Air or gas generated in the stomach and bowels; flatulence.

Knowledge . . .
Oppresses else with surfeit, and soon turns
Wisdom to folly, as nourishment to *wind*.
Milton, P. L., vii. 130.

11. A disease of sheep, in which the intestines are distended with air, or rather affected with a violent inflammation. It occurs immediately after shearing.—**A capful of wind.** See *capful*.—**A fair wind**, a wind that enables a sailing ship to head her course with the sails full.—**All in the wind.** See *all*.—**A sheet in the wind.** See *sheet*[1].—**Bare wind**†. See *bare*[1].—**Before the wind.** See *before*.—**Between wind and water.** (*a*) In that part of a ship's side or bottom which is frequently brought above the water by the rolling of the vessel or by fluctuation of the water's surface. Any breach effected by shot in this part is peculiarly dangerous.

They had a tall man-of-war to convoy them; but, at the first bout, it was shot *between wind and water*, and forced to make towards land.
Court and Times of Charles I., II. 42.

Hence, figuratively—(*b*) Any part or point generally where a blow or attack will most effectually injure.

Shot him *between wind and water*.
Beau. and Fl., Philaster, iv. 1.

He had hit his desires in the Master-vein, and struck his former Jealousie *between wind and water*, so that it sunk in the instant.
Fannant, Hist. of Edward II. (ed. 1680), p. 11.

Broken wind, a veterinary term for a form of paroxysmal dyspnœa, which seems to depend on asthma combined with a varying amount of emphysema: also loosely used for other dyspnœic conditions. See *broken-winded* and *wind-broken*.—**By the wind.** See *by*[1].—**Cardinal winds.** See *cardinal*.—**Close to the wind.** See *close*[2], *adv.*—**Down the wind.** (*a*) In the direction of and moving with the wind: as, birds fly quickly *down the wind*. (*b*) Toward ruin, decay, or adversity. Compare *to whistle off*, under *whistle*, *v. t.*

The more he prayed to it [the image] to prosper him in the world, the more he went *down the wind* still.
Sir R. L'Estrange.

Head to wind. See *head*.—**Hot winds of the plains**, southwesterly winds in Texas, Kansas, Nebraska, and the Dakotas, which occur during the summer season, and by their extreme heat and dryness prove exceedingly destructive to vegetation.—**How the wind blows** or **lies.** (*a*) The direction or velocity of the wind. (*b*) Figuratively, the position or state of affairs; how matters stand at a particular juncture: as, trifles show *how the wind blows*.

Miss Sprong, her confidante, who, seeing *how the wind lay*, had tried to drop little malicious hints . . . until the old lady had cut them short. *Farrar*, Julian Home, iv.

In the wind, astir; afoot.

Go to, there's somewhat *in the wind*, I see.
B. Jonson, Case is Altered, iii. 3.

What the blazes is *in the wind* now?
Dickens, Oliver Twist.

In the wind's eye, in the teeth of the wind, directly toward the point from which the wind blows; in a direction exactly contrary to that of the wind.—**Is the wind in that door?**† is that how the case stands? is that the state of affairs?

Thras. I am come to intreat you to stand my friend, and to favour me with a longer time, and I wil make you sufficient consideration.
Usurer. Is the winde in that doore? If thou hast my mony, so it is; I will not defer a day, an houre, a minute.
Greene and Lodge, Looking-Glass for London and Eng.

Leading wind. See *leading*[1].—**Mountain and valley winds**, in *meteor.*, diurnal winds blowing up the sides of mountains and the trough of valleys during the day, and down during the night. They are due to differences of temperature arising from unequal heating and radiation, whereby the air at the summits of hills and mountains is heated during the day to a higher temperature than the air at the same level over the valleys or lowlands, causing a current up the valleys and mountain-sides; conversely, during the night the air at the summit is cooled by radiation to a lower temperature than the air at the same level over the lowlands, causing a downward surface flow of cold air. In narrow valleys this current sometimes attains great strength, as in the case of the Wisper wind of the Rhine.—**North wind of California**, a dry, desiccating north wind experienced on the Pacific slope of the United States, but especially in the Sacramento and San Joaquin valleys of California. When occurring during the growing season, it is exceedingly injurious to vegetation.—**On extra** or **heavy wind.** See *organ*[1], 6.—**On the wind**, as near as possible to the direction from which the wind blows; in the position or trimmed in the manner of a vessel that is sailing "by the wind."—**Periodic winds.** See def. 1.—**Plate of wind.** See *plate*.—**Red wind**, a wind which blasts fruit or corn; a blight. *Halliwell.*

The goodliest trees in the garden are soonest blasted with *red winds*. *Abp. Sandys*, Sermons, p. 103. (*Davies.*)

Robin Hood wind, a wind in which the air is saturated with moisture at a temperature near the freezing-point, the moisture rendering it especially raw and penetrating; a thaw-wind.—**Running of the wind.** See *running*.—**Second wind**, a regular state of respiration attained during continued exertion after the breathlessness which had arisen at an earlier stage.—**Slant of wind.** See *slant*.—**Soldier's wind.** See *soldier*.—**Thaw-wind**, a wind prevailing during a thaw: in general, since it becomes saturated with moisture at a temperature only a little above freezing, it is peculiarly raw and penetrating.—**To beat the wind.** See *beat*[1].—**To break wind, carry the wind, eat up into the wind, gain the wind.** See the verbs.—**To get one's wind**, to recover one's breath: as, they will up and at it again when they *get their wind*. [Colloq.]—**To get the wind of**, to get on the windward side of.

All the three Biskainers made toward our ship, which was not carelesse *to get the winde of* them all.
Hakluyt's Voyages, III. 198.

To get (take) wind, to get wind of. See *get*[1].—**To haul the wind.** See *haul*.—**To have a free wind.** See *free*.—**To have in the wind**, to be on the scent or trail of; perceive and follow.

A hare had long escap'd pursuing hounds. . . .
To save his life, he leap'd into the main,
But there, alas! he could no safety find,
A pack of dog-fish *had* him *in the wind*. *Swift.*

To have the wind of. Same as *to have in the wind*.

My son and I will *have the wind of* you.
Shak., Tit. And., iv. 2. 133.

To keep the wind. See *keep*.—**Too near the wind**, mean; stingy; cheese-paring. [Naut. slang.]—**To raise the wind.** See *raise*[1].—**To recover the wind of.** See *recover*[2].—**To sail close to the wind.** (*a*) To sail with the ship's head just so near to the wind as to fill the sails without shaking them; sail as closely against the direction of the wind as possible. (*b*) To border closely upon dishonesty or indecency: as, beware in dealing with him, he *sails* rather *close to the wind*. (*c*) See *sail*[1].—**To shake a vessel in the wind.** See *shake*.—**To slip one's wind.** See *slip*[1].—**To sow the wind and reap the whirlwind**, to act wrongly or recklessly and in time be visited with the evil effects of such conduct. Hos. viii. 7.—**To take the wind out of one's sails.** See *sail*[1].—**To take wind**, to leak out.—**To touch the wind.** See *touch*.—**To whistle down the wind, to whistle for a wind.** See *whistle*.—**Wind-scale.** See *scale*[3].=**Syn. 1.** *Wind, Breeze, Gust, Flaw, Blast, Storm, Squall, Gale, Tempest, Hurricane, Tornado, Cyclone*, etc. *Wind* is the general name for air in motion, at any rate of speed. A *breeze* is gentle and may be fitful; a *gust* is pretty strong, but especially sudden and brief; a *flaw* is essentially the same as *gust*, but may rise to the force of a *squall;* a *blast* is stronger and longer than a *gust;* a *storm* is a violent disturbance of the atmosphere, generally attended by rain, hail, or snow; a *squall* is a *storm* that begins suddenly and is soon over, perhaps consisting of a series of strong *gusts;* a *gale* is a violent and continued *wind*, lasting for hours or days, its strength being marked by such adjectives as *stiff* and *hard;* a *tempest* is the stage between a *gale* and a *hurricane*—*hurricane* being the name for the wind at its greatest height, which is such as to destroy buildings, uproot trees, etc. A *tornado* and a *cyclone* are by derivation storms in which the wind has a circular or rotatory movement (see defs.).

wind[2] (wind), *v. t.*; pret. and pp. *winded* (in some uses, erroneously, *wound*), ppr. *winding*. [< ME. *winden, wynden* (= MD. *winden* = OHG. *wintōn*), expose to the wind, air; < *wind*[2], *n.* With reference to blowing a horn, the verb *wind*[2], owing to the alternative (poetical) pron. wind, and prob. to some vague association of a horn as being usually curved, with the verb *wind*[1], has been confused with the verb *wind*[1], whence the irreg. pret. and pp. *wound*. It is possible, however, that the irreg. pret. and pp. *wound* arose out of mere conformity with the other verb, as the pret. *rang*, pp. *rung* (instead of *ringed*), of the verb *ring*[2], and the pret. *wore*, pp. *worn*, of the verb *wear*[1], arose out of conformity to similar forms of the similar verbs *sing, swear*, etc.] **1.** To force wind through with the breath; blow; sound by blowing: as, to *wind* a horn: in this sense and the three following pronounced wind.

The last Miracle is the third time of Michaels *winding* his horne, when God shall bring forth all the Iewes.
Purchas, Pilgrimage, p. 221.

Gawain . . . raised a bugle hanging from his neck,
And *winded* it, and that so musically
That all the old echoes hidden in the wall
Rang out like hollow woods at hunting-tide.
Tennyson, Pelleas and Ettarre.

2. To produce (sound) by blowing through or as through a wind-instrument.

But gin ye take that bugle-horn,
And *wind* a blast sae shrill.
Rose the Red, and White Lilly (Child's Ballads, V. 178).

3. To announce, signal, or direct by the blast of a horn, etc. [Rare.]

'Twas pleasure, as we look'd behind,
To see how thou the chase could'st *wind*,
Cheer the dark blood-hound on his way,
And with the bugle rouse the fray!
Scott, L. of L. M., v. 29.

4. To perceive or follow by the wind or scent; nose.

As when two skilful hounds the lev'ret *wind*,
Or chase thro' woods obscure the trembling hind.
Pope, Iliad, x. 427.

We *winded* them by our noses—their perfumes betrayed them. *Johnson*, Dryden.

5. To expose to the wind; winnow; ventilate.—**6.** To drive or ride hard, as a horse, so as to render scant of wind.—**7.** To rest, as a horse, ★in order to let him recover wind.

windage (win′dāj), *n.* [< *wind*[2] + *-age*.] **1.** In *gun.*: (*a*) The difference allowed between the diameter of a projectile and that of the bore of the gun from which it is to be fired, in order to allow the escape of some part of the explosive gas, and to prevent too great friction. (*b*) The rush or concussion of the air produced by the rapid passage of a shot.

The last shot flying so close to Captain Portar that with the *windage* of the bullet his very hands had almost lost the sense of feeling.
R. Peeke (Arber's Eng. Garner, I. 626).

(*c*) The influence of the wind in deflecting a missile, as a ball or an arrow, from its direct path, or aside from the point or object at which it is aimed; also, the amount or extent of such deflection. (*d*) The play between the spindle of the De Bange gas-check and its cavity in the breech-screw: it is expressed in decimal parts of an inch, and is measured by the difference between the diameters of the spindle and its cavity.—**2.** In *surg.*, same as *wind-contusion*.

windas, windass (win′das), *n.* [Early mod. E. also *windace, wyndace;* < ME. *windas, wyndas, windasse*, a windlass, < MD. *windaes*, D. *windas* (> OF. *guindas, guyndas*, F. *guindas*), windlass, lit. a 'winding-beam,' = Icel. *vindāss*, a rounded pole which can be wound round, windlass, < D. *winden* = Icel. *vinda*, wind (= E. *wind*), + *aes* = Icel. *āss*, pole, main rafter, sail-yard, = Goth. *ans*, a beam. Hence, by confusion with *windlass*[1], the modern form *windlass*[2].] **1**†. Same as *windlass*[2].

Ther may no man out of the place it dryve
For noon engyn of *wyndas* or polyve.
Chaucer, Squire's Tale, l. 176.

Gete som crosse bowis, and *wyndacs* to bynd them with, and quarrels. *Paston Letters*, I. 82.

2. A fanner for winnowing grain. *Jamieson.* ★[Scotch.]

windbag (wind′bag), *n.* A bag filled with wind; hence, a person of mere words; a noisy, empty pretender. [Slang.]

windball (wind′bâl), *n.* **1.** A ball inflated with air; a balloon.

Generally the high stile is disgraced and made foolish and ridiculous by all wordes affected, counterfait, and puffed vp, as it were a *windball* carrying more countenance then matter. *Puttenham*, Arte of Eng. Poesie, p. 165.

2. In *surg.*, a cause of death or injury formerly supposed to lie in the passage of a projectile in close proximity to the person injured. See *wind-contusion*.

Where life is destroyed by the influence of the *windball*. *J. M. Carnochan*, Operative Surgery, p. 279.

wind-band (wind′band), *n.* **1.** A company of musicians who use only or principally wind-instruments; a brass or military band.—**2.** The wind-instruments of an orchestra or band taken collectively. See *wind*[2], 8.—**3.** A long cloud supposed to indicate stormy weather. *Halliwell.* [Prov. Eng.]

wind-beam (wind′bēm), *n.* A beam tying together the rafters of a pitched roof: same as *collar-beam*.

windberry (wind′ber*ri*), *n.*; pl. *windberries* (-iz). The cowberry, *Vaccinium Vitis-Idæa*. *Britten and Holland.* [Prov. Eng.]

wind-bill (wind′bil), *n.* In *Scots law*, an accommodation bill. See *accommodation*.

wind-bore (wind′bōr), *n.* **1.** The extremity of the suction-pipe of an exhausting or aspirating pump, usually covered with a perforated plate to prevent the intrusion of foreign substances.—**2.** In *mining*, same as *snore-piece*.

windbound (wind′bound), *a.* Prevented from sailing by contrary winds; detained by contrary winds: as, *windbound* ships.

wind-brace (wind′brās), *n.* See *brace*[1].

wind-break (wind′brāk), *n.* Any structure, ★growth of trees or other plants, or mound of earth, designed to protect the ground or objects to leeward from the effects of strong winds. In prairie lands a wind-break has an appreciable influence to a distance of twenty times its own height. By facilitating the fall of snow and rain and its retention on the ground, by diminishing evaporation due to the wind, and by protecting from radiation, wind-breaks are effective against both wind, drought, and frost.

wind-break (wind′brāk), *v. t.* To break the wind of. See *wind-broken*.

'Twould *wind-break* a mule to vie burdens with her.
Ford.

windbroach† (wind′brōch), *n.* The hurdy-gurdy or vielle.

Nero, a base blind fiddler, or player on that instrument which is called a *windbroach*.
Urquhart, tr. of Rabelais, ii. 30.

For an old man to pretend to talk wisely is like a musician's endeavouring to fumble out a fine sonata upon a *wind-broach*. *Tom Brown*, Works, II. 234. (*Davies.*)

wind-broken (wind′brō″kn), *p. a.* Diseased in the respiratory organs; having the power of breathing impaired by chest-disease: as, a *wind-broken* horse. Also *broken-winded*.

wind-changing (wind′chān″jing), *a.* Changeful as the wind; fickle. [Rare.]

Wind-changing Warwick now can change no more.
Shak., 3 Hen. VI., v. 1. 57.

wind-chart (wind′chärt), *n.* A chart showing the wind-directions at a given time, or the directions prevailing during any period of the year over any region of the earth. Wind-charts for the ocean, of which the "Wind and Current Charts" of the British Admiralty and the "Pilot Charts" of the United States Hydrographic Office are examples, constitute an important aid to navigators.

wind-chest (wind′chest), *n.* In *organ-building*, a chest or box immediately below the pipes or reeds, from which the compressed air is admitted to them by means of valves or pallets. See *organ*[1] and *reed-organ*.

wind-colic (wind′kol″ik), *n.* Intestinal pain caused by flatulence.

wind-contusion (wind′kon-tū″zhon), *n.* In *surg.*, a contusion, such as rupture of the liver or concussion of the brain, unaccompanied by any external mark of violence, supposed to be produced by the air when rapidly displaced by the velocity of a projectile, as a cannon-ball. It is now, however, considered to be occasioned by the projectile itself striking the body in an oblique direction, the comparative escape of the external soft tissues being accounted for by the degree of obliquity with which the missile impinges on the elastic skin, together with the position of the internal structures injured relatively to the impingement of the ball on one side and hard resisting substances on another. Also called *windage*.

wind-cutter (wind′kut″ėr), *n.* In *organ-building*, the upper lip of the mouth of a flue-pipe, against which the stream of air impinges when the pipe is sounded.

wind-dial (wind′dī″al), *n.* A dial showing the changes in the direction of the wind by means of an index or pointer connected with a wind-vane.

The *Wind Dial* lately set up at Grigsby's Coffee and Chocolate House, behind the Royal Exchange, being the first and only one in any publick House in England, and having given great Satisfaction to all that have seen it, and being of Constant use to those that are in any wise Concerned in Navigation.
Quoted in *Ashton's* Social Life in Reign of Queen Anne, [II. 56.

wind-dog (wind′dog), *n.* A name popularly applied to fragments of rainbows seen on detached clouds. Also *wind-gall*.

wind-dropsy (wind′drop″si), *n.* Emphysema; tympanites.

wind-egg (wind′eg), *n.* An infecund or otherwise imperfect egg, as one which will produce nothing but wind (gas); a soft-shelled egg, such as may be laid by a hen that is comparatively old or has been injured.

winder[1] (wīn′dėr), *n.* [< *wind*[1] + *-er*[1].] 1. One who winds, rolls, or coils: as, a bobbin-*winder*.

They consist of sewing boys, shoe-binders, *winders* for weavers, and girls for all kinds of slop needlework.
Mayhew, London Labour and London Poor, II. 353.

2. An instrument or a machine for winding thread, etc. (*a*) A contrivance like a small windlass revolving a spool or reel upon which the thread is wound. (*b*) A large adjustable frame which can be passed through the opening of a skein and then increased in diameter so as to hold it firmly for winding off. (*c*) A small stick, strip, or notched slate upon which thread can be wound: a substitute for a spool or reel.

3. The key or utensil used to wind up the spring-work of a roasting-jack.

To keep troublesome servants out of the kitchen, always leave the *winder* sticking on the jack to fall on their heads. *Swift*, Advice to Servants (Cook).

4. A plant that twists itself round others.

Winders and creepers; as ivy, briony, hops.
Bacon, Nat. Hist., § 536.

5. A winding-step of a staircase.

winder[2] (wīn′dėr), *n.* [< *wind*[2] + *-er*[1].] 1. One who winds or sounds a horn.

Winder of the horn,
When snouted wild-boars routing tender corn
Anger our huntsman. *Keats*, Endymion, i.

2 (win′dėr). A blow which takes away the breath.—3. A fan. *Halliwell.* [Prov. Eng.]

winder[2] (win′dėr), *v. t.* [< *winder*[2], *n.*; prob. in part a dial. corruption of **winner* for *winnow*.] To fan; clean or winnow with a fan: as, to *winder* grain. *Brockett.* [Prov. Eng.]

windfall (wind′fâl), *n.* [< *wind*[1] + *fall*[1], *v.*] 1. Something blown down by the wind, as fruit from a tree, or a number of trees in a forest.

When they did spread, and their boughs were become too great for their stem, they became a *windfall* upon the sudden.
Bacon, True Greatness of Kingdoms and Estates (ed. 1887).

She 's nobbut gone int' t' orchard, to see if she can find *wind-falls* enough for t' make a pie or two for t' lads.
Mrs. Gaskell, Sylvia's Lovers, vi.

2. An unexpected piece of good fortune, as an unexpected legacy.

This man, who otherwise beforetime was but poor and needy, by these *windfalls* and unexpected cheats became very wealthy. *Holland*, tr. of Plutarch's Morals, p. 1237.

3. The tract of fallen trees, etc., which shows the path of a tornado.—4. A violent gust of wind rushing from coast-ranges and mountains to the sea.—5. The down-rush of air occurring on the leeward side of a hill or mountain at a distance from its base.

windfall† (wind′fâl), *a.* Windfallen. [Rare.]

You shall have leaves and *windfall* boughs enow,
Near to these woods, to roast your meat withal.
Marlowe and Nashe, Dido, Queen of Carthage, i. 1. 172.

windfallen (wind′fâ″ln), *a.* Blown down by the wind.

To gather *windfall'n* sticks.
Drayton, Polyolbion, xiii. 182.

windfanner (wind′fan″ėr), *n.* Same as *wind-hover*.

wind-fertilized (wind′fėr″ti-līzd), *a.* In *bot.*, fertilized with pollen borne by the wind, as flowers; anemophilous, as conifers, grasses, sedges, etc.

windfish (wind′fish), *n.* The fall-fish, or silver chub, *Semotilus corporalis*, the largest cyprinoid of eastern North America. See *Semotilus*.

wind-flower (wind′flou″ėr), *n.* 1. A plant of the genus *Anemone*, chiefly the wood-anemone, *A. nemorosa*: so called by translation of the classic name of an anemone or other plant anciently associated with the wind. The wind-loving reputation of this plant appears to have been conferred chiefly by the name. The wind-flower is a small herb, found in Europe and northwestern Asia, bearing a whorl of three trifoliate leaves and a single delicate white or outwardly pinkish vernal flower. The American pasque-flower, *Pulsatilla hirsutissima*, bears the name specifically in the western United States.

Bide thou where the poppy blows,
With *wind-flowers* frail and fair.
Bryant, Arctic Lover.

2. The marsh-gentian, *Gentiana Pneumonanthe*. *Treas. of Bot.*

wind-furnace (wind′fėr″nās), *n.* Any form of furnace using the natural draft of a chimney without the aid of a bellows or blower; a natural-draft furnace; a laboratory-furnace provided with a tall chimney.

The crucible is then placed in a *wind-furnace*, and slowly heated as long as fumes escape. *Ure*, Dict., IV. 553.

wind-gage (wind′gāj), *n.* 1. An instrument for ascertaining the velocity and force of wind; an anemometer. See *anemometer*.—2. An apparatus or contrivance for measuring or indicating the amount of the pressure of the wind in the wind-chest of an organ.—3. *Milit.*, a graduated attachment to the sights of a fire-arm or cannon by which allowance can be made, in aiming, for the effect of the wind upon the projectile.

wind-gall[1] (wind′gâl), *n.* [< *wind*[2] + *gall*[2].] Distension of the synovial bursa at the fetlock-joint of the horse, such as may be felt on each side of the tendons behind the joint. Also called *puff*.

His horse, . . . full of *windgalls*, sped with spavins.
Shak., T. of the S., iii. 2. 53.

Neither Spavin, Splinter, nor *Wind-gall*.
Etherege, She Would if She Could, ii. 2.

wind-gall[2] (wind′gâl), *n.* [< *wind*[2] + *gall*[2]; as in *water-gall*, *weather-gall*.] Same as *wind-dog*.

"Wind-dogs," . . . fragments or pieces (as it were) of rainbows (sometimes called *wind-galls*) seen on detached clouds. *Fitz Roy*, Weather Book, p. 23.

wind-galled (wind′gâld), *a.* Having wind-galls.

Did you think I was *Wind-gall'd*? I can sing too, if I please. *Steele*, Tender Husband, iii. 1.

wind-gap (wind′gap), *n.* See *gap*, 2.

wind-gun (wind′gun), *n.* Same as *air-gun*.

Forc'd from *wind-guns*, lead itself can fly,
And pond'rous slugs cut swiftly through the sky.
Pope, Dunciad, i. 181.

wind-hatch (wind′hach), *n.* In *mining*, the opening or place where ore is taken out of the earth.

windhawk (wind′hâk), *n.* The windhover or kestrel.

wind-herb (wind′ėrb), *n.* See *Phlomis*.

wind-house (wind′hous), *n.* A house built partly underground to serve as a shelter or place of refuge in hurricanes.

windhover (wind′huv″ėr), *n.* A kind of hawk, the kestrel, *Falco tinnunculus* or *Tinnunculus alaudarius*: so called from its hovering in the face of the wind. See *kestrel*. Also called *windbibber*, *windcuffer*, *windfanner*, *windhawk*, *windsucker*, *vanner-hawk*, *staniel*, etc.

About as long
As the *wind-hover* hangs in balance.
Tennyson, Aylmer's Field.

windily (win′di-li), *adv.* With high wind; in a way that betokens wind.

The stars were glittering *windily* even before this crimson melted out of the east.
W. C. Russell, Sailor's Sweetheart, iv.

windiness (win′di-nes), *n.* 1. The state of being windy or tempestuous: as, the *windiness* of the weather or season.—2. Flatulence.—3. Tendency to generate wind (gas): as, the *windiness* of vegetables.—4. Tumor; puffiness; vanity; boastfulness.

The swelling *windiness* of much knowledge.
Brerewood's Languages, Pref.

winding[1] (wīn′ding), *p. a.* [Ppr. of *wind*[1], *v.*] 1. Curving; spiral: as, a *winding* stair.

The staires are *winding*, having a stately roofe.
Coryat, Crudities, I. 35.

2. Full of bends or turns: as, a *winding* path.

The ascent [of mount Tabor] is so easy that we rode up the north side by a *winding* road.
Pococke, Description of the East, II. i. 64.

Across the court-yard, into the dark
Of the *winding* pathway in the park,
Curate and lantern disappear.
Longfellow, Baron of St. Castine.

3. Warped; twisted; bent; crooked: as, a *winding* surface.

winding[1] (wīn′ding), *n.* [< ME. *wyndynge*; verbal n. of *wind*[1], *v.*] 1. A turn or turning; a bend; flexure; meander: as, the *windings* of a road or stream.

The degise, endentyng, barrynge, owndynge, palynge, *wyndynge* or bendynge, and semblable wast of clooth in vanitee. *Chaucer*, Parson's Tale.

They [the ways] were wonderfull hard, all stony and full of *windings*. *Coryat*, Crudities, I. 92.

To follow the *windings* of this river.
Addison, Remarks on Italy (Works, ed. Bohn, I. 537).

The *windings* of the marge. *Tennyson*, Edwin Morris.

2. A twist in any surface, so that all its parts do not lie in the same plane; a casting or warping. *Gwilt.*—**Compound winding.** When the field-magnets of a dynamo are fitted with two coils, one of which is placed in circuit with the armature and external leads, while the other is connected across the terminals as a shunt, the dynamo is said to be *compound wound*, and the winding *compound winding*.—**Differential winding.** See *differential*.—**In winding**, warped; out of the straight: applied by joiners to a piece of wood when two of its opposite corners stand higher than the other two.—**Out of winding**, brought to a plane: said of a surface: a workmen's phrase.—**Series winding.** A dynamo is said to be *series wound*, or to have a *series winding*, when its field-magnet coil is joined in series with the armature coil.—**Shunt winding.** When the field-magnet coils of a dynamo are designed for, and connected as, a shunt on the armature coil, the dynamo is said to be *shunt wound*, and the method of winding *shunt winding*.

winding[2] (wīn′ding), *n.* [Verbal n. of *wind*[2], *v.*] A call by the boatswain's whistle.

winding-engine (wīn′ding-en″jin), *n.* Any form of motor employed to turn a drum around which a hoisting-rope is drawn; in a mine, an engine by which the ropes are wound on and unwound from the drums, for raising or lowering the bucket, kibble, or cage on which the mined material is brought to the surface. Also called *drawing-engine* and *hoisting-engine*.

windingly (wīn′ding-li), *adv.* In a winding manner; with curves, bends, or turns.

The stream that creeps
Windingly by it. *Keats*, Endymion, i.

winding-pendant (wīn′ding-pen″dant), *n.* *Naut.*, a pendant hooked at the fore- or main-masthead with its bight secured as far out as necessary on the foreyard or main-yard, and having a heavy tackle, called a *winding-tackle*, depending from its lower end, used for lifting heavy weights.

winding-rope (wīn′ding-rōp), *n.* In *mining*, the rope which connects the cage with the drum of the winding-engine. Formerly the winding-ropes

were of hemp or manila; at the present time steel wire is chiefly used, and both flat and round ropes are employed. In one of the largest Belgian coal-mines, in which the lift is 765 yards, the rope (which tapers toward the bottom) weighs 6 tons.

winding-sheet (wīn'ding-shēt), *n.* 1. A sheet in which a corpse is wrapped.

These arms of mine shall be thy *winding-sheet;*
My heart, sweet boy, shall be thy sepulchre.
Shak., 3 Hen. VI., ii. 5. 114.

2. Solidified drippings of grease from a candle which cling to the side of it and present some resemblance to drapery in its folds and creases. The appearance of this has been fancied to be an omen of death or other misfortune.

He . . . fell asleep on his arms, . . . a long *winding-sheet* in the candle dripping down upon him.
Dickens, Tale of Two Cities, ii. 4.

winding-stairs (wīn'ding-stārz), *n.* A ladder-shell; a scalaria; a wentletrap. See cut under *Scalaria*.

The Dutch call these shells *winding-stairs.*
P. P. Carpenter, Lect. Mollusca, 1861.

winding-sticks (wīn'ding-stiks), *n. pl.* In *joinery*, two short sticks or strips of wood with parallel edges, placed across the two ends of a board to test its freedom from warps or winds.

winding-tackle (wīn'ding-tak″l), *n.* A heavy tackle for use with a winding-pendant.

winding-up (wīn'ding-up'), *n.* The act of one who winds up, in any sense.

It is curious that in the *winding-up* of each of these pieces the same expedient is employed.
Gifford, Int. to Ford's Plays, p. xli.

wind-instrument (wind'in″strö-ment), *n.* A musical instrument the sound of which is produced by a stream of compressed air, usually by the breath. Chief of such instruments is the human voice. Wind-instruments blown by the breath are divided into two classes: *wood wind-instruments*, including the flute, flageolet, oboe, clarinet, bassoon, English horn, etc.; and *brass* or *metal wind-instruments*, including the trumpet, horn, trombone, tuba, ophicleide, etc. Wind-instruments sounded by air mechanically compressed include the pipe-organ and the reed-organ, together with the bagpipe, and, in a certain sense, the Æolian harp. The method of tone-production in all these instruments, except the last, is either the vibration induced in a stream of air by directing it against a sharp edge, as in the flute and flue-pipes in the organ, or the vibration induced in an elastic tongue or reed in or over an orifice through which a stream of air is driven, as in the voice, the clarinet, and the reed-organ. Sometimes both methods are used in the same instrument, as in the pipe-organ.

With a *wind instrument* my master made,
In five days you may breathe ten languages,
As perfect as the devil or himself.
T. Tomkis (?), Albumazar, i. 3.

windlace†, *n.* Same as *windlass*[1].

windlass[1]† (wind'las), *n.* [Early mod. E. also *windlace, windlasse, windlesse, wyndelesse;* perhaps < ME. **windels* (= MLG. *windelse*, a winding, hurdle-work, LG. *windels*, a winding, as the winding of a screw, or the ornamental work on a sword-hilt), < AS. *windan*, etc., turn, wind: see *wind*[1], and cf. *windle*.] 1. A winding or turning; a circuitous course; a circuit.

Hewar that fetteth the *wyndelesse* in huntyng—hveur.
Palsgrave, p. 231.

Amonge theis be appoynted a fewe horsemen to raunge som what abrode for the greater appearance, bidding them fetche a *windlasse* a great waye about, and to make al toward one place. *Golding*, tr. of Cæsar, fol. 206.

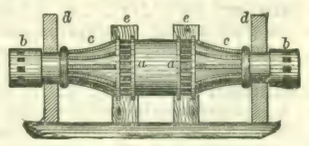
I now fetching a *windlesse*, that I myght better haue a shoote. *Lyly*, Euphues and his England, p. 270.

Hence—2. Any indirect, artful course; circumvention; art and contrivance; subtleties.

Thus do we of wisdom and of reach,
With *windlasses* and with assays of bias,
By indirections find directions out.
Shak., Hamlet, ii. 1. 65.

windlass[1]† (wind'las), *v.* [Early mod. E. also *windlace;* < *windlass*[1], *n.*] I. *intrans.* 1. To take a circuitous path; fetch a compass.

A skilful woodsman by *windlassing* presently gets a shoot which without taking a compass . . . he could never have obtained. *Hammond*, Works, IV. 615. (*Latham.*)



2. To adopt a circuitous, artful, or cunning course; use stratagem; act indirectly or warily.

She is not so much at leasure as to *windlace*, or use craft, to satisfy them. *Hammond*, Works, IV. 566. (*Latham.*)

II. *trans.* To bend; turn about; bewilder.

Your words, my friend! (right healthful caustics!) blame
My young mind marred, whom love doth *windlass* so.
Sir P. Sidney (Arber's Eng. Garner, I. 513).

★**windlass**[2] (wind'las), *n.* [Early mod. E. also *windles;* a corruption of *windas, windass*, by confusion with *windlass*[1].] 1. A modification of the wheel and axle, used for raising weights, etc. One kind of windlass is the winch used for raising water from wells, etc., which has an axle turned by a crank, and a rope or chain for raising the weight by being wound round the axle. A simple form of windlass, much used in ships for raising the anchors or obtaining a purchase on other occasions, consists of a strong beam of wood placed horizontally, and supported at its ends by iron spindles which turn in collars or bushes inserted in what are termed the *windlass-bitts.* This large axle is pierced with holes directed toward its center, in which long levers or handspikes are inserted for turning it round when the anchor is to be weighed or any purchase is required. It is furnished with pawls to prevent it from turning backward when the pressure on the handspikes is intermitted. Different arrangements of gearing are applied to a windlass to exert increased power, and steam-windlasses, in which a small steam-engine is made to heave the windlass round, have come largely into use. Compare *capstan* (with cut), and cut under *winch.*

Windlass.

a, a, ratchet-heads; *b, b*, drumheads; *c, c*, whelps built around a spindle which is journaled in the cheeks *d, d*. The pawls are pivoted in the pawl-bitts *e, e*, and sustain the strain while the handspikes, which rotate the windlass by being placed like spokes in the holes of the drumheads, are being shifted for a new purchase.

2†. A handle by which anything is turned; specifically, a winch-like contrivance for bending the arbalist or crossbow. See *crossbow.*

The arblast was a cross-bow, the *windlace* the machine used in bending that weapon. *Scott*, Ivanhoe, xxviii., note.

Differential or Chinese windlass, a windlass with a barrel differing in diameter in different parts, the rope winding upon the larger and unwinding from the smaller portion. The amount of absolute lift and of the power exerted is determined by the difference in the two diameters of the barrel.—**Spanish windlass** (*naut.*), an extemporized purchase made by winding a rope round a roller and inserting a lever in a hitch or bight of the rope. By heaving round the lever a considerable strain is produced.

windlass[2] (wind'las), *v.* [< *windlass*[2], *n.*] I. *intrans.* To use a windlass; raise something as by a windlass.

Let her [Truth] rest, my dear sir, at the bottom of her well; . . . none of our *windlassing* will ever bring her up. *Miss Edgeworth*, Helen, xiv.

II. *trans.* To hoist or haul by means of a windlass.

The stern line began to draw, and the sloop was *windlassed* clear of the stone pile and saved.
The Century, XXXIX. 226.

windle (win'dl), *n.* [< ME. *windel*, as in comp. *garn-windel*, a wheel on which yarn is wound, < AS. *windel* (= MD. *windel*, a wheel, pulley, roll, cradle, = MLG. *windle*, a roll, etc.), < *windan*, etc., turn, wind: see *wind*[1], and cf. *windlass*[1].] 1. An implement or engine for turning or winding: used in different senses locally.

To force the water . . . with devise of engines and *windles* up to the top of the hill.
Holland, tr. of Pliny, xxxvi. 15.

Speak her fair and canny, or we will have a ravelled hasp on the yarn-*windles*. *Scott*, Pirate, v.

From a *windle* the thread is conducted to the quills.
S. Judd, Margaret, i. 2.

2. The windthrush or redwing, *Turdus iliacus.* See cut 2 under *thrush*[1]. [Devonshire, Eng.] —3. A dry measure, equal to about 3¼ Winchester bushels. The official returns for 1879 showed that it was not then entirely obsolete. It is there stated as 220/58¾ imperial bushels of wheat, 180/50 bushels of barley, or 220/62.857 bushels of beans.

80 *wyndels* of barley . . . £40.
H. Hall, Society in Elizabethan Age, App., i.

windlest†, *n.* An obsolete form of *windlass*[2]. *Cotgrave.*

windless (wind'les), *a.* [< *wind*[2] + *-less.*] 1. Free from or unaffected by wind; calm; unruffled.

A *windless* sea under the moon of midnight. *Ruskin.*

A *windless*, cloudless even. *William Morris*, Sigurd, iii.

2. Wanting wind; out of breath.

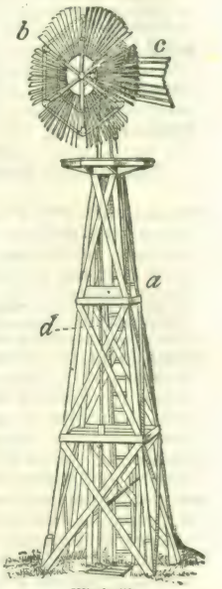
Binding his hands and knitting a handkercher about his eyes, that he should not see, and when they had made him sure and fast, then they laid him on until they were *windless*. *Harman*, Caveat for Cursetors, p. 96.

windlesse†, *n.* An obsolete form of *windlass*[1].

windlestraw (win'dl-strâ), *n.* [Also Sc. *windlestræ;* < AS. *windelstreów*, straw for plaiting, < *windel*, a woven basket, etc., + *streów*, etc., straw: see *windle* and *straw*[1].] 1. The old stalk of various grasses, as the tufted hair-grass, *Deschampsia cæspitosa*, the dog's-tail, *Cynosurus cristatus*, or *Apera Spica-venti.*

Tall spires of *windlestrae*
Threw their thin shadows down the rugged slope.
Shelley, Alastor.

2. The whitethroat, *Sylvia cinerea:* same as *jackstraw*, 5. [Local, Eng.]



windlift† (wind'lift), *n.* [A perversion of *windlass, windlesse*, the second element being made to simulate *lift*[2].] A windlass.

A *Wind-lift* to heave up a gross Scandal.
Roger North, Examen, p. 354.

windling (wind'ling), *n.* [< *wind*[2] + *-ling*[1].] A branch blown down by the wind. [Prov. Eng.]

wind-marker (wind'mär″kėr), *n.* A movable arrow or other device for showing on a chart the direction of the wind at any point.

windmill (wind'mil), *n.* [< ME. *windmille, windmelle, windmulle, windmilne, wyndemylne* = D. *windmolen* = MHG. *windmül*, G. *windmühle;* < *wind*[2] + *mill*[1], *n.*] 1. A mill or machine for grinding, pumping, or other purposes, moved by the wind; a wind-motor; any form of motor for utilizing the pressure of the wind as a motive power. Two types of machines are used, the horizontal and the vertical. The vertical motor consists essentially of a horizontal shaft called the *wind-shaft*, with a combination of sails or vanes fixed at the end of the shaft, and suitable gearing for conveying the motion of the wind-shaft to the pump or other machinery. The older types of windmill used four vanes or sail-frames called *whips*, covered with canvas, arrangements being provided for reefing the sails in high winds. To present the vanes to the wind, the whole structure or tower carrying the windmill was at first turned round by means of a long lever. Later the top of the tower, called the *cap*, was made movable. Windmills are now made with many wooden vanes forming a disk exposed to the winds, and fitted with automatic feathering and steering machinery, governors for regulating the speed, apparatus for closing the vanes in storms, etc. These improved windmills are chiefly of American invention, and are largely used in all parts of

the United States for pumping water. Horizontal windmills employ an upright wind-shaft, and movable vanes placed in a circle round it, the vanes feathering when moving against the wind.

I saugh him carien a *wind-melle*
Under a walshe-note shale.
Chaucer, House of Fame, l. 1280.

2. A visionary scheme; a vain project; a fancy; a chimera.

He lived and died with general councils in his pate, with *windmills* of union to concord Rome and England, England and Rome, Germany with them both.
Bp. Hacket, Abp. Williams, i. 102. (*Davies.*)

To fight windmills, to combat chimeras or imaginary opponents: in allusion to Don Quixote's adventure with the windmills.

windmill-cap (wind'mil-kap), *n.* The movable upper part of a windmill, which turns to present the sails in the direction of the wind. See *windmill.*

windmill-grass (wind'mil-gràs), *n.* A showy grass, *Chloris truncata*, of southeastern Australia: so named apparently from its six to ten long spreading flower-spikes.

windmill-plant (wind'mil-plant), *n.* Same as *telegraph-plant.*

windmilly (wind'mil-i), *a.* [< *windmill* + *-y*[1].] Abounding with windmills. [Rare.]

A *windmilly* country this, though the windmills are so damp and rickety. *Dickens*, Uncommercial Traveller, xxv.

windock†, **winnock** (win′dǫk, win′ǫk), *n.* Same as *window*. [Scotch.]

The foirsaidis — wer diuerss and syndrie tymes callit at the tolbuith *windok*.
Acts James VI. (1581), p. 289. (*Jamieson.*)

Listening the doors and *winnocks* rattle.
Burns, A Winter Night.

windolet†, *n.* A false spelling of *windowlet*.

windore† (win′dōr), *n.* [A perversion of *window*, simulating *door*.] A window.

Nature has made man's breast no *windores*,
To publish what he does within doors.
S. Butler, Hudibras, II. ii. 369.

★**window** (win′dō), *n.* [Early mod. E. *windowe*; < ME. *windowe*, *wyndowe*, *windoge*, *windohe* (the orig. guttural showing in the Sc. *windak*, *windock*, *winnock*), < Icel. *vindauga* (= Norw. *vindauga* = Dan. *vindue* for **vindöje*, the form *vindue* being prob. < Icel.), window, lit. 'wind-eye,' < *vindr*, wind, + *auga*, eye: see *wind*[2] and *eye*[1], *n.* The AS. words were *ágdura*, 'eyedoor,' and *ágthyrl*, 'eyethirl,' i. e. 'eyehole.' The G. word for *window* is *fenster* = Sw. *fönster*, from the L.] 1. An opening in the wall of a building for the admission of light and air. In modern buildings this opening is usually fitted with a frame in which are set movable sashes containing panes of glass or other transparent material, the whole frame with the sashes, etc., also being known as the window. Many windows are not designed to be opened. Glass was employed in windows among the ancient Romans, and came into extensive use among other nations in the course of the eleventh century. See cuts under *batement-light*, *multifoil*, *rose-window*, and *wheel-window*.

C. H. Moore, Gothic Architecture, p. 304.

window-seat (win′dō-sēt), *n.* A seat in the recess of a window.

window-sector (win′dō-sek″tọr), *n.* A bar or plate of metal in the form of a sector of a circle, used to control the movement and position of a window or ventilator in the raised roof of a railway-car. *E. H. Knight.*

window-shade (win′dō-shād), *n.* A contrivance for shutting out or tempering light at a window; a variety of window-blind, usually a piece of holland or similar material, arranged to roll up on a roller, and to cover the window when pulled out.

window-shell (win′dō-shel), *n.* Same as *window-oyster*.

window-shut† (win′dō-shut), *n.* A window-shutter.

When you bar the *window-shuts* of your lady's bed-chamber at nights, leave open the sashes.
Swift, Advice to Servants (Chamber-maid).

window-shutter (win′dō-shut″ėr), *n.* A shutter used to darken or secure a window.

window-sill (win′dō-sil), *n.* The sill of a window. See *sill*[1], 1.

window-stile (win′dō-stīl), *n.* One of the vertical bars in a window-sash.

window-stool (win′dō-stōl), *n.* See *stool*.

windowy† (win′dō-i), *a.* [< *window* + *-y*[1].] Exhibiting intersecting lines or little crossings like those of the sashes of a window.

Poor fish, beset
With strangling snare, or *windowy* net.
Donne, The Bait.

windpipe (wind′pīp), *n.* [Early mod. E. *wyndpype*; < *wind*[2] + *pipe*[1], *n.*] The tube passing from the larynx to the division of the bronchi which conveys the air in respiration to and from the lungs. See *trachea*, and cut under *mouth*.

wind-plant (wind′plant), *n.* The wind-flower, *Anemone nemorosa*. See cut under *anemone*.

wind-pole (wind′pōl), *n.* See the quotation.

Taking, with Dové, north-east and south-west (true) as the *wind-poles*, all intermediate directions are found to be more or less assimilated to the characteristics of those extremes, as they are nearer one or other.
Fitz Roy, Weather Book, p. 173.

wind-pox (wind′poks), *n.* Varicella or chicken-pox.

wind-pressure (wind′presh″ụr), *n.* 1. The pressure of the wind on any object in its path. The pressure of the wind blowing perpendicularly on a flat surface is usually deduced from its velocity by means of the equation $P = kAV^2$. If P is the pressure in pounds, V the velocity in feet per second, A the area of the surface in square feet, then the value of the numerical constant k for ordinary temperatures and barometric pressures is variously given from 0.0015 to 0.0022. — 2. In *organ-building*, the degree of compression in the compressed air in the storage-bellows and the wind-chests.

wind-pump (wind′pump), *n.* A pump moved by wind.

wind-record (wind′rek″ọrd), *n.* A record of wind velocities or directions; especially, a continuous registration made by an anemograph or self-recording anemometer; an anemogram.

windring† (win′dring), *a.* [Possibly a misreading for *winding* or *wandering*.] Winding.

You nymphs, call'd Naiads, of the *windring* brooks.
Shak., Tempest, iv. 1. 128.

wind-rode (wind′rōd), *a.* *Naut.*, riding with head to wind instead of to current. Compare *tide-rode*.

wind-root (wind′rōt), *n.* The pleurisy-root, ★*Asclepias tuberosa*.

wind-rose (wind′rōz), *n.* 1. A table or diagram showing the relative frequency of winds blowing from the different points of the compass, or the relative amount of total wind-movement for each direction; also, a table or diagram showing the connection between the wind-direction and any other meteorological element: thus, a thermal *wind-rose* shows the average temperature prevailing with winds from different directions. — 2. See *rose*[1] and *Rœmeria*.

windrow (wind′rō), *n.* [Also, corruptly, *winrow*; < *wind*[2] + *row*[2], *n.*] 1. A row or line of hay raked together for the purpose of being rolled into cocks or heaps; also, sheaves of corn set up in a row one against another in order that the wind may blow between them. — 2. A row of peats set up for drying; a row of pieces of turf, sod, or sward cut in paring and burning. — 3. Any similar row or formation; an extended heap, as of dust thrown up by the wind.

Each day's dust, before the next day came, was swept into *windrows* or whirled away altogether by intermittent gusts charging up the slope from the valley.
The Century, XXXI. 63.

4. The green border of a field, dug up in order to carry the earth to other land to mend it: so called because laid in rows and exposed to the ★wind. *Ray*, Eng. Words (1691), p. 120.

windrow (wind′rō), *v. t.* [< *windrow*, *n.*] To rake or put into the form of a windrow.

wind-sail (wind′sāl), *n.* 1. A wide tube or funnel of canvas serving to convey a current of fresh air into the lower parts of a ship. — 2. One of the vanes or sails of a windmill. — **To trim a wind-sail**, to turn the opening of the wind-sail toward the wind.

wind-scale (wind′skāl), *n.* See *scale*[3].

wind-seed (wind′sēd), *n.* A plant of the composite genus *Arctotis*.

wind-shaft (wind′shȧft), *n.* See *windmill*, 1.

wind-shake (wind′shāk), *n.* A flaw in the timber of exogenous trees. See *shake*, *n.*, 7, and *anemosis*.

If you come into a shop, and find a bow that is small long, heavy, and strong, lying straight, not winding, not marred with knot gall, *wind-shake*, wem, fret, or pinch, buy that bow of my warrant.
Ascham, Toxophilus (ed. 1864), p. 107.

wind-shaked† (wind′shākt), *a.* Same as *wind-shaken*. [Rare.]

The *wind-shaked* surge, with high and monstrous mane,
Seems to cast water on the burning bear.
Shak., Othello, ii. 1. 13.

wind-shaken (wind′shā″kn), *a.* 1. Driven or agitated by the wind; tottering or trembling in the wind.

He's the rock, the oak not to be *wind-shaken*.
Shak., Cor., v. 2. 117.

2. Impaired by the action of the wind: as, *wind-shaken* timber.

wind-shock (wind′shok), *n.* Same as *wind-shake*.

wind-side (wind′sīd), *n.* The windward side. *Mrs. Browning*.

Windsor bean, chair, Knight, soap. See *bean*[1], 2, *chair*, etc.

wind-spout (wind′spout), *n.* A waterspout, tornado-funnel, or other form of whirlwind.

wind-storm (wind′stôrm), *n.* See *storm*.

windstroke (wind′strōk), *n.* A paralysis of spinal origin in the horse.

windsucker (wind′suk″ėr), *n.* 1. The windhover or kestrel. [Kent, Eng.]

Kistrilles or *windsuckers*, that filling themselves with winde, fly against the wind evermore.
Nashe, Lenten Stuffe (Harl. Misc., VI. 170).

2. A person ready to pounce on any one, or on any blemish or weak point.

There is a certain envious *windsucker*, that hovers up and down, labouriously engrossing all the air with his luxurious ambition, and buzzing into every ear my detraction.
Chapman, Iliad, Pref. to the Reader.

But it would be something too extravagant for the veriest *wind-sucker* among commentators to start a theory that a revision was made of his original work by Marlowe after additions had been made to it by Shakespeare.
Swinburne, Shakespeare, p. 55.

3. A crib-biter.

wind-sucking (wind′suk″ing), *n.* The noise made by a horse in crib-biting.

wind-swift (wind′swift), *a.* Swift as the wind.

Therefore hath the *wind-swift* Cupid wings.
Shak., R. and J., ii. 5. 8.

windthrush (wind′thrush), *n.* The redwing, *Turdus iliacus*. Also called *winnard* and *windle*. See cut 2 under *thrush*[1]. [Prov. Eng.]

wind-tight (wind′tīt), *a.* So tight as to prevent the passage of wind or air.

Cottages . . . *wind-tight* and water-tight.
Bp. Hall, Remains, p. 46. (*Latham.*)

wind-trunk (wind′trungk), *n.* In *organ-building*, a duct which conducts the compressed air from the bellows to a wind-chest. See cut under *organ*.

wind-up (wīnd′up), *n.* [< *wind up*: see *wind*[1].] The conclusion or final adjustment and settlement of any matter, as a speech, business, entertainment, etc.; the closing act; the close.

Very well married, to a gentleman in a great way, near Bristol, who kept two carriages! That was the *wind-up* of the history. *Jane Austen*, Emma, xxii.

I must be . . . careful . . . to . . . have a regular *wind-up* of this business. *Dickens*, Bleak House, xviii.

windward (wind′wärd), *a.* and *n.* [< *wind*[2] + *-ward*.] **I.** *a.* On the side toward the point from which the wind blows: as, *windward* shrouds.

II. *n.* The point from which the wind blows: as, to ply or sail to *windward*.

To *windward*, the pale-green water ran into a whitish sky. *W. C. Russell*, Jack's Courtship, xxii.

To get to the windward of one, to get the advantage of one; get the better of one; take the wind out of one's sails. —**To lay or cast an anchor to windward,** to adopt measures for success or security.

windward (wind′wärd), *adv.* [< *wind*[2] + *-ward*.] Toward the wind: opposed to *leeward*.

wind-way (wind′wā), *n.* 1. In *mining*, a passage for air.—2. In *organ-building*. See *pipe*[1], 2 (*a*).

wind-wheel (wind′hwēl), *n.* A wheel moved by the wind and used as a source of power, as in the windmill, wind-pump, etc.

windy (win′di), *a.* [< ME. *windy*, *windi*, < AS. *windig*, full of wind, < *wind*, wind (see *wind*[2]), + *-y*[1].] 1. Consisting of wind; formed by gales.

What *windy* joy this day had I conceived.
Milton, S. A., l. 1574.

Here's that *windy* applause, that poor transitory pleasure, for which I was dishonoured. *South*.

10. Talkative; boastful; vain. [Colloq.]

Yet after these blustering insolences and *windy* ostentations all this thing is but a man, and that, God knows, a very foolish one. *Rev. T. Adams*, Works, I. 52.

windy-footed (win′di-fût″ed), *a.* Wind-swift; swift-footed. [Rare.]

The *windy-footed* dame. *Chapman*.

★ **wine** (wīn), *n.* [< ME. *win*, *wyn*, < AS. *wīn* = OS. OFries. *wīn* = D. *wijn* = MLG. *wīn* = LG. *wien* = OHG. MHG. *win*, G. *wein*, wine, = Icel. *vín* = Sw. Dan. *vin* = Goth. *wein* = It. Sp. *vino* = Pg. *vinho* = F. *vin* = Slav. OBulg. Serv. *vino* = Bohem. *víno* = Pol. *wino* = Russ. *vino* = OIr. *fín*, Ir. Gael. *fíon*, < L. *vīnum*, wine, collectively grapes, = Gr. *οἶνος*, wine, allied to *οἴνη*, the vine; cf. L. *vitis*, the vine, *vinea*, vine, etc. From the L. *vinum* are also ult. E. *vine*, *vignette*, *vinous*, *vinegar*, *vintage*, *vintner*, etc.] 1. The fermented juice of the grape or fruit of the vine, *Vitis*. See *Vitis*. Wines are distinguished practically by their color, their hardness or softness on the palate, their flavor, and their being still or effervescing. The differences in the quality of wines depend upon differences in the varieties of vine, and quite as much on the differences of the soils in which the vines are planted, in the exposure of the vineyards, in the treatment of the grapes, and in the mode of manufacturing the wines. When the grapes are just fully ripe, the wine is generally most perfect as regards strength and flavor. The leading character of wine, however, must be referred to the alcohol which it contains, and upon which its intoxicating powers principally depend. The amount of alcohol in the stronger ports and sherries as found in the market is from 16 to 25 per cent.; in hock, claret, and other light wines, from 7 per cent. Wine containing more than 13 per cent. of alcohol may be assumed to be fortified with brandy or other spirit. Among the most celebrated ancient wines were those of Lesbos and Chios of the Greeks, and the Falernian and Cecuban of the Romans. Among the principal modern wines are port, sherry, Bordeaux, Burgundy, champagne, Madeira, Rhine, Moselle, Tokay, and Marsala. The principal wine-producing countries are France, Germany, Spain, Portugal, Italy, Austria-Hungary, Greece, Cape Colony, Australia, and the United States.

That mon much merthe con make,
For *wyn* in his hed that wende.
Sir Gawayne and the Green Knight (E. E. T. S.), l. 900.

He [God] causeth the grass to grow for the cattle, and herb for the service of man; that he may bring forth food out of the earth, and *wine* that maketh glad the heart of man. Ps. civ. 14, 15.

Bacchus, that first from out the purple grape
Crush'd the sweet poison of misused *wine*.
Milton, Comus, l. 47.

2. The juice, fermented or unfermented, of certain fruits or plants, prepared in imitation of wine obtained from grapes: as, gooseberry *wine*; raspberry *wine*.

Perhaps you'd like to spend a couple of shillings, or so, in a bottle of currant *wine* by and by?
Dickens, David Copperfield, vi.

3. Figuratively, intoxication produced by the use of wine.

Noah awoke from his *wine*. Gen. ix. 24.

Fled all the boon companions of the Earl,
And left him lying in the public way;
So vanish friendships only made in *wine*.
Tennyson, Geraint.

4. A wine-drinking; a meal or feast of which wine is an important feature; specifically, a wine-party at one of the English universities.

A death's-head at the *wine*. *Tennyson*, Princess, iv.

Wines are an expiring institution at Oxford. Except in the form of semi-public festivities, such as Freshmen's *Wines* or Mods. *Wines*, they hardly survive.
Dickens's Dict. Oxford, p. 128.

5. In *phar.*, a solution of a medicinal substance in wine: as, *wine* of coca; *wine* of colchicum.—6. Same as *wine-glass*: a trade-term.—**Adam's wine.** Same as *Adam's ale* (which see, under *Adam*).—**Antimonial, bastard**†**, burnt wine.** See the adjectives. —**Bitter wine of iron,** citrate of iron and quinine with tincture of sweet orange peel and syrup in sherry.—**China wine,** a name erroneously applied to Chinese samshoo. —**Comet wine.** See *comet*.—**Concrete oil of wine.** Same as *etherin*.—**Cowslip wine.** See *cowslip*.—**Diuretic wine,** a solution of squills, digitalis, juniper, and potassium acetate in white wine.—**Flowers of wine.** See *flower*.—**Gascon wine.** See *Gascon*.—**Gooseberry wine.** See *gooseberry*.—**Green wine,** a technical name for wines during the first year after making.—**Heavy oil of wine.** Same as *ethereal oil* (*a*) (which see, under *ethereal*).—**High wines.** See *high*.—**I a Rose wines,** good claret of the second quality, resembling in flavor Château La Rose, which is produced in the same district.—**Liqueur wine.** See *liqueur*, 1 (*a*).—**Low wine,** in *distillation*, the result of the first run of the still from the fermented liquor or wash. It is about as alcoholic as sherry. —**Oil of wine,** ethereal oil, a reputed anodyne, but used only in the preparation of other compounds.—**Palm wine.** Same as *toddy*, 1.—**Pelusian wine.** See *Pelusian*. —**Quinine wine,** sherry with sulphate of quinine in solution.—**Rhenish wine,** hock, or wine of the Rhine: the old name, now somewhat uncommon except in poetry and fiction. Compare *Rhine wine*.—**Rhine wine,** wine produced on the banks of the Rhine, especially the still white wines of that region: formerly known as *hock*.—**Sops in wine**†. See *sop*.—**Sparkling wine.** See *sparkle*.—**Spirit of wine,** alcohol.—**Steel wine.** Same as *wine of iron*.—**Stronger white wine,** a name used in the formulas of the United States Pharmacopœia to designate sherry.—**Tears of strong wine.** See *tear*[2].—**To drink wine ape**†, to drink so as to act foolishly.

I trowe that ye *dronken* han *wyn ape*,
And that is whan men pleyen with a straw.
Chaucer, Prol. to Manciple's Tale, l. 44.

White wine, wine light in color and transparent. Especially—(*a*) In the British islands, during the eighteenth century and until about 1850, almost exclusively Madeira and sherry. (*b*) More recently in the British islands, and generally in the United States, the much lighter-colored wines of France, as Chablis and Sauterne, and the wines of Germany.—**Wine of citrate of iron,** a solution of ammonioferric citrate with tincture of sweet orange peel and simple syrup in sherry.—**Wine of colchicum-root,** a vinous extract of colchicum-root containing 40 per cent. of the active ingredient of the drug. —**Wine of colchicum-seed,** a vinous extract of colchicum-seeds, containing 15 per cent. of the active ingredient of the drug.—**Wine of iron** (*vinum ferri* of the British Pharmacopœia), sherry with iron tartrate in solution.—**Wine of one ear**†. See *ear*[1].—**Wine of opium,** a solution of two ounces of opium in a pint of sherry, flavored with cinnamon and cloves. Also called *Sydenham's laudanum*.—**Wine of Wales,** metheglin; mead. *S. Dowell*, Taxes in England, IV. 53.—**Wine whey,** a drink made by mixing wine with sweetened milk. The milk being curdled and separated, either by the wine or in some other manner, the flavored whey forms the beverage.—**Wormwood wine.** See *wormwood*.—**Yard of wine.** See *yard of ale*, under *yard*[1]. (See also *ginger-wine*, *rice-wine*.)

wine-bowl (wīn'bōl), *n.* An elaborate drinking-cup, large, and without a stand or stem; a bowl intended for use in drinking wine.

Mazers, or maple *wine-bowls*, were for centuries in common use in England.
A. P. Humphrey, Art Journal, 1883, p. 182.

Winebrennerian (wīn-bre-nē'ri-an), *a.* and *n.* [< *Winebrenner* (see def.) + *-ian*.] I. *a.* Pertaining to Winebrenner or to the Winebrennerians: as, *Winebrennerian* doctrines.

II. *n.* A member of a Baptist denomination called officially the *Church of God*. It was founded in Pennsylvania by John Winebrenner, a clergyman of the German Reformed Church, and was organized in 1829–30. Its distinctive tenet is that feet-washing is "obligatory upon all Christians."

wine-bush (wīn'bůsh), *n.* A bush or sign marking the presence of a wine-shop or tavern.

There stood near to the tomb a very small hut, also thatched, and declared to be a tavern by its *wine-bush*.
J. H. Shorthouse, John Inglesant, xxxvi.

wine-carriage (wīn'kar″āj), *n.* A utensil for holding a single bottle of wine, of basket form, but having wheels allowing it to be rolled smoothly along the table.

wine-cask (wīn'kåsk), *n.* A strong tight cask, made for holding wine for ripening or transportation.

wine-cellar (wīn'sel″ăr), *n.* [< ME. *wyne-celar*; < *wine* + *cellar*.] A cellar, or an inclosed part of a cellar, reserved for the storage of wine. Such a place, when used for claret and other light wines, should have an equable temperature, not too warm. On the other hand, Madeira, port, and similar strong wines, as well as spirits, are supposed to improve by exposure to warmer air. They are often kept in a different cellar, or in an upper story of the house.

Thi *wyne c lar* in colde Septemtrion
Wel derk and ferre from bathes, oste, and stable,
Myddyng, cisterne, and thynges everichoon
That evel smelle.
Palladius, Husbondrie (E. E. T. S.), p. 17.

wine-colored (wīn'kul″ord), *a.* Of the color of red wine; vinaceous.

wine-conner (wīn'kon″ėr), *n.* A wine-taster; an inspector of wines. Compare *ale-conner*.

Tasterin . . . A Broker for Wine-marchants, a *Wine-cunner*. *Cotgrave*.

wine-cooler (wīn'kö″lėr), *n.* A vessel in which bottled wine is immersed in a cool liquid, as in water containing ice, to cool it before it is drunk. Wine-coolers for use at table are generally of a reversed conical form, and of silver, silver-plated ware, or the like.

wine-drunk† (wīn'drungk), *a.* [< ME. *wyn-drunke*; < *wine* + *drunk*.] Drunken with wine; intoxicated.

Ne wurth thu never so wod, ne so *wyn drunke*.
Rel. Antiq., I. 178.

wine-fat (wīn'fat), *n.* [< *wine* + *fat*[2].] The vat or vessel into which the liquor flows from a wine-press. Isa. lxiii. 2.

winefly (wīn'flī), *n.* 1. A small fly, of the genus *Piophila*, which lives in its earlier stages in wine, cider, and other fermented liquors, and even in strong alcohol.—2. Any one of several small flies of the genus *Drosophila*, which breed in decaying fruit, pomace, and marc.

wine-fountain (wīn'foun″tān), *n.* An urn-shaped vessel with cover and faucet: usually a piece of plate, as of silver or of silver-gilt, and characteristic of the eighteenth century.

wine-glass (wīn'glås), *n.* A small drinking-glass for wine. The name is usually given to that size and shape of glass which is especially appropriated to the wine most in use: thus, in some places, the small glass for sherry will bear this name, and the others be called by special names, as *claret-glass* or *champagne-glass*.

wineglassful (wīn'glås-fůl), *n.* As much as a wine-glass can hold; as a conventional measure, two fluidounces.

wine-grower (wīn'grō″ėr), *n.* One who owns or cultivates a vineyard where wine is produced.

wine-growing (wīn'grō″ing), *n.* The cultivation of the grape with a view to the making of wine.

wineless (wīn'les), *a.* [< *wine* + *-less*.] Lacking wine; not using, producing, or containing wine; unaccompanied by wine: as, a *wineless* meal.

A *wineless* weak wine as one may say, that either drinketh flat and hath lost the colour, or else is much delayed with water. *Holland*, tr. of Plutarch, p. 560.

You will be able to pass the rest of your *wineless* life in ease and plenty. *Swift*, To Gay, Nov. 10, 1730.

The well-known fact that *wineless* offerings were made to the Muses. *Amer. Jour. Philol.*, VIII. 3.

wine-marc (wīn'märk), *n.* In *wine-manuf.*, the refuse matter which remains after the juice has been pressed from the fruit. See *marc*[2].

As many [grapes] as have lien among *wine-marc*, or the refuse of kernels and skins remaining after the presse, are hurtfull to the head. *Holland*, tr. of Pliny, xxiii. 1.

wine-measure (wīn'mezh″ūr), *n.* An old English system of measures of capacity differing from beer-measure, the gallon being about five sixths of the gallon of the latter, and containing only 231 cubic inches. It remained in use until the establishment of the imperial gallon in 1825, and its gallon is the standard of the United States. In wine-measure, 1 tun = 2 pipes = 3 puncheons = 4 hogsheads = 6 tierces; one tierce = 42 gallons; one gallon = 2 pottles = 4 quarts = 8 pints. See also *gill* and *gallon*.

wine-merchant (wīn'mėr″chant), *n.* One who deals in wines and other alcoholic beverages, especially at wholesale, or in large quantities.

wine-oil (wīn'oil), *n.* The commercial name for an oil found in a peculiarly rich brandy made from the ferment and stalks left from wine-making. It has a strong flavor of cognac. Also called *cognac-oil* and *huile de marc*.

wine-palm (wīn'päm), *n.* A palm from which palm-wine is obtained; a toddy-palm. See *toddy* and *toddy-palm*. Compare *buriti*.

wine-party (wīn'pär″ti), *n.* A party at which wine is a chief feature; a drinking-party.

There were young men who despised the lads who indulged in the coarse hospitalities of *wine-parties*, who prided themselves in giving recherché little French dinners. *Thackeray*, Book of Snobs, xv.

wine-piercer (wīn'pēr″sėr), *n.* In *her.*, a bearing representing an instrument for tapping casks. It somewhat resembles a gimlet with a heavy handle set crosswise to the shaft.

wine-press (wīn'pres), *n.* A press in which the juice is squeezed from grapes.

I have caused wine to fail from the *wine-presses:* none shall tread with shouting. Jer. xlviii. 33.

wine-room (wīn'röm), *n.* 1. A room in which wine is kept or stored.—2. A room where wine is served to customers; a bar-room.

winery (wī'nėr-i), *n.*; pl. *wineries* (-iz). [< *wine* + *-ery*.] An establishment for making wine.

Several large canneries have been established within ten years. as well as packing establishments for raisins, and *wineries*. *Appleton's Ann. Cyc.*, 1886, p. 186.

wine-sap (wīn'sap), *n.* A highly esteemed American apple.

wine-skin (wīn'skin), *n.* A vessel for holding wine, made of the nearly complete skin of a goat, hog, or other quadruped, with the openings of the legs, neck, etc., secured. Compare *borachio*, *askos*.

No man putteth new wine into old *wine-skins:* . . . but they put new wine into fresh *wine-skins*.
Mark ii. 22 [R. V.].

wine-sops† (wīn'sops), *n. pl.* Same as *sops in wine*. See *sop*.

Bring the Pinckes therewith many Gelliflowres sweete,
And the Cullambynes; let us haue the *Wynesops*.
E. Webbe, Eng. Poetrie (ed. Arber), p. 84.

wine-sour (wīn'sour), *n.* The name of a kind of wild plum.

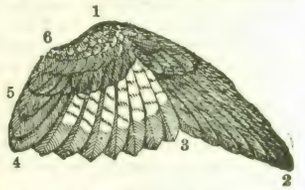
wine-stone (wīn'stōn), *n.* A deposit of crude tartar or argol which settles on the sides and bottoms of wine-casks.

wine-taster (wīn'tās″tėr), *n.* 1. One whose business it is to taste or sample wines.—2. Same as *sampling-tube*. Compare *pipette*, 2.

wine-tree† (wīn'trē), *n.* [< ME. *wintre*, < AS. *wīntreów*, a grape-vine, < *wīn*, wine, + *treów*, tree: see *wine* and *tree*.] A grape-vine.

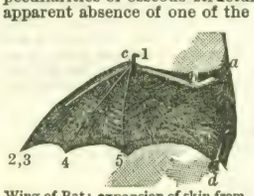
Me drempte, ic stod at a *win-tre*,
That adde waxen buges thre,
Orest it blomede, and sithen bar
The beries ripe, wurth ic war.
Genesis and Exodus (E. E. T. S.), l. 2059.

wine-vault (wīn'vâlt), *n.* 1. A vaulted wine-cellar; hence, any wine-cellar, or place for the storage of wines.—2. Generally in the plural, a place where wine is tasted or drunk: often used as equivalent to *tavern* or "*saloon*."



wine-warrant (wīn'wor″ant), *n.* A warrant to the keeper of a bonded warehouse for the delivery of wine.

winey, *a.* See *winy*.



wineyard†, *n.* [< ME. *wynyard*, *winyord*, *win-geard*, < AS. *wīngeard*, a wineyard, < *wīn*, wine, + *geard*, yard: see *wine* and *yard*[2]. Cf. *vine-yard*.] Same as *vineyard*.

Nimeth & keccheth us, leofman, anon the gunge uoxes. Thet beoth the erest prokunges thet sturieth the *win-geardes*. *Ancren Riwle*, p. 294.

★**wing** (wing), *n.* [Formerly also *weng*; < ME. *winge*, *wenge*, also (with intrusive *h*) *hwinge*, *whenge*, < Icel. *vængr* = Sw. Dan. *vinge*, a wing. The AS. word for 'wing' was *fether*; cf. L. *penna*, Gr. πτερόν, wing, from the same ult. source: see *feather* and *pen*[2].] 1. In *vertebrate zoöl.*, the fore limb, anterior extremity, or appendage of the scapular arch or shoulder-girdle, corresponding to the human arm, fitted in any way for flight or aërial locomotion; or the same limb, however rudimentary or functionless, of a member of a class of animals which ordinarily have this limb fitted for flight. That modification of a limb which makes it a wing occurs in several ways: (*a*) In *ornith.*, by the reduction and consolidation of terminal bones of the fore limb, the reduction of the free carpal bones to two, a peculiar construction and mechanism of the joints, a compaction of the fleshy parts, and an extension of surface by the peculiar tegumentary outgrowths called *feathers*. (See cuts under *Ichthyornis* and *pinion*[1].) Such a limb, in nearly all birds, is serviceable for aërial flight; in a few birds, as dippers, which fly through the air, also for swimming under water; in some, as penguins, only for swimming, in which case the wing is flipper-like or finlike; in some, as the ostrich, it serves only as an aid in running; in some, as the emu, cassowary, and apteryx, it is practically functionless; it appears to have been wanting in the moas; it is a weapon of offense and defense in some birds, as the swan, and others in which it is provided with a horny spur; it is terminated with a claw or claws in some birds. The principal feathers of the wing are the remiges, rowers, or flight-feathers, those which are seated upon the hand being the primaries, those of the forearm secondaries, those of the upper arm tertiaries and scapularies, those of the thumb bastard quills; the smaller feathers, overlying the bases of the remiges, are collectively known as *coverts*. (See cut under *covert*, 6.) The various shapes of birds' wings depend to some extent upon the proportions of the bones, especially those of the pinion (see *Macrochires*), but mainly upon the development of the flight-feathers, and the lengths of these relatively to one another. Among birds which can fly probably no one shape is sharply distinguished from all others; so that the terms in technical use are simply descriptive of size, contour, and the like, as long, short, narrow, broad (or ample), pointed, rounded, vaulted, etc., requiring no further explanation. See names of the sets of feathers used above, and phrases below. (*b*) In *mammal.*, by the enormous extension of bones of the hand and fingers, upon which, and between which and the body and leg, is stretched an extension of integument, the whole limb being lengthened, as well as its terminal segment, and there being other peculiarities of osseous structure and mechanism, as the apparent absence of one of the two bones of the forearm by extreme reduction of the ulna. Such is the condition of the fore limb of bats, or *Chiroptera*, which alone are provided with true wings and capable of true flight; for the so-called wings of various other mammals described as "flying," as the flying-squirrel, flying-phalanger, etc., are more properly parachutes or patagia, and their flight is only a prolonged leap. See cuts under *bat*, *flying-fox*, and *Pteropodidæ*. (*c*) In *herpet.*, by a modification of the fore limb comparable to that of a bat's, but peculiar in the enormous extension of an ulnar digit, the little finger, and its connection with the body by an expansion of the integument, as in the extinct flying reptiles, the pterodactyls. (See cut under *pterodactyl*.) The flying apparatus of certain recent reptiles, as the *Draco volans*, is a parachute, not a true wing. (*d*) In *ichth.*, a mere enlargement of the pectoral fins enables some fishes to sustain a kind of flight; and, as the pectoral fins answer to the fore limbs of higher vertebrates, this case comes under the definition of a wing. See cut under *flying-fish*.

Wing of Bird: feathers of the wing-tract (pteryla alaris). 1, bend of the wing, or carpal angle; 1–2, edge of the wing; 2, wing-tip, at end of longest primary; 1–2–3, the pinion, borne upon the manus, consisting of ten primaries and the primary coverts, together with the alula, or bastard wing; 3, reëntrance of the wing in the middle of the posterior border of wing 2–4; 1–3–4, seven secondaries, overlaid by greater, median, and lesser rows of secondary coverts, the unshaded area forming a speculum; 4–5, three tertiaries (specialized inner secondaries); 6, root of the wing, toward the anatomical shoulder; 6–1, anterior border of the wing.

Wing of Bat: expansion of skin from the body on to elongated digits. *a*, shoulder; *b*, elbow; *c*, wrist; *d*, hind foot; 1, small free hooked thumb; 2, 3, second and third fingers, lying close together; 4, fourth finger; 5, fifth finger.

2. In *entom.*, an expansion of the crust of an insect, sufficing for flight, or a homologous expansion, however modified in form or function, or even functionless so far as aërial locomotion is concerned. Such a formation, though a wing by analogy of function with the wing of a vertebrate, is an entirely different structure, having no homology with the fore limb of a vertebrate. It consists of a fold of integument, supported on a tubular framework of so-called nerves or veins, which may be in communica-

tion with the tracheæ or breathing-organs, and is consequently a respiratory as well as a locomotory organ. Most insects are provided with functionally developed (thoracic) wings, of which there are usually two pairs (mesothoracic and metathoracic); but both may be entirely suppressed, or either pair may be more rudiments (see cuts under *halter*[3] and *Stylops*), or the anterior pair may be converted into a horny case covering the other pair, as in the great order *Coleoptera*, where the anterior pair are converted into *elytra*, and in *Orthoptera*, in which they become *tegmina*. (See *wing-case*.) The form, structure, and disposition of insects' wings are very variable, but quite constant in large groups, and therefore a basis of the division of insects into orders, and of their classification: whence the terms *Coleoptera*, *Neuroptera*, *Lepidoptera*, *Orthoptera*, *Diptera*, *Aptera*, etc. See phrases below, and cuts under *nervure* and *venation*.

Wing of Butterfly: expanse of scaly integument. 1–2, front, costal, or cephalic margin; 2, apex or tip; 2–3, outer, distal, or apical margin; 3, inner or anal angle; 3–4, inner, posterior, or anal margin; 4–1, base. Several nerves or veins appear, separating wing-cells.

3. In other invertebrates, some part resembling or likened to a wing in form or function; an alate formation, as the expanded lip of a strombus.—**4.** An organ resembling the wing of a bird, bat, or insect, with which gods, angels, demons, dragons, and a great variety of fabulous beings, as well as some inanimate objects, are conceived to be provided for the purpose of aërial locomotion or as symbolical of the power of omnipresence.

As far as Boreas claps his brazen *wings*.
Marlowe, Tamburlaine, I., i. 2.

O, welcome, pure-eyed Faith; white-handed Hope,
Thou hovering angel, girt with golden *wings*.
Milton, Comus, l. 214.

5. Loosely or humorously, the fore leg of a quadruped; also, the arm of a human being.

If Scottish men tax our language as improper, and smile at our *wing* of a rabbit, let us laugh at their shoulder of a capon. *Fuller*, Worthies, Norfolk, II. 445.

6. Figuratively, a means of travel, progress, or passage: usually emblematic of speed or elevation, but also used as a symbol of protecting care. See *under one's wing*, below.

Riches . . . make themselves *wings*. Prov. xxiii. 5.

Unto you that fear my name shall the Sun of righteousness arise with healing in his *wings*. Mal. iv. 2.

Thou art so far before
That swiftest *wing* of recompense is slow
To overtake thee. *Shak.*, Macbeth, i. 4. 17.

This quiet sail is as a noiseless *wing*
To waft me from distraction.
Byron, Childe Harold, iii. 85.

7. The act or the manner of flying; flight, literally or figuratively.

From this session interdict
Every fowl of tyrant *wing*,
Save the eagle, feather'd king.
Shak., Phœnix and Turtle, l. 10.

He [Plato] penetrated into the profoundest mysteries of thought, and was not deterred from speculations of boldest flight and longest *wing*. *Jour. Spec. Phil.*, XIX. 52.

8†. Kind; species. Compare *feather*, 4. [Rare.]

Of all the mad rascalls (that are of this *wing*) the Abraham-man is the most phantastick.
Dekker, Belman of London (ed. 1608), sig. C 3.

9. Something resembling or likened to a wing. (*a*) In *anat.*, a part likened to a wing; an ala, or alate part: as, the *wings* of the sphenoid bone. See *ala*, 2, and cut under *sphenoid*. (*b*) That which moves with or receives a wing-like motion from the action of the air, as a fan used to winnow grain, the vane or sail of a windmill, the feather of an arrow, or the sail of a ship. (*c*) In *bot.*, a membranous expansion or thin extension of any kind, such as that of certain capsules, of samaras, etc.; also, one of the two lateral petals of a papilionaceous flower. See *ala*, 1, and *papilionaceous* and *tetrapterous* (cuts). (*d*) In *shipbuilding*, that part of the hold or space between decks which is next the ship's side, more particularly at the quarter; also, the overhang-deck of a steamer before and abaft the paddle-boxes, bounded by a thick plank called the *wing-wale*, which extends from the extremity of the paddle-beam to the ship's side. (*e*) In *arch.*, a part of a building projecting on one side of the central or main part. (*f*) In *fort.*, the longer side of a crown- or horn-work, uniting it to the main work. (*g*) A leaf of a gate, double door, screen, or the like, which may be folded or otherwise moved back. (*h*) The laterally extending part of a plowshare, which cuts the bottom of the furrow. (*i*) In *engin.*: (1) An extension endwise of a dam, sometimes at an angle with the main part. (2) A side dam on a river-shore for the purpose of contracting the channel. (3) A lateral extension of an abutment. See *wing-wall*. *E. H. Knight*. (*j*) One of the sides of the stage of a theater; also, one of the long narrow scenes which fill up the picture on the side of the stage. See cuts under *stage*. (*k*) One of the two outside divisions of an army or fleet in battle-array: usually called the *right wing* and *left wing*, and distinguished from the *center*.

Wings in Plants.
1, the winged stems of *Genista sagittalis*; 2, the winged seed of *Campsis radicans*.

And this nombre of folk is with outen the pryncipalle Hoost, and with outen *Wenges* ordeynd for the Bataylle.
Mandeville, Travels, p. 275.

The Earl of Mar the *right wing* guided.
Battle of Alford (Child's Ballads, VII. 239).

The defence of the artillery was committed to the *left wing*. *Prescott*, Ferd. and Isa., ii. 12.

(*l*) A shoulder-knot, or small epaulet; specifically, a projecting piece of stuff, perhaps only a raised seam or welt, worn in the sixteenth century on the shoulder, at or near the insertion of the sleeve.

I would have mine such a suit without difference, such stuff, such a *wing*, such a sleeve.
B. Jonson, Every Man out of his Humour, iii. 1.

(*m*) A strip of leather or the like attached to the skirt of the runner in a grain-mill to sweep the meal into the spout. (*n*) The side or displayed part of a dash-board. (*o*) A projecting part of a hand-seine on each side of the central part, or bag, serving to collect the fish, and lead them into the bag. (*p*) A thin, broad, projecting piece on a gudgeon, to prevent it from turning in its socket.

10. A flock or company (of plover). *W. W. Greener*, The Gun, p. 533.—**Angle of the wing**, in *ornith.*, the carpal angle; the bend or flexure of the wing. See *shoulder*, *n.*, 5.—**Anterior wings**, in *entom.*, the upper, front, or fore wings, when there are two pairs; the mesothoracic wings, in any case.—**Bastard wing**, in *ornith.*, same as *alula*. See cuts there and under *covert*.—**Bend of the wing.** Same as *angle of the wing*.—**Convoluted, deflexed, dentate, digitate, divergent, erect, falcate wings.** See the adjectives.—**Dragon's wings.** See *dragon*.—**Expanse** or **extent of wing**, in *zoöl.*, wing-spread. See *expanse*, *n.*, 2, and *spread*, *n.*, 12.—**False wing**, in *ornith.*, the bastard wing, alula, or ala spuria. See *alula* (with cut), and cut under *covert*.—**Flexure of the wing.** See *flexure*.—**Folded wings.** See *fold*[1], *v.*, *Diploptera*, *Vespidæ*, and *wasp*, 1.—**Gray-goose wing†**, a feather of a goose as used on an arrow.

Our Englishmen in fight did chuse
The gallant *gray-goose wing*.
True Tale of Robin Hood (Child's Ballads, V. 370).

Inferior margin of a wing, inferior surface of a wing, inferior wings. See *inferior*.—**Inner margin of the wing.** See *inner*.—**Length of wing**, in *ornith.*, the shortest distance from the flexure or carpal angle to the point of the wing or wing-tip.—**Metathoracic wings.** See *metathoracic*.—**On** or **upon the wing.** (*a*) Flying: as, to shoot birds *on the wing*.

The bird
That flutters least is longest *on the wing*.
Cowper, Task, vi. 931.

(*b*) Figuratively, in motion; traveling; active; busy.

I have been, since I saw you in town, pretty much *on the wing*, at Hampton, Twickenham, and elsewhere.
Gray, Letters, I. 369.

(*c*) Taking flight; departing; vanishing.

Your wits are all *upon the wing*, just a-going.
Vanbrugh, Confederacy, iv. 1.

Petiolate wing. See *petiolate*.—**Plane wings.** See *plane*[1].—**Plicate wings.** Same as *folded wings*.—**Point of the wing**, in *ornith.*, the end of the longest primary. See *wing-tip*.—**Posterior margin of the wing.** See *posterior*.—**Posterior wings**, in *entom.*, the under or hinder wings, when there are two pairs; the metathoracic wings, in any case.—**Reversed, spurious, superior wings.** See the adjectives.—**Tail of the wing.** See *tail*[1].—**Tectiform wings**, in *entom.*, roof-shaped wings; wings held sloping like the roof of a house when the insect rests.—**To clip the wings.** See *clip*[2].—**To drop to wing.** See *drop*.—**To make** or **take wing**, to fly; take flight; depart.

Light thickens; and the crow
Makes wing to the rooky wood.
Shak., Macbeth, iii. 2. 51.

It is a fearful thing
To see the human soul *take wing*
In any shape, in any mood.
Byron, Prisoner of Chillon, viii.

Tumid wing. See *tumid*.—**Under one's wing**, under one's protection, care, or patronage: with reference to the sheltering of chickens under the wings of the hen, as in the New Testament use.

Jerusalem, Jerusalem, that sleest prophetis and stonyst hem that ben sent to thee, hou oft wold I gedre togidre thi sonys, as an henne gedreth togidre hir chikenys *vndir hir wengis*, and thou woldist nat? *Wyclif*, Mat. xxiii. 37.

Under wings, in *entom.*, the posterior wings, when there are two pairs, more or less overlaid by the upper wings.—**Unequal wings.** See *unequal*.—**Upper wings**, in *entom.*, the anterior wings, when there are two pairs, or their equivalents, as elytra and tegmina, which overlie the posterior wings wholly or partly.—**Vertical wings**, in *entom.*, wings held upright when the insect rests, as those of a butterfly; erect wings.—**Wing-and-wing**, the condition of a ship sailing before the wind with studding-sails on both sides: said also of fore-and-aft vessels (schooners) when they are sailing with the wind right aft, the foresail boomed out on one side, and the mainsail on the other. Also *goose-winged*.—**Wings conjoined**, in *her.* See *vol*.—**Wings displayed**, in *her.*, having the wings expanded: said of a bird used as a bearing.

★**wing** (wing), *v.* [< *wing*, *n.*] **I.** *trans.* **1.** To equip with wings for flying; specifically, to feather (an arrow).

Marriage Love's object is; at whose bright eyes
He lights his torches, and calls them his skies.
For her he *wings* his shoulders.
B. Jonson, The Barriers.

So the struck eagle, stretch'd upon the plain, . . .
View'd his own feather on the fatal dart,
And *wing'd* the shaft that quiver'd in his heart.
Byron, Eng. Bards and Scotch Reviewers, l. 829.

2. Figuratively, to qualify for flight, elevation, rapid motion, etc.; especially, to lend speed or celerity to.

'Foot, all this is wrong!
This *wings* his pursuit, and will be before me.
I am lost for ever!
Beau. and Fl., Wit at Several Weapons, v. 1.

Ambition *wings* his spirit. *Lust's Dominion*, i. 2.

3. To supply with wings or side parts, divisions, or projections, as an army, a house, etc.; flank.

They thus directed, we will follow
In the main battle, whose puissance on either side
Shall be well *winged* with our chiefest horse.
Shak., Rich. III., v. 3. 300.

Close to the limb of the sun, where the temperature and pressure are highest, the hydrogen is in such a state that the lines of its spectrum are widened and *winged*.
C. A. Young, The Sun, p. 197.

4. To brush or clean with a wing, usually that of a turkey.

Shut in from all the world without,
We sat the clean-*winged* hearth about.
Whittier, Snow-Bound.

5. To bear in flight; transport on or as on wings.

I, an old turtle,
Will *wing* me to some wither'd bough.
Shak., W. T., v. 3. 133.

His arms and eager eyes ejecting flame,
Far *wing'd* before his squadron Tancred came.
Brooke, tr. of Tasso's Jerusalem Delivered, iii.

6. To perform or accomplish by means of wings.

This last and Godlike Act atchiev'd,
To Heav'n she *wing'd* her Flight.
Prior, The Viceroy, st. 44.

From Samos have I *wing'd* my Way.
Congreve, Semele, ii. 1.

He [Rip Van Winkle] looked round, but could see nothing but a crow *winging* its solitary flight across the mountain. *Irving*, Sketch-Book, p. 52.

7. To traverse in flight.

The crows and choughs that *wing* the midway air
Show scarce so gross as beetles. *Shak.*, Lear, iv. 6. 13.

Not man alone, but all that roam the wood,
Or *wing* the sky, or roll along the flood.
Pope, Essay on Man, iii. 120.

8†. To carve, as a quail or other small bird.

Wynge that partryche. *Babees Book* (E. E. T. S.), p. 265.

Good man! him list not spend his idle meals
In quinsing plovers, or in *winging* quails.
Bp. Hall, Satires, IV. ii. 44.

9. To wound or disable in the wing, as a bird; colloquially, to wound (a person) in the arm or shoulder, or some other not vital part.

What are the odds now that he doesn't *wing* me? These green-horns generally hit everything but the man they aim at. *Colman the Younger*, Poor Gentleman, v. 3.

II. *intrans.* To fly; soar; travel on the wing.

We, poor unfledged,
Have never *wing'd* from view o' the nest.
Shak., Cymbeline, iii. 3. 28.

As the bird *wings* and sings,
Let us cry, "All good things
Are ours!" *Browning*, Rabbi Ben Ezra.

wing-band (wing'band), *n.* Same as *wing-bar*.

wing-bar (wing'bär), *n.* A colored bar or band across a bird's wing; technically, such a band formed by the tips of the greater or median wing-coverts, or both of these, and placed between the wing-bow and the wing-bay. Such are found in uncounted different birds. See cut under *solitary*.

wing-bay (wing'bā), *n.* The plumage-marking of a bird formed by the secondary feathers of the wing, when the wing is closed and these feathers differ in color from the rest of the plumage: so called because in the black-breasted red game type of coloring this marking is of a bay color. See *speculum*, 3 (*b*), and first cut under *wing*.

wing-beat (wing'bēt), *n.* A wing-stroke; one completed motion of the wing in the act of flying.

wing-bow (wing'bō), *n.* In poultry, and hence in other birds, the plumage-marking on the shoulder or bend of the wing; distinctive coloration of the lesser coverts collectively: thus, in the black-breasted red gamecock the *wing-bows* are crimson. See cuts under *Agelæus* and *sea-eagle*.

wing-case (wing'kās), *n.* The hard, horny case or cover which overlies the functional wing of

many insects, especially of *Coleoptera;* the elytrum. In hemipterous insects the wing-cases are technically called *hemielytra.* Wing-cases are always the modified fore wings; when these wings are but little modified, as in orthopterous insects, they are called *tegmina.* See cuts under *beetle, chrysalis, clavus, Coleoptera,* and *katydid.* Also *wing-cover.*

wing-cell (wing′sel), *n.* In *entom.*, any one of the spaces between the nerves or veins of the wing. See cuts under *nervure, venation,* and *wing.*—**Didymous, petiolate, radiated wing-cells.** See the adjectives.

wing-compass (wing′kum″pas), *n.* A compass with an arc-shaped piece which passes through the opposite leg, and is clamped by a set-screw.

wing-conch (wing′kongk), *n.* A wing-shell.

wing-cover (wing′kuv″ėr), *n.* In *entom.*, same as *wing-case.*—**Mutilated wing-covers.** See *mutilated.*

wing-covert (wing′kuv″ėrt), *n.* In *ornith.*, any one of the small feathers which overlie or underlie the flight-feathers of the wing; a covert of the wing. See *covert, n.*, 6 (with cut), *tectrices,* and first cut under *wing.*—**Under wing-coverts.** See *under.*

winged (wingd or wing′ed), *a.* [< ME. *winged, wenged;* < *wing* + *-ed*².] **1.** Having or wearing wings, in any sense: as, the *winged* horse (Pegasus); the *winged* god (Mercury); a *winged* (feathered) arrow; a *winged* ship.

Steer hither, steer your *winged* pines,
All beaten mariners. *W. Browne,* Syrens' Song.

There is also a little contemptible *winged* creature, an inhabitant of my aerial element.
I. Walton, Complete Angler, p. 28.

2. In *her.*, having wings. Specifically—(*a*) Noting a bird when the wings are of a different tincture from the body. [Rare.] (*b*) Noting an object not usually having wings: as, a *winged* column.

3. In *bot., anat.,* and *conch.*, alate; alated; having a part resembling or likened to a wing: as, a *winged* shell or bone; a *winged* seed. See cuts under *sphenoid, wing-shell,* and *wing, n.*, 9 (*c*).—**4.** Abounding with wings, and hence with birds; swarming with birds. [Rare.]

The *wing'd* air dark'd with plumes.
Milton, Comus, l. 730.

5. Moving or passing on or as on wings; swift; rapid.

Ther mighte I seen
Wenged wondres faste fleen.
Chaucer, House of Fame, l. 2118.

Come, Tamburlaine! now whet thy *winged* sword.
Marlowe, Tamburlaine, I., ii. 3.

With Fear oppress'd,
In *winged* Words he thus the Queen address'd.
Congreve, Hymn to Venus.

6. Soaring; lofty; elevated; sublime.

How *winged* the sentiment that virtue is to be followed for its own sake, because its essence is divine!
J. S. Harford, Michael Angelo, v.

He [Emerson] looked far away over the heads of his hearers, with a vague kind of expectation, as into some private heaven of invention, and the *winged* period came at last obedient to his spell. *Lowell,* Study Windows, p. 383.

7. Disabled in the wing; having the wing broken.

You will often recover *winged* birds as full of life as before the bone was broken. *Coues,* Key to N. A. Birds, p. 16.

Winged bull, an Assyrian symbol of force and domination, of frequent occurrence in ancient Assyrian architectural sculpture, in which pairs of winged human-headed bulls and lions of colossal size usually guarded the portals of

wing-stopper (wing′stop″ėr), *n.* **1†.** A rope having one end clenched to a cable, and the other to the ship's beam.—**2.** A cable-stopper used in the wings or sides of the hold in old days when rope cables were used.

wing-stroke (wing′strōk), *n.* The stroke or sweep of the wings; a wing-beat.

wing-swift (wing′swift), *a.* Swift of wing; of rapid flight.

wing-tip (wing′tip), *n.* The point of the wing; the apex of the longest primary of a bird's wing. This is often the end of the first primary, which may exceed in length the next one by as much as or by more than the second surpasses the third. The most pointed wings result from this conformation, and the wing is generally the more rounded the further removed the longest primary is from the first one. A sharp yet strong wing results from the greatest length of the second or third primary, supported nearly to its end by those next to it on each side; and, in general, two or three feathers, of nearly or quite equal lengths, compose the wing-tip.

wing-tract (wing′trakt), *n.* In *ornith.*, the pteryla alaris; that special tract or pteryla upon which grow the feathers of the wing, excepting the scapulars (which are situated upon the humeral tract). See *pteryla,* and first cut under *wing.*

wing-transom (wing′tran″sum), *n.* *Naut.*, the uppermost or longest transom in a ship. Also called *main transom.* See cut under *transom.*

wing-wale (wing′wāl), *n.* See *wing, n.*, 9 (*d*).

wing-wall (wing′wâl), *n.* A wall which extends sidewise from an abutment of a bridge or pier, to protect the earth behind and at the side of the abutment and prevent its displacement.

wingy (wing′i), *a.* [< *wing* + *-y*¹.] **1.** Having wings.

The cranes,
In feather'd legions, cut th' ætherial plains; . . .
But, if some rushing storm the journey cross,
The *wingy* leaders all are at a loss.
Rowe, tr. of Lucan, v. 1029.

2. Soaring as on wings; aspiring; lofty.

As for those *wingy* mysteries in divinity, and airy subtleties in religion, which have unhinged the brains of better heads, they never stretched the pia mater of mine.
Sir T. Browne, Religio Medici, i. § 9.

3. Rapid; swift.

With *wingy* speed outstrip the eastern wind.
Addison, tr. of Ovid's Metamorph., ii.

Wink at the footman to leave him without a plate.
Swift.

"Very well, sir," cried the squire, who immediately smoked him, and *winked* on the rest of the company, to prepare us for the sport. *Goldsmith*, Vicar, vii.

I blush to say I've *winked* at him, and he has *winked* at me! *W. S. Gilbert*, Gentle Alice Brown.

6. To twinkle; shine with quick, irregular gleams; flash; sparkle.

Whether the Heav'ns incessant agitation,
Into a Star transforming th' Exhalation,
Kindle the same, like as a coal that *winkt*
On a sticks end (and seemed quite extinct).
Sylvester, tr. of Du Bartas's Weeks, i. 21.

And every Lamp, and every Fire,
Did at the dreadful Sight *wink* and expire.
Cowley, Pindaric Odes, xiv. 13.

O for a beaker full of the warm South,
Full of the true, the blushful Hippocrene,

Eternall Father, at whose *wink*
The wrathfull Ocean's swelling pride doth sink.
Sylvester, tr. of Du Bartas's Weeks, i. 5.

But why wou'd you ne'er give a Friend a *Wink* then?
Wycherley, Country Wife, v. 4.

In an instant my coachman took the *wink* to pursue.
Steele, Spectator, No. 454.

2†. A nap; sleep.

Thenne wakede I of my *wink*, me was wo with alle
That I nedde [had not] sadloker i-slept.
Piers Plowman (A), v. 3.

3. The time required for winking once; a very short space of time; a moment: referring usually to sleep.

We never
Slept *wink* ashore all night, but made sail ever.
Chapman, Odyssey, xvi. 491.

He 's harped them all asleep:
Except it was the king's daughter
Who ae *wink* cou'dna get.

And there I saw mage Merlin, whose vast wit
And hundred *winters* are but as the hands
Of loyal vassals toiling for their liege.
Tennyson, Coming of Arthur.

3. Figuratively, a period analogous to the winter of the year; a season of inertia or suspended activity, or of cheerlessness, dreariness, or adversity.

Now is the *winter* of our discontent
Made glorious summer by this sun of York.
Shak., Rich. III., i. 1. 1.

The *winter* of sorrow best shows
The truth of a friend such as you.
Cowper, Winter Nosegay.

4. The last portion of corn brought home at the end of harvest; or, the state of affairs when all the grain on a farm is reaped and brought under cover; also, the rural feast held in celebration of the ingathering of the crops. [Scotch.]

For now the maiden has been win,
And *Winter* is at last brought in;
And syne they dance and had the kirn.
The Har'st Rig, st. 136. (*Jamieson.*)

II. *a.* Occurring in, characteristic of, or pertaining to winter; wintry.

Youth like summer morn, age like *winter* weather.
Shak., Passionate Pilgrim, l. 159.

On a sudden, lo! the level lake,
And the long glories of the *winter* moon.
Tennyson, Passing of Arthur.

wintle (win'tl), *v. i.*; pret. and pp. *wintled*, ppr. *wintling*. [Var. of *wentle*.] To twist; writhe; roll; reel; stagger. [Scotch.]

Tho' now ye dow but hoyt an' hobble,
An' *wintle* like a saumont-coble.
Burns, Farmer's Salutation to his Auld Mare.

wintle (win'tl), *n.* [< *wintle*, *v.*] A rolling or reeling motion; a stagger. Also, erroneously, *whintle*. [Scotch.]

He by his shouther gae a keek,
And tumbl'd wi' a *whintle*
Out-owre that night.
Burns, Halloween.

Wintrich's change of tone. In *music*, an alteration in pitch of the percussion-note obtained from a cavity upon the opening of the mouth: the note becomes louder, higher, and more tympanitic in character.

wintriness (win'tri-nes), *n.* The character of being wintry: as, the *wintriness* of the climate or the season.

wintrous† (win'trus), *a.* [< *winter*[1] + *-ous*.] Wintry; stormy.

The more *wintrous* the season of the life hath been, look for the fairer summer of pleasures for evermore. *Z. Boyd.*

wintry (win'tri), *a.* [Also *wintery*; < ME. **wintry*, < AS. *wintrig, wintreg* (cf. G. *winterich*); as *winter*[1] + *-y*[1].] **1.** Of or pertaining to winter; occurring in winter; peculiar or appropriate to the cold season of the year; cold and stormy.

Ere the clouds gather, and the *wint'ry* sky
Descends in storms to intercept our passage.
Rowe, Jane Shore, ii.

Great ice-crystals . . . gave the vessel a *wintery* appearance. *C. F. Hall*, Polar Expedition, 1876, p. 415.

2. Figuratively, cool; chilly; frosty.

She could even smile — a faint, sweet, *wintery* smile.
Mrs. Gaskell, Cranford, ii.

winy (wī'ni), *a.* [< *wine* + *-y*[1].] Characteristic of or peculiar to wine; resembling wine; pertaining to or influenced by wine; vinous. Also *winey*.

But, being once well chafed with wine, . . . there was no matter their ears had ever heard of that grew not to be a subject of their *winie* conference.
Sir P. Sidney, Arcadia, ii.

They are much like such Grapes as grow on our Vines, both in shape and colour; and they are of a very pleasant *Winy* taste. *Dampier*, Voyages, I. 392.

winze[1] (winz), *n.* [Prob. < **winze*, *v.*, winnow, Icel. *vinza*, winnow, < *vindr*, wind: see *wind*[2], and cf. *winnow*.] In *mining*, a vertical or inclined excavation which is like a shaft except that it does not rise to the surface. The winze usually connects one level with another, for the purpose of promoting the ventilation of that part of the workings near to which it is. Winzes also, to a certain extent, serve the purpose of mills or passes, since the stoping is often begun from them, and some time must necessarily elapse before a regular mill can be formed in the deads.

winze[2] (winz), *n.* [Ult. identical with *wish*, prob. through D. *verwenschen*, curse, G. *ver-*

wünscht, accursed: see *wish*, *v.*] A curse or imprecation. [Scotch.]

He . . . loot a *winze*, an' drew a stroke,
Till skin in blypes cam haurlin'
Aff 's nieves that night. *Burns*, Halloween.

winze[3] (winz), *n.* A corrupt form of *winch*[1]. *E. H. Knight.*

wipe[1] (wīp), *v.*; pret. and pp. *wiped*, ppr. *wiping*. [< ME. *wipen*, *wypen*, < AS. *wīpian*, wipe, rub, < **wīp*, a wisp of straw (= LG. *wiep*, a wisp of straw, a rag to wipe anything with); cf. *wisp* (a prob. extension of **wip*).] **I.** *trans.* **1.** To rub or stroke with or on something, especially a soft cloth, for cleaning; clean or dry by gently rubbing, as with a towel.

Horn gan his swerd gripe,
And on his arme *wype*.
King Horn (E. E. T. S.), p. 18.

Sche *whypyth* his face with her kerchy.
Coventry Mysteries, p. 318.

The large Fra Angelico in the Academy is as clear and keen as if the good old monk were standing there *wiping* his brushes. *H. James, Jr.*, Trans. Sketches, p. 274.

2. To remove by or as by gently rubbing with or on something, especially a cloth; hence, with *away*, *off*, or *out*, to remove, efface, or obliterate.

God shall *wipe away* all tears from their eyes.
Rev. xxi. 4.

Sword, I will hallow thee for this thy deed, . . .
Ne'er shall this blood be *wiped from* thy point.
Shak., 2 Hen. VI., iv. 10. 74.

Why, then, should I now, now when glorious peace
Triumphs in change of pleasures, be *wip'd off*,
Like a useless moth, from courtly ease?
Ford, Love's Sacrifice, i. 1.

Oh, thou has nam'd a word that *wipes away*
All thoughts revengeful.
Beau. and Fl., Maid's Tragedy, ii. 1.

Yet here hee smoothly seeks to *wipe off* all the envy of his evill Government upon his Substitutes and under Officers. *Milton*, Eikonoklastes, i.

3. Figuratively, to cleanse, as from evil practices or abuses; clear, as of disadvantage or superfluity.

I will *wipe* Jerusalem as a man wipeth a dish.
2 Ki. xxi. 13.

4†. To cheat; defraud; trick.

If they by covin or guile be *wiped* beside their goods, so that no violence be done to their bodies, they ease their anger by abstaining from occupying with that nation until they have made satisfaction.
Sir T. More, Utopia (tr. by Robinson), ii. 10.

We are but quit; you fool us of our moneys
In every cause, in every quiddit *wipe* us.
Fletcher, Spanish Curate, iv. 5.

5†. To stroke or strike gently; tap.

Thenne he toke me by the hande frome the grounde and *wyped* my face with a rose and kyssed me.
Joseph of Arimathie (E. E. T. S.), p. 30.

6. To beat; chastise. [Slang.]—**7.** In *plumbing*, to apply (solder) without the use of a soldering-iron, by allowing the solder to cool into a semi-fluid condition, and then applying it by wiping it over the part to be soldered by the use of a pad of leather or cloth. See *wiping*, 2.—**To wipe another's nose†.** See *nose*[1].—**To wipe the** (or **one's**) **eye.** See *eye*[1].

II. *intrans.* To make strokes with a rubbing or sweeping motion.

He comes full upon it, seated upright, with its back against a tree, *wiping* at the dogs swarming upon it, right and left, with its huge paws.
W. M. Baker, New Timothy, p. 205.

wipe[1] (wīp), *n.* [Early mod. E. also *wype*; < *wipe*[1], *v.*] **1.** The act or process of wiping clean or dry; a sweeping stroke of one thing over another; a rub; a brush.

He often said of himself, with a melancholy *wipe* of his sleeve across his brow, that he "didn't know which-a-way to turn." *George Eliot*, Felix Holt, viii.

2. A quick or hard stroke; a blow, literally or figuratively; a cut: now regarded as slang.

Since you were the first that layde hand to weapon, the fault is not mine if I haue happened to giue you a *wype*.
Guevara, Letters (tr. by Hellowes, 1577), p. 235.

To statesmen would you give a *wipe*,
You print it in Italic type. *Swift*, On Poetry.

3. The mark of a blow or wound; a scar; a brand. [Rare.]

The blemish that will never be forgot;
Worse than a slavish *wipe*, or birth-hour's blot.
Shak., Lucrece, l. 537.

4. Something used in wiping; specifically, a handkerchief. [Slang.]

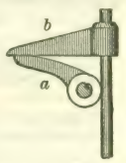
I'm Inspector Field!
And this here warment 's prigged your *wipe*.
Barham, Ingoldsby Legends, II. 355.

"And what have you got, my dear?" said Fagin to Charley Bates. "*Wipes*," replied Master Bates, at the same time producing four pocket-handkerchiefs.
Dickens, Oliver Twist, ix.

5. *pl.* A fence of brushwood. *Halliwell.* [Prov. Eng.]—**6.** Same as *wiper*, 3.

As the cam, which is a revolving wheel with twelve or fourteen projecting teeth or *wipes*, revolves.
W. H. Greenwood, Steel and Iron, p. 308.

wipe[2] (wīp), *n.* Same as *weep*[2].



wiper (wī'pėr), *n.* [< *wipe*[1] + *-er*[1].] **1.** One who or that which wipes.

Another movement [of a soldering-machine] carries the can body across the *wiper*, which removes the superfluous solder. *Sci. Amer.*, N. S., LXIII. 297.

2. That on which anything is wiped, as a hand-towel or a handkerchief.

The *wipers* for their noses. *B. Jonson*, Masque of Owls.

3. In *mach.*, a piece projecting generally from a horizontal axle, for the purpose of raising stampers, pounders, or pistons in a vertical direction and letting them fall by their own weight. Wipers are employed in fulling-mills, stamping-mills, oil-mills, powder-mills, etc. Also *wipe*.—**4.** A steel implement for cleaning the bore of a musket, etc. It has two twisted arms, screws on the end of a ramrod, and carries a piece of cloth or a bunch of tow. The larger wipers for cleaning cannon are attached to a wooden stick, and are termed *worms* or *sponges*. See cut under *gun*.

a, wiper; *b*, toe.

wiper-wheel (wī'pėr-hwēl), *n.* A cam-wheel serving to lift a trip-hammer, a stamp, or the like, allowing it to fall again by its own weight. See *cam*[1].

wiping (wī'ping), *n.* **1.** The act of one who wipes; specifically, a beating; a thrashing; a trimming. [Slang.]

Even in the domestic circle one can have a choice of "a towelling," "a basting," "a clouting," . . . "a trimming," or "a *wiping*," when occasion requires.
N. and Q., 7th ser., VII. 153.

2. In *plumbing:* (*a*) The removal, with a greased cloth, of solder which has been poured upon a joint to heat it before soldering. (*b*) The operation of shaping with a wooden pad a mass of solder applied to form a wiped joint.

wiping-rod (wī'ping-rod), *n.* See *wiper*, 4.

wird†, wirdet, *n.* Obsolete variants of *weird*.

wire[1] (wīr), *n.* and *a.* [< ME. *wir*, *wyr*, < AS. **wīr*, a wire, a spiral ornament of wire, = MLG. *wire*, LG. *wir*, wire; cf. OHG. *wiara*, MHG. *wiere*, fine-drawn gold, gold ornament, = Icel. *vīrr*, wire (cf. Sw. *vire*, wind, twist); cf. Lith. *wela*, iron wire, L. *viriæ*, armlets (see *virole*, *ferrule*).] **I.** *n.* **1.** An extremely elongated body of elastic material; specifically, a slender bar of metal, commonly circular in section, from the size which can be bent by the hand with some difficulty down to a fine thread. Wire was originally made by hammering, a sort of groove in the anvil serving to determine the size. It is now drawn by powerful machinery, and passed through a series of holes constantly diminishing in size. Wire of square section, flat like a tape, etc., is also made.

Fetislich hir fyngres were fretted with golde *wyre*.
Piers Plowman (B), ii. 11.

Wyre. Filum, vel ferrifilum . . . (filum ereum vel ferreum, P.). *Prompt. Parv.*, p. 530.

At what period and among what people the art of working up pure gold, or gilded silver, into a long, round hair-like thread—into what may be correctly called *wire*—began, is quite unknown.
S. K. Handbook Textile Fabrics, p. 22.

2†. A twisted thread; a filament.

Upon a courser, startling as the fyr,
Men mighte turne him with a litel *wyr*,
Sit Eneas, lyk Phebus to devyse.
Chaucer, Good Women, l. 1205.

3. A quantity of wire used for various purposes, especially in electric transmission, as in case of the telephone, the telegraph, electric lighting, etc.; specifically, a telegraph-wire, and hence (colloquially) the telegraph system itself: as, to send orders by *wire*.

It is ridiculous to make love by *wire*.
C. D. Warner, Their Pilgrimage, p. 301.

Faraday's term "electrode," literally a way for electricity to travel along, might be well applied to designate the insulated conductor along which the electric messenger is despatched. It is, however, more commonly and familiarly called "the *wire*" or "the line."
Encyc. Brit., XXIII. 113.

4. A metallic string of a musical instrument; hence, poetically, the instrument itself.

Sound Lydian *wires*, once make a pleasing note
On nectar streams of your sweet airs to float.
Marston, Antonio and Mellida, I., v. 1.

Listening to what unshorn Apollo sings
To the touch of golden *wires*.
Milton, Vacation Exercise, l. 38.

With *wire* and catgut he concludes the day,
Quav'ring and semiquav'ring care away.
Cowper, Progress of Error, l. 126.

5†. The lash; the scourge: alluding to the use of metallic whips.

Thou shalt be whipp'd with *wire*.
Shak., A. and C., ii. 5. 65.

Lol. You may hear what time of day it is, the chimes of Bedlam goes.
Alib. Peace, peace, or the *wire* comes!
Middleton and Rowley, Changeling, i. 2.

6. In *ornith.*, one of the extremely long, slender, wire-like filaments or shafts of the plumage of various birds. See *wired*, *wire-tailed*, and cut under *Videstrelda*.—**7.** *pl.* Figuratively, that by which any organization or body of persons is controlled and directed: now used chiefly in political slang. See *wire-pulling*.

Now, however, there was a vacancy, and they [the politicians] scented their prey afar off. The usual manipulation of the *wires* began, and they were managed with the usual skill. *The Nation*, XVI. 330.

8. A pickpocket with long fingers, expert at picking women's pockets. *Hotten.* [Thieves' slang.]

He was worth 20*l.* a week, he said, as a *wire*—that is, a picker of ladies' pockets.
Mayhew, London Labour and London Poor, I. 410.

9. A fiber of cobweb, a fine platinum wire, or a line upon glass, fixed in the focus of a telescope, to aid in comparing the positions of objects.—**Barbed, beaded, dead wire.** See the adjectives.—**Binding-wire.** See *binding*.—**Compound telegraph-wire,** a wire composed of a steel center surrounded by a copper tube, the object being to obtain the necessary conductivity and strength with less material than is required when iron wire is used.—**Dovetail wire,** a wire having a wedge-shaped section.—**Earth wire.** See *earth-wire*.—**Filling the wire,** in *teleg.*, putting such a number of stations on one wire that it is occupied during the whole day.—**Gold wire,** a wire formed of a core of silver covered with gold. It may be drawn out to the fineness of thread.—**Ground-wire.** Same as *earth-wire*.—**Hollow wire,** in *goldsmithing*, small tubes used for making joints, as in the cases of watches, etc.—**Latten, live, phantom wire.** See the qualifying words.—**Leading-in wire,** the wire which makes connection between a telegraph-line and a telegraph-office.—**Open wires,** in *teleg.*, exposed or overhead bare wires. Also sometimes used for *open circuit*.—**Saddle wire,** a telegraph-wire carried on insulators fixed directly to the tops of the poles.—**Taped wires,** wires covered with tape for insulation or weather-protection.—**Telodynamic wire,** a wire used to transmit force or power, as in giving motion to a machine from a countershaft or from the driving-pulley of an engine.—**To pull** or **work** (the) **wires.** See *wire-pulling*.—**Undertakers' wire,** an insulated wire the use of which was at one time supposed to be authorized by fire-insurance underwriters for electric-lighting purposes. So named because of the defective quality or insulation of this wire and the danger in its use. [Colloq.]—**Wire-covering machine,** a machine for covering wire with a finer wire or with thread.—**Wire of Lapland,** a shining slender material made from the sinews of the reindeer, soaked in water, beaten, and spun into a sort of thread of great strength. These threads are dipped in melted tin, and drawn through a horn with a hole in it. The Laplanders use this wire for embroidering their clothes.—**Wire-twisting machine,** a machine or tool for joining ends of wire, as sections of fencing- or telegraph-wires, etc., by twisting them on each other.—**Woven-wire lathing.** See *lathing*[1].

II. *a.* Made of wire; consisting of or fitted with wires: as, a *wire* sieve; a *wire* bird-cage.

He did him to the *wire*-window,
As fast as he could gang.
Fire of Frendraught (Child's Ballads, VI. 180).

Wire armor. Same as *chain-mail*. See *mail*[1], 3.—**Wire belting,** belts or straps for machinery, made of wire instead of leather.—**Wire bent.** See *bent*[2].—**Wire bridge.** (*a*) Same as *suspension-bridge*. See *bridge*[1] (with cut). (*b*) In *elect.*, a kind of Wheatstone bridge in which two adjacent resistances are formed by a wire which can be divided in any ratio by means of a sliding contact and a graduated scale.—**Wire cables.** See *cable*.—**Wire cartridge,** a cartridge for a shotgun, having the charge of shot inclosed in a network of wire to concentrate the discharge.

Wire cartridges are woven wire receptacles in which shot are mixed with bone dust. *Sportsman's Gazetteer*, p. 568.

Wire cloth. See *cloth*.—**Wire entanglements,** in *fort.* See *entanglement*.—**Wire fence, gauze, guard, gun.** See the nouns.—**Wire mattress.** See *mattress*.—**Wire rope.** See *rope*[1].—**Wire-spring coiling-machine,** a machine for making spiral metal springs.—**Wire stitch.** See *stitch*, 9.—**Wire wheel.** See *wheel*[1].

wire[1] (wīr), *v.*; pret. and pp. *wired*, ppr. *wiring*. [< *wire*[1], *n.*] **I.** *trans.* **1.** To bind, fit, or otherwise provide with wire; put wire in, on, around, through, etc.: as, to *wire* corks in bottling liquors; to *wire* beads; to *wire* a fence; to *wire* a bird-skin, as in taxidermy; to *wire* a house for electric lighting.

As bats at the *wired* window of a dairy,
They beat their vans.
Shelley, Witch of Atlas, xvi.

In 1711 the coats used to be *wired* to make them stick out. *J. Ashton*, Social Life in Reign of Queen Anne, I. 151.

Many of the houses built during the past two years were *wired* when constructed.
Electric Rev. (Amer.), XV. 4.

2. To snare by means of a wire: as, to *wire* a bird.

Donald Caird can *wire* a maukin,
Kens the wiles o' dun-deer staukin'.
Scott, Donald Caird's Come Again.

3. To send through a telegraphic wire; send by telegraph, as a message; telegraph: as, *wire* a reply. [Colloq.]

The coronation of the Emperor of Austria as King of Hungary, the canonization of saints of Rome, were . . . cabled to New York, just as the Washington news is *wired* to the same place. *Athenæum*, No. 2154, p. 207.

4. To be wound or bound about like wire; encircle. [Rare.]

But, as the Vine her lovely Elm doth *wire*,
Grasp both our Hearts, and flame with fresh Desire.
Howell, Letters, I. i. 14.

5. In *surg.*, to maintain the ends of (a fractured bone) in close apposition by means of wire passed through holes drilled in the bone.

II. *intrans.* **1.** To flow in currents as thin as wire. [Rare.]

Then in small streams (through all the isle *wiring*)
Sends it to every part, both heat and life inspiring.
P. Fletcher, Purple Island, iv.

2. To communicate by means of a telegraphic wire; telegraph.

I told her in what way I had learned of her accident and her whereabouts, and I added that I had *wired* to her husband. *D. Christie Murray*, Weaker Vessel, xxxiii.

To wire away. Same as *to wire in*. [Slang.]

Nevertheless, in one fashion or another he "keeps *wiring away*," stopping now and then to listen as well as his throbbing pulses will allow.
Fortnightly Rev., N. S., XLIII. 93.

To wire in, to apply one's self closely and perseveringly to anything; press forward; go ahead. [Slang.]

wire[2] (wīr), *n.* A corruption of *weir*.

wire-bent (wīr'bent), *n.* Same as *mat-grass*, 2.

wire-bird (wīr'bėrd), *n.* A species of plover.

[At St. Helena] are a few Wild Goats, a kind of Rock Pigeon, and a species of Plover called the "*Wire Bird*."
W. W. Greener, The Gun, p. 657.

wire-cutter (wīr'kut″ėr), *n.* A form of nippers with sharp edges or blades, for cutting wire.

wired (wīrd), *a.* [< *wire* + *-ed*[2].] **1.** In *ornith.*, having wires or wiry feathers: chiefly in composition: as, the twelve-*wired* bird of paradise. Compare *wire-tailed*, and see *wire*[1], *n.*, 6, and cuts under *Seleucides*, *thread-tailed*, *Trochilidæ*, and *Videstrelda*.—**2.** In *croquet*, protected or obstructed by an intervening wire.

wire-dancer (wīr'dan″sėr), *n.* One who dances or performs other feats upon a wire stretched at some distance above the ground. Compare *rope-dancer*.

Mr. Maddox, the celebrated *wire-dancer*, . . . had also been engaged as an auxiliary to the same theatre.
Baker, Biographia Dramatica (ed. 1811), I. 127.

wire-dancing (wīr'dan″sing), *n.* The performance or the profession of a wire-dancer.

Wire-dancing, at least so much of it as I have seen exhibited, appears to me to be misnamed; it consists rather of various feats of balancing, the actor sitting, standing, lying, or walking upon the wire, which at the same time is usually swung backwards and forwards.
Strutt, Sports and Pastimes, p. 316.

wiredraw (wīr'drâ), *v.*; pret. *wiredrew*, pp. *wiredrawn*, ppr. *wiredrawing*. **I.** *trans.* **1.** To draw (metal) out into wire; especially, to form into wire, as a metal, by forcibly pulling through a series of holes gradually decreasing in diameter.—**2.** To draw out to greater length; extend in quantity or time; stretch, especially to excess; prolong; protract.

A hungry chirurgeon often produces and *wire-draws* his cure. *Burton*, Anat. of Mel., p. 276.

He never desisted from pulling his Beard till he had *wiredrawn* it down to his Feet.
Maundrell, Aleppo to Jerusalem, p. 42.

3. To draw out into excessive tenuity or subtlety, as a thought, argument, or discourse; spin out, especially by useless refinements, hair-splitting, or the like; render prolix at the expense of force and clearness.

The devil perhaps may want his due if authority be not reviled against, and a long schismatical oration hypocritically stretched out to the rabble of their disobedient and unlicked auditors, who . . . do extol the vapourous matter with a *wire-drawn* speech and louting courtesy.
Tom Nash his Ghost, p. 8.

What they call improvement is generally . . . spinning out their Author's sense till 'tis *wiredrawn;* that is, weak and slender. *Felton*, On the Classicks (ed. 1715), p. 163.

The development of those principles [special pleading] produced such a . . . crop of . . . *wiredrawn* distinctions that the most subtle intellect found it difficult to understand them. *Forsyth*, Hortensius, p. 341.

4. To stretch or strain unwarrantably; wrest; pervert; distort.

You injuriously *Wire-draw* him to Presbyters, and foist in (Seniores and præpositos) which are farre from the clause and matter. *Bp. Hall*, Def. of Humb. Remonst., § 8.

Nor am I for forcing, or *wiredrawing* the sense of the text so as to make it designedly foretell the King's death.
South, Sermons, V. ii.

I have been wrongfully accused, and my sense been *wiredrawn* into blasphemy. *Dryden.*

5. To beguile; cheat.

To *Wire draw*, . . . to decoy a Man, or get somewhat out of him. *Bailey*, 1731.

6. In the steam-engine, to reduce the area through which the steam may flow, thus materially reducing its pressure after the passage through the constricted opening.

II. *intrans.* To follow the profession, practice, or methods of a wiredrawer; especially, to use unwarrantable methods; pervert; cheat.

I purchas'd, wrung, and *wire-draw'd* for my wealth,
Lost, and was cozen'd. *Beau. and Fl.*, Scornful Lady, v.

wiredrawer (wīr'drâ″ėr), *n.* [< *wiredraw* + *-er*[1].] **1.** One who or that which draws metal into wire.

Yet they will take upon them to displace a bishop and learned divines, and place in their room weavers and *wire-drawers*. *Tom Nash his Ghost*, p. 9.

Then again they [wires] are nealed the third time, . . . and delivered to the small *Wire Drawers*.
Ray, Eng. Words (ed. 1691), p. 195.

2. Figuratively, one who spins out unduly; one who carries a matter into useless subtleties, with or without perversion of meaning.

Either shut me out for a Wrangler, or cast me off for a *Wiredrawer*. *Lyly*, Euphues, Anat. of Wit, p. 106.

3. A stingy, grasping person. *Halliwell.*

wiredrawing (wīr'drâ″ing), *n.* [Verbal n. of *wiredraw*, *v.*] **1.** The act or art of extending ductile metals into wire. The metal is first hammered into a bar, and then passed successively through a series of holes in a hardened steel plate, gradually diminishing in diameter until the requisite degree of fineness is attained. Extremely fine gold and platinum wires for the spider-lines of telescope-micrometers are formed by coating the metal with silver, and then drawing it down to a great tenuity through a draw-plate the holes of which are made in a diamond or ruby. The silver is then removed by nitric acid, leaving an almost invisible interior wire, which has been attenuated to a diameter of only $\frac{1}{18000}$ inch.

2. Figuratively, the act of drawing out an argument or a discussion to prolixity and attenuation by useless refinements, distinctions, disquisitions, etc.

The counsel on the other side declared that such twisting, such *wiredrawing*, was never seen in a court of justice. *Macaulay.*

Out of all that rubbish of Arab idolatries, . . . rumours and hypotheses of Greek and Jews, with their idle *wire-drawings*, this wild man of the Desert [Mahomet] . . . had seen into the kernel of the matter.
Carlyle, Hero-Worship, ii.

Wiredrawing-bench, an apparatus for wiredrawing, consisting of a reel on which the wire to be drawn is wound, a draw-plate and stand, and a cone-shaped drum actuated by bevel-gearing.

wire-edge (wīr'ej), *n.* A thin, wire-like edge formed on a cutting-tool by over-sharpening it on one side, which causes the edge to turn over slightly toward the other side.

wire-edged (wīr'ejd), *a.* Having a wire-edge.

The tool to be ground . . . will . . . become *wire-edged*.
Campin, Hand-turning, p. 41.

wire-finder (wīr'fīn″der), *n.* A kind of telephonic detector employed to find the wires belonging to different circuits, etc. It has a magnet between the poles of which the wire is held; near the magnet is a short ear-tube with ferrotype diaphragm; and a pulsating or interrupted current sent through the wire causes the diaphragm to sound.

wire-gage (wīr'gāj), *n.* See *gage*[2].

wire-grass (wīr'gras), *n.* **1.** A species of meadow-grass, *Poa compressa*, native in the Old World, naturalized in North America. It is sometimes mistaken for the Kentucky blue-grass, *Poa pratensis*, but is well distinguished by its shorter leaves and smaller dense panicle, and its flattened wiry culms which are decumbent and less tall. Also called *English blue-grass*.

2. A valued forage grass, *Eleusine Indica*, perhaps native in India, now widely distributed in warm and temperate regions: it is common southward in the United States. It has thick succulent stems with radiating spikes at the summit. Also *crab-grass*, *yard-grass*, and *dog's-tail*.

3. One of various other grasses, as the Bermuda grass, *Capriola Dactylon* (see *grass*), *Sporobolus ejuncidus*, and species of *Aristida* in the southern United States, and *Paspalum filiforme* in the West Indies.

wiregrub (wīr'grub), *n.* A wireworm.

wire-heel (wīr'hēl), *n.* A certain defect and disease in the feet of a horse or other beast.

wireman (wīr'man), *n.*; pl. *wiremen* (-men). A man who puts up and looks after wires, as for the telegraph, telephone, or electric lighting.

Linemen and *wiremen* were in great demand in New York last week. *Elect. Rev.* (Amer.), XVII. 286.

wireway (wīr'wā), *n.* A system of transportation by the agency of traveling or stationary wires. Wireways are used for carrying stone, ores, clay, coal, etc., from mines to docks or railroad stations, or from docks to coal-yards, or from sewage construction-works to docks or dumping-grounds, etc. The most common form is an endless traveling wire rope, supported on posts placed at intervals along the way, or, in some instances, supported only at each end, as in the crossing of rivers or ravines, or the descent of mountain-sides. The more modern system is to use a fixed overhead wire cable on which run sheaves from which the skips or buckets are suspended. Small examples of this system are the cash-carrier systems in stores. In the traveling-wire systems the freight is placed in buckets or skips hung on the wire and traveling along with it. Arrangements are made for automatic loading, starting, stopping, unloading, and switching to branch wires. Some of the traveling-wire lines used in mines are several miles long. In short lines, as in cash-carrier systems, the traveling basket, ball, or car is sometimes moved by raising one end of the wire, when the car rolls down to the cashier's desk. See *telpherage*.

wire-weed (wīr'wēd), *n.* The knot-grass, *Polygonum aviculare*. [Prov. Eng.]

wis[3]†, *v.* A spurious word, arising from a misunderstanding of the Middle English adverb *iwis*, often written *i-wis*, and in Middle English manuscripts *i wis*, *I wis*, whence it has been taken as the pronoun *I* with a verb *wis*, vaguely regarded as connected with *wit* (which has a preterit *wist*). See *iwis*, and, for the real verb, see *wit*[1].

Which book advisedly read, and diligently followed but one year at home in England, would do a young gentleman more good, I *wiss*, than three years' travell abroad.
Ascham, The Scholemaster, p. 65.

Where my morning haunts are he *wisses* not.
Milton, Apology for Smectymnuus.

wisard†, *n.* and *a.* An obsolete spelling of *wizard*.

wisdom (wiz′dum), *n.* [< ME. *wisdom*, *wysdom*, *wisedom*, < AS. *wisdōm*, wisdom (= OS. *wisdōm* = OFries. *wisdōm* = MD. *wijsdom* = OHG. MHG. *wistuom*, wisdom, knowledge, judgment, G. *weisstum*, knowledge, = Icel. *vísdómr* = Sw. Dan. *visdom*, wisdom), < *wis*, wise, + *dōm*, condition: see *wise*[1] and *-dom*.] 1. The property of being wise; the power or faculty of forming the fittest and truest judgment in any matter presented for consideration; a combination of discernment, discretion, and sagacity, or similar qualities and faculties, involving also a certain amount of knowledge, especially the knowledge of men and things gained by experience. It is often used in a sense nearly synonymous with *discretion*, or with *prudence*, but both of these are strictly only particular phases of wisdom. Frequently *wisdom* implies little more than sound and sober common-sense: hence it is often opposed to *folly*.

Than seide thei, be comen assent, thei wolde counseile with Merlyn, that hadde grete *wisedom*.
Merlin (E. E. T. S.), i. 95.

The beste *wysdom* that I Can
ys to doe well & drede no man.
Booke of Precedence (E. E. T. S.), extra ser., i. 68.

That which moveth God to work is goodness, and that which ordereth his work is *wisdom*, and that which perfecteth his work is power. *Hooker.*

If you go on thus, you will kill yourself;
And 'tis not *wisdom* thus to second grief
Against yourself. *Shak.*, Much Ado, v. 1. 2.

When I arraigned the *wisdom* of Providence, I only showed my own ignorance. *Goldsmith*, Asem.

If old age is even a state of suffering, it is a state of superior *wisdom*, in which man avoids all the rash and foolish things he does in his youth.
Sydney Smith, in Lady Holland, vi.

2. Human learning; knowledge of arts and sciences; erudition.

Acts vii. 22.

The Doctors laden with so many badges or cognisances of *wisdom*. *Foxe* (Arber's Eng. Garner, I. 105).

3. With possessive pronouns used as a personification (like "your highness," etc.).

Viola. I saw thee late at the Count Orsino's.
Clown. . . . I think I saw *your wisdom* there.
Shak., T. N., iii. 1. 47.

Do, my good fools, my honest pious coxcombs,
My wary fools too! have I caught *your wisdoms?*
Fletcher, Wife for a Month, iv. 1.

4. A wise saying or act; a wise thing.

They which do eate or drinke, hauyng those *wisdomes* euer in sighte, . . . may sussitate some disputation or reasonynge wherby some part of tyme shall be saued whiche els . . . wolde be idely consumed.
Sir T. Elyot, The Governour, ii. 3.

One of her many *wisdoms*. *Mrs. H. Jackson*, Ramona, i.

5. Skill; skilfulness.

And I have filled him with the spirit of God, in *wisdom*, and in understanding, and in knowledge, and in all manner of workmanship. Ex. xxxi. 3.

[In Scripture the word is sometimes specifically used, especially in Paul's Epistles, in an opprobrious sense to designate the theosophical speculations (1 Cor. i. 19, 20) or rhetorical arts (1 Cor. ii. 5) current among the Greeks and Romans in the first century; sometimes in a good sense to designate spiritual perception of, accompanied with obedience to, the divine law (Prov. iii. 13; Acts vi. 3). Sometimes (as in Prov. viii.) it has personal attributes assigned to it.]

Book of Wisdom of Jesus. See *Ecclesiasticus*.—**Book of Wisdom of Solomon**, one of the deuterocanonical books of the Old Testament. (See *deuterocanonical* and *Apocrypha*.) Tradition ascribes its authorship to Solomon; but by most modern Protestant theologians it is attributed to an Alexandrian Jew of the first or second century B. C. The shorter title *Wisdom*, or *Book of Wisdom*, is commonly applied to this book, but not to Ecclesiasticus. Abbreviated *Wisd.*—**Salt of wisdom.** Same as *sal alembroth* (which see, under *sal*[1]).—**Syn. 1.** *Knowledge*, *Prudence*, *Wisdom*, *Discretion*, *Providence*, *Forecast*, *Provision*. *Knowledge* has several steps, as the perception of facts, the accumulation of facts, and familiarity by experience, but it does not include action, nor the power of judging what is best in ends to be pursued or in means for attaining those ends. *Prudence* is sometimes the power of judging what are the best means for attaining desired ends; it may be a word or action, or it may be simply the power to avoid danger. It implies deliberation and care, whether in acting or refraining from action. *Wisdom* chooses not only the best means but also the best ends; it is thus far higher than *prudence*, which may by choosing wrong ends go altogether astray; hence also it is often used in the Bible for piety. As compared with *knowledge*, it sees more deeply into the heart of things and more broadly and comprehensively sums up relations, draws conclusions, and acts upon them; hence a man may abound in *knowledge* and be very deficient in *wisdom*, or he may have a practical *wisdom* with a comparatively small stock of *knowledge*. *Discretion* is the power to judge critically what is correct and proper, sometimes without suggesting action, but more often in view of action proposed or possible. Like *prudence* the word implies great caution, and takes for granted that a man will not act contrary to what he knows. *Providence* looks much further ahead than *prudence* or *discretion*, and plans and acts according to what it sees. It may be remarked that *provision*, which is from the same root as *providence* and *prudence*, is primarily a word of action, while they are only secondarily so. *Forecast* is a grave word for looking carefully forward to the consequences of present situations and decisions; it implies, like all these words except *knowledge*, that one will act according to what he can make out of the future. See *cautious*, *astute*, and *genius*.

I *wisdom* dwell with *prudence*, and find out *knowledge* of witty inventions. Prov. viii. 12.

Knowledge and *wisdom*, far from being one,
Have ofttimes no connexion. *Knowledge* dwells
In heads replete with thoughts of other men;
Wisdom in minds attentive to their own.
Knowledge, a rude, unprofitable mass,
The mere materials with which *Wisdom* builds,
Till smooth'd, and squar'd, and fitted to its place,
Does but encumber whom it seems t' enrich.
Knowledge is proud that he has learn'd so much;
Wisdom is humble that he knows no more.
Cowper, Task, vi. 88.

Men of gud *dyscretyowne*
Suld excuse and loue Huchowne,
That cunnand wes in literature.
Wyntown, quoted in Destruction of Troy (E. E. T. S.), [Pref., p. xxv.

This was your *providence*,
Your *wisdom*, to elect this gentleman,
Your excellent *forecast* in the man, your *knowledge!*
Fletcher, Rule a Wife, iii. 1.

Buckle, Essays (Progress of Knowledge), p. 195.

Wisteria, Wistaria (wis-tē'ri-ą, -tā'ri-ą), *n.* [NL., named in honor of Caspar *Wistar*, an American anatomist (1761–1818).] 1. A name given by Nuttall in 1818 to *Kraunhia*, a genus of leguminous plants. It is characterized by having papilionaceous flowers in terminal racemes, with a smooth style and stamens usually completely diadelphous, and by a coriaceous readily dehiscent legume, the last character separating it from the large tropical old world genus *Millettia*. There are 5 species, natives of North America, China, and Japan. They are lofty climbing shrubs with odd-pinnate leaves, entire feather-veined and reticulated leaflets, and small stipules. The handsome purplish flowers form terminal pendent racemes. They are much cultivated in America, commonly under the name *Wistaria;* in England they are often known as *kidney-bean tree*, in Australia as *grape-flower vine*. *Kraunhia Chinensis*, the Chinese, and *K. frutescens*, the American wistaria, are much used in the United States to cover verandas and walls. The latter is a native of swamp-margins from Virginia to Illinois and southward, and develops its flowers at the same time with the leaves, instead of before them, as in *K. Chinensis*. *K. Japonica*, by some thought not a distinct species, is commonly trained in Japan horizontally on trellises over pleasure-seats as an ornamental shade; it sometimes lives more than a century.

2. [*l. c.*] A plant of the genus *Kraunhia*.

wistful (wist'fûl), *a.* [Prob. for **whistful*, based on the older adverb *wistly*, which is prob. for *whistly*. The assumption that *wistful* stands for *wishful* is untenable; for the required change *wishful* > **wisful* > *wistful* could not occur in the mod. E. period, particularly with *wishful* itself remaining in use; but the sense 'longing' appears to have arisen in part from association with *wishful*. It is to be noted that *wistful* in the earliest instance quoted (Browne) does not mean, as some dictionaries give it, merely 'observant' or 'attentive,' and that its later uses are more or less indefinite, indicating that it was orig. a poetical word, based on some other, which other is prob. *wistly* for *whistly* as here assumed.] 1. Silent; hushed; standing in mute attention.

In sullen mutt'rings chid
The artlesse songsters, that their musicke still
Should charme the sweet dale and the *wistfull* hill.
W. Browne, Britannia's Pastorals, ii. 2.

This commanding creature . . . put on such a resignation in her countenance, and bore the whispers of all around the court with such a pretty uneasiness, . . . until she was perfectly confused by meeting something so *wistful* in all she encountered. *Steele*, Spectator, No. 113.

2. Full of thoughts; contemplative; musing; pensive.

Why, Grubbinol, dost thou so *wistful* seem?
There 's sorrow in thy look.
Gay, Shepherd's Week, Friday.

3. Wishful; longing.

Lifting up one of my sashes, [I] cast many a *wistful*, melancholy look towards the sea.
Swift, Gulliver's Travels, ii. 8.

No poet has expressed more vividly than Shelley the *wistful* eagerness of the human spirit to interpret the riddle of the universe. *E. Dowden*, Shelley, I. 75.

wistfully (wist'fûl-i), *adv.* In a wistful manner; pensively; earnestly; longingly; wishfully.

With that, he fell again to pry
Through perspective more *wistfully*.
S. Butler, Hudibras, II. iii. 458.

The captive's miserable solace of gazing *wistfully* upon the world from which he is excluded.
Irving, Sketch-Book, p. 112.

Doubtless there is nothing sinful in gazing *wistfully* at the marvellous providences of God's moral governance, and wishing to understand them.
J. H. Newman, Parochial Sermons, i. 204.

wistfulness (wist'fûl-nes), *n.* The state or property of being wistful.

wistless (wist'les), *a.* [Irreg. < *wist*, known: see *wit*[1]. Cf. *wistful* and *-less*.] Not knowing; ignorant (of); unwitting (of). [Rare.]

Wistless what I did, half from the sheath
Drew its glittering blade. *Southey*, Joan of Arc, i.

wistlyț (wist'li), *adv.* [Prob. for *whistly*, i. e. 'silently,' which sense suits the earliest quotations (cf. "And her eyes on all my motions with a mute observance hung," *Tennyson*, Locksley Hall); the change of *hw* to *w* is very common in England, and may well have been assisted in this instance by association with *wist*, pret. of *wit*, and with *wish;* but to derive *wistly* from either *wist* or *wish* (as if for *wishedly*) is contrary to sound theory and to the actual use of the word. *Wishly* in the "Mir. for Mags.," given as the "same as *wistly*," may be truly *wishly*, < *wish* + *-ly*[2]. The same considerations apply to *wistful*, which appears to stand for **whistful*.] 1. Silently; with mute attention; earnestly.

Robyn behelde our comly kynge
Wystly in the face.
Lytell Geste of Robyn Hode (Child's Ballads, V. 115).

Speaking it, he *wistly* look'd on me;
As who should say, "I would thou wert the man
That would divorce this terror from my heart."
Shak., Rich. II., v. 4. 7.

For I'll go turn my tub against the sun,
And *wistly* mark how higher planets run,
Contemplating their hidden motion.
Marston, Satires, v. 171.

Shak., Pericles, iv. 4. 31.

[The phrase *to wit* is now used chiefly to call attention to some particular, or as introductory to a detailed statement of what has been just before mentioned generally, and is equivalent to 'namely,' 'that is to say': as, there were three present—*to wit*, Mr. Brown, Mr. Green, and Mr Black.

Ius Ciuile was the order and manner in old dayes to forme their plees in lawe, that is *to witt* to cite, aunswere, accuse, proue, denie, alledge, relate, to giue sentence, and to execute. *Guevara*, Letters (tr. by Hellowes, 1577), p. 16.

That which Moses saith, God built a woman, The Talmud interpreteth, He made curles, and he brought her to Adam, *to wit* with leaping and dancing.
Purchas, Pilgrimage, p. 214.]

(*d*) Present participle: *witting*, sometimes *weeting* (erroneously *wotting*). Compare *unwitting*.

Yet are these feet . . .
Swift-winged with desire to get a grave,
As *witting* I no other comfort have.
Shak., 1 Hen. VI., ii. 5. 16.

(*e*) Past participle: *wist*. [Obsolete or archaic.]

For harmes myghten folwen mo than two
If it were *wist*. *Chaucer*, Troilus, i. 615.

The grey border-stone that is *wist*
To dilate and assume a wild shape in the mist.
Mrs. Browning, Lay of the Brown Rosary.

wit[1] (wit), *n.* [< ME. *wit*, *wyt* (pl. *wittes*), < AS. *wit*, knowledge, = OS. **wit* in comp. *fire-wit*, curiosity, = OFries. *wit* = MLG. *wite*, *wete* = OHG. *wizzi*, MHG. *witze*, G. *witz*, knowledge, understanding, wisdom, = Icel. *vit* = Sw. *vett* = Dan. *vid*, wit, knowledge; cf. Goth. *un-wits*, without understanding, foolish, *un-witi*, ignorance, foolishness; from the verb.] 1. Knowledge; wisdom; intelligence; sagacity; judgment; sense.

"It is but a Dido," quod this doctour, "a dysoures tale. Al the *witt* of this worlde and wiȝte mennes strengthe Can nouȝt confourmen a pees bytwene the pope and his enemys." *Piers Plowman* (B), xiii. 172.

Many things here among us have been found by chance, which no *wit* could ever have devised.
Sir T. More, Utopia (tr. by Robinson), i.

Had I but had the *wit* yestreen
That I hae coft the day—
I'd paid my kane seven times to hell
Ere you'd been won away!
The Young Tamlane (Child's Ballads, I. 125).

I have the *wit* to think my master is a kind of a knave.
Shak., T. G. of V., iii. 1. 262.

If a man is honest, it detracts nothing from his merits to say he had the *wit* to see that honesty is the best policy.
E. Dicey, Victor Emmanuel, p. 112.

2. Mind; understanding; intellect; reason; in the plural, the faculties or powers of the mind or intellect; senses: as, to be out of one's *wits*; he has all his *wits* about him.

So my *witte* wex and wanyed til I a fole were,
And somme lakked my lyf allowed it fewe,
And leten me for a lorel. *Piers Plowman* (B), xv. 3.

Who knew the *wit* of the Lord, or who was his counceilour? *Wyclif*, Rom. xi. 34.

Many yong *wittes* be driuen to hate learninge before they know what learninge is.
Ascham, The Scholemaster, p. 19.

His *wits* are not so blunt. *Shak.*, Much Ado, iii. 5. 11.

I am in my *wits*; I am a labouring man,
And we have seldom leisure to run mad.
Fletcher and Rowley, Maid in the Mill, iii. 2.

Sir John Russel also was taken there, but he, feigning himself to be out of his *Wits*, escaped for that Time.
Baker, Chronicles, p. 150.

3†. Knowledge; information.

The Child of Wynd got *wit* of it,
Which filled his heart with woe.
The Laidley Worm of Spindleston-heugh (Child's Ballads, I. 283).

Let neither my father nor mother get *wit*,
But that I'm coming hame.
The Queen's Marie (Child's Ballads, III. 119).

4. Ingenuity; skill.

Your knyf withe alle your *wytte*
Vnto youre sylf bothe clene and sharpe conserve,
That honestly yee mowe your own mete kerve.
Babees Book (E. E. T. S.), p. 6.

What strength cannot do, man's *wit* — being the most forcible engine — hath often effected.
Raleigh (Arber's Eng. Garner, I. 16).

5. Imagination; the imaginative faculty. [Rare.]

Wit in the poet . . . is no other than the faculty of imagination in the writer, which . . . searches over all the memory for the species or ideas of those things which it designs to represent.
Dryden, Annus Mirabilis, To Sir R. Howard.

6. The keen perception and apt expression of those connections between ideas which awaken pleasure and especially amusement. See the quotations and the synonyms.

True *wit* consists in the resemblance of ideas. . . . But every resemblance of ideas is not what we call *wit*, and it must be such an one that gives delight and surprise to the reader. Where the likeness is obvious, it creates no surprise, and is not *wit*. Thus, when a poet tells us that the bosom of his mistress is as white as snow, there is no *wit* in the comparison; but when he adds, with a sigh, it is as cold too, it then grows into *wit*. *Addison*.

Wit lying most in the assemblage of ideas, and putting those together with quickness and variety wherein can be found any resemblance or congruity, thereby to make up pleasant pictures and agreeable visions in the fancy.
Locke, Human Understanding, II. xi. 2.

In *wit*, if by *wit* be meant the power of perceiving analogies between things which appear to have nothing in common, he never had an equal. *Macaulay*, Bacon.

7†. Conceit; idea; thought; design; scheme; plan.

To senden him into som fer contree
Ther as this Jasoun may destroyed be;
This was his *wit*. *Chaucer*, Good Women, l. 1420.

Was 't not a pretty *wit* of mine, master poet, to have had him rode into Puckeridge with a horn before him?
Dekker and Webster, Northward Ho, v. 1.

At one's wit's end. See *end*.—**Kind wit†.** See *kind*[1].—**The five wits**, the five senses; in general, the faculties of the mind. The five wits have been fancifully enumerated as common wit, imagination, fantasy, estimation, memory.

The deedly synnes that been entred into thyn herte by thy *five wittes*. *Chaucer*, Tale of Melibeus.

If thy *wits* run the wild-goose chase, I have done, for thou hast more of the wild-goose in one of thy *wits* than . . . I have in my whole *five*. *Shak.*, R. and J., ii. 4. 77, 78.

Alone and warming his *five wits*,
The white owl in the belfry sits.
Tennyson, The Owl.

To drive to one's wit's end. See *drive*.—**To have one's wits in a creel.** See *creel*.—**To live by one's wits**, to live by temporary shifts or expedients, as one without regular means of living.

Addison sent to beg Gay, who was then *living by his wits* about town, to come to Holland House.
Macaulay, Addison.

=**Syn. 6.** *Wit*, *Humor*. In writers down to the time of Pope *wit* generally meant the serious kind of *wit*.

Serious *wit* is . . . neither more nor less than quick wisdom. *Burnet*.

Look, he's winding up the watch of his *wit*; by and by it will strike. *Shak.*, Tempest, ii. 1. 13.

In more recent use *wit* in the singular generally implies comic *wit*; in that sense it is different from *humor*. One principal difference is that *wit* always lies in some form of words, while *humor* may be expressed by manner, as a smile, a grimace, an attitude. Underlying this is the fact, consistent with the original meaning of the words, that *humor* goes more deeply into the nature of the thought, while *wit* catches pleasing but occult or far-fetched resemblances between things really unlike: a good pun shows *wit*; Irving's "History of New York" is a piece of sustained *humor*, the *humor* lying in the portrayal of character, the nature of the incidents, etc. Again, "*Wit* may, I think, be regarded as a purely intellectual process, while *humor* is a sense of the ridiculous controlled by feeling, and coexistent often with the gentlest and deepest pathos" (*H. Reed*, Lects. on Eng. Lit., xi. 357). Hence *humor* is always kind, while *wit* may be unkind in the extreme: Swift's "Travels of Gulliver" is much too severe a satire to be called a work of *humor*. It is essential to the effect of *wit* that the form in which it is expressed should be brief; *humor* may be heightened in its effect by expansion into full forms of statement, description, etc. *Wit* more often than *humor* depends upon passing circumstances for its effect.

The best and most agreeable specimen of English *humor* (it is *humor* in contrast to *wit*) which belongs to that period is Steele's invention, and Addison's use, of the character of Sir Roger de Coverley. . . . The same species of pure, genial, wise, and healthful *humor* has been sustained in the incomparable "Vicar of Wakefield," and in the writings of our countryman Washington Irving.
H. Reed, Lects. on Eng. Lit., xi. 369.

While *wit* is a purely intellectual thing, into every act of the humorous mind there is an influx of the moral nature; rays, direct or refracted, from the will and the affections, from the disposition and the temperament, enter into all *humor*; and thence it is that *humor* is of a diffusive quality, pervading an entire course of thought; while *wit* — because it has no existence apart from certain logical relations of thought which are definitely assignable, and can be counted even — is always punctually concentrated within the circle of a few words. *De Quincey*.

Dr. Trusler says that *wit* relates to the matter, *humour* to the manner; that our old comedies abounded with *wit*, and our old actors with *humour*; that *humour* always excites laughter but *wit* does not; that a fellow of *humour* will set a whole company in a roar, but that there is a smartness in *wit* which cuts while it pleases. *Wit*, he adds, always implies sense and abilities, while *humour* does not; *humour* is chiefly relished by the vulgar, but education is requisite to comprehend *wit*.
Fleming, Vocab. Philos.

It is no uncommon thing to hear "He has *humour* rather than *wit*." Here the expression commonly means pleasantry; for whoever has *humour* has *wit*, although it does not follow that whoever has *wit* has *humour*. *Humour* is *wit* appertaining to character, and indulges in breadth of drollery rather than in play and brilliancy of point. *Wit* vibrates and spirts; *humour* springs up exuberantly as from a fountain and runs on. In Congreve you wonder what he will say next; in Addison you repose on what is said, listening with assured expectation of something congenial and pertinent. *Landor*.

Small room for Fancy's many chorded lyre,
For *Wit's* bright rockets with their trains of fire.
O. W. Holmes, An After-Dinner Poem.

I am not speaking of the fun of the book [Don Quixote], of which there is plenty and sometimes boisterous enough, but of that deeper and more delicate quality, suggestive of remote analogies and essential incongruities, which alone deserves the name of *humor*. *Lowell*, Don Quixote.

wit[2] (wit), *n.* [Prob. another use, and certainly now regarded as another use, of *wit*[1], *n.*; cf. *spirit*, a person of lively mind or energy, from *spirit*, liveliness, energy; *witness*, a person who has knowledge, from *witness*, knowledge. But *wit* as applied to a person may in part represent, as it may phonetically descend from, the ME. **wit*, *wet*, *wite*, *weote*, < AS. *wita*, *weota*, also *gewita*, a man of knowledge, an adviser, counselor, = OF. *wita*, a witness, = OHG. *wizo*, a witness; lit. 'one who knows,' with formative *a-* (*-an*) of agent, < *witan*, know: see *wit*[1], *v.* This AS. *wita* appears in the historical term *witenagemot*, AS. *witena gemōt*, 'wits' moot, moot of counselors,' a council, parliament.] One who has discernment, reason, or judgment; a person of acute perception; especially, one who detects between associated ideas the finer resemblances or contrasts which give pleasure or enjoyment to the mind, and who gives expression to these for the entertainment of others; often, a person who has a keen perception of the incongruous or ludicrous, and uses it for the amusement and frequently at the expense of others.

By providing that choice *wits* after reasonable time spent in contemplation may at the length either enter into that holy vocation . . . or else give place and suffer others to succeed in their rooms.
Hooker, Eccles. Polity, v. 80.

O, sure I am, the *wits* of former days
To subjects worse have given admiring praise.
Shak., Sonnets, lix.

When I die,
I'll build an almshouse for decayèd *wits*.
Beau. and Fl., Wit at Several Weapons, v. 2.

If you examine the sayings of Charles Lamb, Sydney Smith, and other great *wits*, you will perceive that what amuses you is the sudden perception of some fine resemblance. *J. F. Clarke*, Self-Culture, p. 145.

wit[2] (wit), *v. i.* [< *wit*[2], *n.*] To play the wit; be witty: with an indefinite *it*.

witan (wit'an), *n. pl.* [AS., pl. of *wita* (ME. *wite*, *weote*, *wete*), a man of knowledge, member of a council or parliament: see *wit*[2].] In *Anglo-Saxon hist.*, members of the witenagemot.

As *witan* from every quarter of the land stood about his throne, men realized how the King of Wessex had risen into the King of England.
J. R. Green, Conq. of Eng., p. 215.

Thou art the mightiest voice in England, man;
Thy voice will lead the *Witan*.
Tennyson, Harold, ii. 2.

★**witch**[1] (wich), *n.* [< ME. *witche*, *wicche*, *wichche*, *wiche*, a witch (man or woman), < AS. *wicca*, m., *wicce*, f. (pl. *wiccan* in both genders), a sorcerer or sorceress, a wizard or witch, = Fries. *wikke* = LG. *wikke*, a witch; cf. Icel. *vitki*, m., a witch, wizard, prob. after AS.; prob. a reduction, with shortened vowel and assimilation of consonants (*tg* > *tk* > *kk*, in AS. written *cc*), of AS. *witga*, a syncopated form of *witiga*, *witega*, a seer, prophet, soothsayer, magician (cf. *deóful-witga*, 'devil prophet,' wizard) (= OHG. *wizago*, *wizzago*, a prophet, soothsayer), < **witig*, seeing, a form parallel to *witig* (with short vowel), knowing, *witan*, know, **witan*, see: see *wit*[1], and cf. *witty*. The notion that *witch* is a fem. form is usually accompanied by the notion that the corresponding masc. is *wizard* (the two words forming one of the pairs of masc. and fem. correlatives given in the grammars); but *witch* is historically masc. as well as fem. (being indeed orig., in the AS. form *witga*, only masc.), and *wizard* has no immediate relation to *witch*. Cf. *wiseacre*, ult. < OHG. *wīzago*, and so a doublet of *witch*. Hence ult. (< AS. *wicca*) ME. *wikke*, *wicke*, evil, wicked, and *wikked*, *wicked*, wicked: see *wick*[7] and *wicked*[1]. The change of form (AS. *wicca* < *witga*) is paralleled by a similar change in *orchard* (AS. *orceard* < *orcgeard* < *ortgeard*), and the development of sense ('wicked,' 'witched') is in keeping with the history of other words which have become ultimately associated with popular superstitions—superstition, whether religious or etymological, tending to pervert or distort the forms and meanings of words.] **1.** A person (of either sex) given to the black art; a sorcerer; a conjurer; a wizard; later and more particularly, a woman supposed to have formed a compact with the devil or with evil spirits, and to be able by their aid to operate supernaturally; one who practises sorcery or enchantment; a sorceress.

"Crucifige," quod a cacchepolle. "I warante hym a *witche!*"
Piers Plowman (B), xviii. 46.

There was a man in that citee, whos name was Symount, a *wicche*. Wyclif, Acts viii. 9.

Devil or devil's dam, I'll conjure thee:
Blood will I draw on thee; thou art a *witch*.
Shak., 1 Hen. VI., i. 5. 6.

When a Country-wench cannot get her Butter to come, she says, The *Witch* is in her Churn.
Selden, Table-Talk, p. 82.

2. An old, ugly, and crabbed or malignant woman; a hag; a crone: a term of abuse.

Foul wrinkled *witch*, what makest thou in my sight?
Shak., Rich. III., i. 3. 164.

3. A fascinating woman; a woman, especially a young woman or a girl, possessed of peculiar attractions, whether of beauty or of manners; a bewitching or charming young woman or girl. [Colloq.]—**4.** A charm or spell. [Rare.]

If a man but dally by her feet,
He thinks it straight a *witch* to charm his daughter.
Greene, George-a-Greene, p. 262. (*Davies.*)

5. A petrel: doubtless so called from its incessant flight, often kept up in the dark.—**6.** A water-witch.—**7.** The pole, pole-dab, or craig-fluke, a kind of flatfish.—**Black witch.** Same as *ani* (which see, with cut). *P. H. Gosse.* [Jamaica.]—**The riding of the witch.** See *riding*[1].—**White witch** or **wizard**, a witch or wizard of a beneficent or good-natured disposition.

Sorcerers are too common; cunning men, wizards, and *white-witches*, as they call them, in every village.
Burton, Anat. of Mel., p. 271.

And, like *white witches*, mischievously good.
Dryden, The Medal, l. 62.

Witches' Sabbath. See *Sabbath*. 5.—**Witch of Agnesi**, in *math.*, a plane curve discussed by Donna Maria Gaetana Agnesi, professor of mathematics in the University of Bologna, who died a nun in 1799. It consists of a straight line together with a cubic to which that line is the inflectional asymptote, this cubic having an acnode at infinity in a direction perpendicular to the line. If $x = 0$ is the equation of the line, $(y/c)^2 + 1 = (c/x)$ is that of the cubic. The area of the curve is four times that of the circle having four-pointic contact with the cubic and two-pointic contact with the line. Also called *versiera*.

witch[1] (wich), *v. t.* [< ME. *witchen*, *wicchen*, *wichen*, < AS. *wiccian*, bewitch; cf. D. LG. *wikken* = Icel. *vitka*, soothsay, divine; from the noun. Cf. *bewitch*.] **1.** To bewitch; fascinate; enchant.

Ne schuld he with wicchecraft be *wicched* neuer-more.
William of Palerne (E. E. T. S.), l. 4427.

For she has given me poison in a kiss—
She had it 'twixt her lips—and with her eyes
She *witches* people.
Beau. and Fl., King and No King, iii. 1.

Thou hast *witched* me, rogue.
B. Jonson, Alchemist, ii. 1.

2. To work by charms or witchcraft; effect, cause, or bring by or as by witchcraft.

Did not she *witch* the devil into my son-in-law, when he killed my poor daughter?
Ford and Dekker, Witch of Edmonton, v. 2.

And so in one evening Ellery *witched* himself into the good graces of every one in the simple parsonage; and when Tina at last appeared she found him reigning king of the circle. *H. B. Stowe*, Oldtown, p. 492.

All round, upon the river's slippery edge,
Witching to deeper calm the drowsy tide,
Whispers and leans the breeze-entangling sedge.
Lowell, Indian-Summer Reverie.

witch[2] (wich), *n.* [Also, in comp., *wich*, *wych*, *weech*; < ME. *wiche*, < AS. *wice*, the sorb or service-tree; appar. applied to several trees with pendulous branches, < *wican* (pp. *wicen*), bend, yield: see *weak*. witch-chick (wich'chik), *n.* A swallow: from an old superstition. See *swallow-struck*. Also *witchuck* and *witch-hag*.

witchcraft (wich'kraft), *n.* [< ME. *wicchecraft*, < AS. *wiccecræft*, *wiccræft*, witchcraft, < *wicca*, m., *wicce*, f., witch, + *cræft*, craft: see *witch*[1] and *craft*[1].] **1.** The practices of witches; sorcery; a supernatural power which persons were formerly supposed to obtain by entering into compact with the devil. The belief in witchcraft was common in Europe till the sixteenth century, and maintained its ground with tolerable firmness till the middle of the seventeenth century; indeed it is not altogether extinct even at the present day. Numbers of reputed witches were formerly condemned to be burned. One conspicuous outbreak of popular excitement over supposed demoniacal manifestations took place about 1692 in New England, especially in and near Salem.

There was thane an Enchantour in the Contree, that deled with *Wycche craft*, that men clepten Taknia.
Mandeville, Travels, p. 132.

Now the arrival of Sir William Phips to the government of New-England was at a time when . . . scores of poor people had newly fallen under a prodigious possession of devils, which it was then generally thought had been by *witchcrafts* introduced. *C. Mather*, Mag. Christ., ii. 13.

2. Extraordinary power; irresistible influence; fascination; witchery.

★**witch-elm** (wich'elm), *n.* [Also *wich-elm*, and archaically *wych-elm*; also *weech-elm*; < *witch*[2] + *elm*. In this word and *witch-hazel*, the archaic spelling is much affected in modern use.] An elm, *Ulmus montana*, of hilly districts in western and northern Europe and northern Asia; the common wild elm of Scotland, Ireland, and the northern and western parts of England. It is less tall than the common English elm (*U. campestris*), but is a considerable tree, of picturesque habit, the trunk branching naturally near the base, the leaves broadly ovate. The wood has the fine-grained, tough, and elastic quality of *U. campestris*, and is preferred for bent work, as in boat-building. In southeastern England a variety of the common elm is also called by this name.

The *witch-elm* that shades Saint Fillan's Spring.
Scott, L. of the L., i., Int.

Witch-elms that counterchange the floor
Of this flat lawn with dusk and bright.
Tennyson, In Memoriam, lxxxix.

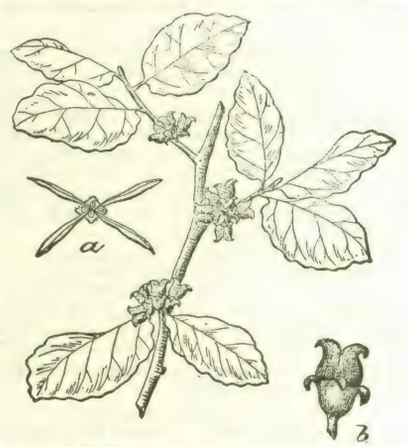
witches'-broom (wich'ez-bröm), *n.* A popular name for the broom-like tufts of branches developed on the silver-fir, birch, cherry, and other trees in consequence of the attacks of certain fungi, especially species of *Peridermium* and *Exoascus*.

witches'-butter, *n.* **1.** An alga. See *Nostoc*, 2. —**2.** A fungus, *Exidia glandulosa*. *Miller.*

witches'-thimble, *n.* See *thimble* and *Silene*.

witchet (wich'et), *n.* [Origin obscure.] A rounding-plane.



witch-finder† (wich'fīn″dėr), *n.* A professional discoverer of witches, whose services were sometimes employed when the persecution of so-called witches was in vogue.

He [Matthew Hopkins] then set up as "*Witch Finder* Generall," and, on the invitation of several towns, made journeys for the discovery of witches through Essex, Suffolk, Norfolk, and Huntingdonshire. . . . Supposed witches were urged to confess, and on the strength of their own confession were hanged.
Dict. Nat. Biog., XXVII. 336.

witch-grass (wich'gras), *n.* **1.** Same as *old-witch grass*.—**2.** The quitch-grass or couch-grass, *Agropyron repens*.

witch-hag (wich'hag), *n.* Same as *witch-chick*.

witch-hazel (wich'hā″zl), *n.* [Also *wich-hazel*, *wych-hazel*; < *witch*[2] + *hazel*. Cf. *witch-elm*.] **1.** The witch- or wych-elm, *Ulmus montana*, its broad leaves resembling those of hazel. [Prov. Eng.]—**2.** A shrub or small tree, *Hamamelis Virginiana*, of eastern North America. It is noticeable for its flowers with four yellow strap-shaped petals, appearing when the leaves are falling, the fruit, which is a woody capsule, ripening the next season. The leaves

Branch with Fruits of Witch-hazel (*Hamamelis Virginiana*). *a*, male flower; *b*, fruit.

are broad and straight-veined, wavy-margined. The leaves and bark of witch-hazel abound in tannin, and the bark affords also a reputed sedative application for various cases of external inflammation. The leaves are said to possess similar properties, and an infusion of them is given internally for bowel-complaints and hemorrhages. While witch-hazel is now much in vogue as a cure for bruises and sprains, as also for various internal difficulties, and is even officinally recognized, its real virtue, if any, is still quite in doubt.

witching (wich'ing), *n.* [< ME. *wicching*, *wicchinge*; verbal n. of *witch*[1], *v.*] The practices of witches; enchantment.

witching (wich'ing), *p. a.* **1.** Bewitching; suited to enchantment or witchcraft; weird.

'Tis now the very *witching* time of night,
When churchyards yawn. *Shak.*, Hamlet, iii. 2. 406.

2. Fascinating; enchanting.

Let neither flattery, nor the *witching* sound
Of high and soft preferment, touch your goodness.
Fletcher (*and another*), False One, iv. 3.

witchingly (wich'ing-li), *adv.* In a bewitching, fascinating, or enchanting manner. *Thomson*, Castle of Indolence, i. 6.

witch-knot (wich'not), *n.* A knot or snarl, especially in the hair, supposed to be caused by witchcraft. Compare *elf*, *v.*, and *elf-lock*.

O, that I were a witch but for her sake!
Yfaith her Queenship little rest should take;
I'd scratch that face, that may not feele the aire,
And knit whole ropes of *witch-knots* in her haire.
Drayton, Poems (ed. 1637), p. 253. (*Halliwell.*)

O wha has loosed the nine *witch-knots*
That were amang that ladye's locks?
Willie's Ladye (Child's Ballads, I. 166).

witch-meal (wich'mēl), *n.* The powdery pollen of the club-moss, *Lycopodium clavatum;* lycopode. It is so rapidly inflammable as to have been used in theaters to represent lightning.

witch-ridden (wich'rid″n), *a.* Ridden by witches; having a nightmare.

witch-seeker (wich'sē″kėr), *n.* Same as *witch-finder*.

witch-stitch (wich'stich), *n.* In *embroidery*, same as *herring-bone stitch* (which see, under *herring-bone*).

witchuck (wich'uk), *n.* Same as *witch-chick*.

witch-wife (wich'wīf), *n.* A woman who practises witchcraft.

In the tenth century we hear of the first instance of a death in England for heresy, in the actual drowning of a *witch-wife* at London Bridge.
J. R. Green, Conq. of Eng., p. 11.

witenagemot (wit'e-na-ge-mōt'), *n.* [AS. *witena gemōt*, 'counselors' moot': *witena*, gen. pl. of *wita*, *weota*, *gewita*, a man of knowledge, a counselor; *gemōt*, moot or meet, assembly, council, parliament: see *wit*[2] and *moot*[1].] In *Anglo-Saxon hist.*, the great national council or parliament, consisting of the king with his dependents and friends and sometimes the members of his family, the ealdormen, the bishops, and other ecclesiastics. This council, which met frequently, constituted the highest court of judicature in the kingdom. It was summoned by the king in any political emergency, and its concurrence was necessary in many important measures, such as the deciding of war, the levying of extraordinary taxes, grants of land in certain cases, election and (in many instances) deposition of kings.

The old Germanic tradition, which associated "the wise men" in all royal action, gave a constitutional ground to the powers which the *Witenagemot* exercised more and more as English society took a more and more aristocratic form; and it thus came to share with the crown in the higher justice, in the imposition of taxes, the making of laws, the conclusion of treaties, the control of war, the disposal of public lands, the appointment of bishops and great officers of state. There were times when it claimed even to elect or depose a king.

wol1, *v.* An obsolete or dialectal form of *will*1.

wol2, *adv.* An obsolete or dialectal form of *well*2.

wold1 (wōld), *n.* [Formerly also *would*; also dial. *old*; < ME. *wold, wald, wæld*, < AS. *weald, wald*, a wood, forest, = OS. OFries. *wald* = D. *woud* = OHG. *wald*, MHG. *walt*, G. *wald*, a wood, forest (> OF. *gaut*, brushwood ?), = Icel. *völlr* (gen. *vallar* for **valdar*), a field, plain; perhaps orig. a hunting-ground, considered as 'a possession,' and so connected with AS. *geweald* (= G. *gewalt* = Icel. *vald*), power, dominion, < *wealdan*, etc., rule, possess: see *wield*. Cf. Gr. ἄλσος (for **Fαλτ-Fος* ?), a grove. Cf. *weald*.] An open tract of country; a down. The wolds of Yorkshire and Lincolnshire are high, rolling districts bare of woods, and very similar, both topographically and geologically, to the downs of the more southern parts of England. The Cotswold Hills, in Gloucestershire, closely resemble the downs of Kent and Sussex and the wolds of Yorkshire and Lincolnshire in every respect except the geological age of the formations by which they are underlain, which, in the case of the Cotswolds, is a calcareous rock of Jurassic, and not of Cretaceous age, as is the case with the other-mentioned wolds and downs.

Who sees not a great difference betwixt . . . the *Wolds* in Lincolnshire and the Fens? *Burton*, Anat. of Mel., p. 259.

Each hill and dale, each deepening glen and *wold*.
Byron, Childe Harold, ii. 88.

The notes of the robin and bluebird
Sounded sweet upon *wold* and in wood.
Longfellow, Evangeline, ii. 4.

The *wolds* [of Yorkshire] constitute properly but one region, sloping from a curved summit, whose extremities touch the sea at Flamborough Head, and the Humber at Ferriby; but this crescent of hills is cut through by one continuous hollow,—the great Wold Valley from Settrington to Bridlington. *Phillips*, Yorkshire, p. 41.

wold2, *n.* See *weld*1.

wold3†, **woldet.** Obsolete forms of *would*. See *will*1.

woldestowt. A Middle English form of *wouldest thou*.

★**wolf** (wụlf), *n.*; pl. *wolves* (wụlvz). [< ME. *wolf, wulf, wlf, wlfe* (pl. *wolves, wulves, wolwes, wulfes*), < AS. *wulf* (pl. *wulfas*) = OS. *wulf* = OFries. *wolf* = D. *wolf* = MLG. 'tearer, render,' < √ *wark*, Skt. √ *vraṣch*, tear, Gr. ἕλκειν, pull. L. *vulpes*, fox, is prob. not connected. *Wolf*, as a complimentary term for a warrior, is a constituent of many E. and G. names, as in *Adolph*, 'noble-wolf,' *Rudolph*, 'glory-wolf,' etc. Cf. *werwolf, lupine*1, *lycanthropy*, etc.] **1.** A digitigrade carnivorous canine quadruped, *Canis lupus*, of the lupine or thoöid series of *Canidæ*; hence, some similar animal. The common wolf of Europe, etc., is yellowish or fulvous-gray, with harsh strong hair, erect pointed ears, and the tail straight or nearly so. The height at the shoulder is from 27 to 29 inches. Wolves are swift of foot, crafty, and rapacious, and destructive enemies to the sheep-cote and farm-yard; they associate in packs to hunt the larger quadrupeds, as the deer, the elk, etc. When hard pressed with hunger these packs not infrequently attack isolated travelers, and have been known even to enter villages and carry off children. In general, however, wolves are cowardly and stealthy, approaching sheepfolds and farm-buildings only at dead of night, making a rapid retreat if in the least disturbed by a dog or a man, and exhibiting great cunning in the avoidance of traps. Wolves are still numerous in some parts of Europe, as France, Hungary, Spain, Turkey, and Russia; they probably ceased to exist in England about the end of the fifteenth century, and in Scotland in the first part of the eighteenth century; the latter date probably marks also the disappearance of wolves in Ireland. The wolves of North America are of several distinct species. One of these is scarcely different from the European, but is generally regarded as a species, under the name of *Canis griseus*. The usual color is a grizzled gray, but it sports in many colors, as reddish and blackish. Most strains of the American wolf are larger and stouter than those of Europe. The gray wolf is also called the *buffalo-wolf*, from its former abundance in the buffalo-range, and *timber-wolf*, as distinguished from the prairie-wolf or coyote, *Canis latrans*, a much smaller and very different animal, which lives chiefly in open country, in burrows in the ground, and in some respects resembles the jackal. (See *coyote*, with cut.) Yet other wolves, of rather numerous species, inhabit most parts of the world; some grade into jackals (see *Thous*), others toward foxes (see *fox-wolf*); and most of them interbreed easily with some varieties of the dog of the countries they respectively inhabit, the dog itself being a composite of a mixed wolf ancestry (see *wolf-dog*, 2).

Common Wolf (*Canis lupus*).

2. A person noted for ravenousness, cruelty, cunning, or the like: used in opprobrium.

Rescued is Orleans from the English *wolves*.
Shak., 1 Hen. VI. (ed. Knight), i. 6. 2.

3. In *entom.*: (*a*) A small naked caterpillar, the larva of *Tinea granella*, the wolf-moth, which infests granaries. (*b*) The larva of a bot-fly; a warble. **4.** A tuberculous excrescence which rapidly eats away the flesh. See *lupus*1, 3.

A tree that cureth the *wolfe* with the shauings of the wood groweth in these parts. *Hakluyt's Voyages*, I. 364.

If God should send a cancer upon thy face, or a *wolf* into thy side, if he should spread a crust of leprosy upon thy skin, what wouldst thou give to be but as now thou art? *Jer. Taylor*, Holy Living, ii. 6.

5. In *music*: (*a*) The harsh discord heard in certain chords of keyboard-instruments, especially the organ, when tuned on some system of unequal temperament. In the mean-tone system, as usually applied, five intervals in each octave were discordant — namely, G♯–E♭, B–E♭, F♯–B♭, C♯–F, and G♯–C. Under the modern system of equal temperament, the wolf is evenly distributed, and so practically unnoticed. (*b*) A chord or interval in which such a discord appears. (*c*) In instruments of the viol class, a discordant or false vibration in a string when stopped at a certain point, usually due to a defect in the structure or adjustment of the instrument. Sometimes called *wolf-note*. **6.** A wooden fence placed across a ditch in the corner of a field, to prevent cattle from straying into another field by means of the ditch. *Halliwell.* [Local, Eng.] **7.** Same as *willow*2. *E. H. Knight.*—**Barking wolf,** the coyote or prairie-wolf of North America, *Canis latrans*. See cut under *coyote*.—**Black wolf,** *Canis ater*, a dark species of wolf, found in southerly parts of the United States.—**Dark as a wolf's mouth** or **throat,** pitch-dark. *Scott.*—**Golden wolf,** the Tibetan wolf, *Canis laniger*. Also called *chanco*.—**Gray wolf.** See def. 1.—**Indian wolf,** a certain Asiatic wolf, *Canis pallipes*, somewhat like a jackal.—**Marine wolf,** in *her.* See *marine*.—**Pied wolf.** See *pied*.—**Red wolf,** a reddish or erythritic variety of the common wolf, found in the United States.—**Strand wolf.** See *strand-wolf*.—**Tasmanian wolf,** a marsupial of Tasmania, the thylacine dasyure, *Thylacinus cynocephalus*: same as *zebra-wolf*. See cut under *thylacine*.—**To cry wolf,** to raise a false alarm: in allusion to the shepherd boy in a well-known fable.—**To have a wolf by the ears,** to have a difficult task.

He found himself so intrigued that it was like *a wolf by the ears*; he could neither hold it nor let it go; and, for certain, it bit him at last.
Roger North, Lord Guilford, II. 2. (*Davies.*)

To have a wolf in the stomach, to eat ravenously. *Halliwell.*—**To keep the wolf from the door,** to keep out hunger or want.—**To see a wolf,** to lose one's voice: in allusion to the belief of the ancients (see Virgil, Ecl. ix.) that if a man saw a wolf before the wolf saw him he lost his voice, at least for a time.

"What! are you mute?" I said—a waggish guest,
"Perhaps she 's *seen a wolf*," rejoin'd in jest.
Fawkes, tr. of Idylliums of Theocritus, xiv.

"Our young companion has *seen a wolf*," said Lady Hameline, alluding to an ancient superstition, "and has lost his tongue in consequence."
Scott, Quentin Durward, xviii.

White wolf, *Canis albus*, a large light species found in northern North America.—**Zebra wolf.** See *zebra-wolf*. (See also *prairie-wolf, timber-wolf*.)

wolf (wụlf), *v.* [< *wolf*, *n.*] **I.** *intrans.* To hunt for wolves.

The stock in trade of a party engaged in *wolfing* consists in flour, bacon, and strychnine, the first two articles named for their own consumption, the last for the wolves.
Sportsman's Gazetteer, p. 13.

II. *trans.* To devour ravenously: as, to *wolf* down food. [Slang.]

wolfberry (wụlf′ber″i), *n.*; pl. *wolfberries* (-iz). A shrub, *Symphoricarpos occidentalis*, of northern North America, in the United States ranging from Michigan and Illinois to the Rocky Mountains. It is sometimes cultivated for ornament, mainly on account of its white berries, which are borne in axillary and terminal spikes.

wolf-dog (wụlf′dog), *n.* **1.** A large stout dog of no particular variety, kept to guard sheep, cattle, etc., and destroy wolves. **2.** A dog bred, or supposed to be bred, between a dog and a wolf. **3.** The Russian wolf-hound, a breed somewhat resembling the deerhound in appearance.

wolf-eel (wụlf′ēl), *n.* A wolf-fish of California, *Anarrhichthys ocellatus*.

Wolfenbüttel fragments. See *fragment*.

wolfer (wụl′fėr), *n.* [< *wolf* + *-er*1.] One who hunts wolves; a professional wolf-killer.

The wild throng of buffalo-hunters, *wolfers*, teamsters, . . . filled the streets. *The Century*, XXXV. 416.

Wolfe's operation for ectropium. See *operation*.

Wolffia (wolf′i-ä), *n.* [NL. (Horkel, 1839), named after J. F. *Wolff* (1778–1806), a German physician and botanist.] A genus of monocotyledonous plants, of the family *Lemnaceæ*, distinguished from *Lemna* by one-celled anthers and by the absence of roots. The 12 species occur in Europe, India, Africa, and America, and extend north into the United States; they are commonly globose, sometimes conical or flattish, with a proliferous base, and produce minute flowers from chinks in the surface, each flower consisting of a single stamen or ovary without any spathe or other envelop. They are known, like *Lemna*, as *duckmeat*, and are remarkable for their almost microscopic size, being esteemed the smallest of flowering plants.

Wolffian1 (wụl′fi-an), *a.* Same as *Wolfian*1.

Wolffian2 (wụl′fi-an), *a.* [< K. F. *Wolff* (see def.) + *-ian*.] Of or pertaining to K. F. Wolff (1733–94), a German anatomist and physiologist; in *anat.*, *physiol.*, and *zoöl.*, noting certain structures of vertebrated animals.—**Wolffian bodies,** the primordial kidneys or renal organs in all vertebrates, excepting probably the lancelets; the so-called false kidneys, in all the higher vertebrates (*Mammalia* and *Sauropsida*) preceding and performing the functions of true kidneys until replaced by the latter, but among *Ichthyopsida*, as fishes, persisting and constituting the permanent renal organs.—**Wolffian ducts.** See *ductus Wolffii*, under *ductus*.

wolf-fish (wụlf′fish), *n.* A teleostean acanthopterygious fish, *Anarrhichas lupus*: so called from its ferocious aspect and habits. It is found around the coasts of Great Britain, where it attains a length of 6 or 7 feet, but in southern seas it is said to reach a much greater size. The mouth is armed with strong sharp teeth, the inner series forming blunt grind-

ers adapted for crushing the mollusks and crustaceans on which it feeds. The ventral fins are absent; the color is brownish-gray, spotted and striped with brown over the upper parts, while the belly is white. The flesh is palatable, and is largely eaten in Iceland, while the skin is durable, and is manufactured into a kind of shagreen. When taken in a net it attacks its captors ferociously, and unless stunned by a blow on the head is capable of doing great damage with its powerful teeth. Also called *sea-cat, catfish, wolf-eel,* and *sea-wolf.* See cut under *Anarrhichas.*

Wolfian[1] (wůl'fi-an), *a.* [< C. *Wolff* (see def.) + *-ian.*] Pertaining to the philosophy of Christian Wolff (1679–1754), which is Leibnitzianism diluted with common sense and dressed as a modified scholasticism, more systematic and more Euclidean than that of the middle ages. Though not profound, Wolff's philosophy met the wants of Germany, which it dominated for about fifty years, beginning with 1724. Also *Wolfian.*

Wolfian[2] (wůl'fi-an), *a.* [< F. A. *Wolf* (see def.) + *-ian.*] Pertaining to or promulgated by F. A. Wolf, a German philologist (1759–1824).—**Wolfian theory,** a theory put forward by Wolf in his "Prolegomena" in 1795, to the effect that the Iliad and Odyssey cannot be the works of one man, Homer, because writing was unknown at the time that these poems are said to have been composed. He supposes, therefore, that the Iliad and Odyssey consist of ballads or episodes, the work of different men, collected and arranged in a more or less consistent and homogeneous whole in the sixth century B. C. The ballads could have been preserved by the recitation of strolling minstrels.

Wolfianism (wůl'fi-an-izm), *n.* [< *Wolfian*[1] + *-ism.*] The system of Wolfian philosophy. See *Wolfian*[1].

wolfing (wůl'fing), *n.* [Verbal n. of *wolf, v.*] The occupation or industry of taking wolves for their pelts. Wolfing is extensively practised in winter in some parts of the United States, as Montana and the Dakotas. The wolves are destroyed chiefly by poisoning with strychnine.

wolfish (wůl'fish), *a.* [Formerly also *wolvish;* < *wolf* + *-ish*[1].] 1. Like a wolf; having the qualities or traits of a wolf; savage; ravening: as, a *wolfish* visage; *wolfish* designs.

> Thy desires
> Are *wolvish,* bloody, starved, and ravenous.
> *Shak.,* M. of V., iv. 1. 138.
>
> Bane to thy *wolfish* nature! *B. Jonson,* Volpone, v. 8.
>
> Good master, let it warn you; though we have hitherto pass'd by these man-Tygers, these *wolvish* Outlaws safely, early and late, as not worth their malice.
> *Brome,* Queen's Exchange, ii.

2. Hungry as a wolf is supposed to be; ravenous. [Colloq.]

wolfishly (wůl'fish-li), *adv.* In a wolfish manner.

wolfkin (wůlf'kin), *n.* [< *wolf* + *-kin.*] A young or small wolf.

> "Was this your instructions, *wolfkin?*" (for she called me lambkin). *Richardson,* Pamela, I. 144.
>
> Kite and kestrel, wolf and *wolfkin.*
> *Tennyson,* Boädicea.

wolfling (wůlf'ling), *n.* [< *wolf* + *-ling*[1].] A young wolf; a wolfkin.

> Young children were thrown in, their mothers vainly pleading: "*Wolflings,*" answered the Company of Marat, "who would grow to be wolves."
> *Carlyle,* French Rev., III. v. 3.

wolf-moth (wůlf'môth), *n.* A cosmopolitan grain-pest, *Tinea granella,* a small creamy-white moth with brown spots on the wings, whose small white larvæ infest stored grain. See *wolf, n.,* 3 (*a*), and cut under *corn-moth.*

wolf-net (wůlf'net), *n.* A kind of net used in fishing, by means of which great numbers of fish are taken.

wolf-note (wůlf'nōt), *n.* Same as *wolf,* 5 (*c*).

wolfram (wůlf'ram), *n.* [G. *wolfram,* given as < "*wolf,* wolf, + *ram, rahm,* froth, cream, soot."] 1. A native tungstate of iron and manganese. Its color is generally a brownish or grayish black, and it has a reddish-brown streak. The specific gravity (7.2 to 7.5) is nearly equal to that of metallic iron. It occurs crystallized, also massive with lamellar structure: it is the ore from which the metal tungsten is usually obtained, and is often found associated with tinstone. Also called *wolframite.*

2. The metal tungsten or wolframium: an improper and now uncommon use.—**Wolfram-ocher.** Same as *tungstite.*

wolframate (wůlf'ra-māt), *n.* Same as *tungstate.*

wolframic (wůlf-ram'ik), *a.* Of or pertaining to tungsten.

wolframium (wůlf-rā'mi-um), *n.* Same as *tungsten,* the chemical symbol of which is W, from this word.

wolfrobe (wůlf'rōb), *n.* The skin or pelt of a wolf made into a robe for use in carriages, etc.

wolf's-bane (wůlfs'bān), *n.* [< *wolf's,* poss. of *wolf,* + *bane*[1].] A plant of the genus *Aconitum;* aconite or monk's-hood; specifically, *A. Lycoctonum,* the yellow or yellow-flowered wolf's-bane, also called *badger's-, bear's-,* or *hare's-bane.* It is found widely in Europe, especially in mountains. Its greenish-yellow flowers have the hood developed like an extinguisher; its poison is less virulent than that of other species.—**Mountain wolf's-bane,** *Ranunculus Thora.* See *Ranunculus.*

wolfsbergite (wůlfs'bėrg-īt), *n.* [Named from *Wolfsberg,* in the Harz.] Same as *chalcostibite.*

wolf-scalp (wůlf'skalp), *n.* The skin of a wolf's head, or a piece of it sufficient for identification, exhibited to claim the bounty paid for the killing of a wolf in some parts of the United States.

wolf's-claws (wůlfs'klâz), *n.* The common club-moss, *Lycopodium clavatum:* so called from the claw-like ends of the prostrate branches.

wolf's-fist (wůlfs'fist), *n.* [< ME. *wulves fist,* < AS. *wulfes fist,* a puffball: *wulfes,* gen. of *wulf,* wolf; *fist,* ME. *fyst,* a breaking of wind: see *wolf* and *fist*[2]. Cf. *Lycoperdon.*] A puffball. See *Lycoperdon. Gerard.* Also *woolfist.*

wolf's-foot (wůlfs'fůt), *n.* The club-moss, *Lycopodium:* so named by translation of the generic name.

wolf's-head (wůlfs'hed), *n.* [< ME. *wolvesheed; < wolf's,* poss. of *wolf,* + *head.*] 1. The head of a wolf.—2†. An outlaw.

> Tho were his bondemen sory and nothing glad,
> When Gamelyn her lord *wolves-heed* was cryed and maad.
> *Tale of Gamelyn,* l. 700.

wolfskin (wůlf'skin), *n.* [< ME. *wolveskynne; < wolf's,* poss. of *wolf,* + *skin.*] The skin or pelt of a wolf; also, a rug or other article made of this pelt; a wolfrobe.

wolf's-milk (wůlfs'milk), *n.* A plant of the genus *Euphorbia,* particularly *E. Helioscopia,* the sun-spurge. The name is supposed to refer to the acrid milky juice of these plants.

wolf-spider (wůlf'spī′dėr), *n.* Any spider of the family *Lycosidæ,* the species of which do

wolf's-thistle† (wůlfs'this′l), *n.* See *thistle.*

wolf-tooth (wůlf'töth), *n.*; pl. *wolf-teeth* (-tēth). A small supernumerary premolar of the horse, situated in advance of the grinders. There are sometimes four of these teeth, one on each side of each jaw.

> Many readers may not be aware that blind horses, even in one eye only, will not get a proper summer coat; and the connexion between *wolf-teeth* and shying is another of many interesting facts. *Athenæum,* No. 3300, p. 120.

wolf-trap (wůlf'trap), *n.* In *her.,* a bearing representing a curved bar having a ring fixed to the center of it. *Berry.*

woll, *v.* An obsolete or dialectal form of *will*[1].

Wollaston doublet. See *doublet,* 2 (*b*).

wollastonite (wol'as-ton-īt), *n.* [Named after W. H. *Wollaston* (1766–1828), an English scientist, the discoverer of the method of working native platinum.] A mineral occurring in tabular crystals (hence called *tabular spar*), also massive, cleavable, with fibrous structure. It has a white to yellow or gray color, and a vitreous to pearly cleavage. It is a silicate of calcium ($CaSiO_3$), and belongs to the pyroxene group.

Wollaston prism. The four-sided glass prism of the camera lucida devised by Wollaston in 1804. See figure under *camera lucida.*

wolle[1], *v.* See *will*[1].

wolle[2]†, **wollen**†. Obsolete forms of *wool, woolen.*

wollongongite (wol'on-gong-īt), *n.* A kind of kerosene-shale, very rich in oil, found near Wollongong in New South Wales: it was originally described as a kind of hydrocarbon.

wolloper, *n.* See *walloper*[2].

woltow†. A Middle English form of *wolt* (*wilt*) *thou.*

wolveboon (wůlv'bön), *n.* See *Toxicodendron.*

wolverene, wolverine (wůl-vė-rēn'), *n.* [Formerly also *wolveren, wolverenne, wolverin, wolvering;* appar. a French-Canadian name based on E. *wolf.*] The American glutton, or carcajou, *Gulo luscus* (specifically identical with the glutton of the Old World), a subplantigrade carnivorous mammal of the family *Mustelidæ,* inhabiting British America and northerly or mountainous regions of the United States. It is 2 or 3 feet long, of thick-set form, with short, stout legs, low ears, subplantigrade feet, bushy tail and shaggy pelage of

Wolverene or Carcajou (*Gulo luscus*).

blackish color, with a lighter band of color on each side meeting its fellow upon the rump. The animal is noted for its voracity, ferocity, and sagacity. In the fur countries, where the wolverene is numerous, it is one of the most serious obstacles with which the trapper has to contend, as it soon learns to spring the traps set for ermine and sable, and devour the bait without getting caught, being itself too wary to be trapped without great difficulty. In these regions, also, caches of provisions must be constructed with special precautions against their discovery and spoliation by wolverenes. The pelt is valuable, and is much used for robes and mats, in which the whitish or light-brown areas of the fur present a set of oval or horse-shoe-shaped figures when several skins are sewed together. From its comparatively large and very stout form, together with its special coloration, the wolverene is sometimes called *skunk-bear.*—**The Wolverene State,** Michigan.

wolves, *n.* Plural of *wolf.*

wolves'-thistle† (wůlvz'this′l), *n.* See *thistle.*

wolvish† (wůl'vish), *a.* An obsolete form of *wolfish.*

wolward†, *adv.* See *woolward.*

woman (wům'an), *n.*; pl. *women* (wim'en). [< ME. *woman, wuman, womman, wumman, wummon,* altered (with the common change of *wi-* to *wu-,* often spelled *wo-*) from *wimman, wimmon,* which stand (with assimilation of *fm* to *mm*) for the earlier *wifman, wifmon, wyfman* (pl. *women, *wumen, wommen, wummen, wimmen,* earlier *wifmen, wyfmen*), < AS. *wīfman, wīfmon,* later *wimman* (pl. *wīfmen,* later *wimmen*), a woman, lit. 'wife-man,' i. e. female person, < *wīf,* a woman, female, + *man,* man, person (masc., but used, like L. *homo* and Gr. *ἄνθρωπος,* in the general sense 'person, human being'). The compound *wīfman* is peculiar to AS., but a similar formation appears in the G. *weibsperson.* It is notable that it was thought necessary to join *wīf,* a neuter noun, representing a female person, to *man,* a masc. noun representing either a male or female person, to form a word denoting a female person exclusively. The assimilation of *fm* to *mm* occurs likewise in *leman,* formerly and more prop. spelled *lemman,* and in *Lammas.* The change of initial *wi-* to *wu-* occurs also in AS. *widu* > *wudu* > E. *wood*[1], and the spelling of *wu-* as *wo-* or *woo-* to avoid the cumulation of *u*'s or *v*'s (*wu-, uuu-, vvv-*) occurs in *wood*[1], *wool,* etc. The difference of pronunciation between the singular *woman* and the plural *women,* though it has come to distinguish the singular from the plural, is entirely accidental; formerly both pronunciations of the first syllable were in use in both numbers. The proper modern spelling of the plural, as now pronounced, would be *wimmen;* the spelling *women* is due to irreg. conformity to the singular *woman,* which is properly so spelled according to the analogy of *wolf,* though **wooman,* like **woolf,* would be better, as being then in keeping with *wool, wood*[1].] 1. An adult female of the human race; figuratively, the female sex; human females collectively. See *lady,* 5.

It is no *wonder* that art gets not the victory over nature.
Bacon, Physical Fables, iv., Expl.

Bless me! Charles, you consume more tea than all my family, though we are seven in the parlour, and as much sugar and butter — well, it 's no *wonder* you are bilious!
Thackeray, Lovel the Widower, ii.

2. That emotion which is excited by novelty, or the presentation to the sight or mind of something new, unusual, strange, great, extraordinary, not well understood, or that arrests the attention by its novelty, grandeur, or inexplicableness. *Wonder* expresses less than *astonishment,* and much less than *amazement.* It differs from *admiration* in not being necessarily accompanied with love, esteem, or approbation. But *wonder* sometimes is nearly allied to *astonishment,* and the exact extent of the meaning of such words can hardly be graduated.

They were filled with *wonder* and amazement.
Acts iii. 10.

O, how her eyes dart *wonder* on my heart!
Mount bloode, soule to my lips, taste Hebe's cup;
Stande firme on decke, when beauties close-fight 's up.
Marston, Antonio and Mellida, I., i. 1.

They also shewed him some of the engines with which some of his servants had done *wonderful* things.
Bunyan, Pilgrim's Progress, i.

Wonderful Parliament. Same as *Merciless Parliament* (which see, under *parliament*).=**Syn.** *Wonderful, Strange, Surprising, Curious, Unique,* extraordinary, marvelous, amazing, startling, wondrous (poetic). *Wonderful* generally refers to something above the common, and so marvelous, perhaps almost incredible. *Strange* refers rather to something beside the common — that is, simply very unusual or odd, and so exciting surprise or wonder. Anything that excites awe or high admiration, or strikes one as sublime, is *wonderful;* an unpleasant object may be *strange,* but would not be called *wonderful.* That which is unexpected is *surprising,* but it is not necessarily *strange:* as, a *surprising* fact; a *surprising* discovery in science. *Curious* is *wonderful* on a small scale; by its derivation it often refers to an object extremely nice and intricate or elaborate in its details, but also it often conveys the notion of pleasing strangeness and even of rarity: as, a *curious* bit of mosaic; a *curious* piece of mechanism; a *curiously* colored stone. *Unique* expresses that which is sole of its kind or quality: as, a *unique* book; a *unique* sort of person. See *eccentric* and *surprise.*

wonderful (wun′dėr-fûl), *adv.* [< ME. *wonderfull;* < *wonderful, a.*] Wonderfully; exceedingly; very. [Obsolete or vulgar.]

Names of Tribulation, Persecution,
Restraint, Long-patience, and such like, affected
By the whole family or *wood* of you.
B. Jonson, Alchemist, iii. 2.

Wood is used to signify any miscellaneous collection, or stock of materials, hence some poets intitle their miscellaneous works silvarum libri; and our poet [Ben Jonson], conforming to this practice, calls his the Forest.
Upton, quoted in note to "The Alchemist."

Agal or **agila wood.** See *agallochum.*—**Agatized wood.** See *agatize* and *silicify.*—**Aloes wood.** See *agallochum.*—**Amboyna wood.** See *kiabooca-wood.*—**Artificial wood,** a composition made of paper, paper-pulp, glue, sawdust, hemp, albumen, metallic oxids, drying-oils, sulphur, caoutchouc, gutta-percha, mineral salts, etc. When warm or wet, according to the nature of the particular composition, it is plastic, but in cooling or drying it hardens and acquires properties similar to those of wood.—**Brauna wood.** See *brauna.*—**Brazil wood, braziletto wood.** See *brazil, braziletto.*—**Castor wood,** *Magnolia Virginiana.*—**Caviuna wood,** a palisander wood obtained in Brazil from *Dalbergia nigra* and perhaps some other trees.—**Champ wood,** the wood of the champ and the champak.—**Cock of the woods,** the capercaillie (which see, with cut).—**Commissioners of Woods and Forests,** a department of the British Government, called more fully the Board of Commissioners of Woods, Forests, Land-revenues, Works, and Buildings, established by 2 and 3 Wm. IV., c. 1. By 14 and 15 Vict., c. 42, it is divided into a Board of Commissioners of Woods, Forests, and Land-revenues, and a Board of Commissioners of Works and Public Buildings. The former have the management of the crown woods and forests, and land-revenues; the latter have the management of the public works and buildings, to which has been added, by later acts, the care of the royal parks, etc. *Encyc. Dict.*—**Coromandel wood.** Same as *calamander-wood.*—**Cuba wood.** Same as *fustic.*—**Curana wood,** the wood of *Protium altissimum.* See *Icica.*—**Feast of wood-carrying,** one of the annual festivals of the ancient Jews, instituted after the Babylonish captivity. It obtained its name from the practice of the people's bringing wood to the temple on the day of its celebration for the burning of the sacrifices.—**Fossil wood.** (*a*) Wood in a fossil state—that is, wood in a state of nature that has undergone various preservative processes and has become fossil. Popularly the term is usually applied to silicified wood—that is, wood in which the substance has been replaced, atom by atom, by silica in such a manner as to retain the exact form and appearance of the original wood. Wood preserved in this manner is exceedingly abundant in various parts of the western United States, especially in the Yellowstone National Park, Wyoming, where it is not rare to find trunks 30 feet in height, and 8 or 10 feet in diameter, standing upright exactly in the positions in which they grew, and so perfectly preserved that every cell, with all its delicate markings, can be as satisfactorily examined as from a living tree. In central Arizona perfectly silicified trunks of trees, 8 feet in diameter and 140 feet long, have been observed. These latter belong to the genus *Araucarioxylon*, the representative in a fossil state of the genus *Araucaria*. Fossil wood may also be due to the molecules being displaced by lime or iron, or by various combinations of minerals. Lignite, which represents one of the stages in the formation of coal, is very frequently fossil wood which has lost more or less of its volatile constituents, but still retains its wood-like structure and appearance. The term *fossil wood* is therefore properly applied to any wood that is so situated in the earth, or has been so acted upon by various minerals, as to be permanently preserved. (*b*) See *fossil cork*, under *fossil.*—**Hard wood,** the wood of various trees, such as oak, cherry, maple, ebony, ironwood, etc., so called from these woods being relatively very hard, firm, and compact. The quality results from the cells having exceedingly thick walls and being very compactly arranged, with very few or no intercellular spaces or ducts. Trees furnishing wood of this character are usually of slow growth, with narrow annual rings and dense, solid heart-wood. Mahogany, rosewood, and most woods susceptible of a fine polish belong to this class.—**Hypernic wood.** See *hypernic.*—**Incense wood.** See *incense-tree.*—**Jacaranda wood.** See *palisander.*—**Jarool, jarrah, kamassi wood.** See *jarool*, etc.—**Jasperized wood.** Same as *silicified wood.*—**Kanyin wood.** Same as *gurjun wood.* See *gurjun.*—**Karri wood,** the timber of *Eucalyptus diversicolor*, of southwestern Australia. The tree is said to attain exceptionally the height of 400 feet. The timber is useful for ship-planking, masts, wheel-work, railway-ties, etc.—**Khow wood.** See *Olea.*—**Lemon wood.** (*a*) The wood of the lemon-tree, which is hard, elastic, and fragrant. (*b*) In South Africa, an evergreen shrub, or a tree 20 or 30 feet high, *Grumilea Capensis*, having a hard, tough wood, variously useful.—**Lingoa wood.** Same as *lingo*[2].—**Loblolly wood,** the wood of the loblolly-tree.—**Metallization of wood.** See *metallization.*—**Molded wood.** See *mold*[4].—**Molompi, mora, myall wood.** See *molompi*, etc.—**Myrtle wood,** the wood of the Tasmanian myrtle. See *Fagus.*—**Nephritic wood.** See *nephritic.*—**Nicaragua wood,** a dye-wood exported from Nicaragua, similar to brazil-wood, and derived from *Hæmatoxylum Braziletto*; peach-wood.—**Padouk wood,** the Andaman redwood. See *redwood*, 2.—**Pernambuco wood,** true brazil-wood.—**Perpignan wood,** the wood of the European nettle-tree, *Celtis australis.* See *nettle-tree*, 1.—**Petrified wood.** Same as *silicified wood*, below.—**Picræna wood,** the wood of *Picrasma excelsa.* See *quassia*, 2.—**Quassia, quebracho, saj wood.** See *quassia*, etc.—**Samaria wood.** Same as *curana wood*, above.—**Sand wood,** a leguminous shrub of the Isle of Réunion, *Bremontiera Ammoxylon*, of doubtful affinity.—**Santa Martha wood.** Same as *peach-wood.*—**Secondary, speckled, sterile wood.** See the adjectives.—**Silicified wood.** See *fossil wood*, above, and *silicify.*—**Soft wood,** a wood, such as basswood, poplar, tulip, cedar, and white pine, which is relatively soft and easily worked. This character is due to the large and thin-walled cells, including usually numerous ducts. Soft-wooded trees are generally of rapid growth, making thick annual layers.—**Tonka-bean wood.** Same as *scent-wood.*—**Trincomali wood.** See *halmalille.*—**Turanira wood,** the wood of the bastard bully-tree, *Bumelia retusa*, of the West Indies.—**Wood-bending machine,** a machine or an apparatus for bending wood into shape. Different machines are used, according to the purpose for which the wood is to be used, as for ship-timbers, furniture, sleigh-runners, hoops, and staves.—**Wood moot** or **mote.** See *moot*[1].—**Wood reed-grass.** See *reed-grass.*—**Wood stop,** in *organ-building*, a stop the pipes of which are made of wood, as the flute, the stopped diapason, etc.—**Wood tea.** See *tea*[1].—**Wood wind.** See def. 9, above. (For a multitude of other woods, see specific epithets.)

★=**Syn. 1.** *Woods, Park*, etc. See *forest.*

That wimmen loves us *for wood*.
Chaucer, House of Fame, l. 1747.

wood[2]† (wöd), *v. i.* [< ME. *wooden, wodien*; from the adj. Cf. *weed*[3].] 1. To act like a madman; rave.

He stareth and *woodeth* in his advertence.
Chaucer, Second Nun's Tale, l. 467.

2. To be fierce or furious; rage.

Thogh they ne anoye nat the body, yit vices *wooden* to destroyen men by wounde of thowht.
Chaucer, Boëthius, iv. meter 3.

wood[3]†, *n.* An old spelling of *woad*. *Prompt. Parv.*

wood-acid (wůd'as″id), *n.* Same as *wood-vinegar.* See *vinegar.*

Take 20 pounds terra japonica, 5 pounds of *wood-acid*, . . . to about 10 barrels of water, or enough of the latter to cover the hides. *C. T. Davis*, Leather, p. 607.

wood-agate (wůd'ag″āt), *n.* An agate which shows more or less perfectly the structure of the wood from which it has been derived by a process of silicification.

★**wood-alcohol** (wůd'al″kō-hol), *n.* See *alcohol.*

wood-almond (wůd'ä″mond), *n.* A shrub, *Hippocratea comosa.* See *Hippocratea.*

wood-anemone (wůd'a-nem″ō-nē), *n.* The wind-flower, *Anemone nemorosa.*

wood-ant (wůd'ant), *n.* 1. A large ant, as *Formica rufa*, which lives in the woods.—2. A white ant, or termite, as *Termes flavipes*, which lives in the wood of old buildings. See cut under *Termes.* [U. S.]

wood-apple (wůd'ap″l), *n.* See *Feronia*, 1.

wood-ashes (wůd'ash″ez), *n. pl.* The remains of burned wood or plants.

wood-awl (wůd'âl), *n.* The green woodpecker, or awl-bird, *Gecinus viridis*: same as *woodwale.* See cut under *popinjay.* [Cornwall, Eng.]

wood-baboon (wůd'ba-bön″), *n.* The drill; the cinereous or yellow baboon of Guinea, *Cynocephalus leucophæus.* See *drill*[4].

wood-barley (wůd'bär″li), *n.* See *Hordeum.*

wood-beetle (wůd'bē″tl), *n.* See *Paussidæ.*

wood-betony (wůd'bet″ǫ-ni), *n.* See *betony.* Also called *head-betony* and *lousewort.*

wood-bill (wůd'bil), *n.* In *her.*, a bearing representing a woodmen's bill for lopping fagots, etc.

woodbine, woodbind (wůd'bīn, -bīnd), *n.* [Early mod. E. *wodbynde*; < ME. *woodbynde, woodebynde, wodebinde, wodebynde, wudebinde*, < AS. *wudubind, wudebinde*, earlier *uuidubinde, uuidubindae, uuidubindlae*; so called because it binds or winds round trees, < *wudu, widu*, tree, wood, + *bindan*, bind: see *wood*[1] and *bind.*] The common European honeysuckle, *Lonicera Periclymenum*, whence the name is more or less extended to other honeysuckles. *L. Caprifolium*, a species very similar to *L. Periclymenum*, is designated *American woodbine.* The name is also given to the Virginia creeper, *Parthenocissus quinquefolia.*

Aboute a tre with many a twiste
Bytrent and writhen is the soote *woodbynde*.
Chaucer, Troilus, iii. 1231.

So doth the *woodbine* the sweet honeysuckle
Gently entwist. *Shak.*, M. N. D., iv. 1. 47.

Spanish woodbine, the seven-year vine, or Spanish arbor-vine, *Operculina tuberosa.* See *vine.*—**Wild woodbine.** See *wild*[1].

wood-bird (wůd'bėrd), *n.* A bird that lives in the woods.

Begin these *wood-birds* but to couple now?
Shak., M. N. D., iv. 1. 145.

wood-block (wůd'blok), *n.* **1.** In *engraving*, a die cut in relief on wood, and in condition for furnishing impressions in ink in a printing-press; a woodcut. See *wood-engraving*. The wood commonly used for wood-blocks is box, the blocks being cut directly across the grain. Inferior kinds of wood, such as American rock-maple, pear, plane, etc., are used for coarser work.

2. A print or impression from such an engraved block; a woodcut. Also used attributively in both senses: as, *wood-block* illustrations.

wood-boiler (wůd'boi″lėr), *n.* A vessel adapted for boiling wood in order to soften it and thus facilitate working.

wood-borer (wůd'bōr″ėr), *n.* That which bores wood, as an insect, a crustacean, or a mollusk. Compare *Cis*, *ship-worm*, *Saperda*, and *teredo*, and other citations under *wood-boring*.

wood-boring (wůd'bōr″ing), *a.* Capable of or characterized by boring wood; having the habits of a wood-borer: as, the *wood-boring* shrimps; *wood-boring* beetles. See *gribble*[2], *Limnoria*, *Cheluridæ*, *Lymexylon*, *ship-worm*, and *teredo*.

wood-born (wůd'bôrn), *a.* Born in the woods. *Spenser*, F. Q., I. vi. 16. [Rare.]

wood-bound (wůd'bound), *a.* Encumbered with tall woody hedgerows. *Imp. Dict.*

wood-brick (wůd'brik), *n.* A block of wood, of the shape and size of a brick, inserted in the interior walls of a building to afford a hold for the joinery, etc.

Woodbridge gun. See *gun*[1].

wood-broney (wůd'brō″ni), *n.* The common ash, *Fraxinus excelsior*. [Prov. Eng.]

wood-broom (wůd'bröm), *n.* The wild teazel, *Dipsacus sylvestris*.

wood-bug (wůd'bug), *n.* A forest-bug.

woodburytype (wůd'ber-i-tīp), *n.* [Named after Walter Bentley *Woodbury*, the inventor.] **1.** A photomechanical process in which a relief is produced from a negative on a film of bichromated gelatin, hardened in alum. This is pressed into a plate of soft metal, the result being an intaglio mold. A warm solution of gelatin containing any desired pigment is poured on the mold, a sheet of paper is laid over it, and pressure applied, the superfluous pigmented gelatin being squeezed out, and only that remaining in the intaglio mold and forming the image being left. When this sets it adheres to the paper, and is then fixed by hardening in a solution of alum. Compare *heliotypy*.

2. A picture produced by this process.

wood-calamint (wůd'kal″a-mint), *n.* The common calamint, *Clinopodium Calamintha*.

wood-carpet (wůd'kär″pet), *n.* **1.** A floor-covering made of slats or more ornamental shapes of wood of different colors, fastened to a cloth backing. The different pieces of wood are arranged so as to produce the effects of tessellated floors, mosaic work, etc. Also called in the United States *wood-carpeting*.

2. A British geometrid moth, *Melanippe rivata*, common in the south of England.

wood-carver (wůd'kär″vėr), *n.* One who carves wood.

The peasants are turners, lapidaries, electro-platers, *wood-carvers*, and spectacle-makers.
Edinburgh Rev., CLXVI. 310.

wood-carving (wůd'kär″ving), *n.* **1.** The art or process of carving wood.—**2.** A piece of sculpture in wood.

wood-cell (wůd'sel), *n.* A cell normally entering into the composition of the wood of plants. Wood-cells are one of the regular modifications of prosenchyma, consisting of cell-structures greatly elongated in proportion to their breadth, with very thick walls and usually pointed extremities. When thoroughly lignified, wood-cells take little active part in the metabolism of the plant, their function being mainly to give strength and power of resistance to it. Also called *woody fiber*. See *prosenchyma*, *tissue*, 4, and cut under *disk*, 4 (*e*).

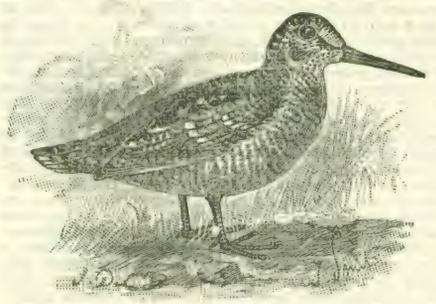
wood-charcoal (wůd'chär″kōl), *n.* See *charcoal*, 1.

woodchat (wůd'chat), *n.* The red-backed shrike or butcher-bird of Africa and Europe, *Lanius rufus*. Also called *L. auriculatus* and by other names. It is occasionally seen in Great Britain in summer. The name is misleading, as the bird is not a chat in any proper sense.

woodchat-shrike (wůd'chat-shrīk), *n.* The woodchat.

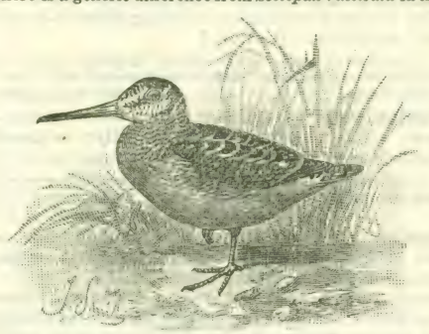
wood-chopper (wůd'chop″ėr), *n.* One who chops wood; specifically, one who cuts down trees, as a lumberman.

woodchuck[1] (wůd'chuk), *n.* [Also *woodshock*, applied to a different quadruped; a corruption, simulating E. *wood*[1], of *wejack*, *weejack*, repr. an Amer. Ind. name, of which the Cree form is rendered *wuchak* by Watkins (Cree Dict., 1865).] The commonest North American species of marmot, *Arctomys monax*, a large rodent quadruped of the family *Sciuridæ*. It is from 15 to 18 inches long, of very stout, heavy form, with brownish and grayish tints above, and reddish-brown below. It feeds on vegetables of many kinds, burrows in the ground, and hibernates in winter. Also called *ground-hog* and *chuck*. See *Arctomys*.—**Woodchuck day**, in popular myth, the day (assumed to be Candlemas day) on which the woodchuck first comes out of its hole after its hibernation. The saying goes that if the woodchuck sees its shadow on that day, it retires to its burrow for six weeks longer, which implies that warm, sunshiny weather very early in the spring, or in February, arousing the woodchuck from its torpidity, is likely to be followed by a cold or late season. Also *ground-hog day*.



woodchuck[2] (wůd'chuk), *n.* [Prob. < *wood*[1] + *chuck*[5], var. of *chack*[3].] The green woodpecker, *Gecinus viridis*. See cut under *popinjay*. [Prov. Eng.]

wood-chuck (wůd'chuk), *n.* In a lathe, a chuck adapted for holding a piece of wood to be operated on.



The stoppers are fixed in a hollow *wood-chuck* by slight blows of a mallet. *O'Bryne*, Artisan's Handbook, p. 195.

woodcoal (wůd'kōl), *n.* Charcoal.

woodcock (wůd'kok), *n.* [< ME. *wodekoc*, *wodekok*, *woddecoke*, < AS. *wuducoc*, a woodcock; as *wood*[1] + *cock*[1].] **1.** One of two distinct birds of the family *Scolopacidæ*, closely related to the true snipe (*Gallinago*). (*a*) In Europe, *Scolopax rusticula* (wrongly spelled *rusticola*), a very common bird of the northerly parts of the Old World, one of the largest and best-known representatives of its family, highly esteemed as a game-bird, its flesh being delicious, while the thick cover it inhabits and the rapidity of its flight test the nerve and skill of the sportsman. It is migratory, breeding chiefly in the higher latitudes, nesting upon the ground in a dry spot under cover, and laying four eggs. This woodcock is over 12 inches in length, and weighs from 10 to 15 ounces; the plumage is intimately variegated with brown, black, russet, and tawny. It is seldom seen in America, and only as a straggler from Europe. (*b*) In the United States and Canada, *Philohela minor*, a bird of the same general characteristics as the former, but smaller, usually under 12 inches in length, and weighing 9 ounces or less; the under parts are whole-colored, and there is a generic difference from *Scolopax rusticula* in the structure of the outer primaries, three of which are attenuated and abbreviated in *Philohela*. The sexes are alike in color, but the female is considerably larger than the male, and alone reaches the maximum size and weight above given; the male is usually 10 to 11 inches long, and 16 to 17 in spread, weighing 5, 6, or 7 ounces according to condition. The bill is perfectly straight, 2½ to 3 inches long, and deeply furrowed; it is a very sensitive probe, with which the bird feels for worms in the mud by thrusting it in for its full length. The physiognomy of the woodcock is peculiar, by reason of the shape of the head, and the great size of the dark eyes, as well as their site high up and far back. The wings are short and rounded, but ample; the tail is very short, rounded, and usually held up; the legs are feathered to the heel, naked beyond; the toes are cleft quite to the base; there is a small hind toe, and the middle toe with its claw is rather longer than the tarsus. The woodcock is to some extent a nocturnal bird. It abounds in most of its range, and is one of the leading game-birds of America; it is found in bogs and swamps, wet woodlands, alder-brakes (sometimes called *woodcock-brakes* in consequence), and not seldom in quite dry fields, as corn-fields; it is migratory, but erratic and capricious in its movements, and nests throughout its range. The eggs are laid on the ground, generally in April (earlier or later according to latitude); they are less pointed than usual among waders, 1½ by 1¼ inches in size, of a brownish-gray color, with very numerous and small chocolate-brown surface-spots and neutral-tint shell-spots; the full number is four. The woodcock has a peculiar bleating cry, and sometimes exhibits the curious habit of removing the young from danger by flying off with the chick, which is held in the parent's feet. Also called *snipe*, with or without qualifying words (see *snipe*[1], 1 (*c*)), *American woodcock*, *little woodcock*, *lesser woodcock*, *red woodcock*, *wood-hen*, *bog-sucker*, *bogbird*, *timberdoodle*, *hookumpake*, *night-peck*, *night-partridge*, *shrups*, *cock* (short for *woodcock*), and *Labrador twister*.

European Woodcock (*Scolopax rusticula*).

American Woodcock (*Philohela minor*).

2. The large black pileated woodpecker, or log-cock, *Hylotomus* (or *Ceophlæus*) *pileatus*. See cut under *pileated*. [Local, U. S.]

Woodcock . . . is applied by backwoodsmen and other country folk to the pileated woodpecker, . . . wherever that big red-crested bird of the tall timber is found.
G. Trumbull, Bird Names (1888), p. 151.

3. In *conch.*, a woodcock-shell: more fully called *thorny woodcock*. Also called *Venus's-comb*.—**4.** A simpleton: in allusion to the facility with which the European woodcock allows itself to be taken in springs or in nets set for it in the glades.

Go, like a *woodcock*,
And thrust your neck i' the noose.
Beau. and Fl., Loyal Subject, iv. 5.

Among us in England this bird is infamous for its simplicity or folly, so that a *woodcock* is proverbially used for a foolish, simple person. *Willoughby*.

Little woodcock. (*a*) The great or double snipe, or woodcock-snipe, *Gallinago major*. [British.] (*b*) The American woodcock, *Philohela minor*: a book-name. [U. S.]—**Springes to catch woodcocks**, arts to entrap simplicity. *Shak.*, Hamlet, i. 3. 115.—**Woodcock's cross**†, penitence for folly.

Not controversies now are in disputes
At Westminster, where such a coyle they keepe:
Where man doth man within the law betosse,
Till some go croslesse home by *Woodcocks crosse*.
John Taylor, Works (1630). (*Nares.*)

Woodcock's head. (*a*) A tobacco-pipe: so called from the shape.

Sav. O peace, I pray you, I love not the breath of a *woodcock's head*.
Fastid. Meaning my head, lady?
Sav. Not altogether so, sir; but as it were fatal to their follies that think to grace themselves with taking tobacco, when they want better entertainment, you see your pipe bears the true form of a *wood-cock's head*.
B. Jonson, Every Man out of his Humour, iii. 3.

(*b*) A woodcock-shell, as *Murex haustellum*.

woodcock-eye (wůd'kok-ī), *n.* A snap-hook. *E. H. Knight*. [Eng.]

woodcock-fish (wůd'kok-fish), *n.* The sea-woodcock or trumpet-fish, *Macrorhamphosus scolopax*: so called from the long beak, like that of the snipe or woodcock. See cut under *snipe-fish*.

woodcock-owl (wůd'kok-oul), *n.* The short-eared owl, *Asio accipitrinus*, *Otus brachyotus*, or *Brachyotus palustris*: so called from its association with the European woodcock. [Local, Eng. and Ireland.]

woodcock-pilot (wůd'kok-pī″lọt), *n.* The European gold-crested kinglet, *Regulus cristatus*: so called as preceding the woodcock in migration. See cut under *goldcrest*. [Local, Eng.]

woodcock-shell (wůd'kok-shel), *n.* One of several muricine shells which have a long spout or beak, as *Murex tribulus* or *M. tenuispina*; a woodcock, woodcock's head, or Venus's-comb. See cut under *Murex*.

woodcock-snipe (wůd'kok-snīp), *n.* Same as *little woodcock* (*a*) (which see, under *woodcock*).

wood-copper (wůd'kop″ėr), *n.* See *olivenite*.

wood-corn (wůd'kôrn), *n.* A certain quantity of grain paid by the tenants of some manors in Great Britain to the lord of the manor for the liberty to pick up dead or broken wood.

woodcracker (wůd'krak″ėr), *n.* The common European nutcracker or nuthatch, *Sitta cæsia* or *S. europæa*. See cut under *Sitta*. *Plot*, Nat. Hist. Oxford, p. 175. (*Yarrell.*) [Local, Eng.]

woodcraft (wůd'kråft) *n.* [< ME. *wodecraft*; < *wood*[1] + *craft*[1].] Skill in anything which pertains to the woods or forest; skill in the chase, especially in hunting deer, etc.

What were *woodcraft* without fatigue and without danger? *Scott*, Quentin Durward, x.

wood-crash (wůd'krash), *n.* A machine, made on the principle of a spring-rattle, used in theaters to imitate the sound of breaking timbers.

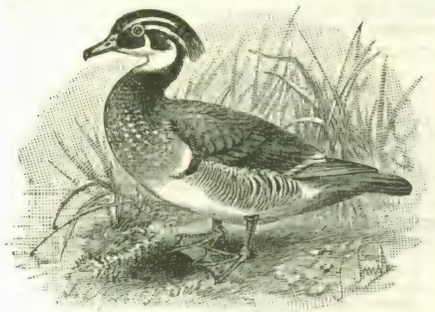
wood-cricket (wůd'krik″et), *n.* A kind of cricket that lives in the woods; specifically, *Nemobius sylvestris*, of Europe.

wood-culver (wůd'kul″vėr), *n.* The wood-pigeon or ring-dove, *Columba palumbus*. Also *wood-quest*. [Prov. Eng.]

woodcut (wůd'kut), *n.* An engraving on wood, or a print from such an engraving. See *wood-engraving*.—**Woodcut-paper**, a soft paper of very fine

fiber and smooth face, half-sized or wholly unsized, readily receptive of ink or impression. Sometimes called *plate-paper*.

wood-cutter (wůd'kut″ėr), *n.* 1. A person who cuts wood.—2. A maker of woodcuts; an engraver on wood. See *wood-engraving*.



wood-cutting (wůd'kut″ing), *n.* 1. The act or employment of cutting wood by means of saws or by the application of knife-edge machinery.—2. Wood-engraving.

wood-dove (wůd'duv), *n.* [< ME. *wodedove, wodedowve, wodedouve*; < *wood*[1] + *dove*[1].] The stock-dove, *Columba œnas*; also, the common wood-pigeon, *C. palumbus*.

> The *wode-dowve* upon the spray

wood-end (wůd'end), *n.* Same as *hood-end*.

wood-engraver (wůd'en-grā″vėr), *n.* 1. An ★artist who engraves on wood.—2. In *entom.*, any one of several bark-beetles of the genus *Xyleborus* and allied genera; specifically, *X. cælatus*. This works in the cambium layer of pine-trees in the United States in such a way that, on removing the loosened bark, the surface of the wood is seen furrowed in a regular and artistic manner, numerous galleries passing off at right angles from a straight median tunnel.

Wood-engraver (*Xyleborus cælatus*), eight times natural size.

wood-engraving (wůd'en-grā″ving), *n.* 1. The art or process of cutting designs in relief upon blocks of wood, usually box, so that impressions can be made from them with a pigment in a printing-press, upon paper or other material. For cuts of more than 5 or 6 inches square, two or more blocks are firmly secured together. The surface of the smoothed block, which is cut directly across the grain, is prepared for the engraver by rubbing it with pounded Bath brick mixed with a little water, in order to give a hold to the lead-pencil, and the subject is drawn in with pencil or India ink, or is transferred upon the block by photography. The engraver then, by means of gravers, tint-tools, gouges or scrapers, and flat tools or chisels of different sizes, cuts out the design, leaving it in raised lines or dots upon the surface of the block, so that these may receive the ink and yield the desired impression under the action of the press. In such parts of the design as are to be solid black, the engraver leaves the surface of the wood untouched; in such parts as are to be wholly white, he cuts the surface entirely away; the large number of tones, technically called *tints*, between these extremes are rendered by cutting out wider or narrower spaces, corresponding to white paper in the print, between the lines or dots left in relief. An engraving is seldom a mere reproduction of the copy; it is a translation, into which the personal element of the engraver enters: thus the engraving may be either superior or inferior artistically to the original. Wood-engraving is technically the opposite of steel- or copperplate-engraving: in the latter the lines cut by the engraver form the picture; in the former the parts of the surface left uncut form the picture.

2. A block of wood engraved by the above method, or an impression from such a block.

woodenhead (wůd'n-hed), *n.* A blockhead; a thick-headed, dull, or stupid person; a numskull. [Colloq.]

wooden-headed (wůd'n-hed″ed), *a.* Thick-headed; stupid; lacking penetration or discernment.

wooden-headedness (wůd'n-hed″ed-nes), *n.* The state or character of being wooden-headed; stupidity. [Colloq.]

> I overheard some rather strong language going on within, words such as "*wooden-headedness*" and "fibs" being used. *Light*, Feb. 23, 1889.

woodenly (wůd'n-li), *adv.* In a wooden manner; stiffly; clumsily; awkwardly; without feeling or sympathy.

> Diverse thought to have some sport in seeing how *woodenly* he would excuse himself.
> *Roger North*, Lord Guilford, II. 22.

woodenness (wůd'n-nes), *n.* Wooden character or quality; stiffness; lack of spirit or expression; clumsiness; stupidity.

woodenware (wůd'n-wār), *n.* A general name for bowls, dishes, etc., turned from solid blocks of wood: often used also of coopers' work, such as pails and tubs.

wood-evil (wůd'ē″vl), *n.* Same as *red water* (which see, under *water*).

woodfall† (wůd'fâl), *n.* A fall or cutting of timber.

> The *woodfalls* this year do not amount to half that sum of twenty-five thousand pounds. *Bacon.*

wood-fern (wůd'fėrn), *n.* Various species of *Dryopteris*; also *Polypodium vulgare*.

wood-fiber (wůd'fī″bėr), *n.* Fiber derived from wood; specifically, the fiber obtained from various species of *Picea, Abies, Populus, Tilia, Liriodendron*, etc., employed as a material for the manufacture of paper-pulp. See *wood-paper* and *wood-pulp*.

wood-flour (wůd'flour), *n.* Very fine sawdust, especially that made from pine wood for use as a surgical dressing.

Woodfordia (wůd-fōr'di-ą), *n.* [NL. (Salisbury, 1806), named after J. *Woodford*, author (1824) of a catalogue of the plants of Edinburgh.] A genus of dicotyledonous plants, of the family *Lythraceæ* and tribe *Lythreæ*. It is characterized by black-dotted leaves, a curved tubular calyx, declined stamens, and pilose seeds. The two species are natives of India, China, eastern tropical Africa, and Madagascar. *W. floribunda* is a much-branched shrub, hoary with grayish hairs, producing round branches and square branchlets, with opposite ovate-lanceolate entire whitish leaves. The flowers are scarlet, and crowded into cymose panicles. See *dhauri*.

wood-francolin (wůd'frang″kō-lin), *n.* One of the francolins, *Francolinus gularis*.

wood-fretter (wůd'fret″ėr), *n.* Something which frets wood, as an insect; a wood-borer or wood-eater.

wood-frog (wůd'frog), *n.* A frog, *Rana sylvatica*, of the United States.

wood-gas (wůd'gas), *n.* Illuminating gas obtained from wood.

wood-geld† (wůd'geld), *n.* In *old Eng. law*, money paid for the privilege of cutting wood within the limits of a forest.

wood-germander (wůd'jėr-man″dėr), *n.* Same as *wood-sage*. See *sage*[2].

wood-gnat (wůd'nat), *n.* A British gnat, *Culex nemorosus*.

wood-god (wůd'god), *n.* A sylvan deity.

> The myld *wood-gods* arrived in the place. *Spenser.*

wood-grass (wůd'grâs), *n.* The great wood-rush, *Juncoides sylvaticum*. [Prov. Eng.]

wood-grinder (wůd'grīn″dėr), *n.* In *paper-manuf.*, a machine for grating and grinding wood to make paper-stock.

wood-grouse (wůd'grous), *n.* A grouse that lives in the woods. Specifically—(*a*) The cock-of-the-woods, or capercaillie (which see, with cut). (*b*) In the United States, a species of *Canace* (or *Dendragapus*), as the Canada grouse, or spruce-partridge, and the dusky pine-grouse. See cut under *Canace* and second cut under *grouse*.

wood-hack (wůd'hak), *n.* [< ME. *wodehake*; < *wood* + *hack*[1].] A woodpecker, as the green woodpecker, *Gecinus viridis*. See cut under *popinjay*. [Prov. Eng.]

wood-hagger (wůd'hag″ėr), *n.* A wood-cutter.

> Let no man thinke that the President and these Gentlemen spent their times as common *Wood-haggers* at felling of trees.
> Quoted in *Capt. John Smith's* Works, I. 197.

wood-hawk (wůd'hâk), *n.* An African hawk of the genus *Dryotriorchis*: a book-name.

wood-hen (wůd'hen), *n.* A ralline bird of the genus *Ocydromus*, of which there are several

Wood-hen (*Ocydromus australis*).

species, of New Zealand, New Caledonia, and other Pacific islands, as *O. australis*, the weka rail. See *Ocydromus*.

wood-hewer (wůd'hū″ėr), *n.* 1. One who hews wood.—2. Any bird of the subfamily *Dendrocolaptinæ*, as *Xiphocolaptes emigrans*: a book-name. See cuts under *saberbill* and *Upucerthia*.

wood-hole (wůd'hōl), *n.* A place where wood is stored for fuel.

> Leave trembling, and creep into the *Wood-hool* here.
> *Etherege*, She Would if She Could, i. 1.

wood-honey (wůd'hun″i), *n.* [< ME. *wudehunig*, < AS. *wuduhunig*; as *wood*[1] + *honey*.] Wild honey. Mat. iii. 4 (ed. Hardwick).

wood-hoopoe (wůd'hö″pō), *n.* A hoopoe of the family *Irrisoridæ*; a tree-hoopoe. See cut under *Irrisor*.

wood-horse (wůd'hôrs), *n.* 1. A sawhorse or sawbuck.

> Old Uncle Venner was just coming out of his door, with a *wood-horse* and saw on his shoulder; and, trudging along the street, he scrupled not to keep company with Phœbe, so far as their paths lay together.
> *Hawthorne*, Seven Gables, xiv.

2. Same as *stick-bug*, 1.

woodhouse[1] (wůd'hous), *n.* A house or shed in which wood is piled and sheltered from the weather.

woodhouse[2]†, *n.* An erroneous form of *woodwose.*

Foure *woodhouses* drew the mount 'till it came before the queen, and then the kyng and his compaigne discended and daunced.
Bp. Hall, quoted in Strutt's Sports and Pastimes, p. 239.

wood-ibis (wůd'ī″bis), *n.* A large grallatorial bird of the stork kind, *Tantalus* (or *Tantalops*) *loculator,* which abounds in the wooded swamps and bayous of southerly regions of the United States; hence, any stork of the subfamily *Tantalinæ;* a wood-stork. These birds are ibises in no proper sense. The species named is nearly 4 feet long, and 5½ feet in extent of wings. The adult of both sexes is snow-white with black primaries, alula, and tail, with the bald head livid-bluish and yellowish, the very heavy bill dingy-yellowish, the bare legs blue. The weight is 10 or 12 pounds. The young are dark-gray, with blackish wings and tail. These birds are gregarious, nest in large heronries, and lay two or three white eggs of elliptical shape, incrusted with a flaky substance, and measuring 2¾ by 1¾ inches. This wood-ibis is known on the Colorado river as the *Colorado water-turkey;* it occasionally strays to the Middle States, and spreads south in the West Indies, Central America, and parts of South America. Similar birds inhabit tropical and subtropical regions of the Old World. See cut under *Tantalus.*

woodie (wůd'i), *n.* A dialectal form of *widdy,* itself a dialectal variant of *withy*[1], 3: applied humorously to the gallows. [Scotch.]

Half the country will see how ye'll grace the *woodie.*
Scott, Guy Mannering, xxviii. (*Encyc. Dict.*)

woodiness (wůd'i-nes), *n.* The state or character of being woody. *Evelyn.*

wood-inlay (wůd'in″lā), *n.* Decoration by means of the incrustation of one wood in another. Compare *tarsia.*

woodisht (wůd'ish), *a.* [< *wood*[1] + *-ish*[1].] Sylvan.

The many mirthful jests, and wanton *woodish* sports.
Drayton, Polyolbion, s. 11. (*Encyc. Dict.*)

wood-jobber (wůd'job″ėr), *n.* A woodpecker.

woodkernt (wůd'kėrn), *n.* 1. A robber who infests woods; a forest-haunting bandit. *Holland.*—2. A boor; a churl.

The rich central pasture lands were occupied by the clans; the surrounding poorer soils were almost desolate or roamed by a few scattered *wood-kerne.*
Fortnightly Rev., XL. 200.

wood-kingfisher (wůd'king″fish-ėr), *n.* A kingfisher of the genus *Dacelo* in a broad sense; a kinghunter or halcyon, as the laughing-jackass. See *Daceloninæ,* and cut under *Dacelo.*

wood-knacker (wůd'nak″ėr), *n.* The green woodpecker, *Gecinus viridis.* See cut under *popinjay.* [Prov. Eng.]

wood-knifet (wůd'nīf), *n.* A short sword or dagger, used in hunting and for various purposes for which the long sword was too cumbrous.

He pulld forth a *wood kniffe,*
Fast thither that he ran;
He brought in the bores head,
And quitted him like a man.
The Boy and the Mantle (Child's Ballads, I. 14).

★ **woodland** (wůd'land), *n.* and *a.* [< ME. *wodeland, wodelond,* < AS. *wuduland;* as *wood*[1] + *land*[1].] I. *n.* Land covered with wood, or land on which trees are suffered to grow, either for fuel or for timber.

Here hills and vales, the *woodland* and the plain,
Here earth and water seem to strive again. *Pope.*

And Agamenticus lifts its blue
Disk of a cloud the *woodlands* o'er.
Whittier, The Wreck of Rivermouth.

=Syn. *Woods, Park,* etc. See *forest.*

II. *a.* Of, peculiar to, or inhabiting the woods; sylvan: as, *woodland* echoes; *woodland* songsters.

The *woodland* choir. *Fenton.*

I am a *woodland* fellow, sir, that always loved a great fire. *Shak.,* All's Well, iv. 5. 49.

Woodland caribou, woodland reindeer, the common caribou of North America, as found in wooded regions, and as distinguished from the *barren-ground reindeer,* which occurs beyond the limit of trees. See cut under *caribou.*

woodlander (wůd'lan-dėr), *n.* An inhabitant of the woods.

Every friend and fellow-*woodlander.*
Keats, Endymion, ii.

woodlark (wůd'lärk), *n.* A European lark, *Alauda arborea,* of more decidedly arboreal habits than the skylark, to which it is closely related. It differs from the latter chiefly in being somewhat smaller, with shorter tail and more marked variegation of the colors, but its song is quite different. The nest is placed on the ground, and the eggs are four or five in number, of a white color spotted with reddish-brown. The woodlark is migratory, and widely distributed at different seasons. It is common in some parts of Great Britain, but rare in Scotland. See cut under *Alauda.*

wood-layer (wůd'lā″ėr), *n.* A young oak or other timber-plant laid down among the thorn or other plants used in hedges.

wood-leopard (wůd'lep″ärd), *n.* A beautiful white black-spotted moth, *Zeuzera pyrina,* the larva of which lives in wood; the wood leopard-moth. This insect has been discovered in the United States since the definition of *leopard-moth* was published in this dictionary.

woodless (wůd'les), *a.* [< *wood*[1] + *-less.*] Without timber; untimbered.

wood-lily (wůd'lil″i), *n.* 1. The lily of the valley, *Convallaria majalis;* locally (from a resemblance in the racemes), the wintergreen, *Pyrola minor.* [Eng.]—2. A plant of the genus *Trillium.*

wood-liverwort (wůd'liv″ėr-wėrt), *n.* A lichen, *Sticta pulmonaria,* which frequently grows on trees. See cut under *apothecium.*

wood-lock (wůd'lok), *n.* In *ship-building,* a piece of hard wood, close fitted and sheathed with copper, in the throating or score of the pintle, to keep the rudder from rising. *Thearle,* Naval Arch., ¶ 233.

wood-louse (wůd'lous), *n.* 1. Any terrestrial isopod of the family *Oniscidæ.* The common wood-louse of England is a species of *Oniscus.* Also called *hog-louse, sow-bug, slater,* etc. See cuts under *Isopoda* and *Oniscus.*—2. A termite, or white ant, as *Termes flavipes;* any member of the *Termitidæ.* See cut under *Termes.* [Local, U. S.]—3. Any one of the small whitish species of the corrodentian family *Psocidæ,* found in the woodwork of houses; the death-watch; a book-louse. See *book-louse, Psocidæ,* and cut under *death-watch.*—4. Same as *wood-louse-milleped.*

woodlouse-milleped (wůd'lous-mil″e-ped), *n.* A milleped of the family *Glomeridæ.*

woodlyt (wůd'li), *adv.* [< ME. *woodly, wodly, wodliche;* < *wood*[2] + *-ly*[2].] Madly; furiously; wildly.

Whan he wiȝtli a-wok *wodli* he ferde,
Al to-tare his a-tir that he to-tere miȝt.
William of Palerne (E. E. T. S.), l. 3884.

Therwith the fyr of jelousye upsterte
Withinne his brest, and hente him by the herte
So *woodly* that he lyk was to biholde
The box-tre or the asshen dede and colde.
Chaucer, Knight's Tale, l. 443.

woodman (wůd'man), *n.*; pl. *woodmen* (-men). [Early mod. E. *wodman;* < *wood*[1] + *man.*] 1. An officer appointed to take care of the king's woods; a forester. *Cowell.*—2†. A woodsman; a hunter.

Am I a *woodman,* ha? Speak I like Herne the hunter?
Shak., M. W. of W., v. 5. 30.

'Tis dangerous keeping the
Fool too long at Bay, lest some old *Wood-man* drop in
By chance, and discover thou art but a Rascal Deer.
Etherege, Love in a Tub, v. 4.

3. One who fells timber.

Forth goes the *woodman,* leaving unconcerned
The cheerful haunts of man, to wield the axe
And drive the wedge in yonder forest drear.
Cowper, The Task, v. 41.

War-*woodman* of old Woden, how he fells
The mortal copse of faces! *Tennyson,* Harold, v. 1.

wood-march (wůd'märch), *n.* An umbelliferous plant, a species of sanicle, *Sanicula Europæa. Gerard,* Herball.

wood-meeting (wůd'mē″ting), *n.* A Mormon name for a camp-meeting.

wood-mill (wůd'mil), *n.* A polishing-wheel made of a disk of mahogany, used, after the roughing-mill, to smooth surfaces of alabaster and the like.

wood-mite (wůd'mīt), *n.* Any mite or acarine of the family *Oribatidæ;* a beetle-mite.

woodmongert (wůd'mung″gėr), *n.* A woodseller; a lumber- or timber-merchant.

The House is just now upon taking away the charter from the Company of *Wood-mongers,* whose frauds, it seems, have been mightily laid before them.
Pepys, Diary, III. 298.

wood-mouse (wůd'mous), *n.* A mouse that habitually lives in the woods. Specifically—(*a*) In Europe, the long-tailed field-mouse, *Mus sylvaticus.* (*b*) In the United States, any one of several species of white-footed mice or deer-mice of the genus *Peromyscus,* of which *P. americanus* is the principal one. See *Vesperimus, vesper-mouse,* and cut under *deer-mouse.*

wood-naphtha (wůd'naf″thą), *n.* The commercial name of the mixture of impure methyl alcohol, acetone, etc., distilled from wood.

woodnesst (wůd'nes), *n.* [< ME. *woodnesse, wodnesse,* < AS. *wōdnes,* madness, fury, insanity (Bosworth), = MD. *woedenisse* = OHG. *wotnissa* (Stratmann); as *wood*[2] + *-ness.*] Insanity; madness.

Yet saugh I *woodnesse* laughing in his rage.
Chaucer, Knight's Tale, l. 1153.

Festus seide with greet voice: Paul, thou maddist, many lettris turnen thee to *woodness.* *Wyclif,* Acts xxvi. 24.

wood-nightshade (wůd'nīt″shād), *n.* The bitter-sweet, or woody nightshade, *Solanum Dulcamara.* See *nightshade,* 1 (*a*).

wood-note (wůd'nōt), *n.* A wild or natural musical tone, like that of a forest-bird, as the woodlark, wood-thrush, or nightingale.

Or sweetest Shakspeare, Fancy's child,
Warble his native *wood-notes* wild.
Milton, L'Allegro, l. 134.

wood-nut (wůd'nut), *n.* The European hazel-★ nut, *Corylus Avellana.*

wood-nymph (wůd'nimf), *n.* 1. A goddess of the woods; a dryad.

By dimpled brook and fountain-brim
The *wood-nymphs,* deck'd with daisies trim,
Their merry wakes and pastimes keep.
Milton, Comus, l. 120.

2. The humming-bird *Thalurania glaucopis.*—3. One of several noctuid moths, of the genus

Beautiful Wood-nymph (*Euthysanotia grata*), natural size.

Euthysanotia, as *E. grata,* the beautiful wood-nymph, and *E. unio,* the pearl wood-nymph. The larvæ of both of these species feed on the vine in the United States.

Pearl Wood-nymph (*Euthysanotia unio*), natural size.

wood - offeringt (wůd'of″ėr-ing), *n.* Wood burnt on an altar.

We cast the lots among the priests, the Levites, and the people for the *wood offering.* Neh. x. 34.

wood-of-the-holy-crosst, *n.* [Trans. of L. *lignum sanctæ crucis.*] A name once given to the mistletoe, *Viscum album,* from its reputed virtue in helping the infirmities of old age. *Treas.* ★ *of Bot.*

wood-oil (wůd'oil), *n.* 1. See *gurjun.*—2. Same as *tung-oil.*—3. A product of the satinwood, *Peradenia Chloroxylon.*

wood-opal (wůd'ō″pąl), *n.* Silicified wood; opalized wood. It is found in great abundance in many parts of the world, but especially in the auriferous gravels of the Sierra Nevada of California, where extensive forests have been exposed by hydraulic mining, in which the trunks of the trees have been converted into amorphous silica, or opal, which usually contains a small percentage of water, although this is not considered as being essential to its composition. Also called *xylopal.* See *fossil wood* (under *wood*[1]), and *silicify.*

wood-owl (wůd'oul), *n.* The European tawny or brown owl, *Syrnium aluco,* or a similar species, as the barred owl of the United States. They are earless owls, of medium to large size, the species of which are numerous and live in the woods of most parts of the world. See cut under *Strix.*

★ **wood-paper** (wůd'pā″pėr), *n.* A trade-name for paper made in part or in whole of pulp prepared by chemical and mechanical means from wood. The wood employed is usually poplar, though pine, fir, basswood, and beech are largely used. By the mechanical process the wood is ground to fine powder suitable for pulp, and by the chemical process the wood, cut up into small pieces, is digested with various chemicals to free it from the sap and other useless matter, to bleach it, and to reduce it to fine, loose pulp. See *pulp-digester, wood-grinder,* and *paper.*

wood-parenchyma (wůd'pa-reng″ki-mą), *n.* A combination of wood or fiber usually classed as parenchyma, but intermediate between this and prosenchyma. Each fiber consists of three cells, one of which has flattened ends, while the other two, attached to these ends, are pointed.

wood-partridge (wůd'pär″trij), *n.* The Canada grouse. See *grouse, wood-grouse,* and cut under *Canace.* [Local, U. S.]

wood-pavement (wůd'pāv″ment), *n.* Pavement composed of blocks of wood: first used in London in 1839.

wood-pea (wůd'pē), *n.* See *pea*[1].

wood-peat (wůd'pēt), *n.* Peat formed in forests from decayed wood, leaves, etc. Also called *forest-peat.*

woodpeckt (wůd'pek), *n.* The woodpecker.

Nor *wood-pecks,* nor the swallow, harbour near.
Addison, tr. of Virgil's Georgics, iv.

★**woodpecker** (wŭd′pek″ėr), *n.* Any bird of the large family *Picidæ*, of which there are numerous genera and some 250 species, inhabiting nearly all parts of the world. They are picarian and scansorial birds, having the toes arranged in pairs, two before and two behind (except, of course, in the three-toed genera: see *Picoides*1, and cut under *Tiga*); the tail-feathers rigid and acuminate, to assist in climbing; the bill hard and chisel-like, adapted for boring wood (whence the name); and a remarkable structure of the palatal and hyoidean bones and salivary glands. (See cuts under *salivary* and *saurognathous*.) The tongue is capable, in most species, of being thrust far out of the mouth, and is lumbriciform. (See cut under *sagittilingual*.) The plumage as a rule is variegated in intricate patterns of coloration, and usually includes bright, rich, or striking tints. Insects constitute most of their food; their eggs are white, and are laid in holes they dig in trees; their voice is harsh and abrupt. They are of great service to man by destroying insects which infest trees. See *Picidæ*, and numerous cuts there cited.—**Arizona woodpecker,** *Picus* (*Dendrocopus*) *arizonæ*, a bird lately discovered in Arizona, and for some time called *Picus stricklandi*, but distinct from Strickland's woodpecker in having the upper parts of a uniform light-brown color and the spots of the under parts guttiform. *Hargitt*, Ibis, 1866, p. 115.—**Audubon's woodpecker,** the small southern form of the hairy woodpecker (which see), named *Picus auduboni* by W. Swainson in 1831, and renamed *Picus auduboni* by Dr. James Trudeau in 1837, without reference to the prior homonym. —**Ayres's woodpecker,** *Colaptes ayre ii* of Audubon (1839), *C. hybridus* of Baird (1858), *Picus hybridus auratomexicanus* of Sundevall (1866), names covering the remarkable flickers of western North America, especially of the upper Missouri and adjacent regions, which present every step of the intergradation between the yellow-shafted and the red-shafted flickers (*C. auratus* and *C. mexicanus*); the so-called hybrid woodpecker. The coloration is so unstable that it often varies on right and left sides of the same specimen. The case is unique, and its interpretation continues in question by ornithologists.—**Baird's woodpecker,** (*a*) The Cuban ivorybill, *Campophilus bairdi*, named by J. Cassin, in 1863, in compliment to Spencer Fullerton Baird (1823–1887). (*b*) The Californian woodpecker, *Melanerpes formicivorus bairdi*.—**Bengal woodpecker, var. A,** *Brachypternus erythronotus*, of Ceylon. *Latham*, 1782.—**Bengal woodpecker, var. B,** *Chrysocolaptes lucidus*, of the Philippines. *Latham*, 1782.—**Black-and-white-spotted woodpeckers,** the numerous members of the restricted genus *Picus* (= *Dendrocopus:* see under *great black woodpecker*, below), usually 9 to 10 inches long, with four toes, the plumage variegated intricately with black and white, with a scarlet occipital band or pair of spots in the adult male. The greater and lesser spotted woodpeckers of England, and the hairy and downy woodpeckers of the United States, are characteristic examples. —**Black-backed three-toed woodpecker,** *Picoides arcticus*, marked by the characters indicated in the name, 9 to 10 inches long, common in northerly parts of North America.—**Black-breasted woodpecker,** the adult female of the thyroid woodpecker.—**Black woodpecker,** the great black woodpecker.—**Bristle-billed woodpeckers,** the genus *Asyndesmus*. *Coues.*—**Brown-headed woodpecker,** the adult female of *Sphyropicus thyroides;* the thyroid woodpecker (see below).—**Buff-crested woodpecker** (of Latham, 1782), the female of *Campophilus melanoleucus* (the *Picus albirostris* of Vieillot), a white-billed crested woodpecker of tropical America, 13½ inches long, congeneric with the ivorybill.—**Cactus woodpecker,** *Picus* or *Melanerpes cactorum*, of Peru, Bolivia, Uruguay, and the Argentine Republic.—**Californian woodpecker,** that race of *Melanerpes formicivorus* (a Mexican species) which abounds in the United States from the Rocky Mountains to the Pacific. It is 8½ to 9½ inches long, of a glossy blue-black color, with the rump, bases of all the quills, edge of the wing, and under parts from the breast white, the sides with sparse black streaks, the forehead white continuously with a stripe down in front of the eye and thence encircling the throat, the crown in the male crimson and white, in the female crimson, black, and white, the eyes white, often with a creamy or pinkish, sometimes bluish, tint. This is the woodpecker noted for drilling holes in dead boughs in which to insert acorns—some branches being found thus drilled and studded with hundreds of acorns.—**Canadian woodpecker,** the large northern form of the hairy woodpecker (which see), formerly *Picus canadensis* (Gmelin, 1788), and before that *Picus leucomelas* (Boddaert, 1783).—**Cape woodpecker,** the South African *Mesopicus griseocephalus*, 7½ inches long, having the crown, crest, rump, upper tail-coverts, and middle of the belly crimson. This bird was originally described in 1776 by Sonnini as *pic verd de l'Isle de Luçon*, whence *Picus manillensis* of Gmelin (1788), and *Manilla green woodpecker* of Latham; next by Buffon in 1780 as *pic à tête grise du Cap de Bonne Espérance*, whence *Picus griseocephalus* of Boddaert (1783) and *Cape woodpecker;* next by Scopoli in 1786 as *Picus menstruus*—this most frequent specific name indicating the bloody-red color of certain parts; next as *pic olive* by Levaillant (1806); also as *Picus caniceps*, *P. obscurus*, *P. capensis*. It has been placed in 6 different genera; its proper onym was first given by Cassin in 1863.—**Carolina woodpecker, var. A,** *Melanerpes* or *Centurus radiolatus*, peculiar to Jamaica. *Latham*, 1782.—**Carolina woodpecker, var. B,** the red-bellied woodpecker. *Latham*, 1782.—**Collared woodpecker,** *Asyndesmus torquatus;* Lewis's woodpecker.—**Crawfurd's woodpecker,** a bird so named by Gray in Griffith's Cuvier (1829), now called *Thriponax crawfurdi*, and supposed to be found near Ava in Burma, but known only from a drawing executed by a native artist for Mr. Crawfurd, Jr.—**Crimson-breasted woodpecker,** the monotypic *Geocolaptes olivaceus* (also *Picus arator*), of South Africa, 9½ to 10 inches long, much varied with olivaceous and reddish tints. *Latham*, 1783.—**Crimson-rumped woodpecker,** *Mesopicus goertan*, the *goertan* or *pic vert du Sénégal* of early French writers, a West African species, 8 inches long, of a golden-olive color above, with scarlet rump and upper tail-coverts, and otherwise much variegated.—**Cuban woodpecker,** *Nesoceleus fernandinæ*, usually called *Colaptes fernandinæ* and *Cuban flicker*, 11½ to 12 inches long, above olive-black barred with yellow, and confined to Cuba.—**Downy woodpecker,** *Picus* (*Dendrocopus*) *pubescens*, a small black and white species, 6 or 7 inches long, one of the commonest woodpeckers of eastern parts of North America, and among those popularly called *sapsucker* (which see). It is exactly like the hairy woodpecker, except in size, and in having the lateral tail-feathers barred with black and white, instead of being entirely white. There is no such difference between the two as the terms *downy* and *hairy* would seem to imply. This species corresponds in the United States to the lesser spotted woodpecker of England.—**Gairdner's woodpecker,** *Picus pubescens gairdneri*, the western subspecies of the downy woodpecker, having few if any white spots on the black wing-coverts, and in some localities the belly smoky-gray: dedicated by Audubon in 1839 to Dr. Meredith Gairdner, a Scotch naturalist.—**Gila woodpecker,** the saguaro or pitahaya woodpecker. See cut under *pitahaya*. —**Gilded woodpecker.** (*a*) An American flicker of the genus *Colaptes*, as the golden-winged woodpecker, *C. auratus*. See cut under *flicker*2. (*b*) Specifically, one of these, *C. chrysoides*, of Arizona, Lower California, and southward, which resembles the common flicker in the body, tail, and wings, but has the head as in the Mexican flicker.—**Golden-shafted, golden-winged, gold-winged woodpecker,** the common flicker, *Colaptes auratus*.—**Gray-headed woodpecker,** *Gecinus canus*, a popinjay of nearly all Europe and much of Asia. *Pennant*, 1785, and more fully *gray-headed green woodpecker* (Edwards, 1747).—**Grayson's woodpecker,** the ladder-backed woodpecker of the Tres Marias Islands off the Pacific coast of Mexico, named after Col. A. J. Grayson by Lawrence, in 1874, *Picus scalaris*, var. *graysoni*.—**Great black woodpecker,** *Picus* or *Dryocopus martius*, the largest European woodpecker, ranging in northerly latitudes through the Palearctic region to Kamchatka and Japan. It is 17 inches long, black, with pointed scarlet crest in the male (the scarlet restricted in the female), and peculiar in having the tarsi extensively feathered. It corresponds to the pileated woodpecker of North America. Many authors assume this isolated woodpecker to be monotypic of the restricted genus *Picus*, in which case the numerous smaller black and white species like the greater and lesser spotted of Europe, and the hairy and downy of North America, are generically called *Dendrocopus;* but when these are left in *Picus*, the great black woodpecker has been called *Dryocopus*. The generic name now employed for the small black and white woodpeckers is *Dryobates* (Boie, 1826).—**Greater spotted woodpecker,** *Picus* (*Dendrocopus*) *major*, ranging through nearly all of Europe and much of Asia. This is one of the woodpeckers common in Great Britain, there corresponding to the hairy woodpecker of the United States. It is 10 inches long, of black and white color in intricate pattern, the male with a red hindhead. See cut under *Picus*.—**Green woodpecker,** *Gecinus viridis*, the commonest woodpecker in Great Britain, with a host of provincial English names, dialectal variants of these, and various poetical epithets, but only about twenty New Latin names. (See cut under *popinjay*.) The genus *Gecinus* ranges through almost all the Palearctic and Indian regions, where it is represented by 17 species. That mentioned inhabits the greater part of Europe, north to 60° N. lat., also Asia Minor and eastward to Persia. It is about 12½ inches long, of a greenish color, variegated with crimson, yellow, white, black, etc.—**Green woodpecker of Mexico**†, a bird described in 1734 by Seba as *Ardea mexicana*, and later in 1760 by Brisson as *pic verd du Mexique*, being a popinjay artificially fitted with the legs of some other bird and falsified as to habitat. —**Hairy woodpecker,** *Picus* (*Dendrocopus*) *villosus*, a common woodpecker of eastern North America, entirely black and white, the male with a scarlet occipital band, the size usually 9 or 10 inches, but varying from 8 to 11. This very exceptional gradation in size has caused the recognition of three varieties, *major*, *medius*, and *minor*, graded mainly according to latitude, the northernmost birds being the largest. These varieties have several synonyms, and in western North America the hairy woodpecker runs into yet other geographical or climatic races. —**Half-billed woodpecker**† (Latham, 1782), a nominal species, based on *Picus semirostris* of Linnæus (1766), which was a popinjay with a broken bill.—**Harris's woodpecker,** *Picus villosus harrisi*, the hairy woodpecker of the regions from the Rocky Mountains to the Pacific, in which the white spots on the wing-coverts are few, if any, and the belly is smoky-gray in some localities. This subspecies is thus parallel with that of the downy woodpecker called *Gairdner's*, and was dedicated by Audubon in 1839 to Edward Harris.—**Hybrid woodpecker,** Ayres's woodpecker.—**Imperial woodpecker,** *Campophilus imperialis*, an ivory-billed and the largest known woodpecker, nearly 2 feet long, with black nasal plumules, no white stripe on the head or neck, a long occipital crest of scarlet, the secondaries tipped with white, the plumage otherwise black, and the bill white. This magnificent bird inhabits Mexico, and will probably be found in the United States near the Mexican border.—**Ivory-billed woodpecker,** the ivorybill; any member of the genus *Campophilus* having a white bill. See cut under *Campophilus*.—**Javan three-toed woodpecker,** the bird figured under *Tiga* (which see).—**Ladder-backed three-toed woodpecker,** *Picoides americanus*, marked by the characters indicated in the name, 8 to 9 inches long, common in northerly parts of North America.—**Ladder-backed woodpeckers,** those small black-and-white-spotted woodpeckers whose upper parts are regularly barred crosswise with black and white, as the Texan woodpecker and related forms. *Coues.* —**Larger red-crested woodpecker,** the pileated woodpecker. *Catesby*, 1731.—**Largest white-billed woodpecker,** the ivorybill. *Catesby*, 1731.—**Lesser black woodpecker** (Latham, 1782), the homonym of two different species of South American woodpeckers, *Melanerpes rubrifrons* and *M. cruentatus*.—**Lesser spotted woodpecker,** *Picus* (*Dendrocopus*) *minor*, ranging through nearly all Europe, much of Asia, and parts of Africa. It is one of the woodpeckers common in Great Britain, where it corresponds to the downy woodpecker of the United States. It is 6 inches long, of black and white color in intricate pattern, the male with a red hindhead.—**Lewis's woodpecker,** *Melanerpes torquatus* of Wils, originally *Picus torquatus* of Wilson (1811), named by the latter after its discoverer, Captain Meriwether Lewis, United States army. It inhabits western North America, chiefly in mountainous parts of the United States, and is generically distinct from all other woodpeckers in having the plumage of the under parts hair-like by reason of disconnection of the barbs of the feathers. It is 10 to 12 inches long, greenish-black with bronze luster, a patch of velvety crimson feathers on the face, the under parts and a collar round the neck hoary-gray, heightened to rose- or lake-red on the belly. Also called *collared* and *bristle-billed woodpecker*.—**Lineated woodpecker,** *Ceophlœus* or *Dryocopus* (formerly *Picus*) *lineatus*, of Central and South America, of rather large size (14 inches long), crested with crimson, and otherwise resembling the pileated woodpecker, to which it is nearly related.—**Little brown woodpecker,** *Iyngipicus gymnophthalmus*, of Ceylon and the point of the Indian peninsula, 4¾ inches long. *Latham*, 1787.—**Magellanic woodpecker,** *Ipocrantor magellanicus*, a monotypic species of Chili and Patagonia, 15 inches long, mostly blue-black with scarlet crested head.—**Malaccan woodpecker,** *Chrysophlegma malaccensis*, of the Malay countries, Sumatra, and Borneo. It is one of a group of about 8 Oriental species of this genus. *Latham*, 1787.—**Manilla green woodpecker,** the Cape woodpecker (by a geographical blunder). *Latham*, 1782.—**Maria's woodpecker,** a young hairy woodpecker, named *Picus martinæ* by Audubon in 1839 after a Miss Maria Martin.—**Masked woodpeckers,** the genus *Xenopicus*. *Coues*, 1884.—**Narrow-fronted woodpecker,** *Melanerpes formicivorus angustifrons*, a variety found in Lower California, having not the forehead but the white frontal stripe narrower than usual.—**Nubian woodpecker,** the leading species of a group of about 12 species composing the Ethiopian genus *Campothera; C. nubica*, of Abyssinia and south to equatorial Africa. *Latham*, 1782.—**Nuchal woodpecker,** a western variety of the sapsucker, *Sphyropicus varius nuchalis*, showing more red on the head, and thus an approach to *S. ruber*.—**Nuttall's woodpecker,** *Picus* (*Dendrocopus*) *nuttalli*, the ladder-backed woodpecker of the Pacific slope of the United States, very near the Texan: named in 1843 by Dr. W. Gambel in compliment to the botanist Thomas Nuttall.—**Orange woodpecker,** *Brachypternus aurantius*, of northern India, in part of the color named, and 11 inches long. the male of which was originally described in 1760 by Brisson as *pic du Cap de Bonne Espérance*, and the female the same year by the same as *pic verd de Bengal*, whence the Linnean (1766) *Picus aurantius* and *Picus bengalensis*. The same bird served also as the type of Malherbe's genus *Brahmapicos*, dedicated to the leading personage of the Hindu Trimurti. —**Phillips's woodpecker,** a young hairy woodpecker: so named as a distinct species in 1839, by Audubon, after Benjamin Phillips, F. R. S.—**Pileated woodpecker,** the black log-cock of North America, *Hylotomus* or *Dryotomus* or *Phlœotomus* or *Ceophlœus pileatus*, originally *Picus pileatus*. See cut under *pileated*.—**Pole-backed three-toed woodpecker,** *Picoides americanus dorsalis*, having a long white stripe lengthwise down the middle of the black back, of the Rocky Mountain region of the United States.—**Raffles's woodpecker,** *Gauropicoides raffiesi*, a monotype inhabiting Tenasserim, the Malay peninsula, Sumatra, and Borneo, originally named *Picus raffiesii* by Vigors, in 1831, after Sir Stamford Raffles. The upper parts are mostly uniform golden-olive.—**Rayed woodpecker,** one of the zebra-woodpeckers, *Picus* or *Centurus* or *Zebrapicus striatus*, of Hayti and San Domingo. *Latham*, 1782.—**Red-bellied woodpecker,** *Centurus carolinus*, one of the zebra-woodpeckers, common in the United States. See cut under *Centurus*.—**Red-breasted woodpecker,** *Sphyropicus ruber*, the sapsucker of the Pacific coast of the United States, like *S. varius*, but having the whole head, neck, and breast carmine-red in both sexes.—**Red-cheeked woodpecker** (of Edwards, 1764), *Celeus undatus*, a crested Amazonian species of a genus of 14 species peculiar to the Neotropical region.—**Red-cockaded woodpecker.** See *red-cockaded*.—**Red-headed woodpecker,** *Melanerpes erythrocephalus:* so named by Catesby in 1731. See cut under *Melanerpes*.—**Red-shafted woodpecker,** the Mexican flicker, *Colaptes mexicanus*. —**Red-throated woodpecker,** the adult male of the thyroid woodpecker, formerly described as *Melanerpes rubrigularis* (Sclater).—**St. Lucas woodpecker,** the ladder-backed woodpecker of Lower California: a local race called *Picus scalaris leucasanus*.—**Sap-sucking woodpeckers,** the true sapsuckers of the genus *Sphyropicus* (which see, with cut).—**Smallest spotted woodpecker,** the downy woodpecker. *Catesby*, 1731.—**Strickland's woodpecker,** *Picus* (*Dendrocopus*) *stricklandi*, of southeastern Mexico, dedicated in 1845 by Malherbe to Hugh E. Strickland, principal author of the Stricklandian code of nomenclature in ornithology. It is 7½ inches long, has the back and rump barred with blackish-brown and whitish, the under parts white, fully streaked with black.—**Superciliary woodpecker.** See *superciliary*.—**Texan woodpecker,** the ladder-backed woodpecker of Texas to Arizona and southward to Yucatan, *Picus* (*Dendrocopus*) *scalaris*, 5½ to 6¾ inches long, having the upper parts regularly barred crosswise with white and black. Also called *Texas sapsucker*.—**Three-toed woodpecker,** any species of several different genera of *Picinæ*, in which the first digit (inner hind toe) is lacking. This peculiarity recurs in genera otherwise very close to those in which the feet are normally yoke-toed, so that the species which exhibit it do not form a group by themselves. The three-toed genera are *Picoides*, *Gauropicoides*, *Gecinulus*, and *Tiga* (see cut under *Tiga*). The same peculiarity marks the genus *Sasia* among the *Picumninæ*.—**Thyroid woodpecker,** *Sphyropicus thyroideus*, a remarkable sapsucker of western North America, the opposite sexes of which differ so much that they have been placed in separate genera, and repeatedly described as different species, called *brown-headed, red-throated, Williamson's*, etc., *woodpecker, Picus thyroideus* (Cassin, 1851), *Colaptes thyroideus, Picus nataliæ* (Malherbe, 1854), *Centurus nataliæ, Picus williamsoni* (Newberry, 1857), *Melanerpes thyroideus, M. rubrigularis*, etc. The length is 9 to 9½ inches, the extent 16 to 17; the adult male is glossy blue-black, with scarlet throat, an oblique wing-bar, two stripes on each side of the head, and some other markings white; the female is only continuously black in a shield-shaped area on the breast, otherwise barred closely and regularly with black and white or whity-brown, the head uniform hair-brown, the quills marked with white spots in rows of pairs. The sexual differences begin with nestlings as soon as they are fledged, contrary to one of the broadest rules in ornithology—namely, that, when the adults of opposite sexes differ decidedly in

color, the young males resemble the female, and acquire their distinctive markings at maturity only.—**Tricolor woodpeckers**, the members of the restricted genus *Melanerpes*, as the red-headed. See cut under *Melanerpes*. *Coues.*—**White-backed woodpecker**, *Picus* (*Dendrocopus*) *leuconotus* (originally misprinted *leucotos*—Bechstein, 1802), 10 inches long, having the lower back white, extending from northwestern Europe to Manchuria, Corea, and Mongolia.—**White-headed woodpecker**, *Xenopicus albolarvatus*. See *Xenopicus* (with cut).—**White-rumped woodpecker**, the red-headed woodpecker. See cut under *Melanerpes*. *Latham*, 1782.—**Williamson's woodpecker**, the adult male of the thyroid woodpecker, formerly described by Dr. J. S. Newberry in 1857 as *Picus williamsoni*, after Lieutenant R. S. Williamson, United States army.—**Woodpecker hornbill**, an Asiatic species of *Bucerotidæ*, *Buceros pica* (of Scopoli, 1786, now *Anthracoceros coronatus*), of a black and white color, inhabiting India and Ceylon.—**Yellow-bellied woodpecker**, the common sapsucker: so named originally by Catesby, 1731. See *sapsucker* (with cut), and *Sphyropicus*.—**Yellow blue-footed Persian woodpecker**† (*Picus luteus cyanopus persicus* of Aldrovandi), the popinjay. *Latham*, 1782.—**Yellow-fronted woodpecker**, *Centurus aurifrons*, one of the zebra-woodpeckers, of Texas and southward, having the forehead and nasal plumules golden-yellow, the head and under parts clear ashy-gray, becoming yellowish on the belly, and the upper tail-coverts continuously white.—**Yellow-necked woodpecker**, *Gecinus chlorolophus*, a popinjay of Nepál, parts of the Himalayas, Bengal, Manipur, Assam, Burma, and the Malay peninsula. *Latham*, 1822.—**Yellow-winged woodpecker**. Same as *flicker*2.—**Zebra woodpeckers**. See *zebra-woodpecker*, and cut under *Centurus*.

wood-pewee (wůd′pē″wē), *n.* A tyrannuline, or little olivaceous flycatcher, of the genus *Contopus*, the species of which are numerous in the warmer parts of both Americas. The common wood-pewee, *C. virens*, is the most abundant of its tribe in the woodlands of many parts of North America. It resembles the water-pewee, or pewit flycatcher (compare cuts under *Contopus* and *pewit*), but is smaller (only 6 or 6½ inches long, and 10 or 11 in extent), with extremely small feet, and broad flat beak; the feet and upper mandible are black; the lower mandible is usually yellow; the eyes are brown; the plumage is olive-brown above, below dingy-whitish tinged with yellow and shaded with the color of the back, especially across the breast and along the sides. The nest is flatly saddled on a horizontal bough, stuccoed with lichens; the eggs are four or five in number, creamy-white, marked with reddish-brown and lilac spots usually wreathed about the larger end. The note is a long-drawn querulous whistle of two or three syllables, imitated in the word *pewee*. The western wood-pewee is *C. v. richardsoni*.

wood-pie (wůd′pī), *n.* The woodpecker: so called with reference to the spotted plumage: locally applied to the greater and lesser spotted woodpeckers, *Picus major* and *P. minor*, and the green woodpecker, *Gecinus viridis*. See cuts under *Picus* and *popinjay*. [Local, British.]

wood-pigeon (wůd′pij″ŏn), *n.* **1.** The wood-culver, wood-quest, cushat, or ring-dove, *Columba palumbus;* also, sometimes, the stock-dove, *C. œnas*. [Eng.]—**2.** In the western United States, the band-tailed pigeon, *Columba fasciata*. This is one of the few American pigeons congeneric with an Old World type (that figured under *white-crowned* being another). It is a large stout species (16 inches long and about 27 in extent), the adult male having the head, neck, and under parts vinaceous, fading to white on the crissum, the sides of the neck iridescent, a sharp white half-collar on the back of the neck (whence also called *white-collared pigeon*), the tail marked with a light terminal and dark subterminal bar (whence *band-tailed pigeon*), the bill yellow tipped with black, the feet yellow with black claws, and a red ring round the eye. It is of common but irregular distribution, chiefly in woodland, from the Rocky Mountains to the Pacific, feeds mainly on mast, nests in trees and bushes, and lays (as usual in this family) two white eggs.

woodpile (wůd′pīl), *n.* A stack or pile of wood, especially of wood for fuel.

> And, take it in the autumn, what can be pleasanter than to spend a whole day on the sunny side of a barn or a *woodpile*, chatting with somebody as old as one's self?
> *Hawthorne*, Seven Gables, iv.

wood-pimpernel (wůd′pim″pėr-nel), *n.* A European species of loosestrife, *Lysimachia nemorum*, somewhat resembling the common pimpernel.

wood-puceron† (wůd′pū″se-ron), *n.* [< *wood*1 + F. *puceron*, < *puce*, OF. *pulce* = It. *pulce*, < L. *pulex*, flea.] A kind of aphis or plant-louse.

wood-pulp (wůd′pulp), *n.* Wood-fiber reduced to a pulp, either mechanically or chemically, for use in the manufacture of paper. Almost any wood may be used; the amount of cellulose varies from 39.41 per cent. in oak to 56.99 per cent. in fir. The easily worked woods are preferred, cottonwood and other poplars being largely used in North America. The amount thus consumed in America and continental Europe is very large. Compare *wood-paper*.

wood-quail (wůd′kwāl), *n.* Any bird of the genus *Rollulus;* a roulroul. See cut under *Rollulus*.

wood-quest (wůd′kwest), *n.* The ring-dove, *Columba palumbus:* same as *queest*.

> Me thought I saw a stock-dove, or *wood-quist*, I know not how to tearme it, that brought short strawes to build his nest on a tall cedar.
> *Lyly*, Sapho and Phaon, iv. 3. (*Nares.*)

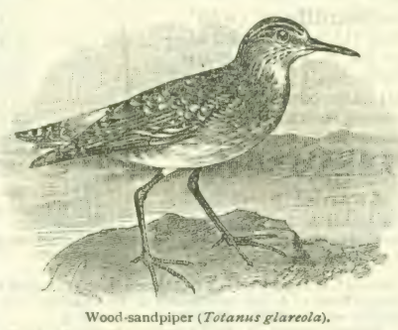
wood-rabbit (wůd′rab″it), *n.* The common gray rabbit of the United States, *Lepus sylvaticus*. See cut under *cottontail*.

wood-rat (wůd′rat), *n.* Any species of *Neotoma*, including large woodland rats of the United States, etc., of the family *Muridæ*, subfamily *Murinæ*, and section *Sigmodontes*, such as the Florida wood-rat, *N. floridana;* the Rocky Mountain wood-rat, *N. cinerea;* the California wood-rat, *N. fuscipes;* the Texas wood-rat, *N. micropus;* the ferrugineous wood-rat of Mexico and Central America, *N. ferruginea*. See *pack-rat* (under *rat*1), and cut under *Neotoma*.

wood-reed (wůd′rēd), *n.* See *reed*1.

woodreeve (wůd′rēv), *n.* In England, the steward or overseer of a wood or forest.

wood-robin (wůd′rob″in), *n.* The American wood-thrush, *Turdus mustelinus*. [Local, U. S.]



wood-rock (wůd′rok), *n.* Ligniform asbestos.

woodruff, woodroof (wůd′ruf, -röf), *n.* [Early mod. E. *woodrofe;* < ME. *wodruffe, wuderove, woderove,* < AS. *wudurofe, wuderofe,* < *wudu*, wood, + **rofe*, of uncertain meaning.] A rubiaceous herb, *Asperula odorata*, of Europe and Asiatic Russia, more fully named *sweet woodruff*. It has a creeping rootstock sending up erect stems, the leaves whorled, chiefly in eights, the flowers small, white, in loose cymes. The plant, from the presence of coumarin, is scented like the sweet vernal-grass and sweet-clover, and in parts of Europe it is used to flavor the spring beverage called *May-drink* (which see). Woodruff is sometimes found growing near German settlements in the United States. The name is extended to the other species of *Asperula*.—**Dyers' woodruff**, *Asperula tinctoria*, of Europe, whose roots sometimes serve in place of madder.—**Quinsy-woodruff**. Same as *quinsywort*.—**Sweet woodruff**. See def.

wood-rush (wůd′rush), *n.* [< *wood*1 + *rush*1, *n.*] A plant of the genus *Juncoides:* also called *glowworm-grass*. The field wood-rush, *Juncoides campestre*, is an extremely common low plant of Europe and North America, having clusters of brown chaffy flowers appearing early in spring: in Great Britain it is locally called *blackhead-* or *cuckoo-grass* and *chimney-sweeps*. A larger species, *J. sylvaticum*, has the names *wood-blades* and *wood-grass*.

wood-sage (wůd′sāj), *n.* See *sage*2.

wood-sandpiper (wůd′sand″pī-pėr), *n.* A common tattler of Europe and much of the Old World, *Totanus glareola*, of the family *Scolopacidæ*, nearly related to the redshank and greenshank, and also to the American solitary sandpiper.

Wood-sandpiper (*Totanus glareola*).

wood-sanicle (wůd′san″i-kl), *n.* See *sanicle*.

wood-saret, *n.* A kind of froth seen on herbs; cuckoo-spit.

> The froth which they call *woodseare*, being like a kind of spittle, is found but upon certain herbs, . . . as lavender, . . . sage, etc. *Bacon*, Nat. Hist., § 497.

wood-saw (wůd′sâ), *n.* Same as *buck-saw*. See cuts under *saw*.

wood-sawyer (wůd′sâ″yėr), *n.* In *entom.*, same as *sawyer*, 4.

wood-screw (wůd′skrö), *n.* A screw specially made for use in fastening together parts of wooden structures or structures of wood and metal. The modern wood-screw has generally a conical point, like that of a gimlet. See cuts under *countersink, screw*, and *screw-thread*.

wood-sere† (wůd′sēr), *n.* and *a.* [Also *woodseer;* < *wood*1 + *sere*1, *sear*1.] **I.** *n.* The time when there is no sap in a tree. *Tusser*, May's Husbandry, st. 6.

II. *a.* Dry; barren.

> The soil . . . is a poor *wood-sere* land, very natural for the production of oaks especially.
> *Aubrey*, Misc., p. 211. (*Davies.*)

Wood's fusible alloy. See *alloy*.

woodshed (wůd′shed), *n.* A shed for keeping wood for fuel.

> She looked so much like one of Elfie's own little dolls which she had thrown into the *woodshed*, out of the way, that she felt ashamed. *St. Nicholas*, XVIII. 288.

woodshock (wůd′shok), *n.* [See *woodchuck*1, applied to a different quadruped.] The pekan, fisher, or Pennant's marten, *Mustela pennanti* or *M. canadensis*, also called *black-cat* and *black-fox*. It is the largest and darkest-colored species of the genus, inhabiting North America approximately between 35° and 65° N. lat., in wooded regions of the country; it is from 2 to 3 feet long, the tail over a foot in length; the general color is black or blackish. See *pekan*, and cut under *fisher*.

wood-shrike (wůd′shrīk), *n.* **1.** The wood-chat.—**2.** An African shrike of the genus *Prionops*.

wood-shrimp (wůd′shrimp), *n.* A boring or terebrant amphipod, of the family *Cheluridæ*. See cut under *Chelura*.

Woodsia (wůd′zi-ą), *n.* [NL. (R. Brown, 1810), named after Joseph *Woods*, a British botanist.] A genus of delicate polypodiaceous ferns, natives of high temperate or boreal latitudes. They are tufted ferns with the stipes often jointed and separating at the joint, and round sori borne on the back of simply forked free veins. The indusium is inferior, thin, either small and open or early bursting into irregular lobes at the top. There are 15 species, of which number 7 are found in North America. See cut under *indusium*.

wood-skin (wůd′skin), *n.* A large canoe, used by the Indians of Guiana, made from the bark of the purple heart-tree and the simari or locust-tree. Some of these canoes are large enough to carry from twenty to twenty-five persons. *Simmonds*.

wood-slave (wůd′slāv), *n.* A Jamaican lizard, *Mabouya agilis*.

woodsman (wůdz′man), *n.*; pl. *woodsmen* (-men). One who dwells in or frequents the woods, as a wood-cutter, sportsman, hunter, or the like.

> The sturdy *woodsman*.
> *J. F. Cooper*, Last of Mohicans, xxv.

> Things that are common to all *woodsmen*.
> *Lowell*, Study Windows, p. 202.

> An Owl and a Duck will resort to the same nest-box, set up by a scheming *woodsman* for his own advantage.
> *Encyc. Brit.*, III. 772.

> The log was white birch. . . . *Woodsmen* are at a loss to account for its intense and yet chaste flame, since the bark has no oily appearance.
> *C. D. Warner*, Backlog Studies, p. 23.

Wood's metal. See *metal*.

wood-snail (wůd′snāl), *n.* A common snail of Great Britain, *Helix nemoralis*.

wood-snake (wůd′snāk), *n.* Any serpent of the family *Dryophidæ*.

wood-snipe (wůd′snīp), *n.* **1.** The European woodcock, *Scolopax rusticula:* so called as distinguished from the common snipe of England (*Gallinago media*). See first cut under *woodcock*. [Local, Eng.]

> The *wood-snipe* was considered a stupid bird.
> *St. James Gazette*, March 14, 1887. (*Encyc. Dict.*)

2. The American woodcock, *Philohela minor*. See second cut under *woodcock*. [Virginia.]

wood-soot (wůd′sůt), *n.* Soot from burnt wood. It has been found useful as a manure.

Wood's operation for inguinal hernia. See *operation*.

wood-sorrel (wůd′sor″el), *n.* A plant of the genus *Oxalis*. The common wood-sorrel is *O. Acetosella*. This is a low stemless species, found in damp deep shade through the north temperate zone. Its peduncles bear single delicate flowers, the petals white with light-reddish veins. It has the old or local names *alleluia, cuckoo-bread, stubwort*, etc., and it is regarded by some as the original Irish shamrock. The violet wood-sorrel, *O. violacea*, is a similar somewhat smaller American plant with violet petals, growing in less shaded ground. (See cut under *Oxalis*.) *O. corniculata*, the yellow wood-sorrel, having slender leafy branching stems which are erect or procumbent, with small yellow flowers, grows nearly everywhere. The leaves in this genus contain oxalic acid, and have a sourish taste. Several Mexican and South American species yield edible tuberous roots. (See *oca* and *arracacha*.) Several exotic species are cultivated in greenhouses, as a variety of *O. purpurata* with abundant flowers of a deep rose-color, *O. flava* with yellow flowers, and *O. versicolor* with flowers exhibiting a pink exterior when closed, white within, opening only in sunshine: these are all from the Cape of Good Hope.

wood-sour (wůd′sour), *n.* [Also *wood-sore, wood-sower*.] The wood-sorrel, *Oxalis Acetosella;* sometimes, the common barberry, *Berberis vulgaris*. [Prov. Eng.]

wood-spack (wůd′spak), *n.* Same as *wood-spite*. [Prov. Eng.]

wood-spirit (wůd′spir″it), *n.* Same as *pyroxylic spirit*. See *pyroxylic*.

wood-spite (wůd′spīt), *n.* [< *wood*1 + *spite*, var. of *speight*.] The green woodpecker, *Gecinus viridis*. Also *wood-spack*. *Willughby; Ray*. See cut under *popinjay*. [Prov. Eng.]

wood-spurge (wůd′spėrj), *n.* See *spurge*2.

wood-stamp (wůd′stamp), *n.* A stamp, engraved or carved in wood, for impressing figures or colors on fabrics.

wood-star (wůd′stär), *n.* 1. A humming-bird of the genus *Calothorax*, as *C. calliope*.—2. The Bahaman sheartail, a humming-bird, *Doricha evelynæ*, common in New Providence and Andros islands. See *sheartail*.

wood-still (wůd′stil), *n.* A turpentine-still.

wood-stone (wůd′stōn), *n.* Petrified wood; especially, silicified wood, such as that from Antigua, the desert of Cairo, etc.

wood-stork (wůd′stôrk), *n.* A stork of the subfamily *Tantalinæ*, more commonly and less correctly called *wood-ibis*. See cut under *Tantalus*.

wood-stove (wůd′stōv), *n.* A stove specially adapted for burning wood, as distinguished from a coal-stove, gas-stove, etc.

wood-strawberry (wůd′strâ″ber-i), *n.* See *strawberry*.

woodsucker (wůd′suk″ėr), *n.* The green woodpecker, *Gecinus viridis*. Compare *sapsucker*. See cut under *popinjay*. [New Forest, Eng.]

wood-swallow (wůd′swol″ō), *n.* The Anglo-Australian name of any bird of the family *Artamidæ*; a swallow-shrike (which see, with cut).

wood-swift (wůd′swift), *n.* The moth *Epialus sylvinus*. See *swift*[1], 7.

woodsy (wůd′zi), *a.* [< *woods*, pl. of *wood*[1], + *-y*[1].] Belonging to or associated with woods; peculiar to or characteristic of woods: as, a *woodsy* stream; a *woodsy* flavor. [U. S.]

Harry, Tina, Esther, and I ran up and down and in and about the piles of wood that evening with a joyous satisfaction. How fresh and spicy and *woodsy* it smelt! I can smell now the fragrance of the hickory, whose clear, oily bark in burning cast forth perfume quite equal to cinnamon. *H. B. Stowe*, Oldtown, p. 485.

Woodsy and wild and lonesome,
The swift stream wound away.
Whittier, Cobbler Keezer's Vision.

woodtapper (wůd′tap″ėr), *n.* A woodpecker. Also *woodtopper*. [Prov. Eng.]

wood-tar (wůd′tär), *n.* Tar obtained from wood. See *tar*[1].

wood-thrush (wůd′thrush), *n.* 1. The mistle-thrush. [Local, Scotland.]—2. In the United States, *Turdus* (*Hylocichla*) *mustelinus*, a beautiful thrush of a russet hue above, passing into olivaceous on the rump and tail, the under parts pure white or faintly tinged with buff on the breast, with a profusion of arrow-headed blackish spots. It is 7½ to 8 inches long, and about 13 in extent. It abounds in copses and woods of eastern parts of the United States, is an exquisite songster, and nests in bushes or low trees, laying four or five robin-blue eggs without spots, 1 1/10 inches long by 7/10 inch broad. It is migratory, breeds throughout its range, and is rather southerly, not going north of New England. It is the most strongly marked species of its subgenus. The name is sometimes extended to the several species of the same subgenus (*Hylocichla*), as the hermit-thrush, the olive-back, the veery, and others. Also locally called *wood-robin*.

To her grave sylvan nooks
Thy steps allure us, which the *wood-thrush* hears
As maids their lovers', and no treason fears.
Lowell, To Whittier.

wood-tick (wůd′tik), *n.* 1. Any tick of the family *Ixodidæ*. See *Ixodidæ*, *tick*[2], and cut under *Acarida*.—2. A small insect which ticks in the woodwork of houses; the death-watch. See cut under *death-watch*.

wood-tin (wůd′tin), *n.* A nodular variety of cassiterite, or tin-stone, of a brownish color and fibrous structure, and somewhat resembling dry wood in appearance.

woodtopper (wůd′top″ėr), *n.* Same as *woodtapper*.

wood-tortoise (wůd′tôr″tis), *n.* See *tortoise*.

wood-vetch (wůd′vech), *n.* See *vetch*.

wood-vine (wůd′vīn), *n.* The bryony.

wood-vinegar (wůd′vin″ē-gär), *n.* See *vinegar*.

wood-violet (wůd′vī″ō-let), *n.* 1. Same as *hedge-violet*.—2. The bird's-foot violet.

wood-wagtail (wůd′wag″tāl), *n.* See *wagtail*.

woodwale (wůd′wāl), *n.* [Also *woodwall*, and formerly *woodwele*, *woodweele*; also *witwal*, q. v.; < ME. *wudewale*, *wodewale* (= MD. *weduwael*, *weedewael* = MLG. *wedewale* = MHG. *witewal*, G. *wittewal*); < *wood*[1] + *-wale* (uncertain).] The woodhack; a woodpecker, as the yaffle.

Wodewale, bryd, idem quod reynefowle (or wodehake) supra et lucar. *Prompt. Parv.*, p. 531.

In many places were nyghtingales,
Alpes, fynches, and *wodewales*.
Rom. of the Rose, l. 658.

The *wodewale* beryde als a belle,
That all the wode abowte me ronge.
Thomas of Erseldoune (Child's Ballads, I. 98).

The *woodweele* sang, and wold not cease,
Sitting upon the spraye.
Robin Hood and Guy of Gisborne (Child's Ballads, V. 160).

wood-walker (wůd′wâ″kėr), *n.* A book-name of any of the gibbons, as members of the genus *Hylobates*.

woodwall (wůd′wâl), *n.* Same as *woodwale*.

wood-warbler (wůd′wâr″blėr), *n.* A bird which warbles in the woods. Specifically—(*a*) In Great Britain, the yellow willow-warbler, or wood-wren, *Sylvia* or *Phylloscopus sibilatrix* (the *Sylvia sylvicola* of some authors), a small migratory species of the subfamily *Sylviinæ*, or true warblers, common to much of Europe and northern Africa. See cut under *wood-wren*. (*b*) In the United States, a bird of the beautiful and extensive family *Mniotiltidæ* or *Dendroïcidæ*, the American warblers, as distinguished from the old world *Sylviidæ*; especially, a bird of the genus *Dendroica*, of which more than 20 species inhabit the United States. The beauty and variety of this genus are displayed to best advantage in the woodland of the eastern United States, where the numerous species are conspicuous ornaments of the forest scene. In most parts of the United States the wood-warblers are migratory birds, coming with great regularity in the spring, each in its own time, abounding for a season, and then passing on to reappear in even greater profusion during the autumn. See *warbler*, where all the species that have English names are defined.

woodward (wůd′wârd), *n.* [< ME. *wodeward*; < *wood*[1] + *ward*[1], *n.* Hence the surname *Woodward*.] A forester; a landreeve.

She [a forest] hath also her peculiar Officers, as Foresters, Verderers, Regarderers, Agisters, &c. Whereas a Chase or Park hath only Keepers and *Woodwards*.
Howell, Letters, iv. 16.

The *wood-ward*, who watched the forest, could claim every tree that the wind blew down.
J. R. Green, Conq. of Eng., p. 317.

Woodwardia (wůd-wär′di-ä), *n.* [NL. (Smith, 1793), named after Thomas J. *Woodward*, an English botanist.] A small genus of polypodiaceous ferns, the chain-ferns, mostly natives of north temperate regions. They are large ferns with pinnatifid or pinnate fronds, and linear or oblong sori which are sunk in cavities of the frond, arranged in a chain-like row parallel to the midribs of the pinnæ. The indusium is fixed by its outer margin to the fruiting veinlet, and covers the cavity like a lid. Of the 6 species 3 are found in North America. See also cut under *sorus*.

Chain-fern (*Woodwardia Virginica*).
a, pinnule, showing the fruit-dots (sori).

woodwardite (wůd′wärd-īt), *n.* [Named after Dr. S. P. *Woodward* (1821–65).] A hydrous sulphate of copper, occurring in concretionary forms of a blue color, found in Cornwall, England.

woodwardship (wůd′wârd-ship), *n.* [< *woodward* + *-ship*.] The office of woodward.

Also Mr. Hungerford has engrossed the above spoils and 60 more trees at 4/- by connivance of Mr. Inkpen, who sold him the *woodwardship* of that manor for 33/4.
Darrell Papers (H. Hall's Society in Elizabethan Age, [App., ii.).

wood-wasp (wůd′wosp), *n.* 1. A European social wasp, or paper-wasp, *Vespa sylvestris*, which hangs its nest in a tree.—2. A wasp which burrows in wood, as certain species of *Crabronidæ*. The female, by means of her strong broad mandibles, excavates cells in the sand or in rotten timber, in which she deposits her eggs, with larvæ or insects as food for her progeny when hatched. These insects are extremely active in their habits, and fond of the nectar of flowers. The larger species are marked with yellow rings, while those of the smaller are generally black. See cut under *Crabro*.

3. A horntail; any member of the *Uroceridæ* (or *Siricidæ*), the larvæ of all of which are wood-borers; a tailed wasp, as *Urocerus* or *Sirex gigas*.

wood-wax (wůd′waks), *n.* [Also *wood-waxen*, and *woadwaxen* (simulating *woad*); < ME. *wodewexe*, < AS. *wudweaxe*, < *wudu*, wood, + *weax*, wax (?).] Same as *woadwaxen*.

wood-waxen (wůd′wak″sn), *n.* Same as *wood-wax*.

woodweelet, **woodwelet**, *n.* Obsolete forms of *woodwale*.

wood-widgeon (wůd′wij″ǫn), *n.* See *widgeon*, 2 (*c*).

wood-wool (wůd′wůl), *n.* Fine shavings made from pine wood, specially prepared and used as a surgical dressing.

woodwork (wůd′wėrk), *n.* Objects, or parts of objects, made of wood; that which is produced by the carpenters' or joiners' art: generally applied to details rather than to complete structures: as, the *woodwork* of a house (that is, the inner fittings, etc.).

A young man has some reason to be displeased when he finds the girl of his heart hand in hand with another young gentleman in an occult and shady recess of the *wood-work* of Brighton Pier. *Thackeray*, Philip, xiv.

The rich painting of the *wood-work* was beginning to fade. *B. Taylor*, Lands of the Saracen, p. 128.

woodworker (wůd′wėr″kėr), *n.* 1. A worker in wood, as a carpenter, joiner, or cabinet-maker.—2. A power-machine for jointing, molding, squaring, and facing wood. It is made adjustable, and has various attachments for work of different kinds.—**Universal woodworker**, a combination machine for working in wood, so made that the two sides can work independently or in concert, as may be desired. Such machines are adapted for a great variety of work, as chamfering, graining, tenoning, crosscutting, and mitering. *E. H. Knight*.

wood-worm (wůd′wėrm), *n.* A worm, grub, or larva that is bred in wood.

woodwose†, *n.* [Also, corruptly, *woodhouse*; < ME. *woodwose*, *wodewose*, *wodewese*, *woodwyse*, *wowyse*; < AS. *wudewāsa*, a man of the woods, a faun or satyr, < *wudu*, wood, + **wāsa*, prob. 'a being,' < *wesan*, dial. *wosan*, be: see *was*.] A wild man of the woods; a satyr or faun. Representations of woodwoses often appear in heraldry as supporters.

Wodwos, that woned in the knarreȝ [rocks].
Sir Gawayne and the Green Knight (E. E. T. S.), l. 721.

In he schokkes his schelde, schountes he no lengare;
Bot alles unwyse *wodewyse* he wente at the gayneste.
Morte Arthure (E. E. T. S.), l. 3818.

Some like brute beasts grazed upon the ground, some went naked, some roamed like *woodwoses*.
Sir T. Wilson (Arber's Eng. Garner, I. 464).

wood-wren (wůd′ren), *n.* 1. Either one of two small woodland birds of Europe, belonging to the subfamily *Sylviinæ*. (*a*) The willow-warbler or willow-wren, *Phylloscopus trochilus*. (*b*) The true wood-warbler, or yellow willow-wren, *Phylloscopus sibilatrix*:

Yellow Wood-wren (*Phylloscopus sibilatrix*).

the preferable use of the name. The two species, though quite distinct, are much alike and often confounded. Neither is a wren in a proper sense.

2†. A supposed species of true wren, described by Audubon in 1834 as *Troglodytes americanus*, but not different from the common house-wren of the United States.

wood-wroth (wöd′rôth), *a.* Angry to the extent of madness. [Scotch.]

When he saw her dear heart's blood,
A' *wood-wroth* waxed he.
Lord Thomas and Fair Annet (Allingham's Ballad-Book).

woodwyse†, *n.* See *woodwose*.

woody (wůd′i), *a.* [Early mod. E. also *woodie*, *woddy*; < ME. *wody*, *wod*, woody; < *wood*[1] + *-y*[1].] 1. Abounding with wood; wooded: as, *woody* land; a *woody* region.

It is all *woddy*, but by the Sea side Southward there are sands like downes.
Quoted in *Capt. John Smith's* Works, II. 277.

Oft in glimmering bowers and glades
He met her, and in secret shades
Of *woody* Ida's inmost grove.
Milton, Il Penseroso, l. 29.

A slanting ray lingered on the *woody* crests of the precipices that overhung some parts of the river, giving greater depth to the dark-gray and purple of their rocky sides.
Irving, Sketch-Book, p. 438.

2. Pertaining or belonging to the woods; dwelling or situated in the woods; peculiar to a wood or forest; sylvan; woodland; woodsy.

All the Satyres scorne their *woody* kind.
Spenser, F. Q., I. vi. 18.

The Brachmanes, which he in his Indian trauels had found in a *woodie* solitarinesse.
Purchas, Pilgrimage, p. 367.

3. Consisting of or containing wood; ligneous: as, the *woody* parts of plants.

Herbs are those plants whose stalks are soft, and have nothing *woody* in them, as grass, sowthistle, and hemlock.
Locke, Elem. of Nat. Philos., ix.

4. Peculiar to or characteristic of wood: as, a *woody* scent or flavor.—**Glandular woody fiber.**

See *glandular*.—**Woody fiber**, the fiber of wood. See *vegetable fibers* (under *fiber*), *wood-cell*, and *woody tissue*, below.—**Woody layers**. See *layer*.—**Woody mullen**†, the Jerusalem sage, *Phlomis fruticosa*.

Verbesco, wooll-blade, torche-herbe, lung-woort, haresbeard, french-sage, higtaper, or *wooddi-mullein*. *Florio.*

Woody nightshade. See *nightshade*, 1 (*a*).—**Woody stem**, in *bot.*, a stem of a hard or woody nature, which lasts for many years, as the trunks of trees.—**Woody tissue**, in *bot.*, vegetable tissue composed chiefly of wood-cells. See *wood-cell* and *tissue*, 4.

wooer (wö′ėr), *n.* [Early mod. E. also *wower*; < ME. *wowere*, *wowar*, *woware*, *wouwere*, < AS. *wōgere*, a wooer, < *wōgian*, woo: see *woo*[1].] One who woos. (*a*) One who courts or solicits in love; a suitor.

"By my feith, frere," quod I, "ȝe faren lyke thise *wooweres* That wedde none wydwes but forto welde here godis."
Piers Plowman (B), xi. 71.

I'll mark no words that smooth-faced *wooers* say.
Shak., L. L. L., v. 2. 838.

(*b*†) One who promotes the marriage of another; a matchmaker.

Wowar, or he that wowythe for another. Pronuba, paranimphus. *Prompt. Parv.*, p. 533.

woof (wöf), *n.* [Altered, by initial conformity with *weave*, *weft*, *web*, from *oof*, < ME. *oof*, < AS. *ōwef*, *ōweb*, *āweb*, contr. to *āb*, woof, < *āwefan* in pp. *āwefen*, weave, < *ā-* + *wefan*, weave: see *a-*[1] and *weave*[1].] **1.** The thread that is carried by the shuttle and is woven into the warp by being passed back and forth through successive sheds, or partings made in the warp or lengthwise threads by the action of heddles; the threads that run from side to side of a web; the weft.

The placing of the tangible parts in length or transverse, as in the warp and the *woof* of textile, is more inward or more outward. *Bacon*, Nat. Hist.

2. Texture; cloth: as, a pall of softest *woof*.

There was an awful rainbow once in heaven:
We know her *woof*, her texture; she is given
In the dull catalogue of common things.
Keats, Lamia, ii.

His movements were watched by hundreds of natives, . . . an exceedingly tall race, almost naked, . . . the women cinctured with a *woof* of painted feathers or a deerskin apron. *Bancroft*, Hist. U. S., I. 34.

woofy (wö′fi), *a.* [< *woof* + *-y*[1].] Having a close texture; dense: as, a *woofy* cloud. *J. Baillie.*

woohoo (wö-hö′), *n.* The sail-fish: same as *boohoo*[2] (where see cut).

wooingly (wö′ing-li), *adv.* In a wooing manner; enticingly; with persuasiveness.

Heaven's breath
Smells *wooingly* here. *Shak.*, Macbeth, i. 6. 6.

wook†, *n.* A Middle English form of *week*[1].

wool (wůl), *n.* [Formerly also *wooll*; Sc. *woo*; < ★ME. *woll*, *wolle*, *wulle*, < AS. *wull*, *wul* = OFries. *wolle*, *ulle* = D. *wol* = LG. *wulle* = OHG. *wolla*, MHG. G. *wolle* = Icel. *ull* = Sw. *ull* = Dan. *uld* = Goth. *wulla*, wool (Teut. **wolla*, assimilated from **wolna*), = OBulg. *vlŭna* = Lith. *wilna* = Russ. *volna* = L. *villus*, shaggy hair, *vellus*, a fleece, wool, = Skt. *ūrnā*, wool; lit. a 'covering,' formed, with suffix *-na*, from a root seen in Skt. √ *var*, cover. Connection with Gr. *ἔριον*, wool, *εἶρος*, wool, *οὖλος*, woolly, shaggy, thick, etc., is doubtful.] **1.** The fine, soft, curly hair which forms the fleece or fleecy coat of the sheep and some other animals, as the goat and alpaca, in fineness approaching fur. The wool or fleece of the sheep furnishes the most important material for clothing in all cold and temperate climates. The felting property from which wool derives its chief value, and which is its special distinction from hair, depends in part upon the kinks in the shaft or fiber, but mainly upon the scales with which the surface is imbricated. These scales are minute, from about 1,500 to nearly 4,000 to the inch, and whorled about the stem in verticils; the stem itself is extremely slender, being less than one thousandth of an inch in diameter. Wool is kept soft and pliable by the wool-oil, commonly called *yolk*. In different animals wool shades by imperceptible degrees into hair; and that of the sheep simply represents an extreme case of the most desirable qualities, namely, fineness, kinkiness, and scaliness of the fiber, together with its length, strength, and luster, and the copiousness of the fleece, which consists entirely of wool, without hair; in all of which particulars the wool of the different breeds of sheep varies to a degree. (Compare def. 2.) Wool when shorn is divided into two classes, *short wool*, or *carding-wool*, seldom exceeding a length of 3 or 4 inches, and *long wool*, or *combing-wool*, varying in length from 4 to 8 inches, each class being subdivided into a variety of sorts, according to the fineness and soundness of the staple. The finest wools are of short staple, and the coarser wools usually of long staple. Wools which unite a high degree of fineness and softness with considerable length of staple bear a high price. English-bred sheep produce a good, strong combing-wool, that of the Scotch breeds being somewhat harsher and coarser. The finest carding-wools were formerly exclusively obtained from Spain, the native country of the merino sheep, and at a later period extensively from Germany, where that breed had been successfully introduced and cultivated. Immense flocks of merinos are now reared in Australia, North and South America, and South Africa.

A lytylle Lomb with outen *Wolle*.
Mandeville, Travels, p. 264.

And softe *wolle* our book seith that she wroghte,
To kepen her fro slouthe and ydelnesse.
Chaucer, Good Women, l. 1721.

Wool is a modified form of hair, distinguished by its slender, soft, and wavy or curly structure, and by the highly imbricated or serrated surface of its filaments.
Encyc. Brit., XXIV. 653.

2. The fine, short, thick underfur or down of any animal, as distinguished from the longer and stiffer hairs which come to the surface of the pelage. Most hairy animals have at least two coats, one of long and comparatively straight, stout, stiff hairs, the other of wool. See *underfur*.

In that Contree ben white Hennes withouten Fetheres; but thei beren white *Wolle*, as Scheep don here.
Mandeville, Travels, p. 208.

Eye of newt and toe of frog,
Wool of bat and tongue of dog.
Shak., Macbeth, iv. 1. 15.

3. The short, crisp, curly or kinky hair of the head of some persons, as negroes; humorously, the hair of any person's head. [Colloq.]

From a strange freak of nature, not unusual in these Virginian mountains, his knotty *wool* was of a pale tan-color. *Harper's Mag.*, LXXVI. 203.

4. Any light, downy, fleecy, or flocculent substance resembling wool. (*a*) The dense furry or woolly coat of many insects, as the pubescence covering the moths known as *millers*, that on various caterpillars, that spun by various larvæ for a case or cocoon, etc. Secretions of various insects are very nicely graded from a solid waxy consistency through various frothy states to a light dry fleecy condition resembling wool: see *wax-insect*, *spittle-insect*, and *woolly aphis* (under *woolly*). In another large class of cases the spun-out secretion is gossamer, cobweb, or true silk. See these words, and *silkworm*. (*b*) In *bot.*: (1) A sort of down or pubescence, or a clothing of dense curling hairs, on the surface of certain plants. (2) The fiber of the cotton-plant, commonly called *cotton-wool*.—**Angora wool**, the wool of the Angora goat, from which angora is made.—**Berlin wool**, a kind of fine dyed wool used for worsted-work, knitting, etc. It is harder and closer than zephyr-wool.—**Camel's wool**, mohair.—**Cape wool**, a somewhat inferior variety of wool brought from the Cape of Good Hope.—**Carding-wool**, wool of short fiber worked upon a carding-machine. It is distinguished from *combing-wool*, which has a long fiber and is prepared for spinning by combing.—**Dyed in the wool**, tinged in the fiber; hence, permanent; lasting; not liable to fade or change; thorough; out-and-out: as, a *dyed-in-the-wool* democrat. [U. S.]—**Fleece-wools**. See *fleece*, 1.—**German wool**. Same as *Berlin wool*.—**Glass wool**, a mass of fine filaments of glass forming together a cotton-like substance similar to mineral wool.—**Great cry and little wool, much cry and little wool**. See *cry*.

And so his hyghnes shal haue theroff but as hadd the man that sherid is hogge, *muche crye and litill woll*.
Sir John Fortescue (c. 1475), On the Governaunce of England, x., quoted in N. and Q., 7th ser., VI. 186.

But if you compare his threatenings and his after-affections you would say of them, as that wise man shearing his hogs: Here is a *great* deal of *cry, but a little wool*.
Rev. T. Adams, Works, I. 477.

Hamburg wool, one of the varieties of German or Berlin wool made for fancy work.—**Hand-washed wool**, wool washed before the sheep were shorn.—**Holmgren's wools**, skeins of wool of different colors used as tests for color-blindness.—**Laid wool**, wool from sheep which had been smeared with tar and butter as a protection from the rigor of winter.—**Leviathan wool**. See *leviathan*.—**Long wool**. See def. 1.—**Mineral wool**. See *mineral*.—**More squeak than wool**, more noise than substance. [Colloq.]

For matter of title he thought there was *more squeak than wool*. *Roger North*, Lord Guilford, II. 17. (*Davies.*)

Philosopher's wool, philosophic wool. See *philosophic*.—**Pine-wool, pine-needle wool**. See *pine-needle*.—**Scoured wool**. See *scour*[1].—**Shetland wool**, a thin hairy undyed and very tenacious and strong worsted, spun in the Shetland Islands from the wool of the native sheep, and very extensively used in the knitting of fine shawls and other garments. *Encyc. Brit.*, XIV. 127.—**Skirted wool**. See *skirted*.—**Spanish wool**, wool impregnated with rouge.—**To pull the wool over one's eyes**, to deceive or delude one; throw dust in one's eyes; prevent one from seeing clearly in any way.—**Wool-bundling machine**, a machine for compressing and tying fleeces into bundles; a fleece-folder or wool-packer.—**Wool in the grease**, the technical name for wool which has not been cleaned either before or after shearing. (See also *cinder-wool*, *cotton-wool*, *dead-wool*, *lamb's-wool*, *skin-wool*, *slag-wool*.)

wool (wůl), *v. t.* [< *wool*, *n.*] To pull the hair of, in sport or anger; rumple or tousle the hair of. [Colloq., U. S.]

wool-ball (wůl′bâl), *n.* A ball of wool, especially such as is found in the stomach of sheep and other animals.

wool-bearing (wůl′bãr″ing), *a.* Producing wool; having a fleece, as the sheep.

wool-carder (wůl′kär″dėr), *n.* One who cards wool. See *wool-carding*.

wool-carding (wůl′kär″ding), *n.* The process of separating the fibers of wool and laying them parallel preparatory to spinning. See *card*[2] and *carding*[2].

wool-cleaner (wůl′klē″nėr), *n.* A machine for beating, shaking, and cleaning wool previous to scouring and dyeing; a wool-duster or wool-picker.

wool-comber (wůl′kō″mėr), *n.* One employed in wool-combing.

wool-combing (wůl′kō″ming), *n.* The act or process of separating the fibers of wool, especially long-fibered wool, and laying them parallel as in wool-carding. See *comb*[1] and *combing*.

woold (wöld), *v. t.* [With excrescent *d*, < D. *woelen*, wind, wrap, = OHG. *wuolen*, MHG. *wuelen*, G. *wühlen*, stir, move, wallow, etc.; cf. *wallow*[1].] *Naut.*, to wind; particularly, to wind (a rope) round a mast or yard, when made of two or more pieces, at the place where they are fished, for the purpose of confining and supporting them.

woolder (wöl′dėr), *n.* [< *woold* + *-er*[1].] **1.** *Naut.*, a stick used in woolding.—**2.** In *ropemaking*, one of the pins passing through the top, and forming a handle to it. See *top*[3], 2.

wool-driver (wůl′drī″vėr), *n.* One who buys wool in different parts of a sheep-raising country, and brings it for sale to the woolen-mill or market. [Great Britain.]

wool-dryer (wůl′drī″ėr), *n.* A machine for drying wool which has been washed, dyed, etc.

wool-duster (wůl′dus″tėr), *n.* A machine for removing impurities from wool by means of beaters.

wool-dyed (wůl′dīd), *a.* Dyed in the wool—that is, before spinning or weaving: as *wool-dyed* cloth.

woolen, woollen (wůl′en), *a.* and *n.* [< ME. *wollen*, *wullen*, < AS. *wyllen* (= OHG. *wullin*, MHG. G. *wollen*), woolen, < *wul*, wool, + *-en*[2]: see *wool*, *n.*] **I.** *a.* **1.** Made of wool; consisting of wool: as, *woolen* cloth. *Bacon.*

On a poure beggar put a scherte,
And *wollen* wedys that warm will last.
Holy Rood (E. E. T. S.), p. 214.

2. Of or pertaining to wool: as, *woolen* manufactures.—**3.** Clad in the rough, homespun serges of former times, as opposed to the silk, velvet, and fine linen of the wealthier classes; hence, coarse; boorish; rustic; vulgar.

Woollen vassals, things created
To buy and sell with groats. *Shak.*, Cor., iii. 2. 9.

Woolen-back satin, satin of which the back is composed of linsey-woolsey: it is durable and not liable to crease. *Dict. of Needlework.*—**Woolen plush**, a plush with a woolen pile.—**Woolen velvet**, a general name for a woolen cloth with velvet texture. See *astrakhan*, *beaver*[1], *Utrecht velvet* (under *velvet*), and *velvet*.

II. *n.* Cloth made of wool, or chiefly of wool: an abbreviation of *woolen cloth*.

I could not endure a husband with a beard on his face: I had rather lie in the *woollen*. *Shak.*, Much Ado, ii. 1. 33.

The pre-existence under concrete forms of the *woollens*, silks, and cottons we wear, we can trace some distance back. *H. Spencer*, First Principles, § 93.

woolen-cord (wůl′en-kôrd), *n.* A kind of corduroy, or ribbed stuff, of which the face is wholly of wool.

woolen-draper (wůl′en-drā″pėr), *n.* A dealer in woolen cloths of different kinds; especially, a retail dealer in woolens for men's wear.

woolenette, woollenette (wůl-e-net′), *n.* [< *woolen* + dim. *-ette*.] A trade-name for a variety of woolen cloth.

woolen-matelassé (wůl′en-mat-las″ā), *n.* Woolen cloth woven with flowers and other patterns in a light matelassé silk. It is used for women's outer garments.

woolen-printer (wůl′en-prin″tėr), *n.* One who prints woolen cloth, such as flannel, with colored patterns.

woolen-scribbler (wůl′en-skrib″lėr), *n.* Same as *wool-scribbler*.

★**wool-extract** (wůl′eks″trakt), *n.* Wool recovered from mixed fabrics of wool and cotton by subjecting them to a chemical process which destroys the cotton.

wool-fat (wůl′fat), *n.* **1.** Same as *suint*.—**2.** A fatty substance obtained from wool used as a basis for ointments; when purified, lanolin.

woolfell (wůl′fel), *n.* [< *wool* + *fell*[3].] The skin of a wool-bearing beast with the fleece still on it.

The duties on wool, sheepskins, or *woolfells*, and leather, exported, were . . . payable by every merchant, as well native as stranger. *Blackstone*, Com., I. viii.

In 1333 the merchants granted ten shillings on the sack and *woolfells*, and a pound on the last, but this also was regarded as illegal, and superseded by royal ordinance.
Stubbs, Const. Hist., § 277.

woolfist† (wůl′fist), *n.* Same as *wolf's-fist*.

wool-gathering (wůl'gaᴛʜ″ėr-ing), *n.* The act of gathering wool: usually applied figuratively to the indulgence of idle fancies or to any foolish or fruitless pursuit. The allusion is probably to the practice of gathering the tufts of wool to be found on bushes and hedges, necessitating much wandering to little purpose.

His wits were a *wool-gathering*, as they say, and his head busied about other matters. *Burton*, Anat. of Mel., p. 189.

I crost the water in my gown and slippers,
To see my rents and buildings of the Bankside,
And I am slipt clean out of ken, fore-god,
A *wool-gathering*.
Heywood, If you Know not me (Works, ed. 1874, I. 302).

What! I think my wits are a *wool-gathering* to-day.
Swift, Polite Conversation, iii.

wootz (wōts), *n.* [Supposed to be an orig. error or misprint, perhaps for **wook*, repr. Canarese *ukku* (pron. wukku), steel.] The name given to steel made in India by fusing iron with carbonaceous matter. This is done in small crucibles holding a pound or two of the iron, and the wood selected to furnish the carbon to the metal is always that of *Cassia auriculata*, which is cut into small pieces, the same being done with the iron, and the whole covered by one or more green leaves, usually of a species of *Convolvulus*, the crucible being then covered with a lid of clay. A number of these crucibles are placed together in a hole dug in the ground, and heated in a charcoal-fire urged by a pair of bellows made of ox-hide, the blast being kept up for three or four hours. The steel thus obtained is hard in temper, and requires much care in working. This is the oldest method of making steel of which anything definite is known, having been in use, without change, for an indefinite length of time, and being, as generally believed, original with the Hindus.

Dryden, Astræa Redux, l. 275.

(*e*) To exhaust: as, to *work out* a mine or quarry.—**To work out a day's work** (*naut.*), to compute a ship's position from the course and distance sailed.—**To work the twig.** See *twig*[1].—**To work up.** (*a*) To excite; stir up; raise; rouse.

It is no very hard Matter to *work up* a heated and devout Imagination to the Fancy of Raptures and Ecstasies and Mystical Unions. *Stillingfleet,* Sermons, III. iii.

We cannot but tremble to consider what we are capable of being *wrought up* to, against all the ties of nature, love, honour, reason, and religion. *Steele,* Tatler, No. 172.

They [the Moslems] *work* themselves *up* to such agonies of rage and lamentation that some, it is said, have given up the ghost from the mere effect of mental excitement.
Macaulay, Lord Clive.

(*b*) To use up in the process of manufacture or the like; expend in any work: as, we have *worked up* all our materials.

The industry of the people *works up* all their native commodities to the last degree of manufacture. *Swift.*

(*c*) To expand; enlarge; elaborate: as, to *work up* a story or an article from a few hints.

We have read of "Handkerchief Moody," who for some years persisted in always appearing among men with his face covered with a handkerchief—an incident which Hawthorne has *worked up* in his weird manner into the story of "The Minister with the Black Veil."
H. B. Stowe, Oldtown, p. 454.

(*d*) To master by careful study or research: as, to *work up* a theme. (*e*) To achieve or attain by special effort: as, to *work up* a reputation for one's self. (*f*) *Naut.,* to discipline or punish by setting at an unnecessary or hateful job, like scraping the anchor-chain. Such a piece of work is called a *working-up job.*—**To work water.** See the quotation.

Water is also frequently carried over from the boiler with the steam. When this occurs the boiler is said to prime, or to *work water.* *Forney,* Locomotive, p. 170.

★**work** (wėrk), *n.* [< ME. *work, werk, wurc, worc, werc, weorc,* < AS. *weorc, worc, werc* = OS. OFries. D. *werk* = LG. *wark* = OHG. *werch, werah,* MHG. *werc,* G. *werk* = Icel. Sw. *verk* = Dan. *værk* = Goth. *ga-waurki;* cf. Gr. *ἔργον,* work: see *work, v.*] **1.** Effort or exertion directed to the accomplishment of some purpose or end; expenditure of strength, energy, etc.; toil; labor; striving.

Fie upon this quiet life! I want *work.*
Shak., 1 Hen. IV., ii. 4. 118.

Man hath his daily *work* of body or mind
Appointed. *Milton,* P. L., iv. 618.

Here, *work* enough to watch
The Master work, and catch
Hints of the proper craft.
Browning, Rabbi Ben Ezra.

2. Opportunity of expending labor (physical or mental) in some useful or remunerative way, especially as a means of earning a livelihood; employment; something to do: as, to be out of *work;* to look for *work.*—**3.** That upon which one is employed or engaged, and in the accomplishment of which labor is expended or some operation performed; a task, undertaking, enterprise, or project.

If it would please Him whose *worke* it is to direct me to speake such a word over the sea as the good old woman of Abel did over the wall in the like exigent.
N. Ward, Simple Cobler, p. 33.

The great *work* of erecting a way of worshipping of Christ in church fellowship.
N. Morton, New England's Memorial, p. 160.

To her dear *Work* she falls; and, as she wrought,
A sweet Creation followed her hands.
J. Beaumont, Psyche, iii. 61.

4. Something accomplished or done; doing; deed; achievement; feat; performance.

Thei knoulechen wel that the *Werkes* of Jesu Crist ben gode, and his Wordes and his Dedes and his Doctryne by his Gospelles weren trewe, and his Meracles also trewe.
Mandeville, Travels, p. 134.

It is a damned and a bloody *work;*
The graceless action of a heavy hand,
If that it be the *work* of any hand.
Shak., K. John, iv. 3. 58.

A people of that beastly disposition that they performed the most secret *worke* of Nature in publique view.
Purchas, Pilgrimage, p. 323.

Once more,
Act a brave *work*, call it thy last adventry.
B. Jonson, Epigrams, cxxxiii.

It would be easy to multiply illustrations of the difference between . . . the philosophy of words and the philosophy of *works*. *Macaulay*, Lord Bacon.

5. *pl.* In *theol.*, acts performed in obedience to the law of God. According to Protestant theology, such works would be meritorious only as they constituted a perfect and complete observance of the law; according to Roman Catholic theology, such works, if proceeding from grace and love, are so far acceptable to God as to be truly deserving of an eternal reward. See *supererogation.*

And ȝif I shal werke be here *werkis* to wynne me heuene,
And for here *werkis* and for here wyt wende to pyne,
Thanne wrouȝte I vnwisly with alle the wyt that I lere!
Piers Plowman (A), xi. 268.

For by grace are ye saved through faith; and that not of yourselves; it is the gift of God: not of *works*, lest any man should boast. Eph. ii. 9.

6†. Active operation; action.

Where pride, fulnesse of bread, and abundance of idlenesse set them on *worke* against God.
Purchas, Pilgrimage, p. 41.

7. Ferment; trouble. [Rare.]

Tokay and Coffee cause this *Work*
Between the German and the Turk.
Prior, Alma, iii.

8. That which is made or manufactured; an article, fabric, or structure produced by expenditure of effort or labor of some kind, whether physical or mental; a product of nature or art.

The *work* some praise,
And some the architect. *Milton*, P. L., i. 731.

Hence, specifically—(*a*) That which is produced by mental labor; a literary or artistic performance; a composition: as, the *works* of Addison; the *works* of Mozart. See *opus.*

You are rapt, sir, in some *work*, some dedication
To the great lord. *Shak.*, T. of A., i. 1. 19.

No other Poet that I know of [save Ben Jonson], in those days, gave his Plays the pompous Title of *Works;* of which Sir John Suckling has taken notice in his Sessions of the Poets. . . . This puts me in mind of a Distick directed by some Poet of that Age to Ben Johnson:
Pray, tell me, Ben, where does the myst'ry lurk?
What others call a Play, you call a *Work;*
which was thus answer'd by a Friend of his:
The Author's Friend thus for the Author say's,
Ben's Plays are *Works*, when others *Works* are Plays.
Langbaine, Eng. Dramatick Poets (1691), p. 264.

When I contemplate a modern library, filled with new *works* in all the bravery of rich gilding and binding.
Irving, Sketch-Book, p. 165.

(*b*) An engineering structure, as a building, dock, embankment, bridge, or fortification.

And now ye Sarrasyns haue taken vp the stones of the same tumbe and put theym to the *werkes* of theyr Muskey.
Sir R. Guylforde, Pylgrymage, p. 52.

I will be walking on the *works*. *Shak.*, Othello, iii. 2. 3.

Don Guzman, . . . who commanded the sortie, ought to have taken the *work* out of hand, and annihilated all therein. *Kingsley*, Westward Ho, ix.

Frail were the *works* that defended the hold that we held with our lives. *Tennyson*, Defence of Lucknow.

(*c*) Design; pattern; workmanship.

Ther ys a gret Chalis of fine gold of Curius *werke*.
Torkington, Diarie of Eng. Travell, p. 11.

Let there be three or five fine cupolas in the length of it, placed at equal distance, and fine coloured windows of several *works*. *Bacon*, Building (ed. 1887).

All his followers likewise were, in their faces, in part or in whole, painted, . . . some with crosses and other antick *works*. *Mourt's Journal*, in Appendix to New England's Memorial, p. 355.

(*d*) Embroidery; ornamental work done with the needle; needlework.

I am glad I have found this napkin.
. . . I'll have the *work* ta'en out,
And give 't Iago. *Shak.*, Othello, iii. 3. 296.

I never saw any thing prettier than this high *Work* on your Point D'espaigne. *Etherege*, Man of Mode, iii. 2.

9. An establishment for manufacturing, or for performing industrial labor of any sort: generally in the plural, including all the buildings, machines, etc., used in the required operations: as, iron-*works;* hence the plural is used as a collective singular, taking then a singular article: as, there is *a* large glass-*works* in the town.

They have a Salt *Work*, and with that salt preserve the fish they take. *Capt. John Smith*, Gen. Hist. Virginia [(Arber's Eng. Garner, II. 285.)

Whereupon he gott a patent of the king (Cha. I.) for an allum *worke* (which was the first that ever was in England), which was worth to him two thousand pounds per annum, or better. *Aubrey*, Lives (Thomas Chaloner).

10. In *mech.*: (*a*) The product of a force by the component displacement of its point of application in the direction of the force; or, if this is variable, the integral of all successive infinitesimal such products for any motion of the point of application. The work is thus the same whatever be the velocity of the motion or the mass moved, so long as the force and the displacement are the same. Thus, if an electrified body is moved by an electrical force along a horizontal surface, the work is the same whatever the mass of the body moved. But if the same electrical force moves the body for the same distance but upward against gravity, less work on the whole is done, since the force of gravity undoes a part of the work which the electrical force performs. Negative work, or work undone, is also called *resistant work*, in contradistinction to *motor work*. The total work performed upon a particle is equivalent to the kinetic energy it gains; the total work undone, to the kinetic energy it loses. If a force is resisted by friction, the same amount of work is done as if it were not resisted; for, though the resultant force upon the mass moved is less by the amount of the friction, so that less work is done upon the mass as a whole, yet heat is produced, and the particles receive displacements in the direction of the action of friction, the work of which makes up the balance. *Mechanical work* is work done in the displacement of sensible masses, as opposed to work done in the displacement of molecules. If a gun is shot off in a horizontal direction, a force is brought to bear upon the bullet, and in carrying this a certain distance work proportional to the acceleration is performed; at the same time, the heat of the confined gases is reduced by a proportional amount, and heat is said to be transformed into mechanical work.

No heat-engine can convert into *work* a greater fraction of the heat which it receives than is expressed by the excess of the temperature of reception above that of rejection divided by the absolute temperature of reception.
Encyc. Brit., XXII. 482.

(*b*) The negative of the work as defined above. In this sense a ball shot upward is said to do work by removing itself from the attracting earth. [Both these uses were introduced (in German) by Clausius.]

11. In *physics* and *chem.*, any form of energy, except heat, involved in any physical or chemical change. It denotes the quantities of the various forms of mechanical energy, or electrical and magnetic energies, and of chemical energy, that undergo change in form or location in any process. Thus, it is customary to speak of the transformation of heat into *work*, for example, by the steam-engine, when it produces motion or electrical energy, raises a weight, compresses a gas, etc., and in general of the production of both heat and work in the surroundings when a body parts with a portion of its energy, the two terms *heat* and *work* being considered to embrace all forms of energy produced. In *mechanics*, work is the energy-change corresponding to the displacement of a force through a distance.

12. In *mining*, ores before they are cleaned and dressed.—**13.** *pl.* The mechanism or effective part of some mechanical contrivance, such as a watch.—**14.** Manner of working; management; treatment.

It is pleasant to see what *work* our adversaries make with this innocent canon. *Stillingfleet.*

Accommodation works. See *accommodation.*—**Advanced works,** works placed beyond the covered ways and glacis of a permanent fortification, but in defensive relations with it. When placed beyond the range of small arms such works are termed *detached works.*—**Agra work,** an inlay of hard stones, such as agates and carnelians, and other costly materials in white marble, made at Agra in British India.—**Bareilly work,** woodwork decorated in black and gold lacquer, made in the Northwestern Provinces of India.—**Beaten work.** See *beaten.*—**Berlin work,** fancy work on canvas in Berlin wools or worsted.—**Best work.** See *best.*—**Bone-work.** Same as *bone-lace.*—**Carnul work,** decoration by means of lacquer painted with flowers in slight relief on a green ground, gold being freely used: from Carnul, or Kurnul, a town of India.—**Cashmere work,** a kind of metal-work in which copper or brass is deeply engraved, and the engraved lines are filled wholly or in part with a black composition like niello; small raised flowers of white metal are then applied to the surface in connection with the design engraved upon the body of the piece.—**Combed-out work.** See *comb*[1].—**Covenant of works.** See *covenant.*—**Damascene work.** See *damascene.*—**Day's work.** See *day*[1].—**Delhi work,** a variety of Indian embroidery distinguished by a free use of chain-stitch, usually in gold and silver mixed with colored silk on colored grounds.—**Dinged work.** See *ding*[1].—**Drawn and cut work,** decorative work done upon fine linen or the like by cutting away parts and pulling out the threads in places: a kind of work often associated with embroidery. In the more elaborate sorts, a network of threads is fastened down upon a piece of linen lawn, the pattern is stitched (usually in buttonhole-stitch) upon the lawn, and after its completion the threads of the network and some of those of the lawn are pulled out and parts of the lawn cut away.—**Embossed-velvet work.** See *velvet.*—**External work.** See *internal work*, below.—**False work.** See *false.*

There are voices and a sound of tools, and we come to a wooden staging, or *false work*, and climb a short ladder, and stand close to the roof among a group of workmen.
The Century, XXXIX. 221.

Fancy, fat, frosted work. See the adjectives.—**Gnarled work.** Same as *gnarling.*—**Granulated work.** See *granulated.*—**Hammered work.** See *hammer*[1].—**Hiroshima work,** fine decorative metal-work made in Japan, in which various ornamental appliances are combined. The name is derived from the town of Hiroshima, where much of the finest has been made.—**Holbein work,** a kind of embroidery done in modern times in imitation of decorative borders and the like shown in paintings of Holbein and other artists of his time. The design is in outline without filling in, and consists of borders and other patterns of slight scrolls, zigzags, etc. It is worked especially with thread on washable material, and has the advantage of showing alike on both sides.—**Honeycomb work.** See *honeycomb.*—**Incrusted work.** See *incrust.*—**Internal work,** in *physics*, work done in or among the molecules of a body upon change of temperature, as in increasing their velocity, changing their relative position, etc.: contrasted with *external work*, that done against external forces as the body changes in volume.—**Irish work.** See *Irish*[1].—**Lacertine work.** See *lacertine.*—**Laid work.** See *lay*[1].—**Lap-jointed work.** Same as *clincher-work.*—**Lean, lump, madras, mechanical, meshed work.** See the qualifying words.—**Madeira work,** embroidery in white thread upon lawn or cambric, made in the island of Madeira, and of remarkable fineness of execution.—**Monghyr work,** Indian decorative carving in black ebony, inlaid with ivory.—**Moradabad work,** decorative work in metal in which two plates of different metals are soldered together and then engraved on one side in deep incisions, so as to show the one metal through the incisions in the other. In another variety the incisions are filled in with a black composition similar to niello.—**Mother-of-pearl work.** See *mother-of-pearl.*—**Mounted work.** See *mounted.*—**Mynpuri work,** an inlay of wood with brass and other metals similar in its character to buhl, practised in India in recent times.—**Mysore work,** decoration by painting in vivid opaque colors on a brilliant ground composed of translucent green lacquer laid upon tin-foil.—**Niello-work.** See *niello.*—**Nulled work.** See *null.*—**Out of work.** (*a*) Out of working order.

There rises a fearful vision of the human race evolving machinery which will by-and-by throw itself fatally *out of work*. *George Eliot*, Theophrastus Such, xvii.

(*b*) Without employment: as, he was *out of work* and ill.—**Phrygian work.** See *Phrygian.*—**Pierced work.** See *pierced.*—**Pitched work.** See *pitch*[1].—**Plaited string work, pounced work, process work, public works.** See *plaited, pounced*[1], etc.—**Punctured work.** See *puncture.*—**Raised work.** See *raise*[1].—**Random work.** See *random.*—**Reisner work** [from its inventor, *Reisner*, a German of the time of Louis XIV.], a kind of inlaid cabinet-work in which woods of contrasted colors are employed, designs being formed in woods lighter or darker than the ground; marquetry.—**Reticulated work.** See *reticulated.*—**Rubbed work.** See *rub.*—**Russian-tapestry work, rustic work, Saracenic work.** See *Russian*, etc.—**Side of work,** in *coal-mining.* See *man-of-war*, 2.—**Sikh work,** decorative work done by the Sikhs of northern India, especially embossed work in thin copper done with the hammer and punch.—**Sindh work,** decoration produced by laying upon wood several strata of lacquer in different colors, and afterward cutting through the lacquer to various depths, as in engraving on onyx.—**Spanish work,** embroidery of simple character, such as that done upon pillow-cases and table-cloths: a term of the seventeenth century.—**Spiritual and corporal works of mercy.** See *mercy.*—**Stamped work.** See *stamp.*—**Swedish work.** See *Swedish.*—**Tabular work.** Same as *table-work.*—**Tamil work,** ornamental metal-work, containing much filigree, made in Ceylon, especially in the northern part of the island.—**Tessellated work.** See *tessellated.*—**Tied work,** a kind of fancy work by which fringes are made of worsted, silk, or other fiber or cord. The cords are fastened and grouped together by a process like netting, producing a sort of knotted fringe.—**To have one's work cut out.** (*a*) To have one's work prepared or prescribed. (*b*) To have all that one can do. [Slang.]—**To lie to one's work.** See *lie*[1].—**To make short work of** or **with.** (*a*) To bring to a speedy conclusion; accomplish at once. (*b*) To deal with or dispose of summarily.

Mr. Canning *made* very *short work of* poor Mr. Erskine.
H. Adams, Gallatin, p. 394.

To run the works. See *run*[1].—**Turkey work,** rugs or carpeting brought from the East: the phrase was in use as late as the seventeenth century.—**Upper works** (*naut.*). Same as *dead-works.*—**Vienna work,** decorative work in leather, including ornamental utensils of that material, with patterns in slight relief and impressed.—**Vizagapatam work,** an inlay of ivory, horn, and other materials in wood. The work is on a small scale, and is applied to the decoration of movable furniture, tea-caddies, chessboards, etc.—**Work and turn,** in *printing*, a form of type arranged to print two copies by turning the sheet.—**Work of art.** See *art*[2].—**Works of supererogation.** See *supererogation.* (See also *gingerbread-work, piqué-work, spider-work.*)=**Syn. 1.** *Work, Labor, Toil, Drudgery*, occupation, exertion, business. *Work* is the generic term for exertion of body or mind; it stands also for the product of such exertion, while the others do not. *Labor* is heavier; the word may be qualified by strong adjectives: as, confinement at hard *labor*. We may speak of light *work*, but not of light *labor*. *Toil* is still heavier, necessarily involving weariness, as *labor* does not. *Drudgery* is heavy, monotonous *labor* of a servile sort.

All *work*, even cotton-spinning, is noble.
Carlyle, Past and Present, iii. 4.

He had been so far that he almost despair'd of getting back again; for a Man cannot pass thro' those red Mangroves but with very much *labour*.
Dampier, Voyages, I. 156.

With burden of our armour here we sweat.
This *toil* of ours should be a work of thine,
Shak., K. John, ii. 1. 93.

The every-day cares and duties which men call *drudgery* are the weights and counterpoises of the clock of time.
Longfellow, Kavanagh, xiii.

workability (wėr-ka-bil'i-ti), *n.* [< *workable* + *-ity* (see *-bility*).] Practicability; feasibleness.

The *workability* of compulsory notification would depend on the general practitioners. *Lancet*, 1890, II. 21.

workable (wėr'ka-bl), *a.* [< *work* + *-able.*] 1. That can be worked, or that is worth working: as, a *workable* mine; *workable* coal. The term *workable*, as applied to coal, has two meanings: one refers to the maximum limit of depth, the other to the minimum limit of thickness of the bed or beds. In the Report of the English Royal Commission appointed in 1866, the limit of workable depth was taken as 4,000 feet, that of thickness at 1 foot. But no coal has yet been worked to so great a depth as that, and it has only very rarely happened that a seam of less than 2 feet in thickness has been actually mined.

Clay . . . soft and *workable*. *Ascham*, Toxophilus, ii.

I apprehend that the Commissioners [the English of 1866] placed the limit of thickness as low as 12 inches because their inquiries were not in that connection directed to the question what amount of coal would ultimately be found commercially *workable;* it was the simple physical limits which they were chiefly regarding.
Marshall, Coal: its Hist. and Uses, p. 307.

2. Practicable; feasible: as, a *workable* scheme for lighting the streets.—3. Capable of being stirred or influenced.

These have nimble feet, forward affections, hearts *workable* to charity. *Rev. T. Adams*, Works, II. 410.

4. Capable of being set at work.

At the time of taking the last census there were very nearly seven millions of wives and children of a *workable* age still unoccupied.
Mayhew, London Labour and London Poor, II. 358.

workableness (wėr'ka-bl-nes), *n.* Practicableness; feasibility.

That fair trial which alone can test the *workableness* of any new scheme of social life. *J. S. Mill*, Socialism.

workaday (wėrk'a-dā), *n.* and *a.* [Formerly also *workyday*. Cf. *workday.*] **I.**† *n.* A working-day.

Trade, I cashier thee till to-morrow; friend Onion, for thy sake I finish this *workiday*.
B. Jonson, Case is Altered, iv. 3.

We find a great Deference paid to Saturday Afternoon, above the other *worky-Days* of the Week.
Bourne's Pop. Antiq. (1777), p. 145.

II. *a.* Working-day; relating to workdays; plodding; toiling.

Your face shall be tann'd
Like a sailor's *worky-day* hand.
Middleton and Rowley, Spanish Gypsy, iv. 1.

Work-a-day humanity.
Dickens, Uncommercial Traveller, iv.

This is a *workaday*, practical world, and . . . we must face things as they are. *The Century*, XXXIX. 630.

work-bag (wėrk'bag), *n.* A small bag of some textile material, formerly carried by women, and used to contain their needlework. The term was often used for the reticule.

The lawful fine of the pledged *work-bag* of the king's wife. *O'Curry*, Anc. Irish, II. xxiv.

work-basket (wėrk'bas″ket), *n.* A basket used by women either to hold the implements for sewing, as needles, thread, scissors, or thimble, in which case the basket is small, or to hold partly made garments, articles needing repair, etc., for which use the basket is large and has a wide opening.

On the table is . . . Elizabeth's *workbasket*.
Rhoda Broughton, Alas, xxxiv.

work-box (wėrk'boks), *n.* A box used by women to hold materials for sewing and the needlework itself when not too bulky.

Here, lately shut, that *work-box* lay;
There stood your own embroidery frame.
F. Locker, The Castle in the Air.

workday (wėrk'dā), *n.* and *a.* [< ME. *werkdai, werkedei, werkedai, werrkedah*, workday, working-day, < AS. *weorc-dæg* (= G. *werk-tag, werkel-tag* = Icel. *verkdagr*); as *work* + *day*[1].] **I.** *n.* A working-day; a week-day.

For a-pon the *werkeday*
Men be so bysy in vche way,
So that for here ocupacyone
They leue myche of here deuocyone.
Myrc, Instructions for Parish Priests (E. E. T. S.), l. 1005.

II. *a.* Of or pertaining to a working-day or working-days.

Allow me my friends, my freedom, my rough companions, in their *work-day* clothes. *Thackeray*, Philip, vi.

worked-off (wėrkt'ôf'), *a.* In *printing*, noting a form of type from which a required edition has been printed.

worker (wėr'kėr), *n.* [< ME. **worker, worcher;* < *work* + *-er*[1].] 1. One who or that which works; a laborer; a toiler; a performer; a doer.

False apostles, deceitful *workers*. 2 Cor. xi. 13.

Men, my brothers, men the *workers*, ever reaping something new:
That which they have done but earnest of the things that they shall do. *Tennyson*, Locksley Hall.

With co-partnership between employer and employed, the *worker* would feel he was more nearly the equal of the capitalist. *N. A. Rev.*, CXLII. 615.

2. In *entom.*, the neuter or undeveloped female of various social hymenopterous and a few other insects, as bees, ants, and termites, which collects pollen, makes honey, builds or fabricates cells or a nest, stores up food, cares for the young, herds and milks the aphids kept as cows, and performs other services for the community of which it is a member. Among bees the worker is distinguished from the queen and the drone, or the perfect female and male. Among ants certain of the workers are specialized and specified as soldiers; these make war and capture slaves. See cuts under *Aphidæ, Atta, Monomorium, Termes,* and *umbrella-ant.*

3†. Maker; creator.

And therfor in the *worcher* was the vyce,
And in the covetour that was so nyce.
Chaucer, Complaint of Mars, l. 261.

4. In a carding-machine, one of the urchins, or small card-covered cylinders.—5. A leather-workers' two-handled knife, used in scraping hides.

worker-ant (wėr'kėr-ânt), *n.* A working ant. See *worker*, 2.

worker-bee (wėr'kėr-bē), *n.* A working bee. See *worker*, 2.

worker-bobbin (wėr'kėr-bob″in), *n.* In *lace-making*, one of the bobbins that are kept passing from side to side, as distinguished from a hanger-bobbin, the thread of which is left stationary while the other threads pass over and under it.

worker-cell (wėr'kėr-sel), *n.* One of the cells of a honeycomb destined for the larva of a worker-bee. Eggs are laid in these first, afterward in the drone-cells and queen-cells.

workfellow (wėrk'fel″ō), *n.* One engaged in the same work with another. Rom. xvi. 21.

work-folk, work-folks (wėrk'fōk, wėrk'fōks), *n. pl.* Persons engaged in manual labor; workpeople.

Oversee my *work-folks*,
And at the week's end pay them all their wages.
Fletcher (*and another*), Noble Gentleman, ii. 1.

workful (wėrk'fûl), *a.* [< ME. *workvol;* < *work* + *-ful.*] Full of activity and work; laborious; industrious. [Rare.]

You saw nothing in Coketown but what was severely *workful*. *Dickens*, Hard Times, i. 5.

workgirl (wėrk'gėrl), *n.* A girl or young woman who works or is engaged in some useful manual employment.

There are men and women working perpetually for every other possible class, but none for the *workgirl*.
Nineteenth Century, XXII. 371.

In the establishment were seated nine *workgirls*.
Lancet, 1890, II. 951.

work-holder (wėrk'hōl″dėr), *n.* A device for holding a fabric in a convenient position for needlework. It consists usually of spring-jaws for holding the material, and a clamp for securing the holder to the edge of a table. Compare *sewing-bird.*

workhouse (wėrk'hous), *n.* [< late ME. *werkehowse*, AS. *weorc-hūs;* as *work* + *house*[1], *n.*] 1. A house in which work is carried on; a manufactory.

Protogenes . . . had his *workhouse* in a garden out of town. *Dryden*, Obs. on Dufresnoy's Art of Painting.

But, indeed, that which most surprised me in the Louvre was the Attellier or *Work-house* of Monsieur Gerardon: he that made Cardinal Richelieu's Tomb, and the Statua Equestris designed for the Place de Vendosme.
Lister, Journey to Paris, p. 43.

2. A house in which able-bodied paupers are compelled to work; a poorhouse. Under the old poor-laws of England there was a workhouse in each parish, partaking of the character of a bridewell, where indigent, vagrant, and idle people were set to work, and supplied with food and clothing, or what is termed *indoor relief.* Some workhouses were used as places of confinement for rogues and vagabonds, who were there confined and compelled to labor; whilst others were large almshouses for the maintenance and support of the poor. In the United States the workhouses or poorhouses are sometimes under the charge of the county, sometimes under that of the town or township.

Our Laws have wisely determin'd that *Work-houses* are the best Hospitals for the Poor who are able to help themselves. *Stillingfleet*, Sermons, II. vii.

A miser who has amassed a million suffers an old friend and benefactor to die in a *work-house*, and cannot be questioned before any tribunal.

world-wide (wėrld'wīd), *a.* As wide as the world; extending over or pervading all the world; widely spread: as, *world-wide* fame; specifically, in *zoögeog.*, cosmopolitan: noting such habitat, or the fact of such distribution, but not the species or individuals themselves which inhabit all parts of the world.

worm (wėrm), *n.* [< ME. *worm, wurm, wirm, werm,* < AS. *wyrm*, a worm, snake, dragon, = OS. *wurm* = D. LG. *worm* = OHG. MHG. G. *wurm*, worm, insect, snake, dragon, = Icel. *ormr* (for **vormr*) = Sw. Dan. *orm* (for **vorm*) = Goth. *waurms*, a worm, = L. *vermis;* cf. Gr. *ῥόμος, ῥόμυξ* (**ϝρόμος*), a wood-worm; cf. Lith. *kirmis*, worm, = OBulg. *chrŭvĭ* = Russ. *chervŭ*, worm, = OIr. *cruim*, a worm (cf. Ir. *cruimh*, a maggot, W. *pryf*, worm), = Skt. *krimi*, worm (whence ult. E. *crimson, carmine*, q. v.). From the L. *vermis* are ult. E. *vermin, vermicule, vermeil*, etc.] **1.** In popular language, any small creeping creature whose body consists of a number of movable joints or rings, and whose limbs are very short or entirely wanting; any vermiform animal.

Nowe pike oute mougthes, attercoppes, *wormys*,
And butterflie whoos thoste engendryng *worme* is.
Palladius, Husbondrie (E. E. T. S.), p. 138.

(*a*) Any annelid, as the earthworm, lobworm or lugworm, leech, etc. See the distinctive names.

Worms have played a more important part in the history of the world than most persons would at first suppose. In almost all humid countries they are extraordinarily numerous, and for their size possess great muscular power.
Darwin, Vegetable Mould, p. 305.

(*b*) Any helminth, whether parasitic or not, such as a flat-worm, brain-worm, fluke-worm, roundworm, tapeworm, pinworm, hairworm, threadworm, longworm, whirl-worm, guinea-worm, etc. See such words, and *vinegar-eel.* (*c*) One of several long slender vermiform echinoderms, as some holothurians and related forms. See *Vermiformia*, and cuts under *Synapta* and *trepang.* (*d*) Some small or slender acarine or mite, or its larva, as the worm found in sebaceous follicles. See *comedo* and *Demodex.* (*e*) A myriapod; a centiped or milleped; a gally-worm. (*f*) The larva, grub, maggot, or caterpillar of many true hexapod insects: as, bag-*worm;* boll-*worm;* book-*worm;* wire-*worm;* sod-*worm;* snake-*worm;* joint-*worm;* silk*worms.* See the compounded and otherwise qualified names.

The larvæ of the bee-moth are frequently but improperly so called. Indeed when *worms* are spoken of by the ordinary beekeeper, the larvæ of the bee-moth are almost always meant. *Phin*, Dict. Apiculture, p. 78.

(*g*) The adult of some true insects whose body is long and flexible, as a glow-worm. (*h*) One of several long slender crustaceans with short legs or none, which attach to or burrow in other animals, bore into wood, etc., as some kinds of fish-lice, certain isopods (as the gribble), certain amphipods (as the wood-shrimp), etc. (*i*) One of some vermiform mollusks, as a teredo or shipworm, or a wormshell. See cuts under *shipworm* and *Vermetus.* (*j*) A small lizard with rudimentary legs, or none, as a blindworm or slow-worm. (*k*†) A serpent; a snake; a dragon. For a modern instance in composition, see *worm-snake*, 1.

He [Satan] . . .
Wente in to a *wirme*, and tolde eue a tale.
Genesis and Exodus (E. E. T. S.), l. 321.

Hast thou the pretty *worm* of Nilus there,
That kills and pains not?
Shak., A. and C., v. 2. 243.

Here will be subject for my snakes and me.
Cling to my neck and wrists, my loving *worms.*
B. Jonson, Poetaster, Ind.

2. Technically, in *zoöl.*, any member of the Linnean class *Vermes*, or of the modern phylum or subkingdom of the same name; or any turbellarian, planarian, nemertean, platyhelminth, nemathelminth, trematoid, cestoid, nematoid, chætognath, annelid, etc. By some authorities the gephyreans, rotifers, and polyzoans are brought under this head. See *Vermes*, and the various words noted in 1 (*a*), (*b*), above.

3. A person or human being likened to a worm as an object of scorn, disgust, contempt, pity, and the like: as, man is but a *worm* of the dust.

Vile *worm*, thou wast o'erlooked even in thy birth.
Shak., M. W. of W., v. 5. 87.

Hence—**4.** Figuratively, of inanimate objects, something that slowly, silently, or stealthily eats, makes, or works its way, to the pain, injury, or destruction of the object affected: used emblematically or symbolically. (*a*) Corruption, decay, or dissolution; death itself.

Thus chides she Death—
"Grim-grinning ghost, earth's *worm*, what dost thou mean,
To stifle beauty and to steal his breath?"
Shak., Venus and Adonis, l. 933.

My days are in the yellow leaf;
The flowers and fruits of love are gone;
The *worm*, the canker, and the grief
Are mine alone!
Byron, On his Thirty-sixth Birthday.

(*b*) An uneasy conscience; the gnawing or torment of conscience; remorse.

The *worm* of conscience still begnaw thy soul!
Shak., Rich. III., i. 3. 222.

Beatrice. The true value,
Tak 't of my truth, is near three hundred ducats.
De Flores. 'Twill hardly buy a capcase for one's conscience though,
To keep it from the *worm*.
Middleton and Rowley, Changeling, iii. 4.

5. In *anat.*, some vermiform part or process of an animal's body. (*a*) The vermis of the cerebellum. See *vermis*. (*b*) The vermiform cartilage of a dog's tongue. See *lytta*.

There is one easy artifice
That seldom has been known to miss;
To snarl at all things, right or wrong,
Like a mad dog that has a *worm* in 's tongue.
S. Butler.

6. Anything thought to resemble a worm in appearance, or in having a spiral or curved movement. (*a*) The spiral part of a corkscrew or of a woodscrew. Also *wormer*. (*b*) A rod having at the end a double spiral as if two corkscrews were combined, used in withdrawing the cartridge or wad from the barrel of a gun. Also *wormer*. Compare *wadhook*. (*c*) The spiral pipe in a still, through which the vapor to be condensed is conducted. See *distillation*, 2, and cut under *petroleum-still*. (*d*) A spiral tool with a sharp point, used to bore soft rock. *E. H. Knight.*

7. *pl.* Any disease or disorder arising from the presence of parasitic worms in the intestines or other tissues; helminthiasis.—**Clover-hay worm.** See *clover*.—**Cystic worm.** See *cystic*[1].—**Double worms,** the genus *Diplozoön*. See cut under *syzygy*.—**Gotthard worm,** *Dochmius intestinalis*: so called because of the large number of cases of anemia among the workers on the St. Gotthard tunnel, caused by the presence of this parasite. See *tunnel-disease*.—**Idle worms**†. See *idle*.—**Intestinal worm.** (*a*) A worm having itself an intestine; an enteric or enterate worm; a cavitary. (*b*) A worm parasitic in the intestine of another animal, as a tapeworm, threadworm, pinworm, etc.—**Leaf-bearing worms.** See *Phyllodocidæ*.—**Mugá worm,** a kind of silkworm, *Antheræa assama*.

Silk cloth is made from the cocoons of the *mugá worm*.
Encyc. Brit., XIV. 225.

Palm worm, the larva of one of the palm weevils, *Rhynchophorus* (*Calandra*) *palmarum*, and doubtless of any similar species, as *R.* (*C.*) *cruentatus*, found in the heart of the cabbage-palm. It is a large white worm, often eaten in South America, the West Indies, and elsewhere, known as the *gru-gru*, and by the French name *ver palmiste*. It is said to taste like almonds.—**Parenchymatous worms,** the *Parenchymata*.—**Plaited worms,** the *Aspidogasteridæ*.—**Rack-and-worm gear.** See *rack*[1], 6.—**Reshta worm,** the guinea-worm, *Dracunculus* (or *Filaria*) *medinensis*. See cut under *Filaria*.—**Ringed, star-mouthed, tailed, vesicular worms.** See the adjectives.—**White-rag worm.** Same as *lurg*.—**Worm gearing.** Same as *worm-gear*.

worm (wėrm), *v.* [= D. *wurmen*, torment oneself, vex oneself, worry, work hard; cf. G. *würmen*, crawl, wriggle, be lost in thought, also tr. tease, grieve, *wurmen*, worm, worry; from the noun.] **I.** *intrans.* **1.** To move like a worm; go or advance as a worm; crawl or creep sinuously; wriggle; writhe; squirm: as, to *worm* along.

"I little like that smoke, which you may see *worming* up along the rock above the canoe," interrupted the . . . scout. *J. F. Cooper*, Last of Mohicans, xx.

They *wormed* through the grass to within forty or fifty feet of the rifle-pits. *The Century*, XXIX. 139.

2. To work or act slowly, stealthily, or secretly.

When debates and fretting jealousies
Did *worm* and work within you more and more,
Your colour faded.
G. Herbert, The Temple, Church-Rents and Schisms.

II. *trans.* **1.** To effect by slow, stealthy, or insidious means: as, to *worm* one's way along. In this sense also, reflexively, of slow, insidious, or insinuating progress or action: as, he *wormed himself* into favor.

I was endeavoring to settle some points of the greatest consequence; and had *wormed myself* pretty well into him, when his under secretary came in—and interrupted all my scheme. *Swift*, Journal to Stella, Aug. 1, 1711.

Specifically—**2.** To extract, remove, expel, or take away by underhand means persistently continued: generally with *out* or *from*.

It is a riddle to me how this story of oracles hath not *wormed out* of the world that doubtful conceit of spirits and witches. *Sir T. Browne*, Religio Medici, i. 30.

They find themselves *wormed out* of all power. *Swift.*

Who've loosed a guinea from a miser's chest,
And *wormed* his secret *from* a traitor's breast.
Crabbe, Works, I. 196.

3†. To subject to a stealthy process of ferreting out one's secrets or private affairs; play the spy upon.

I'll teach you to *worm* me, good lady sister,
And peep into my privacies, to suspect me.
Fletcher, Wit without Money, iv. 4.

4. To free from worms.

Wormes in the earth also there are, but too many, so that, to keepe them from destroying their Corne and Tobacco they are forced to *worme* them eury morning, which is a great labour, else all would be destroyed.
Capt. John Smith, Works, II. 116.

Another strange gardener . . . challenges as his right the binding or unbinding of every flower, the clipping of every bush, the weeding and *worming* of every bed, both in that and all other gardens thereabout.
Milton, On Def. of Humb. Remonst., vi.

5. To remove the charge, etc., from, as a gun, by means of a worm. See *worm*, *n.*, 6 (*b*).—**6.** To remove the worm or lytta from the tongue of, as of a dog: supposed to be a precaution against madness.

Is she grown mad now?
Is her blood set so high? I'll have her madded!
I'll have her *worm'd!* *Fletcher*, Pilgrim, iv. 1.

I made it up with him by tying a collar of rainbow ribband about his neck for a token that he is never to be *wormed* any more. *H. Walpole*, To Mann, Oct. 3, 1743.

The men repaired her ladyship's cracked china, and assisted the laird in his sporting parties, *wormed* his dogs, and cut the ears of his terrier puppies. *Scott.*

7. To remove the beard of (an oyster or mussel).—**8**†. To give a spiral form to; put a thread on.

Grow'n more cunning, hollow things he formeth,
He hatcheth Files, and winding Vices *wormeth*,
He shapeth Sheers, and then a Saw indents,
Then beats a Blade, and then a Lock invents.
Sylvester, tr. of Du Bartas's Weeks, The Handy-Crafts.

9. *Naut.*, to wind rope-yarns, spun yarn, or similar material spirally round (a rope) so as to fill the spaces between the strands and render the surface smooth for parceling and serving. See cuts under *parceling* and *serving-mallet*.

wormal (wôr'mal), *n.* Same as *warble*[3].

worm-burrow (wėrm'bur″ō), *n.* A fossil wormcast or hole; a scolite or helmintholite.

worm-cast (wėrm'kast), *n.* **1.** The cylindrical casting of a worm; the slender tubular mass of earth voided by the common earthworm after digestion.

The *worm-casts* which so much annoy the gardener by deforming his smoothshaven lawns.
E. P. Wright, Animal Life, p. 575.

2. The fossil cast, mold, track, or hole of a worm or some vermiform creature; a helminthite or helmintholite; a worm-burrow.

worm-cod (wėrm'kod), *n.* See *cod*[2].

worm-colic (wėrm'kol″ik), *n.* Intestinal pain due to the presence of worms.

worm-dye (wėrm'dī), *n.* Same as *vermeil*.

worm-eat (wėrm'ēt), *v. t.* [A back-formation, from *worm-eaten*.] **1.** To eat into, gnaw, bore, or perforate, as is done by various worms, grubs, maggots, etc.; eat a way through or into. See *worm-eaten*.—**2.** To affect injuriously, impair, or destroy by any slow, insidious process.

Leave off these vanities which *worm-eat* your brain.
Jarvis, tr. of Don Quixote, II. iv. 10. (*Davies.*)

worm-eat† (wėrm'et), *p. a.* Same as *worm-eaten*.

Worm-eat stories of old times. *Bp. Hall*, Satires, I. iv. 6.

worm-eaten (wėrm'ē″tn), *p. a.* [< ME. **wermeten, wermethe*; < *worm* + *eaten*.] **1.** Eaten into by a worm; gnawed, bored, or perforated by worms of any kind; abounding in wormholes; wormy: as, *worm-eaten* timber, fabrics, fruit.

We see the corne blasted, trees stricken downe, floures fall, woode *wormeaten*, cloath deuoured with moathes, cattell doe ende, and menne doe die.
Guevara, Letters (tr. by Hellowes, 1577), p. 192.

Concave as a covered goblet or a *worm-eaten* nut.
Shak., As you Like it, iii. 4. 27.

2. Old, worn-out, or worthless, as if eaten by worms. *Raleigh*, Hist. World (ed. 1687), p. 58.

worm-eatenness (wėrm'ē″tn-nes), *n.* The state of being worm-eaten, or as if worm-eaten; decay; rot.

worm-eater (wėrm'ē″tėr), *n.* A bird or other animal that habitually eats or lives upon worms; specifically, the worm-eating warbler of the United States, *Helmintherus vermivorus*. See *worm-eating* and *Vermivora*. *Edwards; Latham.*

worm-eating (wėrm'ē″ting), *a.* Habitually eating worms; feeding or subsisting upon worms; vermivorous; in *ornith.*, noting a number of American warblers of the genera *Helmintherus* and *Helminthophaga* (formerly *Vermivora*), and specifying the worm-eater, *Helmintherus vermivorus*, a common species of the eastern United States.

wormed (wėrmd), *a.* [< *worm* + *-ed*[2].] Affected by worms; gnawed, bored, or otherwise injured by worms; worm-eaten; wormy.

Occasionally the wood [mahogany] which has been floated in tropical seas is found to be badly *wormed* or attacked by marine borers. *Encyc. Brit.*, XV. 288.

wormer (wėr'mėr), *n.* **1.** Same as *worm*, 6 (*a*) and (*b*).—**2.** An angler who fishes with worms for bait; a worm-fisher. [Colloq.]

wormil (wôr'mil), *n.* Same as *wormal*. See *warble*[3].

worming-pot (wėr'ming-pot), *n.* In *pottery*, a device for placing bands, stripes, or other ornaments in color upon pottery. It consists of a vessel from which the color issues through quill-like tubes in a continuous stream as the ware is revolved on a lathe.

worm-larva (wėrm'lär″vä), *n.* The larva of a worm; the larval stage of one of the *Vermes*.

worm-like (wėrm'līk), *a.* Resembling a worm in shape or movement; vermiform; vermicular; spiral or spirally twisted.

wormling (wėrm'ling), *n.* [= Icel. *yrmlingr*; as *worm* + *-ling*[1].] A little worm; hence, a weak, mean creature.

O dusty *wormling!* dar'st thou strive and stand
With Heav'ns high Monarch? wilt thou (wretch) demand
Count of his deeds?
Sylvester, tr. of Du Bartas's Weeks, ii., The Imposture.

wormod†, *n.* A Middle English form of *wormwood*. *Wyclif.*

worm-oil (wėrm'oil), *n.* Same as *wormseed-oil*.

wormpipe (wėrm'pīp), *n.* The worm of a still.

The gas then in its passage through the *worm-pipe* of the condenser (which is always surrounded with cold water) is condensed. *Ure*, Dict., IV. 727.

worm-powder (wėrm'pou″dėr), *n.* A powder used for expelling worms from the intestinal canal or other open cavities of the body.

worm-punch (wėrm'punch), *n.* A small, rather slender punch, used by coopers for clearing out worm-holes in staves or heads of casks, for the purpose of stopping the holes with wooden plugs to prevent leaking.

worm-rack (wėrm'rak), *n.* A rack gearing with a worm-wheel. The teeth are set obliquely, corresponding in obliquity with the pitch of the worm. See cut under *rack*[1], 6.

worm-safe (wėrm'sāf), *n.* A locked chamber containing a hydrometer, and attached to the worm of a still in such manner that a fractional part of the liquor distilled trickles into it from the worm. The mean specific gravity of the liquor is indicated by the hydrometer.

wormseed (wėrm'sēd), *n.* 1. Same as *santonica*. See *santonica* and *santonin*.

Worme-seede [cometh] from Persia. *Hakluyt's Voyages*, II. i. 278.

2. The fruit of the European herb *Chenopodium anthelminticum*, by some authors considered a variety of *C. ambrosioides;* also, the plant itself. The latter species is sometimes distinguished as *American wormseed;* also called *Mexican tea*. The seed is an officinal as well as a popular vermifuge. It yields wormseed-oil (which see).

3. The treacle-mustard, *Erysimum cheiranthoides*, or primarily its seed, which was formerly a popular vermifuge in England. Also *treacle-wormseed*.—**American wormseed.** See def. 2.—**Barbary wormseed,** the heads of species of *Artemisia* growing in Syria and Arabia, used like santonica.—**Levant wormseed.** See *santonica*.—**Oil of wormseed.** See *oil* and *wormseed-oil*.—**Spanish wormseed,** a chenopodiaceous plant, *Salsola tamariscifolia*, or particularly its seed, which is used as an anthelmintic.—**Treacle-wormseed.** See def. 3.

wormseed-mustard (wėrm'sēd-mus″tärd), *n.* See *mustard*.

wormseed-oil (werm'sēd-oil), *n.* A volatile oil obtained from wormseed. It is probably without active medicinal properties.

worm-shaft (wėrm'shäft), *n.* The screw-threaded shaft which engages the teeth of a worm-gear or worm-wheel.

worm-shaped (wėrm'shāpt), *a.* Having the form of a worm; vermiform; vermicular.

worm-shell (wėrm'shel), *n.* A mollusk of the family *Vermetidæ*, or its shell: so called from the long twisted or vermiform shape of the shell. See cut under *Vermetus*.

worms'-meat (wėrmz'mēt), *n.* Food for worms; dead flesh. [Rare.]

I am dead
Already, girl: and so is she and he;
We are all *worms'-meat* now.
Beau. and Fl., Laws of Candy, v. 1.

worm-snake (wėrm'snāk), *n.* 1. A blindworm; a worm-like angiostomatous or scolecophidian snake of the suborder *Typhlopoidea;* a ground-snake, as *Carphophis* (or *Celuta*) *amœna*.—2. Same as *snakeworm*.

worm-tea (wėrm'tē), *n.* A decoction of some plant, generally a bitter plant, used as an anthelmintic.

worm-track (wėrm'trak), *n.* Same as *worm-cast*, 2.

wormul (wôr'mul), *n.* Same as *warble*[3].

worm-wheel (wėrm'hwēl), *n.* A wheel which gears with an endless or tangent screw or worm, receiving or imparting motion. By this means a powerful effect with a diminished rate of motion is communicated from one revolving shaft to another. See *tangent screw* (under *tangent*), *endless screw* (under *endless*, with cut); also cuts under *Hindley's screw* (at *screw*) and ★under *steam-engine*.

wormwood (wėrm'wůd), *n.* [< ME. *wormwod*, an altered form, simulating *worm* + *wood*[1], of the earlier *wermode*, *wermod*, *wormod*, < AS. *wermod* = MD. *wermoed*, *wermoet*, *wermōt*, *wermōde*, *wermēde*, *warmōt*, *warmōde*, etc., = OHG. *werimuota*, *weramōte*, *wermuota*, *wormuota*, MHG. *wermuot*, *wermüete*, G. *wermuth* (> F. *vermout*), wormwood; formation uncertain; appar. lit. 'keep-mind,' preserver of the mind, from a supposed belief in its medicinal virtues (so hellebore was called in AS. *wēdeberge*, preservative against madness), < AS. *werian* (= D. *weren*, *weeren* = MHG. *weren*, G. *wehren*, etc.), defend, protect, keep, + *mōd*, mood, mind: see *wear*[2] and *mood*[1].] A somewhat woody perennial herb, *Artemisia Absinthium*, native in Europe and Asiatic Russia, found in old gardens and by roadsides in North America. This plant is proverbial for its bitterness, and was in medicinal use among the ancients. It is of a highly tonic property, and is still used in Europe for weak digestion; it was formerly employed for intermittents and some other troubles, and was once regarded as a vermifuge. It is very largely consumed, with a few other species, in preparing the absinthe beverage of the French. (See *absinthe* and *absinthium* (with cut)). The name is extended to the genus, or particularly to species closely related to this; various species have their own names, as *southernwood*, *mugwort*, *tarragon*, *santonica*, and *sage-brush*.

The soure Almaunde, *& wermode*, & feyn greeke,
Frote hem yfere asmoche as wol suffice.
Palladius, Husbondrie (E. E. T. S.), p. 199.

These for frenzy be
A speedy and a sovereign remedy,
The bitter *wormwood*, sage, and marigold.
Fletcher, Faithful Shepherdess, ii. 2.

Figuratively—2. Bitterness.

Weed this *wormwood* from your fruitful brain.
Shak., L. L. L., v. 2. 857.

Sir, with this truth
You mix such *wormwood* that you leave no hope
For my disorder'd palate e'er to relish
A wholesome taste again. *Ford*, Perkin Warbeck, i. 2.

His presence and his communications were gall and *wormwood* to his once partial mistress.
Scott, Kenilworth, xi.

Biennial wormwood, *Artemisia biennis*, a weed of the interior northern United States, now spreading eastward. It grows from 1 to 3 feet high, and has once- or twice-pinnatifid leaves, with numerous small greenish heads crowded in their axils.—**Oil of wormwood,** a volatile oil distilled from the common wormwood, usually of a dark-green color, containing the property of the herb.—**Roman wormwood.** (*a*) *Artemisia Pontica*, an Old World species, more aromatic and less bitter than the common wormwood, preferred in Roman medicine, but now scarcely used. (*b*) By transference of the name, the common ragweed, *Ambrosia artemisiæfolia*, a bitter plant with foliage dissected somewhat like that of an artemisia.—**Salt of wormwood.** See *salt*[1].—**Sea wormwood,** the European *Artemisia maritima*.—**Silver wormwood,** *Artemisia argentea*, a silvery silky shrub of Madeira.—**Tartarian wormwood.** Same as *santonica*, 1.—**Tree-wormwood,** *Artemisia arborescens*, an erect tree-like species found on rocky shores and islands of the Mediterranean.—**Wild wormwood** of the West Indies. See *Parthenium*.—**Wormwood wine,** wine which has received a bitter taste from having artemisia steeped in it. Compare *vermouth*.

wormwood-moth (wėrm'wůd-môth), *n.* A rare British noctuid, *Cucullia absinthii*. It is gray with black spots, and its larva feeds on wormwood. It is found chiefly in Devonshire and Cornwall.

wormwood-pug (wėrm'wůd-pug), *n.* A British geometrid moth, *Eupithecia absinthiata*, whose larva feeds upon wormwood.

wormy (wėr'mi), *a.* [< *worm* + *-y*[1].] 1. Containing a worm; full of worms; infested or affected with worms; lousy, as fish; measly, as pork; worm-eaten, as timber, fruit, etc.

Damned spirits all . . .
Already to their *wormy* beds are gone.
Shak. M. N. D., iii. 2. 384.

wound¹ (wönd or wound), *n.* [< ME. *wound, wounde, wund, wunde, wonde*, < AS. *wund* = OS. *wunda, wunde* = OFries. *wunde, unde* = D. *wond, wonde* = OHG. *wunta*, MHG. G. *wunde*, a wound, = Icel. *und* (for **vund*) = Dan. *vunde*, a wound; from an adj., ME. *wund*, < AS. *wund* = D. *ge-wond* = OHG. *wunt*, G. *wund* = Goth. *wunds*, wounded; possibly orig. pp. (in *-d*²) of the verb which appears in AS. *winnan* (pp. *wunnen*), strive, fight, suffer: see *win*¹, *v.* The historical pron. is wound, parallel to that of *ground, found, sound, bound*, etc.] **1.** In *surg.*, a solution of continuity of any of the tissues of the body, involving also the skin or mucous membrane of the part, caused by some external agent, and not the result of disease.

I, lately caught, will have a new made *wound*,
And captive-like be manacled and bound.
Marlowe, tr. of Ovid's Elegies, ii.

2. In *medical jurisprudence*, any lesion of the body resulting from external violence, whether accompanied or not by rupture of the skin or mucous membrane—thus differing from the meaning of the word when used in surgery. Great difference of opinion, however, appears in the way in which the word is interpreted when occurring in criminal statutes. Some authorities have held that it necessarily implies the use of a hard or solid instrument other than the hand or fist; others, that it necessarily implies the breaking of the skin beyond the cuticle or outer membrane.

3. A breach or hurt of the bark and wood of a tree, or of the bark and substance of other plants.—**4.** Figuratively, injury; hurt; harm: as, a *wound* given to credit or reputation, feelings, etc.: often specifically applied in literature to the pangs of love.

Alas, poor shepherd! searching of thy *wound*,
I have by hard adventure found mine own.

wrap-rascal (rap'ras″kal), *n.* [< *wrap* + obj. *rascal;* a humorous term, like *hap-harlot.*] A loose greatcoat worn by people of elegance about 1740, in supposed imitation of the coarse coats of the poorer people; hence, any surtout or long outer garment.

His dress was also that of a horse-dealer—a close-buttoned jockey-coat, or *wrap-rascal*, as it was then termed, with huge metal buttons, coarse blue upper stockings, called boot-hose, because supplying the place of boots, and a slouched hat. *Scott*, Heart of Mid-Lothian, xiii.

The driver, by means of a *wraprascal*, had covered a great part of the rags of his lower garment.
Thackeray, Irish Sketch-Book, xix.

★**wrasse** (ras), *n.* [Also *wrass.* Origin unknown. Some have found a source in the W. name for the fish, *gwrachen y môr.*] An acanthopterygian fish of the family *Labridæ;* any labrid, or labroid fish, having thick fleshy lips, strong sharp teeth, and usually brilliant coloration. See *parrot-fish* (with cut). They are carnivorous salt-water fishes of littoral habits, haunting chiefly rocky shores, and many of them are esteemed food-fishes. The species to which the name applies as a book-name are very numerous; but those of which *wrasse* is actually spoken are chiefly the British species, as the ballan-wrasse and the red wrasse. (See cut under *Labrus.*) In America the best-known wrasses (though not so called) are the common cunner, the tautog, and the fathead. See cuts under these words.—**Comber wrasse.** Same as *comber*[3], 2.—**Cook wrasse,** the striped wrasse, *Labrus mixtus.*—**Ctenoid wrasses,** wrasses with ctenoid scales; the *Ctenolabridæ.*—**Cycloid wrasses,** wrasses with cycloid scales; the *Cyclolabridæ.*—**Servellan wrasse.** Same as *sweetlips*, 3.—**Small-mouthed wrasse,** *Centrolabrus exoletus.* (See also *ballan-wrasse, rainbow-wrasse.*)

wreck[1] (rek), *n.* [< ME. *wrak*, *wrek*, *wrec*, < AS. *wræc*, expulsion, banishment, exile, misery (= D. *wrak*, wreck, = Icel. *rek* (for *vrek*), also *reki*, anything drifted or driven ashore, = Sw. *vrak*, refuse, trash, wreck, = Dan. *vrag*, wreck), < *wrecan* = Icel. *reka*, etc., drive: see *wreak*[1], and cf. *wrack*[1], a doublet of *wreck*[1].] **1.** The destruction, disorganization, disruption, or ruin of anything by force and violence; dilapidation: as, the *wreck* of a bridge; the *wreck* of one's fortunes.

Hence grew the general *wreck* and massacre.
Shak., 1 Hen. VI., i. 1. 135.

The *wreck* of matter and the crush of worlds.
Addison, Cato, v. 1.

2. That which is in a state of wreck or ruin, or remains from the operation of any destroying agency: as, the building is a mere *wreck*; he is but the *wreck* of his former self.

But still the brave old soul held on, making the most of the *wreck* of life, now drifting alone to the Islands of the Blessed. *Theodore Parker*, Historic Americans, vi.

Naught remains the saddening tale to tell,
Save home's last *wrecks*—the cellar and the well!
O. W. Holmes, Island Ruin.

3. The partial or total destruction of a vessel at sea or in any navigable water, by any accident of navigation or by the force of the elements; shipwreck.

Go, go, begone, to save your ship from *wreck*,
Which cannot perish, having thee on board.
Shak., T. G. of V., i. 1. 156.

4. A vessel ruined by wreck; the hulk and spars, more or less dismembered and shattered, of a vessel cast away or completely disabled by breaching, staving, or otherwise breaking.

In the statute of Westminster the first [3 Edw. I., c. 4], the time of limitation of claims given by the charter of Henry II. is extended to a year and a day, . . . and it enacts that, if a man, a dog, or a cat escape alive, the vessel shall not be adjudged a *wreck*. *Blackstone*, Com., I. viii.

5. That which is cast ashore by the sea; shipwrecked property, whether a part of the ship or of the cargo; wreckage; in *old Eng. common law*, derelict of the sea cast upon land within the body of a country, and not in the possession of the owner or his agents. *Wreck*, or more fully *wreck of the sea*, was at common law applied only to wrecked property cast by the sea upon the land; and this included things grounded—that is, not floating at the time of seizure, although in a position where the tide would float them again. All such property was originally the perquisite of the crown, or of its tenant the lord of the manor; but in course of time an exception was made of wrecks from which any living thing escaped to land, in which case a presumption that an owner would appear arose and the property was preserved for a year and a day, after which if no claim was established the right of the crown was recognized. Wrecked matter floating was within the jurisdiction not of the common-law courts, but of admiralty, and known as *derelict*, or *derelict of the sea*. This too was a perquisite of the crown, claimed under the name of a *droit of admiralty*. Such matter was classed as *flotsam*, *jetsam*, and *lagan* or *ligan* (which see). In the United States the right to derelict for which the owner does not appear is in the Federal government; the right to wreck for which he does not appear is in the State to whose coast it comes, subject usually in either case to the right of the rescuer of it to a compensation known as *salvage*.

6. Seaweeds cast ashore by storms; wrack.—**Commissioners of wrecks** (in Maine, Massachusetts, and Rhode Island), **receivers of wrecks** (in Great Britain), **wreck-masters** (in New York and Texas), officers whose duty it is to take charge of wrecked property on the part of the coast for which they are appointed, and preserve it for the owner, or, if unclaimed, for the state.—**Wreck commissioner,** in Great Britain, one of a tribunal consisting of not more than three, appointed by the lord chancellor, under the Merchant Shipping Act, 1876 (39 and 40 Vict., c. 80), for the purpose of investigating shipping casualties.

wreck[1] (rek), *v.*; pret. and pp. *wrecked*, ppr. *wrecking*. [< *wreck*[1], *n.*] **I.** *trans.* **1.** To cause the wreck of, as a vessel; suffer to be ruined or destroyed in the course of navigation or management: said specifically of the person under whose charge a vessel is at the time of its wreck, and usually implying blame, even in case of misfortune.

Friends, this frail bark of ours, when sorely tried,
May *wreck* itself without the pilot's guilt,
Without the captain's knowledge.
Tennyson, Aylmer's Field.

2. To cause the downfall or overthrow of; ruin; shatter; destroy; bring into a disabled or ruinous condition by any means: as, to *wreck* a railroad-train or a bank; to *wreck* the fortunes of a family.

Weak and envy'd, if they should conspire
They *wreck* themselves, and he hath his desire.
Daniel, Civil Wars, iii. 17.

The meeting-houses of the Dissenters were everywhere *wrecked*. *Lecky*, Eng. in 18th Cent., i.

3. To involve in a wreck; imperil or damage by wreck: as, a *wrecked* sailor; *wrecked* cargo.

Here I have a pilot's thumb,
Wreck'd as homeward he did come.
Shak., Macbeth, i. 3. 29.

The spurious tea-men are also the buyers of *wrecked* tea—that is, of tea which has been part of the salvage of a *wrecked* vessel.
Mayhew, London Labour and London Poor, II. 151.

Like golden ripples hasting to the land
To *wreck* their freight of sunshine on the strand.
Lowell, Legend of Brittany, i. 38.

II. *intrans.* To suffer wreck or ruin. [Rare.]

Rocks, whereon greatest men have oftest *wreck'd*.
Milton, P. R., ii. 228.

wreck[2]† (rek), *v.* and *n.* An obsolete form of *wreak*[1].

wreckage (rek'āj), *n.* [< *wreck*[1] + -*age*.] **1.** The act of wrecking, or the state of being wrecked.

Wreckage and dissolution are the appointed issue.
Carlyle, French Rev., II. v. 2.

2. That which remains of or from a wreck of any kind; wrecked material in general.

Only a few years ago, the procession of the fat ox remained, . . . a real piece of *wreckage* from vanished civilizations. *Pop. Sci. Mo.*, XXII. 247.

Littered above the pavement with the *wreckage* and refuse of the market. *W. Besant*, Fifty Years Ago, p. 61.

wreck-chart (rek'chärt), *n.* A chart showing the location and date of wrecks on any coast, as an aid in avoiding them or as a guide in searching for them.

wrecker (rek'ėr), *n.* [< *wreck*[1] + -*er*[1].] **1.** A person who purposely causes a wreck or wreck-

age of any kind, or a person who commits depredation upon such wreckage. Specifically—(*a*) One who lures a ship to destruction on a dangerous coast by false lights or signals, or otherwise, for the purpose of plunder, or one who makes a business of watching for and plundering wrecked vessels. Such wreckers formerly abounded in many parts of the world, sometimes including whole communities in favorable localities.

Those mad days of the Buccaneers and their nominally more respectable descendants, the *Wreckers*, are gone.
Amer. Jour. Psychol., II. 522.

(*b*) One who causes the wreck or ruin of anything; one who lays snares or uses artful or dishonest means to cause physical, financial, or moral wreckage: as, a train-*wrecker* (on a railroad); a bank-*wrecker*; the *wrecker* of another's character.

2. A person employed in recovering wrecked or disabled vessels, or cargo and other property from such vessels, on account of the owners, underwriters, or other persons legitimately concerned; also, a vessel employed in this service.

wreck-fish (rek′fish), *n.* The stone-bass, cernier, cherna, or cherne, *Polyprion cernium*. See *Polyprion*, and cut under *stone-bass*.

wreck-free (rek′frē), *a.* Exempted from the forfeiture of shipwrecked goods and vessels. This privilege was granted to the Cinque Ports by a charter of Edward I.

wreckful (rek′fûl), *a.* [< *wreck*[1] + *-ful*. Cf. *wrackful*.] Causing wreck; producing or involving destruction or ruin. [Archaic and poetical.]

The southern wind with brackish breath
Dispersed them [the ships] all amongst the *wreckful* rocks.
Marlowe and Nashe, Tragedy of Dido, i. 2.

O, how shall summer's honey breath hold out
Against the *wreckful* siege of battering days?
Shak., Sonnets, lxv.

A summer mere with sudden *wreckful* gusts
From a side-gorge. *Tennyson*, Harold, iii. 1.

wrecking-car (rek′ing-kär), *n.* A car provided with means and appliances for clearing wreckage or other obstructions from a railroad-track. Sometimes it is a long platform-car fitted with a small derrick and a house at one end. [U. S.]

wrecking-instrument (rek′ing-in″strō-ment), *n.* Same as *pocket-relay*.

wrecking-pump (rek′ing-pump), *n.* A special steam-pump of great capacity, used in freeing sunken or damaged vessels from water.

wreck-master (rek′màs″tėr), *n.* 1. A person appointed by law to take charge of goods, etc., cast ashore from a wreck. See under *wreck*, *n.*—2. A person appointed by owners or salvors to take charge of a wrecked ship or cargo.

wreck-wood (rek′wûd), *n.* Wood or timber from wrecked vessels.

There stood upon it, in these days, a single rude house of uncemented stones, approached by a pier of *wreckwood*.
R. L. Stevenson, Memoirs of an Islet.

Wredin's test. Absence of a certain gelatinous matter from the middle ear of the fetus, taken as evidence that a child has breathed and therefore had been born alive.

wren (ren), *n.* [Also dial. *wran*; < ME. *wrenne*, *wranne*, a wren, < AS. *wrenna*, *wrænna*, a wren.] A very small migratory and insectivorous singing-bird of Great Britain and other European countries, with a slender bill and extremely short tail, and of dark reddish-brown coloration varied with black, inhabiting shrubbery, and belonging to the family *Troglodytidæ*; hence, any member of this family, and, with a qualifying term, one of various other small birds of different families, as certain warblers, kinglets, etc. See the phrases below. *Wren* originally specified the bird technically known as *Sylvia troglodytes*, *Troglodytes parvulus*, *T. vulgaris*, *T. europæus*, *Anorthura troglodytes*, *A. communis*, etc., the only member of its genus and family found in Europe. It is only about four inches long, very active and sprightly, with a pleasing song at times, and a characteristic habit of carrying the short tail cocked up. This little bird figures extensively in English folklore, and has a host of local, provincial, or familiar names with *wren* expressed or implied, as *bobby*, *cutty*, *kitty*, *jenny*, *sally*, *scutty*, *tiddy*, *tidley*, *titty*, also *our Lady of Heaven's hen*, etc. This wren is a northerly type, and one of several species of the restricted genus *Troglodytes* (or *Anorthura*), as *T. fumigatus* of Japan, *T. alascensis* of Alaska, and the well-known winter wren of North America, *T. hiemalis*, which is so near the English wren as to be by some naturalists regarded as only a variety. (See cut under *Troglodytes*.) In the United States the commonest wren, and the one which plays there the part taken by the English wren in Europe, is the house wren, *T. ædon* or *T. domesticus*, which abounds in most parts of North America, from the Atlantic to the Pacific, runs into several geographical races, and is represented in Mexico and warmer parts of America by several other varieties or congeneric species. The common house wren in settled districts attaches itself closely to man, and nests by preference in nooks and crannies of outhouses, though it is more retired and wood-loving in other regions. It trills a hearty and voluble song, and lays numerous (from 6 to 10) pinkish-white eggs very heavily spotted with brown, in the large mass of rubbish which it carries into its hole for a nest. This wren is migratory, and in many parts of the United States its presence is complementary to that of the winter wren. Certain wrens of North America, of the genus *Cistothorus* (and its section *Telmatodytes*), inhabit marshes and low wet shrubbery, and are known as *marsh-wrens*. (See the generic names, *marsh-wren*, and *tule-wren*.) Various others, chiefly of southern regions of the United States, and thence southward, as the great Carolina and Bewick's, are of the genus *Thryothorus* (which see, with cut). Others are the rock-wrens, cañon-wrens, and cactus-wrens, of the genera *Salpinctes*, *Catherpes*, and *Campylorhynchus*. (See the compound and technical names, with cuts.) All these belong to essentially Neotropical types, which have but few outlying forms in the United States, though richly represented by very numerous species of various genera in the warmer parts of America (as those above named, *Thryophilus*, *Uropsila*, *Henicorhina*, *Cyphorhinus*, and *Microcerculus*). The wrens above noted are all properly so called (*Troglodytidæ*): with the exceptions named, they are all American. The qualified application of *wren* to various small birds of both hemispheres, including some of other families than *Troglodytidæ*, is given in the phrases following.

The poor *wren*,
The most diminutive of birds, will fight,
Her young ones in her nest, against the owl.
Shak., Macbeth, iv. 2. 9.

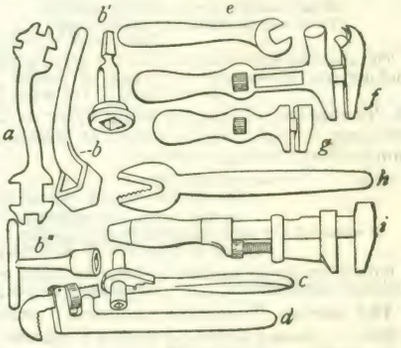
[U. S.]—**Satrap-crowned wren**, the American golden-crested kinglet, *Regulus satrapa*.—**Sedge-wren.** Same as *sedge-warbler*. [Local, British.]—**Spotted wren**, *Troglodytes formosus*, a rare Indian species found in the neighborhood of Darjeeling.—**Texan wren**, a variety of the great Carolina wren found in Texas and southward.—**Vinous-brown wren**, the Japanese wren.—**Wedge-billed wren**, *Sphenocichla humei*, of Sikhim.—**White-bellied wren.** (*a*) A western variety of Bewick's wren. (*b*) *Uropsila leucogastra*, of Oaxaca and Tamaulipas in Mexico, originally described by J. Gould in 1836 as *Troglodytes leucogastra*, a name subsequently misused to denote the white-bellied wren (*a*).—**White-breasted wren**, *Henicorhina prostheleuca*, of Central America.—**White wren**, the willow-warbler, *Phylloscopus trochilus*. [Eng.]—**Winter wren.** See def., and cut under *Troglodytes*.—**Yellow wren**, the willow-warbler, *Phylloscopus trochilus*, and the wood-warbler, *P. sibilatrix*. See cut under *wood-wren*. [Eng.] (See also *cactus-wren*, *cañon-wren*, *marsh-wren*, *reed-wren*, *tule-wren*, *willow-wren*, *wood-wren*.)

wren-babbler (ren′bab″lėr), *n.* A babbler of small size or otherwise resembling a wren: indiscriminately applied to various such timeliine birds. See *Alcippe*, 2, *babbler*, 2, *hill tit* (under *tit*[2]), *hill-wrens* (under *wren*), *tit-babbler*, and *Timelia*, with various cuts.

wrench (rench), *n.* [Also dial. *wrinch*; < ME. *wrench*, *wrenche*, also unassibilated *wrenk*, *wrenke*, *wrink*, < AS. *wrenc*, *wrence*, guile, fraud, deceit (the orig. physical sense being preserved in mod. E., but not recorded in ME. and AS.), = MHG. *ranc*, quick movement, motion, G. *rank*, trick, artifice, intrigue, G. dial. also crookedness; from the root of *wring*; cf. mod. E. *wrong*, *a.* and *n.*, in the metaphorical senses, ult. from the root of *wring*.] 1†. A crooked or tortuous action; a fraudulent device; a trick; a deceit; a stratagem.

His wyly *wrenches* thou ne mayst nat flee.
Chaucer, Canon's Yeoman's Tale, l. 70.

For it ledes a man with *wrenkes* and wyles,
And at the last it hym begyles.
Hampole, Pricke of Conscience, l. 1360, quoted in Religious Pieces (E. E. T. S.), p. 105.



2. A violent twist or turn given to something; a pulling awry; a sudden twisting out of shape, place, or relation: used of both material and immaterial things: as, to sprain one's foot by a *wrench*; the change was a great *wrench* to his feelings.

If one straine make them not confess, let them be stretched but one *wrench* higher, and they cannot be silent. *Bp. Hall*, The Ark and Dagon.

There are certain animals to whom tenacity of position is a law of life—they can never flourish again after a single *wrench*. *George Eliot*, Mill on the Floss, iii. 1.

I might chance give his meaning a *wrench*,
He talking his patois and I English-French.
Lowell, Black Preacher.

3. A sharp turn; specifically, in *coursing*, the turning of a hare at less than a right angle. *Encyc. Brit.*, VI. 515.—4. In *mathematical physics*, a force, or variation of force, tending to give a body a twist about an imaginary or real screw.—5. A tool consisting essentially of a bar of metal having jaws at one end

Wrenches.

a, machinists' wrench; *b*, wagon-wrench; *b′*, socket-wrench for bit-stock; *b″*, socket-wrench with cross-handle, also called key-wrench; *c*, bed-wrench; *d*, pipe-wrench; *e*, machine-wrench; *f*, combination wrench, comprising a hammer and a pipe-wrench; *g*, flat pocket screw-wrench; *h*, alligator-wrench; *i*, monkey-wrench.

adapted to catch upon the head of a bolt or a nut, or to hold a metal pipe or rod, so as to turn it. Some wrenches have a variety of jaws to suit different sizes and shapes of nuts and bolts, and others, as the monkey-wrench, have an adjustable inner jaw.

6†. Means of compulsion. [Rare.]

He . . . resolved to make his profit of this businesse . . . of Naples as a *wrench* and meane for peace.
Bacon, Hist. Hen. VII., p. 90.

wrench (rench), *v.* [< ME. *wrenchen*, wrench, twist, turn, < AS. *wrencan*, deceive, = MHG. G. *renken*, G. (*ver*)*renken*, dislocate, twist, sprain; from the noun.] **I.** *trans.* 1. To twist or turn about with effort or violence; give a sudden twist to; hence, to distort; pervert; turn awry.

Now there can not be in a maker a fowler fault then . . . to *wrench* his words to helpe his rime.
Puttenham, Arte of Eng. Poesie, p. 67.

I am well acquainted with your manner of *wrenching* the true cause the false way. *Shak.*, 2 Hen. IV., ii. 1. 120.

2. To injure or pain by a twisting action; produce a distorting effect in or upon; distort; sprain: as, to *wrench* one's ankle.

Through the space
Of twelve ensuing days his frame was *wrenched*,
Till nature rested from her work in death.
Wordsworth.

3. To pull or draw with torsion; extract by twisting or tortuous action; hence, to wrest forcibly or violently.

Wrench his sword from him. *Shak.*, Othello, v. 2. 288.

To *wrench* it [a fixed opinion] out of their minds is hardly less difficult than pulling up an oak.
Hawthorne, Seven Gables, xvi.

II. *intrans.* To have or undergo a wrenching motion; turn twistingly. [Rare.]

Let not thy venturous Steps approach too nigh
Where, gaping wide, low steepy Cellars lie;
Should thy Shoe *wrench* aside, down, down you fall,
And overturn the scolding Huckster's Stall.
Gay, Trivia, iii. 123.

wrench-hammer (rench′ham″ėr), *n.* A hammer fitted with a movable jaw so that it can also serve as a spanner.

wrench-handle (rench′han″dl), *n.* A double-armed wrench for use with dies in cutting threads and similar work. *E. H. Knight*.

wrenning (ren′ing), *n.* [< *wren* + *-ing*.] The act or sport of stoning a wren to death on St.

Stephen's day, in the north of England, in commemoration of the martyrdom of the saint.

wrenning-day (ren'ing-dā), *n.* St. Stephen's day, on which wrenning is practised in the north of England.

wren-tit (ren'tit), *n.* A bird, *Chamæa fasciata*, peculiar to California, of uncertain relations, usually made the type and sole member of a family *Chamæidæ:* so called from its uniting, to some extent, the habits of a wren and of a titmouse. It is about 6 inches long, with very short rounded wings, a long tail, the beak somewhat like that of a titmouse, the plumage remarkably soft and loose, of a dark-brown color, paler below, and the eye white. See *Chamæa* (with cut). Also called *ground-tit.*

wrest (rest), *v.* [< ME. *wresten, wrasten, wræsten,* < AS. *wrǣstan,* twist forcibly (cf. AS. *wrǣst,* firm, strong, = Icel. *reista,* wrest; cf. Dan. *vriste,* wrest); prob., with formative *-t* (*-tht* > *-st*), < *writhan* (pret. *wrāth*), writhe, twist: see *writhe,* and cf. *wreath*[1]. Cf. also *wrist, wrestle.*] **I.** *trans.* 1. To twist or turn; especially, to deflect, as from the existing or normal state, character, course, or significance: now used chiefly of immaterial things.

> *Drayton,* Nymphidia.

Hence—3. To contend in any way, as in a struggle for mastery; maintain opposition or resistance, especially against a moral foe or force; strive.

> I persuaded them, if they loved Benedick,
> To wish him *wrestle* with affection,
> And never to let Beatrice know it.
> *Shak.,* Much Ado, iii. 1. 42.

Put on the whole armour of God that ye may be able to stand against the wiles of the devil, for we *wrestle* not against flesh and blood but against spiritual wickedness. Eph. vi. 12.

> 'Twill be some pleasure then to take his Breath,
> When he shall strive, and *wrestle* with his Death.
> *Cowley,* Davideis, i.

4. To deal, as with a troublesome duty; apply one's self vigorously; grapple: as, to *wrestle* with a knotty problem; to *wrestle* with a distasteful task. [Colloq.]—5. Hence, to devote one's self earnestly to prayer; pray. [Cant.]

> My reverend Clergy, look ye say
> The best of thanksgiving ye ha'e,
> And *warstle* for a sunny day.
> *Scott,* Carle, now the King's Come, ii.

II. *trans.* 1 To contend with in wrestling: as, I will *wrestle* you for so much. [Colloq.] —2. On a cattle-range, to throw for the purpose of branding, as an animal. [Slang, western U. S.]

A fire is built, the irons heated, and a dozen men dismount to, as it is called, *wrestle* the calves. *T. Roosevelt,* The Century, XXXV. 861.

wrestle (res'l), *n.* [Also dial. *wrastle;* < *wrestle, v.*] A bout at wrestling; a wrestling-match.

Corineus, . . . whom in a *wrestle* the giant catching aloft, with a terrible hugg broke three of his ribs. *Milton,* Hist. Eng., i.

If he had gone out for a few days with his sinewy cousins in the country, and tried a *wrastle* with one of them, he would have quickly found that his body was a pretty slim affair. *Tribune Book of Sports,* p. 5.

wrestler (res'lėr), *n.* [< ME. *wrastlare,* wrestler; < *wrestle* + *-er*[1].] 1. One who wrestles; specifically, one who makes a practice of wrestling, as a professed athlete.

Was not Charles, the duke's *wrestler,* here to speak with me? *Shak.,* As you Like it, i. 1. 94.

2. One who wrestles cattle on a range. [Slang, western U. S.]

The calf-*wrestlers,* grimy with blood, dust, and sweat, work like beavers. *T. Roosevelt,* The Century, XXXV. 861.

wrestling (res'ling), *n.* [Verbal n. of *wrestle, v.*] The act of trying to throw another person to the ground; the act of two persons contending which shall throw the other to the ground and overpower him. Wrestling, as a game subject to special rules, is of great antiquity. It was held in high esteem by the Greeks, and their youth were taught it by special masters as part of the public education. In its highest and simplest form it was the fifth of the five tests of the pentathlon. In this contest the wrestlers wrestled standing and naked, any hold being allowed, and three falls constituting victory. Wrestling, in combination with boxing, formed the arduous and dangerous contest known as the *pancratium*—a contest much more resembling a fight to a finish than an athletic contest. A third form of wrestling, which does not seem to have come down to modern times, consisted in interlocking the fingers, pushing the palms of the hands together, and twisting the joints and wrists, without the assistance of any other member or of any hold of the body. The highest and purest form of Greek wrestling does not appear to have been transplanted to Rome, although the more contentious and cruel pancratium—a sport more nearly allied to the Roman gladiatorial spirit—was introduced there by Caligula, and became popular.—**Greco-Roman wrestling,** a modern style of wrestling (first adopted in France) in which tripping is forbidden; the bout is won when both of the opponent's shoulders are held to the ground.

wrest-pin (rest'pin), *n.* In the pianoforte and harp, a steel pin driven into the wrest-block or frame, around which one end of a string is wound, and by turning which the string may be tuned; a tuning-pin. The upper part of the pin is square in section, so as to be turned by a tuning-hammer or -key. See cut under *harp.*—**Wrest-pin piece,** in the pianoforte, a metal plate through which the wrest-pins are screwed into the wrest-block.

wrest-plank (rest'plangk), *n.* Same as *wrest-block.*

wretch (rech), *n.* and *a.* [< ME. *wrecche, wrechche, wræcche, wrehche,* < AS. *wrecca, wræcca, wreca,* outcast, exile (= OS. *wrekkio,* an adventurer, warrior, = OHG. *wreccho, reccho,* a banished man, exile, stranger, adventurer, MHG. G. *recke,* a warrior, hero, giant), lit. 'one driven out'; cf. *wræc,* exile, < *wrecan,* drive out, banish, persecute, avenge, wreak: see *wreak*[1].] **I.** *n.* 1. A very miserable person; one who is in a state of desperate unhappiness or misfortune, or is exposed to unavoidable suffering or disgrace.

> I *wrecche,* which that wepe and waille thus,
> Was whylom wyf to King Capaneus.
> *Chaucer,* Knight's Tale, l. 73.
>
> Fly, ye *Wretches,* fly, and get away, for your King is slain. *Baker,* Chronicles, p. 15.

The poor *wretch,* half dead with fear, expected every moment to fall by the bloody hands of the Djawi. *Bruce,* Source of the Nile, II. 590.

2. A sorry or contemptible creature; a despicable person: a term of opprobrium applied to one who has incurred condemnation by misconduct, and often used on slight occasion and with little intended force.

wrist (rist), *n.* [Early mod. E. also *wreast*, *wrest*; < ME. *wrist*, *wriste*, also *wirste*, *wyrste*, < AS. *wrist* (usually in comp. *hand-wrist*) = OFries. *wriust*, *riust*, *wirst*, *werst* (*hond-wriust*, 'hand-wrist,' *fot-wriust*, 'foot-wrist,' instep) = LG. *wrist* = MHG. *rist*, *riste*, G. *rist* (G. dial. *frist*), hand- or foot-joint; cf. G. *wider-rist*, withers of a horse (see *withers*), = Icel. *rist* = Sw. Dan. *vrist*, instep; with formative *-t* (*-tht* > *-st*), < *wrīthan*, twist, writhe: see *writhe*, and cf. *wrest*.] 1. That part of the fore limb or arm which comes between the forearm and the hand, and by which the latter is joined or jointed to the former; the wrist-joint; technically, the carpus, or the carpal articulation. The wrist is the first segment of the manus, and its skeleton consists in man of seven carpal bones, together with a sesamoid bone (the pisiform) on the ulnar side, these eight bones being disposed in two rows of four each, proximal and distal. The whole set of bones, their articulations with one another and with the radius, ulna, and the several metacarpals, together with the ligaments and other associated soft parts, are included in the term *wrist*. The motions of the wrist as a whole upon the forearm include all the movements of flexion, extension, abduction, adduction, and circumduction, together with the movements of pronation and supination impressed upon the wrist by the rocking of the radius about the ulna; but the motion of the individual carpal bones upon one another is slight, and that between the distal carpals and the metacarpals is still less. In most other animals than man, the movements of the wrist are more restricted. The term is extended to the corresponding joint of the fore limb of other mammals, birds, and reptiles. Thus the so-called knee of the horse's fore leg is anatomically the carpus or wrist. See *carpus*, and cuts under *hand*, *pisiform*, and *scapholunar*.

Little Preston was found there with both his hands cut off by the *wreasts*.
W. Patten, Ex. into Scotland (Arber's Eng. Garner, III. 128).

3. In *mach.*, a stud or pin projecting from the side of a crank, wheel, or other moving part, and forming a means of attachment to a connecting-rod leading to some other part of the mechanism. Also called *wrist-pin*.—**Bridle wrist**, in the *manège*, the wrist of the horseman's left hand. Compare *bridle-hand*.—**Twist of the wrist.** See *twist*.—**Wrist touch**, in *pianoforte-playing*, a stroke or touch which proceeds from the wrist rather than from the fingers alone or from the whole forearm.

wristband (rist'band, colloq. riz'band), *n.* That band or part of a sleeve, especially of a shirt-sleeve, which covers the wrist. The wristbands sewed on to shirt-sleeves were formerly continued with a flare over the upper part of the hand, serving the purpose of the separate stiff cuffs buttoned to the narrow wristbands now in use. In the times of more elaborate dressing such wristbands were often very long, and adorned with rich lace or fine embroidery.

With that the hands to pocket went,
Full *wristband* deep. *Vanbrugh*, Æsop, ii. 1.

He . . . wore very stiff collars, and prodigiously long *wrist-bands*.

wrist-pin (rist'pin), *n.* 1. In *mach.*, any pin forming a means of connecting a connecting-rod to a cross-head or crank; the pin of the disk-crank to which a connecting-rod is connected. The pin in the cross-head is in the United States more generally called *cross-head pin*.
2. A pin in a wrist-plate of a steam-engine, whether connected with an eccentric-rod or with a valve-rod.

wrist-plate (rist'plāt), *n.* 1. A plate which oscillates on a central pivot, and from the face of which project one or more crank-pins or -wrists for the connection of rods or pitmans.—2. Specifically, a plate used in some kinds of automatic cut-off engines. It has a reciprocating rotary motion on a central pivot, and is actuated through a limited arc by the rod of an eccentric on the crank-shaft of the engine. From its face project four crank-wrists, which give it its name. Two of these wrists are respectively connected with rods that actuate the rocker-arms of two separate oscillating plug-valves, for introducing steam into the cylinder on opposite sides of the piston alternately. The other two wrists are similarly connected to independently operating exhaust-valves.

writ[1] (rit), *n.* [< ME. *writ*, *wryt*, *wrytt*, *iwrit*, < AS. *ge-writ*, *writ*, a writ, writing, or scripture (= OHG. *riz*, a letter, MHG. *riz*, G. *riss*, a rent, a tear, *ritze*, a wound, a scratch, = Icel. *rit*, a writ, writing, penmanship, = Goth. *writs*, a stroke, a point), < *wrītan*, etc., write: see *write*.] 1. 2. In *law*, a precept under seal, in the name of the people, or the sovereign, or other competent legal authority, commanding the officer or other person to whom it is addressed or issued to do or refrain from doing some specified act. In early times, when the pleadings and proceedings generally in actions were oral, writs were, as the name implies, the written parts of an action (besides judgments in courts of record), it being for obvious reasons required that the warrant by which a person or his property might be seized, or his conduct controlled under penalty of contempt, should be expressed in writing and attested by the name and seal of the government.
3. A formal instrument or writing of any kind.

I . . .
Folded the *writ* up in form of the other.
Shak., Hamlet, v. 2. 51.

Barons by writ. See *baron*, 1.—**Close writs.** See *close*[2].—**Indorsed writ.** See *indorse*.—**Judicial writ**, a writ issued by the court, as distinguished from an *original writ*.—**Optional writ.** See *optional*.—**Original writ.** (*a*) The writ formerly required to be issued from Chancery, under the seal of the sovereign, before the commencement of an action in a court of common law: so called to distinguish it from judicial writs, or writs issued by the court in which the action was thus brought in the course of prosecuting the action. (*b*) In the United States, a mandatory precept issuing out of the clerk's office in any of the courts of law, by the authority and in the name of the State or commonwealth, under the seal of the court from which it issues, bearing teste of the chief justice of the court, if he is not a party, and signed by the clerk of the court. (*Heard*.) Its object is to compel the appearance of the defendant, or at least to give him due notice that he is sued. In most of the States it has been superseded by a summons, issued by the plaintiff's attorney, giving such notice and requiring the defendant to plead. See also *original writ*, under *original*.—**Peremptory, Præmunientes, pre-**

rogative writ. See the qualifying words.—**Service of a writ.** See *service.*—**Ship writ,** in *Eng. hist.,* a writ issued in the name of the crown imposing the tax known as *ship-money* (which see): notably one of such writs issued under Charles I. which led to Hampden's opposition. They were declared illegal by 16 Car. I., c. 14 (1640).—**The writ runs.** (*a*) The writ is expressed in terms of or including: as, *the writ runs* in the name of the people. (*b*) The writ is legally capable of enforcement: as, *the writ* of subpœna *runs* throughout the state. (*c*) The writ is practically capable of enforcement: as, "When lawlessness has yielded to order; when the Queen's *writ runs;* when the edicts of the civil courts are obeyed; . . . and when sedition is trampled under foot—then, and then only, is there some chance for the development of remedial measures." (*Edinburgh Rev.,* CLXV. 587.)—**To serve a writ.** See *to serve a process,* under *serve.*—**To serve a writ of attachment.** See *to serve an attachment,* under *serve*[1].—**Twelve-day writ,** in *Eng. law,* a writ allowed by 18 and 19 Vict., c. 67, in actions on bills and notes if brought within six months after maturity, warning defendant to appear within twelve days, otherwise judgment would go against him.—**Vicontiel writs†.** See *vicontiel.*—**Writ of account.** See *action of account,* under *account.*—**Writ of assistance, besayle†, capias, certiorari, consultation, dower, error, estrepement.** See *assistance,* etc.—**Writ of execution.** See *execution,* 3 (*b*).—**Writ of habeas corpus, inquiry, mandamus, possession, privilege, prohibition, protection, recaption, restitution, right, spoliation, subpœna,** etc. See *habeas corpus, inquiry,* etc.—**Writs of extent.** See *extent,* 3 (*b*).

It affects at first usually only those muscles which are directly concerned in the production of writing movements, but, if the act is persisted in, the neighboring muscles may also share in the disturbance. The affection may manifest itself under one of four forms or a combination of them—namely, *paralytic,* in which weakness in the fingers or even absolute inability to hold the pen is experienced; *spastic,* in which the attempt to write excites clonic or tonic contractions of the fingers; *tremulous,* in which the hand shakes so while writing that the letters formed are indistinguishable; and *sensory,* in which the effort to write causes severe pain, tingling, or other abnormal sensations in the hand and at times in the forearm also. The symptoms vary greatly in different individuals, usually, however, increasing in severity as long as the attempt to use a pen is persisted in. The use of steel pens and metal penholders is supposed to increase the liability to the affection. Also called *scriveners' cramp* or *palsy, writers' palsy* or *paralysis,* and *graphospasm.*—**Writers to the signet.** See *signet,* 1.

wurtzilite (wėrt′sil-īt)), *n.* [Named after Dr. Henry *Wurtz*, of New York (b. 1828).] A kind of solid bitumen found in the Uintah Mountains, Utah. It has a deep-black color and brilliant luster, and breaks with a conchoidal fracture. It is elastic when slightly warmed, and in boiling water becomes soft and plastic.

wurtzite (wėrt′sīt), *n.* [After C. A. *Wurtz* (1817–1884), a chemist.] Sulphid of zinc occurring in hexagonal crystals, isomorphous with greenockite. Sulphid of zinc is accordingly dimorphous, the common form, sphalerite or zinc-blende, being isometric. Also called *spiauterite*.

Würzburger (wėrts′bėrg-ėr; G. pron. vürts′bůr-gėr), *n.* Wine made in the neighborhood of the city of Würzburg, in Bavaria. This name is often given to the wines more properly called *Leisten-wein* and *Stein-wein*, and to the famous "wine of the Holy Ghost."

wus[1]**†,** *v. i.* See *wis*[3].

wus[2]**†,** *n.* A Middle English form of *woose, ooze*.

Hee wringes oute the wet *wus* and went on his gate.
Alisaunder of Macedoine (E. E. T. S.), l. 712.

wuther (wuᵺ′ėr), *v. i.* [Also *wudder;* perhaps ult. < AS. *wōth*, a noise, cry, sound.] To make a sullen roar, as the wind. [North. Eng.]

The air was now dark with snow; an Iceland blast was driving it wildly. This pair neither heard the long *wuthering* rush, nor saw the white burden it drifted.
Charlotte Brontë, Shirley, xxxiii.

From time to time the wind *wuthered* in the chimney at his back.
R. L. Stevenson and L. Osbourne, The Wrong Box, vi.

There was also a *wuthering* wind sobbing through the narrow wet streets. *A. E. Barr*, Friend Olivia, iv.

wuther (wuᵺ′ėr), *n.* [Also *wudder;* < *wuther*, *v.*] A low roaring or rustling, as of the wind. [North. Eng.]

I felt sure . . . by the *wuther* of wind amongst trees, denoting a garden outside. *Charlotte Brontë*, Villette, xvi.

wuzzent (wuz′ent), *a.* A dialectal (Scotch) form of *wizened*.

An I had ye amang the Frigate-Whins, wadna I set my ten talents in your *wuzzent* face for that very word!
Scott, Heart of Mid-Lothian, xviii.

wuzzle (wuz′l), *v. t.;* pret. and pp. *wuzzled*, ppr. *wuzzling*. [Origin obscure.] To mingle; mix; jumble; muddle. [New Eng.]

He *wuzzled* things up in the most singular way.
H. B. Stowe, Oldtown, p. 63.

wyandotte (wī′an-dot), *n.* [From the American Indian tribal name *Wyandotte*.] An American variety of the domestic hen, of medium size and compact form, hardy, and valuable for eggs and for the table. The silver wyandotte, the typical variety, has every feather white in the middle and heavily margined with black, except the black tail-feathers and primaries, the hackle (and in males the saddle), which is white striped with black, and the white wing-bows of the males. The golden wyandotte replaces the white of the silver variety by orange or deep-buff; and the white wyandotte is pure-white. The combs are rose, legs yellow, and ear-lobes red.

wych (wich), *n.* See *wick*[4].

wych-elm, wych-hazel, *n.* See *witch-elm, witch-hazel*.

Wyclifite, Wycliffite (wik′lif-īt), *a.* and *n.* [Also *Wicliffite, Wickliffite;* < *Wyclif*, etc. (see def.), + *-ite*[2].] **I.** *a.* Of or pertaining to John Wyclif or de Wyclif (a name also written *Wiclif, Wickliffe, Wyckliffe*, and in various other ways reflecting the varying orthography of his time, properly in modern spelling *Wickliff*), an English theologian, reformer, and translator of the Bible from the Vulgate (died 1384).

II. *n.* One of the followers of Wyclif, commonly called *Lollards*. Wyclif's doctrines, propagated in his lifetime and later by open-air preachers called "poor priests," largely coincided with the later teachings of Luther.

wydet, *a.* An old spelling of *wide*.

wydewhert, *adv.* See *widewhere*.

wye[1]**†,** *n.* See *wie*.

wye[2] (wī), *n.* The letter Y, or something resembling it.

wyer†, *n.* In *her.*, same as *viure*.

wyf†, *n.* An old spelling of *wife*.

Wykehamist (wik′am-ist), *n.* [< *Wykeham* (see def.) + *-ist*.] A student, or one who has been a student, of Winchester College in England, founded by William of Wykeham (1324–1404), Bishop of Winchester and Chancellor of England, as a preparatory school for New College at Oxford, also founded by him. Also used attributively.

It may reasonably be hoped that this is not *Wykehamist* Greek. *Athenæum*, No. 3303, p. 212.

We notice a complaint that *Wykehamists* obtained an undue proportion of the university prizes.
The Academy, No. 873, p. 56.

wylet, *n.* An old spelling of *wile*[1].

wylie-coat (wī′li-kōt), *n.* [Sc.; also spelled *wyle-cot, wilie-coat;* first element uncertain.] A flannel garment worn under the outer clothes; an under-vest or under-petticoat.

wylot, *n.* An old spelling of *willow*[1].

wynt, *n.* An old spelling of *wine*.

wynd[1] (wind), *n.* [Another spelling and use of *wind*[1], *n.*] An alley; a lane; especially, a narrow alley used as a street in a town. [Scotch.]

The *wynds* of Glasgow, where there was little more than a chink of daylight to show the hatred in women's faces.
George Eliot, Felix Holt, xxvii.

wynd[2]**†,** *n.* A Middle English spelling of *wind*[2].

wyndast, *n.* An obsolete spelling of *windas*.

wyndewet, wyndowet, wyndwet, wynewet, *v.* Middle English forms of *winnow*.

wyndret, *v.* An unexplained verb, probably meaning 'to attire' or 'to adorn,' found in the following passage:

It nedede nought
To *wyndre* hir or to peynte hir ought.
Rom. of the Rose, l. 1020.

wynkt, *n.* A Middle English spelling of *wink*[1].

wynn (win), *n.* [Origin obscure.] A kind of timber truck or carriage. *Simmonds*.

wynt†. A contraction of *windeth*, third person singular indicative present of *wind*[1].

wypet, *n.* [< ME. *wipe, wype*, a bird, < Sw. Norw. *vipa* = Dan. *vibe*, lapwing; perhaps so called from its habit of fluttering its wings (cf. *Vanellus*), from the verb represented by Sw. *vippa*, rock, see-saw, tilt: see *whip*[1]. Otherwise imitative; cf. *weep*[2].] A lapwing.

Wype, bryde or lapwynge. Upupa. *Prompt. Parv.*, p. 530.

wyper†, *n.* Same as *wiper*.

wyppyl-tret, *n.* A Middle English form of *whippel-tree*.

wyst, wyset, *a.* Old spellings of *wise*[1]. *Chaucer*.

wytet, *v.* and *n.* Another spelling of *wite*[2].

wythe, *n.* See *withe*.

wyvet, *v.* An old spelling of *wive*.

wyver†, *n.* See *wiver*.

wyvern†, *n.* See *wivern*.

★

1. The twenty-fourth letter and nineteenth consonant-sign in the English alphabet. In the Latin alphabet, from which it comes to ours, it followed next after *U* or *V* (which were then only one letter: see *U*), and was till a late date the last letter in that alphabet, till *Y* and *Z* (see those letters) were finally added from the Greek to represent peculiar Greek sounds. The sign *X* was a Greek addition to the Phenician alphabet; it had in early Greek use a divided value: in the eastern alphabets, that of *kh* (besides the signs for *ph* and *th*); in the western, that of *ks* (besides the signs for *ps* and *ts* or *ds*). The former of the two came afterward to be the universally accepted value in Greece itself; while the latter was carried over into Italy, and so became Roman, and was passed on to us. Hence our *X* has in general the Latin value *ks*; but as initial (almost only in words from the Greek, and there representing a different Greek character, the *ksi*) we have reduced it to the *z*-sound, as in *Xerxes, xanthous*. In many words also, especially among those beginning with *ex*, it is made sonant, or pronounced as *gz*. The accepted rule for this is that the *gz*-sound is given after an unaccented before an accented vowel, as in *exért, exilic* (*egzert, egzilic*), over against *éxercise, éxile* (*eksercize, eksil*). But usage does not follow the rule with exactness, and many cultivated speakers disregard the distinction altogether, pronouncing everywhere alike *ks* (or *kz*). In any case, the sign *X* is superfluous in English, as it was in Latin and in Greek; it denotes no sound which is not fully provided for otherwise. In Old English it was sometimes used for *sh*, as in *xal* = *shall*.

2. As a numeral, X stands for ten. When laid horizontally (⋈), it stands for a thousand, and with a dash over it (X̄), it stands for ten thousand.

3. As an abbreviation, X. stands for *Christ*, as in Xn. (Christian), Xmas. (Christmas).—**4.** As a symbol: (*a*) In *ornith.*, in myological formulas, the symbol of the semitendinosus muscle. *A. H. Garrod.* (*b*) In *math.*: (1) [*l. c.*] In algebra, the first of the unknown quantities or variables. (2) [*l. c.*] In analytical geometry, an abscissa or other rectilinear point-coördinate. (3) In mechanics, the component of a force in the direction of the axis of *x*.—**5.** Originally, a mark on brewers' casks; hence, a name given to ale of a certain quality. Compare XX, XXX.—**Xn function.** See *function*.

xanorphica (zā-nôr'fi-kä), *n.* A musical instrument, resembling the harmonichord and the tetrachordon, invented by Röllig in 1801, the strings of which were sounded by means of little bows.

Xantharpyia (zan-thär-pī'i-ä), *n.* [NL. (J. E. Gray), ⟨ Gr. *ξανθός*, yellow, + NL. *Harpyia*, q. v.] A genus of *Pteropodidæ*. *X. amplexicaudata* is a fruit-bat of the Austromalayan subregion.

xantharsenite (zan-thär'se-nīt), *n.* [⟨ Gr. *ξανθός*, yellow, + E. *arsenite*.] A hydrated arsenate of manganese, occurring in sulphur-yellow massive forms. It is found in Sweden, and is related to chondrarsenite.

xanthate (zan'thāt), *n.* [⟨ *xanth(ic)* + *-ate*[1].] A salt of xanthic acid.

xanthein (zan'thē-in), *n.* [⟨ Gr. *ξανθός*, yellow, + *-e-in*[2].] That part of the yellow coloring matter in flowers which is soluble in water, as distinguished from *xanthin*, which is the insoluble part.

xanthelasma (zan-thē-las'mä), *n.* [NL., ⟨ Gr. *ξανθός*, yellow, + *ἔλασμα*, a plate.] Same as *xanthoma*.

Xanthia (zan'thi-ä), *n.* [NL. (Ochsenheimer, 1816), ⟨ Gr. *ξανθός*, yellow.] A genus of moths, of the family *Orthosiidæ*, having slender porrect palpi, and mostly yellow or orange fore wings undulating along their exterior border. It comprises about 30 species, and is represented in Europe, Asia, North and South America, and the West Indies. *X. fulvago* is the sallow-moth of Europe. Its larva feeds when young on catkins of willow, later on bramble and plantain.

Xanthian (zan'thi-an), *a.* [⟨ Gr. *Ξάνθος*, Xanthus (see def.).] Of or belonging to Xanthus, an ancient town of Lycia in Asia Minor.—**Xanthian sculptures,** a large collection of sculptures, chiefly sepulchral, from Xanthus and the neighboring region, preserved in the British Museum. The collection includes the reliefs from the so-called Harpy tomb. See *Harpy monument*, under *harpy*.

xanthic (zan'thik), *a.* [⟨ Gr. *ξανθός*, yellow, + *-ic*.] Tending toward a yellow color; of or relating to xanthin; yellow, referring to the color of the urine.—**Xanthic acid,** the general name of the acid esters of dithiocarbonic acid, as ethyl xanthic acid, $CS.OC_2H_5.SH$, a heavy, oily liquid with a penetrating smell and a sharp, astringent taste, many of whose salts have a yellow color.—**Xanthic calculus,** a urinary calculus composed in great part of xanthin.—**Xanthic flowers,** flowers which have yellow for their type, and are capable of passing into red or white, but never into blue. Those flowers of which blue is the type, and which are capable of passing into red or white, but never into yellow, have been termed *cyanic flowers*.—**Xanthic oxid,** xanthine.—**Xanthic-oxid calculus.** Same as *xanthic calculus*.

xanthid† (zan'thid), *n.* [⟨ Gr. *ξανθός*, yellow, + *-id*[2].] A compound of xanthogen.

xanthin (zan'thin), *n.* [Also *zanthin*; ⟨ Gr. *ξανθός*, yellow, + *-in*[2].] One of several substances, so named with reference to their color. Especially—(*a*) That part of the yellow coloring matter of flowers which is insoluble in water. (*b*) The yellow coloring matter contained in madder. (*c*) A gaseous product of the decomposition of xanthates.

xanthine (zan'thin), *n.* [See *xanthin*.] A weak base, $C_5H_4O_2N_4$, found in small quantity in the urine and in blood. It is closely related to uric acid and also to caffeine or thein.

xanthinuria (zan-thi-nū'ri-ä), *n.* [⟨ *xanthine* + Gr. *οὖρον*, urine.] The excretion of xanthine in abnormal quantity in the urine. Also *xanthuria*.

Xanthispa (zan-this'pä), *n.* [NL. (Baly, 1858), ⟨ Gr. *ξανθός*, yellow, + NL. *Hispa*, q. v.] A genus of leaf-beetles, of the family *Chrysomelidæ*, erected for the single species *X. cimicoides*, from Cayenne.

xanthitane (zan'thi-tān), *n.* [⟨ Gr. *ξανθός*, yellow, + (*t*)*itan*(*ic*).] An alteration-product of the sphene (titanite) from Henderson county, North Carolina. In composition it is analogous to the clays, but contains chiefly titanic acid instead of silica.

xanthite (zan'thīt), *n.* [⟨ Gr. *ξανθός*, yellow, + *-ite*[2].] A variety of vesuvianite found in limestone near Amity, New York.

Xanthium (zan'thium), *n.* [NL. (Tournefort, 1700; earlier by Lobel, 1576), ⟨ Gr. *ξάνθιον*, a plant, said to be *X. strumarium*, and to have been so named because its infusion turned the hair yellow; ⟨ *ξανθός*, yellow.] A genus of plants, of the family *Ambrosiaceæ*. It is characterized by unisexual flower-heads, the male with a single row of separate bracts, the female armed with numerous

Upper Part of the Stem with the Flower-heads and Leaves of Cockle-bur (*Xanthium strumarium*).

a, staminate flower; *b*, pistillate flower; *c*, involucre, inclosing two pistillate flowers.

hooked prickles. About 15 species are recognized by recent authors; they are mostly of uncertain, perhaps of American, origin, but are now widely naturalized throughout warm regions. They are coarse weedy annuals with alternate leaves which are lobed and closely tomentose, or are coarsely toothed and greenish. The small monœcious flower-heads are solitary or clustered in the axils; in the fertile heads the fruit forms a large spiny bur containing the achenes. The species are known as *cockle-bur*, or as *clot-bur*; about ten occur in the United States. *X. Canadense* is called *hedgehog burweed*. *X. echinatum*, found mainly near the coast and the Great Lakes, is known as *sea-burdock*; of the others, *X. spinosum*, the spiny clot-bur, naturalized from the old world, is armed with slender yellowish trifid spines in the axils; and *X. strumarium* is the common species of Europe. In England it is known as *ditch-bur, burweed, louse-bur*, and *small burdock*.

xanthiuria (zan-thi-ū'ri-ä), *n.* Same as *xanthinuria*.

Xantho (zan'thō), *n.* [NL. (Leach, 1815), ⟨ Gr. *ξανθός*, yellow.] A genus of brachyurous crustaceans, of the family *Cancridæ*, with numerous species. Also *Xanthus*.

xanthocarpous (zan-thō-kär'pus), *a.* [⟨ Gr. *ξανθός*, yellow, + *καρπός*, fruit.] In *bot.*, having yellow fruit.

Xanthocephalus (zan-thō-sef'a-lus), *n.* [NL. (Bonaparte, 1850), ⟨ Gr. *ξανθός*, yellow, + *κεφαλή*, head.] A genus of *Icteridæ*, or American blackbirds, having as type the common yellow-headed blackbird of the United States, first described by Bonaparte in 1825 as *Icterus icterocephalus*, and now known as *X. icterocephalus*. This large blackbird, of striking aspect, abounds in North America

Yellow-headed Blackbird (*Xanthocephalus icterocephalus*), male.

from Illinois, Iowa, and Wisconsin westward, extending north into the British possessions, and south into Mexico. The male is jet-black, with the whole head and neck bright-yellow, except the black lores and a black space about the base of the bill; there is a large white wing-patch, and usually there are a few yellow feathers on the thighs and vent. The length is from 10 to 11 inches, the extent 16½ to 17¾. The female is smaller and chiefly brownish. This blackbird nests in marshy places, and lays from three to six eggs of a grayish-green color spotted with reddish brown. Also called *Xanthosomus*.

Xanthochelus (zan-thō-kē'lus), *n.* [NL. (Chevrolat, 1873), ⟨ Gr. *ξανθός*, yellow, + *χηλή*, a claw.] A genus of snout-beetles, of the family *Curculionidæ* and subfamily *Cleoninæ*, having wings and somewhat pruinose elytra. It contains less than a dozen species, distributed from Egypt to Siberia.

Xanthochlorus (zan-thō-klō'rus), *n.* [NL. (Loew, 1857), ⟨ Gr. *ξανθός*, yellow, + *χλωρός*, greenish-yellow.] A genus of dipterous insects, of the family *Dolichopodidæ*, comprising 4 small rust-colored species with yellow wings, of which 3 are European and 1 is North American. *Leptopus* is a synonym.

Xanthochroa (zan-thok'rō-ä), *n.* [NL. (Schmidt, 1846), ⟨ Gr. *ξανθόχροος*, with yellow skin, ⟨ *ξανθός*, yellow, + *χροιά*, *χρόα*, the skin.] A genus of beetles, of the family *Œdemeridæ*, comprising 7 species, of which 3 are European, 1 is South American, and 3 are North American. They are small slender beetles with contiguous middle coxæ, one-spurred front tibiæ, and deeply emarginate eyes.

Xanthochroi (zan-thok'rō-ī), *n. pl.* [NL., pl. of *xanthochrous*: see *xanthochrous*.] In *ethnol.*, one of the five groups into which some

anthropologists classify man, comprising the blond type, or fair whites.

The *Xanthochroi* or fair whites—tall, with almost colourless skin, blue or grey eyes, hair from straw colour to chestnut, and skulls varying as to proportionate width—are the prevalent inhabitants of Northern Europe, and the type may be traced into North Africa and eastward as far as Hindostan. On the south and west it mixes with that of the Melanochroi, or dark whites, and on the north and east with that of the Mongoloids.

E. B. Tylor, Encyc. Brit., II. 113.

xanthochroia (zan-thō-kroi′ä), *n.* [NL., ⟨ Gr. *ξανθός*, yellow, + *χροιά*, the skin.] A yellow discoloration of the skin resulting from pigmentary changes. Also *xanthopathia*, *xanthopathy*.

xanthochroic (zan-thō-krō′ik), *a.* [⟨ *xanthochro-ous* + *-ic*.] Same as *xanthochroöus*.

That distinction of light- and dark-haired populations and individuals which anthropologists have designated *xanthochroic* and melanochroic.

A. Winchell, N. A. Rev., CXXXIX. 254.

xanthochroöus (zan-thok′rō-us), *a.* [⟨ NL. **xanthochrous*, ⟨ Gr. *ξανθόχροος*, yellow-skinned, ⟨ *ξανθός*, yellow, + *χρόα*, skin, color.] Light-skinned; of or pertaining to the *Xanthochroi*.

xanthocon, xanthocone (zan′thō-kon, -kōn), *n.* [⟨ Gr. *ξανθός*, yellow, + *κόνις*, dust.] An arseniosulphid of silver, of a dull-red or clove-brown color, occurring in hexagonal tabular crystals, but commonly in crystalline reniform masses. When reduced to powder it becomes yellow (whence the name). Also *xanthoconite*.

xanthocreatine (zan-thō-krē′a-tin), *n.* [⟨ Gr. *ξανθός*, yellow, + *κρέας* (*κρεατ-*), flesh, + *-ine*2.] A basic nitrogenous substance found in muscular tissue and occasionally in urine, occurring in the form of yellow crystalline plates.

xanthocreatinine (zan″thō-krē-at′i-nin), *n.* Same as *xanthocreatine*.

xanthocyanopsy (zan″thō-sī-an′op-si), *n.* [⟨ Gr. *ξανθός*, yellow, + *κύανος*, dark-blue, + *ὄψις*, appearance.] Color-blindness in which the ability to distinguish yellow and blue only is present, vision for red being wanting.

Xanthocycla (zan-thō-sik′lä), *n.* [NL. (Baly, 1875), ⟨ Gr. *ξανθός*, yellow, + *κύκλος*, a ring, circle.] A genus of beetles, of the family *Chrysomelidæ*, agreeing somewhat with *Euphitræa* in sternal structure, but with punctate-striate elytra, and different hind thighs. The type is *X. chapuisi* from India. The genus is supposed to be synonymous with *Amphimela* (Chapuis, 1875).

xanthoderma (zan-thō-dėr′mä), *n.* [NL., ⟨ Gr. *ξανθός*, yellow, + *δέρμα*, the skin.] Yellowness of the skin from any cause; xanthochroia.

Xanthodes (zan-thō′dēz), *n.* [NL. (Guenée, 1852), ⟨ Gr. *ξανθός*, yellow, + *εἶδος*, form.] A genus of noctuid moths, of Guenée's family *Acontidæ*, comprising a few species inhabiting southern Europe, Asia, and Africa, whose metamorphoses are unknown. The fore wings are entire, usually rounded, and pale-yellow in color, with red or violet-brown markings.

xanthodont (zan′thō-dont), *a.* [⟨ Gr. *ξανθός*, yellow, + *ὀδούς* (*ὀδοντ-*) = E. *tooth*.] Having yellow teeth, as a rodent. The enamel of the front surface of the incisors in rodents is, as a rule, of some bright color into which yellow enters, mostly orange or of a still more reddened tint, furnishing a notable exception to the white teeth of most mammals, the piceous or reddish-black teeth of most shrews being another exception to the rule.

xanthodontous (zan-thō-don′tus), *a.* [⟨ *xanthodont* + *-ous*.] Same as *xanthodont*.

xanthogen (zan′thō-jen), *n.* [⟨ Gr. *ξανθός*, yellow, + *-γενής*, producing: see *-gen*.] A hypothetical radical formerly supposed to exist in xanthic acid and its compounds.

Xanthogramma (zan-thō-gram′ä), *n.* [NL. (Schiner, 1860), ⟨ Gr. *ξανθός*, yellow, + *γράμμα*, mark, letter.] A genus of dipterous insects, of the family *Syrphidæ*, closely allied to the genus *Syrphus*, and comprising 3 European and 5 North American species. They are large, almost naked flies, of a metallic black color broken with yellow spots and bands. The larvæ probably feed on plant-lice.

Xantholestes (zan-thō-les′tēz), *n.* [NL. (R. B. Sharpe, 1877), ⟨ Gr. *ξανθός*, yellow, + *λῃστής*, a robber: see *Lestes*.] In *ornith.*, a genus of Philippine flycatchers, inhabiting the island of Panay. *X. panayensis* is the only species, 4¾ inches long, olive-yellow above and bright-yellow below.

Xantholinus (zan-thō-lī′nus), *n.* [NL. (Serville, 1825), ⟨ Gr. *ξανθός*, yellow, + NL. (*Staphy*)*linus*.] A genus of rove-beetles or *Staphylinidæ*, of universal distribution, and comprising about 100 species, distinguished chiefly by the long terminal joint of the maxillary palpi. They are found under dead leaves, stones, and moss; but a few European species are myrmecophilous, living in the nests of *Formica rufa* and *F. fuliginosa*.

Xantholites (zan-thō-lī′tēz), *n.* [NL. (Etheridge), ⟨ Gr. *ξανθός*, yellow, + *λίθος*, stone.] A genus of fossil crustaceans from the London clay.

xanthoma (zan-thō′mä), *n.* [NL., ⟨ Gr. *ξανθός*, yellow, + *-oma*.] A connective-tissue new growth in the skin, forming soft yellow patches, either flat (*xanthoma planum*) or tuberculated (*xanthoma tuberosum*). The former is especially apt to occur on the eyelids, being then called *xanthoma palpebrarum*. Also called *vitiligoidea* and *xanthelasma*.

xanthomatous (zan-thom′a-tus), *a.* [⟨ *xanthoma*(*t-*) + *-ous*.] In *pathol.*, of or pertaining to xanthoma: as, the *xanthomatous* diathesis.

xanthomelanous (zan-thō-mel′a-nus), *a.* [⟨ Gr. *ξανθός*, yellow, + *μέλας* (*μελαν-*), black.] Noting a type or race of men. See the quotation.

The *Xanthomelanous*, with black hair and yellow, brown, or olive skins. *Huxley*, Critiques and Addresses, p. 153.

Xanthonia (zan-thō′ni-ä), *n.* [NL. (Baly, 1863), ⟨ *ξανθός*, yellow.] A genus of chrysomelid beetles, comprising 4 species, all North American. *X. stevensi* and *X. villosula* feed on the leaves of the black walnut.

xanthopathy (zan-thop′a-thi), *n.* [⟨ NL. *xanthopathia*, ⟨ Gr. *ξανθός*, yellow, + *πάθος*, disease.] Same as *xanthochroia*.

Xanthophæa (zan-thō-fē′ä), *n.* [NL. (Chaudoir, 1848), ⟨ *ξανθός*, yellow, + *φαιός*, dusky.] A genus of beetles, of the family *Carabidæ*, comprising 2 species, one from Australia and the other from Oceanica.

xanthophane (zan′thō-fān), *n.* [⟨ Gr. *ξανθός*, yellow, + *-φανης*, ⟨ *φαίνεσθαι*, appear.] A yellow coloring matter derived from the retina.

xanthophyl, xanthophyll (zan′thō-fil), *n.* [⟨ Gr. *ξανθός*, yellow, + *φύλλον*, leaf.] In *bot.*, the peculiar yellow coloring matter of autumn leaves, due to the decomposition of chlorophyl. Its chemical composition and the processes of its formation are not well known. See *chlorophyl*, *chrysophyl*. Also called *phylloxanthin*.

xanthophylline (zan-thō-fil′in), *n.* [⟨ *xanthophyl* + *-ine*2.] Same as *xanthophyl*.

xanthophyllite (zan-thō-fil′īt), *n.* [As *xanthophyl* + *-ite*2.] A mineral allied to the micas, occurring in crusts or implanted globules in talcose schist: found in Zlatoust in the Ural. Waluewite is a variety in distinct tabular crystals. Xanthophyllite is closely allied to seybertite (clintonite), and these species, with chloritoid, ottrelite, etc., constitute the clintonite group, or the brittle micas.

xanthopicrin (zan-thō-pik′rin), *n.* [⟨ Gr. *ξανθός*, yellow, + *πικρός*, bitter, + *-in*2.] In *chem.*, a name given by Chevallier and Pelletan to a yellow coloring matter from the bark of *Xanthoxylum Caribæum*, afterward shown to be identical with berberine.

xanthopicrite (zan-thō-pik′rīt), *n.* [⟨ Gr. *ξανθός*, yellow, + *πικρός*, bitter, + *-ite*2.] Same as *xanthopicrin*.

xanthopous (zan′thō-pus), *a.* [⟨ Gr. *ξανθός*, yellow, + *πούς* (*ποδ-*) = E. *foot*.] In *bot.*, having a yellow stem.

xanthoproteic (zan-thō-prō′tē-ik), *a.* [⟨ *xanthoprote*(*in*) + *-ic*.] Related to or derived from xanthroprotein.—**Xanthoproteic acid**, a non-crystallizable acid substance resulting from the decomposition of albuminoids by nitric acid.

xanthoprotein (zan-thō-prō′tē-in), *n.* [⟨ Gr. *ξανθός*, yellow, + E. *protein*.] The characteristic yellow substance formed by the action of hot nitric acid on proteid matters.

xanthoproteinic (zan-thō-prō-tē-in′ik), *a.* [⟨ *xanthoprotein* + *-ic*.] Related to xanthoprotein.

xanthopsin (zan-thop′sin), *n.* [As *xanthops-y* + *-in*2.] Yellow pigment of the retina.

xanthopsy (zan′thop-si), *n.* [⟨ NL. *xanthopsia*, ⟨ Gr. *ξανθός*, yellow, + *ὄψις*, appearance.] Color-blindness in which all objects seem to have a yellow tinge; yellow vision.

xanthopsydracia (zan-thop-si-drā′si-ä), *n.* [NL., ⟨ Gr. *ξανθός*, yellow, + *ψύδραξ*, a blister.] The presence of pustules on the skin.

Xanthoptera (zan-thop′te-rä), *n.* [NL. (Sodoffsky, 1837), ⟨ Gr. *ξανθός*, yellow, + *πτερόν*, wing.] A genus of noctuid moths, of Guenée's family *Anthophilidæ*, comprising a few American species, distinguished by having a subcellular areole on the fore wings. *X.* (*Exyra*) *semicrocea* feeds in the larval state on the leaves of the pitcher-plant (*Sarracenia*). The larva is a semi-looper, and is beautifully banded with white and purple or lake-red.

Xanthoptera (*Exyra*) *semicrocea*.

a, egg, natural size indicated at side; *b*, larva, dorsal view; *c*, one of its appendages, enlarged; *d*, larva, side view; *e*, pupa within cocoon; *f*, moth with closed wings; *g*, moth with expanded wings.

Xanthoptera ridingsi.

xanthopuccine (zan-thō-puk′sin), *n.* [⟨ Gr. *ξανθός*, yellow, + *puc*(*oon*) + *-ine*2.] An alkaloid found in *Hydrastis Canadensis*.

Xanthopygia (zan-thō-pij′i-ä), *n.* [NL. (Blyth, 1849, and *Zanthopygia*, Blyth, 1847), ⟨ Gr. *ξανθός*, yellow, + *πυγή*, rump.] A genus of Old World flycatchers or *Muscicapidæ*, ranging from Japan and China to the Malay peninsula and the Philippines. There are 4 species, of 2 of which the males have the rump yellow (whence the name), the throat and breast yellow, and the tail black. These are *X. tricolor* and *X. narcissina*. *X. cyanomelæna* is chiefly blue and black in the male. *X. fuliginosa* (see *water-robin*, under *robin*1, 3) is different again, and is the type of two other genera (*Rhyacornis* and *Nymphæus*). *X. narcissina* has given rise to the generic name *Charidhyias*; and *X. cyanomelæna* to that of *Cyanoptila*.

Water-robin (*Xanthopygia fuliginosa*).

Xanthopygus (zan-thō-pī′gus), *n.* [NL. (Kraatz, 1857), ⟨ Gr. *ξανθός*, yellow, + *πυγή*, rump.] A genus of American rove-beetles, comprising 1 North American species, *X. cacti*, and about 15 species from South America, characterized by having the marginal lines of the thorax distinct in front, the inner well defined.

xanthorhamnine (zan-thō-ram′nin), *n.* [⟨ Gr. *ξανθός*, yellow, + *ῥάμνος*, buckthorn (see *Rhamnus*), + *-ine*2.] A yellow coloring matter contained in the ripe Persian or Turkish berries and in Avignon grains. See *Persian berries*, under *Persian*.

Xanthornus (zan-thôr′nus), *n.* [NL. (P. S. Pallas, 1769; Scopoli, 1777; generally miscredited to Cuvier), prop. **Xanthornis*, ⟨ Gr. *ξανθός*, yellow, + *ὄρνις*, bird.] A large genus of *Icteridæ*: strictly synonymous with *Icterus* of Brisson (1760). Most of the American carouges, orioles, hang-nests, or troopials have at some time been placed in this genus. Also called *Pendulinus*. See cut under *troopial*.

Xanthorrhiza (zan-thō-rī′zä), *n.* [NL., ⟨ Gr. *ξανθός*, yellow, + *ῥίζα*, root.] A spelling given by Marshall in 1785 to *Zanthorhiza*, a genus of plants, of the family *Ranunculaceæ*. It is characterized by regular racemose flowers with five or ten stamens, and five or ten carpels which become follicles in fruit. The only species, *Zanthorhiza apiifolia*, is a native of the United States, growing on shaded mountain-banks from Pennsylvania and western New York to Kentucky and southward. It is a dwarf shrub with its stem yellowish within, bearing pinnately decompound leaves and pendulous compound racemes of brownish-purple flowers with petaloid sepals and small gland-like petals. Its yellow rootstock secures it the name of *shrub-yellowroot* (which see); this and the bark are intensely bitter, and afford a simple tonic of minor importance.

Xanthorrhœa (zan-thō-rē′ä), *n.* [NL. (Smith, 1798), so called from the red resin of some species; ⟨ Gr. *ξανθός*, yellow, + *ῥοία*, a flow, ⟨ *ῥεῖν*, flow.] A genus of liliaceous plants of the tribe *Lomandreæ*. It is characterized by bisexual flowers with distinct and partly glumaceous perianth-segments, and a three-celled ovary with few or several ovules in each cell. The 11 species are all Australian; they produce a thick rhizome commonly growing up into an arborescent woody trunk, covered or terminated by long linear rigid crowded brittle leaves. The numerous small flowers are densely compacted in a long cylindrical terminal spike.

A red resin exudes from *X. hastilis* and other species, known as *acaroid gum*, or *Botany bay resin*. See *acaroid gum* (under *acaroid*), *blackboy*, and *grass-tree*.—**Xanthorrhœa resin**. Same as *acaroid resin* (which see, under *acaroid*).

xanthosis (zan-thō′sis), *n.* [NL., < Gr. *ξανθός*, yellow, + *-osis*.] In *pathol.*, a yellowish discoloration, especially that sometimes seen in cancerous tumors.

Xanthosoma (zan-thō-sō′mä), *n.* [NL. (Schott, 1832), < Gr. *ξανθός*, yellow, + *σῶμα*, body.] A genus of monocotyledonous plants, of the family *Araceæ*. It is characterized by coriaceous sagittate or pedate leaves, by two- or three-celled ovaries separate below but dilated and united above, forming berries in fruit which are included within the spathe-tube, and by anatropous ovules with an inferior micropyle, mostly attached to the partitions. There are about 20 species, natives of tropical America. They are herbs with a milky juice, producing a tuberous rootstock or thick elongated caudex. They bear long thick petiolate leaves; the flower-stalks are usually short, often numerous, and produce a spathe with an oblong or ovoid convolute tube which bears a boat-shaped lamina and enlarges in fruit. The spadix is shorter and included; the fertile and densely flowered lower part is separated by a constriction from the elongated male section. *X. atrovirens* is known in the West Indies as *kale*, and *X. sagittæfolium* as *tannier* and *taya*.

xanthospermous (zan-thō-spėr′mus), *a.* [< Gr. *ξανθός*, yellow, + *σπέρμα*, seed.] In *bot.*, having yellow seeds; yellow-seeded.

Xanthotænia (zan-thō-tē′ni-ä), *n.* [NL. (Westwood, 1857), < Gr. *ξανθός*, yellow, + *ταινία*, a band: see *tænia*.] A genus of beautiful butterflies, of the nymphalid subfamily *Morphinæ*, containing only the species *X. busiris*, from Malacca, where it was discovered by A. R. Wallace.

Xanthoura, *n.* See *Xanthura*.

xanthous (zan′thus), *a.* [< Gr. *ξανθός*, yellow, + *-ous*.] **1.** Yellow: in anthropology, specifying the yellow or Mongolian type of mankind.

> The second great type, the Mongolian or *Xanthous* or "yellow." *W. H. Flower*, Pop. Sci. Mo., XXVIII. 316.

2. Fair. *Mem. Anthrop. Soc. of London*, I. 78.

xanthoxyl (zan-thok′sil), *n.* A plant of the tribe *Zanthoxyleæ* (*Xanthoxyleæ*), of the family *Rutaceæ*. *Lindley*.

Xanthoxylaceæ (zan-thok-si-lā′sē-ē), *n. pl.* [NL. (Lindley, 1835), < *Xanthoxylum* + *-aceæ*.] The tribe of plants *Zanthoxyleæ* (*Xanthoxyleæ*), given family rank by Lindley.

Xanthoxyleæ (zan-thok-sil′ē-ē), *n. pl.* [NL. (Nees and Martius, 1823), < *Xanthoxylum* + *-eæ*.] A tribe of plants, of the family *Rutaceæ*. It is characterized by regular flowers with free spreading petals and stamens, usually an annular or pulvinate disk, from two to five carpels each with two ovules, and a straight or arcuate embryo commonly with flat cotyledons. It includes 25 genera, mainly tropical, 14 of which are widely separated monotypic local genera. See *Xanthoxylum* and *Pentaceras*. Properly *Zanthoxyleæ*.

xanthoxyloïn (zan-thok-sil′ō-in), *n.* [< *Xanthoxylum* + *-in*².] A neutral principle extracted from the bark of the prickly-ash, *Zanthoxylum Americanum*.

Xanthoxylum (zan-thok′si-lum), *n.* [NL. A spelling given by Philip Miller in 1759 to *Zanthoxylum* of Linnæus, 1753, and of Plukenet, 1696, the name of some West Indian tree; applied to this from the yellow heartwood; < Gr. *ξανθός*, yellow, + *ξύλον*, wood.] A genus of plants, of the family *Rutaceæ*, type of the tribe *Zanthoxyleæ*. It is characterized by alternate pinnate leaves, by polygamous flowers with from three to five imbricate or induplicate petals and three to five stamens, and by a fruit of one to five somewhat globose and commonly two-valved carpels. There are about 15 species, natives of temperate eastern Asia and North America, one of which, *Zanthoxylum Americanum*, occurs in the United States, where it extends westward to Nebraska and south to Georgia. They are trees or shrubs, sometimes armed with straight or recurved prickles. The leaves are commonly odd-pinnate, rarely reduced to one to three leaflets; the leaflets are entire or crenate, oblique, and pellucid-dotted. The flowers are small, usually white or greenish, commonly in crowded axillary and terminal panicles. The fruit is usually aromatic and pungent, with a glandular-dotted pericarp. The bark, especially that of the roots, is powerfully stimulant and tonic, and often used for rheumatism, to excite salivation, and as a cure for toothache; it contains a bitter principle (berberine) and a yellow coloring matter; in the West Indies it is esteemed an antisyphilitic. A large number of species formerly referred to this genus belong to *Fagara*, of which *Fagara flava* is the satinwood of Florida, the West Indies, and the Bermudas, its wood, used in the manufacture of small articles, having at first the odor of true satinwood. *F. Fagara* is the wild lime of Florida and western Texas, extending also through Mexico to Brazil and Peru; in southern Florida it is one of the most common of small trees, often a tall slender shrub; it produces a hard heavy reddish-brown wood, known as *savin* or *ironwood* in the West Indies. (See *wild lime*, under *lime*³.) *F. spinosa*, known as *licca-tree* or *lignum-rorum* in the West Indies, and exported thence under the name of *rosewood*, also extends to Florida, where it is a shrub with coriaceous shining leaves. Another species of the United States, *Fagara Clava-Herculis*, known as *toothache-tree* and as *prickly-ash* (which see), is a small tree ranging from Virginia southward, also known as *pepperwood*. For *F. flava*, see *prickly yellow-wood*, under *yellow-wood*. The other species of the West Indies are there known in general as *yellow-wood* and as *fustic*, several producing a valuable wood; in Jamaica *F. coriacea* is also known as *yellow mastwood*, and *F. spinifex* as *ram-goat* (which see); in Australia *F. brachyacantha* is used for cabinet-work; in Cape Colony *F. Capensis* is known as *knobwood* (which see); 6 other woody species occur in the Hawaiian Islands, all there known as *heaë*. The fruit of some tropical species of *Zanthoxylum* is used as a condiment and also medicinally, as *Z. piperitum*, the Japanese pepper, also *Fagara schinifolia*, the anise-pepper of China. *Fagara nitida* is in China a valued febrifuge. *Zanthoxylum alatum* is a sudorific and anthelmintic, the leaves of which are used as food for silkworms, its fruit in India as a condiment, and its seeds as a fish-poison.

Zanthoxylum Americanum.

1, branch with male flowers; 2, branch with fruits and leaves; *a*, male flower; *b*, female flower; *c*, fruits.

Xanthura (zan-thū′rä), *n.* [NL. (Sclater, 1862, after *Xanthoura*, Bonaparte, 1850), < Gr. *ξανθός*, yellow, + *οὐρά*, tail.] A genus of beautiful American jays, having the tail more or less yellow; the green jays, as *X. luxuosa*, of the Rio Grande region and southward. These resplendent birds vie with any of the blue jays in color, and are of very unusual hues for this group. The species named is yellowish-green, bright-yellow, greenish-blue, azure-blue, jet-black, and hoary-white in various parts; it is not crested.

Rio Grande Jay (*Xanthura luxuosa*).

The length is 11 or 12 inches, the extent 14½ to 15½. It nests in bushes, and lays usually three or four eggs of a greenish-drab color marked with shades of brown. Another and still more richly colored species is the Peruvian jay, *X. yncas*.

xanthuria (zan-thū′ri-ä), *n.* Same as *xanthinuria*.

Xanthyris (zan′thi-ris), *n.* [NL. (Felder, 1862), prop. **Xanthothyris*, < Gr. *ξανθός*, yellow, + *θυρίς*, window.] A genus of bombycoid moths, of the family *Arctiidæ*, comprising one or more species from South America.

Xantus gecko. See *gecko*.

Xantusia (zan-tū′si-ä), *n.* [NL. (S. F. Baird, 1852), named after L. J. *Xantus* de Vesey, who collected extensively in California and Mexico.] The typical genus of *Xantusiidæ*.

Xantusiidæ (zan-tū-sī′i-dē), *n. pl.* [NL., < *Xantusia* + *-idæ*.] An American family of eriglossate lacertilians, typified by the genus *Xantusia*, having the parietal bones distinct and the supratemporal fossæ roofed over.

xd. A contraction of *ex div.* (which see).

xebec (zē′bek), *n.* [Also sometimes *zebec*, *zebeck*, *shebec*, *shebeck*; = F. *chebec* = Sp. *jabeque* = Pg. *chaveco*, *xaveco* = It. *sciabecco*, also *zambecco*; said to be < Turk. *sumbeki*; cf. Pers. Ar. *sumbuk*, a small vessel.] A small three-masted vessel, formerly much used by the Algerine corsairs, and now in use to some extent in Mediterranean commerce. It differs from the felucca chiefly in having several square sails as well as lateen sails, while the latter has only lateen sails.

Xebec.

Our fugitive, and eighteen other white slaves, were put on board a *xebec*, carrying eight six-pounders and sixty men. *Sumner*, Orations, I. 252.

Xema (zē′mä), *n.* [NL. (Leach, 1819): a made word.] A genus of *Laridæ*; the fork-tailed gulls. *X. sabinei* is the only species. This gull is 13 or 14 inches long. The adult is snowy-white, with extensive slaty-blue mantle, the outer five primaries black tipped with white, the head hooded in slate-color with a jet-black ring, the feet black, and the bill black tipped with yellow. The forking of the tail is about one inch. This remarkable and beautiful gull inhabits arctic America both coastwise and interiorly, and strays irregularly southward in winter, though it is not often seen in the United States. It has been taken in the Bermudas, in Peru, and in Europe. The nest is made on the ground; the eggs are three in number, measuring 1¾ by 1¼ inches, and of a brownish-olive color sparsely splashed with brown. The swallow-tailed gull (see *swallow-tailed*) has sometimes been wrongly referred to this genus.

Fork-tailed Gull (*Xema sabinei*).

xenacanthine (zen-a-kan′thin), *a.* and *n.* **I.** *a.* Of or relating to the *Xenacanthini*.

II. *n.* One of the *Xenacanthini*.

Xenacanthini (zen-a-kan-thī′nī), *n. pl.* [NL., < Gr. *ξένος*, strange, + *ἄκανθα*, spine, + *-ini*.] An order of fossil selachians. They had the notochord rarely if ever constricted, neural and hemal arches and spines long and slender, and pectoral fins with long segmented axis. The order includes many extinct fishes which flourished in the seas of the Carboniferous and Permian periods, and which have been referred to the families *Pleuracanthidæ* and *Cladodontidæ*.

Xenaltica (zē-nal′ti-kä), *n.* [NL. (Baly, 1875), < Gr. *ξένος*, strange, + NL. *Haltica*, q. v.] A genus of beetles, of the family *Chrysomelidæ*, having the four anterior tibiæ with a small spine and the hind tibiæ with a double spine. The two known species are from Old Calabar and Madagascar. The genus is supposed to be synonymous with *Myrcina* (Chapuis, 1875).

xenarthral (zē-närʹthral), *a.* [< Gr. *ξένος*, strange, + *ἄρθρον*, a joint.] Peculiarly or strangely jointed, as a mammal's vertebræ; having certain accessory articulations of the dorsolumbar vertebræ, as the American edentates: the opposite of *nomarthral*. *Gill*, 1884.

Xenarthral Articulation of Twelfth and Thirteenth Dorsal Vertebræ of Great Anteater (*Myrmecophaga jubata*), side view, two thirds natural size.

az, prezygapophysis, with *az′*, additional anterior articular facet; *pz*, postzygapophysis, with *pz*¹, *pz*², additional posterior articular facets; *m*, metapophysis; *cc*, facet for articulation of capitellum of rib; *tc*, the same for tubercle of rib.

xenelasia (zen-ē-lā′si-ä), *n.* [NL., < Gr. *ξενηλασία*, the expulsion of strangers, an alien act, < *ξένος*, a stranger, + *ἐλασις*, < *ἐλαύνειν* (*ἐλα-*), drive.] A Spartan law or alien act which prohibited strangers from residing in Sparta without permission.

xenia, *n.* Plural of *xenium*.

xenial (zē′ni-al), *a.* [< Gr. *ξενία*, hospitality, < *ξένος*, Ionic *ξεῖνος*, a guest, also a host, in Homer a friendly stranger.] Pertaining to hospitality, or to the rights, privileges, standing, or treatment of a guest, or to the relations between a guest and his host; specifically, noting such relations, etc., in Greek antiquity.

Again, it is curious to observe that the *xenial* relation was not less vivacious than that of blood. The tie of blood subsists in the second generation from the common ancestor; and Diomed and Glaucus similarly own one another as *ξεῖνοι* because two generations before Œneus had entertained Bellerophon.

Gladstone, Studies on Homer, II. 460.

Xenichthyinæ (zē-nik-thi-i′nē), *n. pl.* [NL., < *Xenichthys* + *-inæ*.] A subfamily of *Sparidæ*, typified by the genus *Xenichthys*, having the dorsal fin deeply emarginate, the vomer toothed, and all the teeth villiform in narrow bands.

Xenichthys (zē-nik′this), *n.* [NL. (Gill, 1863), < Gr. *ξένος*, strange, + *ἰχθύς*, a fish.] A genus of sparoid fishes, typical of the *Xenichthyinæ*, as *X. californiensis*. This queer fish is of a silvery color with continuous dusky stripes along the several rows of scales on the upper part of the body, and is found from San Diego southward.

Xenicidæ (zē-nis′i-dē), *n. pl.* [NL., < *Xenicus* + *-idæ*.] A family of non-oscine (clamatorial or mesomyodian) passerine birds, typified by the genus *Xenicus*, and confined to New Zealand. Also called *Acanthisittidæ*. They were formerly supposed to be creepers, warblers, nuthatches, or wrens, and classed accordingly, but are now placed in the vicinity of the Old World ant-thrushes and related forms (*Pittidæ*, etc.). There is only one intrinsic syringomyon; the sternum is single-notched on each side behind; the nasal bones are holorhinal, the maxillopalatines are slender, and the vomer is broad, with anterior emargination; the tarsi are not laminiplantar; the primaries are ten, with the first about as long as the second, and the rectrices are ten. *Acanthisitta chloris* (the citrine warbler of Latham, 1783) is a short-tailed creeper, quite like a nuthatch in appearance and habits; the species of *Xenicus* resemble wrens. See *Xenicus*.

Xenicus (zen′i-kus), *n.* [NL. (G. R. Gray, 1855), < Gr. *ξενικός*, of a stranger, < *ξένος*, a stranger.] The name-giving genus of *Xenicidæ*. It contains two species. *X. longipes* is the long-legged warbler of Latham (1783), remarkably like a wren in appearance and habits; the other species is *X. gilviventris* of Julius Haast.

Xenisma (zē-nis′mä), *n.* [NL. (Jordan, 1876), < Gr. *ξένισμα*, amazement, < *ξενίζειν*, surprise, make strange, < *ξένος*, strange.] A genus of cyprinodonts, or a subgenus of *Fundulus*, whose dorsal fin is high and begins opposite or slightly behind the anal. Two species inhabit tributaries of the Lower Mississippi. See cut under *studfish*.

xenium (zē′ni-um), *n.*; pl. *xenia* (-ä). [NL., < Gr. *ξένιον*, usually in pl. *ξένια*, a gift to a guest from his host, neut. of *ξένιος*, of a guest, < *ξένος*, a guest, stranger.] In *classical antiq.*, a present given to a guest or stranger, or to a foreign ambassador.

Xenocichla (zen-ō-sik′lä), *n.* [NL. (Hartlaub, 1857), < Gr. *ξένος*, strange, + *κίχλη*, a thrush.] An extensive genus of Ethiopian birds, conventionally referred to the *Timeliidæ*, and also called *Bleda*, *Pyrrhurus*, *Bæopogon*, and *Trichites*. Fifteen species are described; they differ much from one another. Some have often been put in such genera as *Pycnonotus*, *Criniger*, or *Trichophorus*, and all are called by the name *bulbul*, in common with other birds more or less nearly related. *X. icteria* is the yellow-browed bulbul; *X. flavicollis*, the yellow-throated; *X. tephrolæma*, the ashy-throated; *X. simplex*, Marche's; *X. flavistriata*, Barratt's; *X. serina*, the red-billed; *X. syndactyla* (the type of the genus, from Senegambia to Gaboon), the chestnut-tailed; *X. scandens*, the pale; *X. albigularis*, Ussher's; *X. indicator*, the honey-guide; *X. leucopleura*, the white-bellied; *X. notata*, the yellow-marked; *X. canicapilla*, the gray-headed.

Xenocratean (zē-nok-rā-tē′an), *a.* [< *Xenocrates* (see def.).] Pertaining to the doctrine of Xenocrates, a Greek philosopher, who was the head of the Academy, the second after Plato. He is known to have been a voluminous and methodical writer, adhering pretty closely to his master's teachings, but inclined to the doctrines of the Pythagoreans. He held that the ideas were numbers, and that all numbers were produced from 1 and 2.

Xenocratic (zen-ō-krat′ik), *a.* Same as *Xenocratean*.

Xenocrepis (zen-ō-krē′pis), *n.* [NL. (Förster, 1856), < Gr. *ξένος*, strange, + *κρηπίς*, a half-boot.] A genus of hymenopterous parasites, of the chalcid subfamily *Pteromalinæ*, having thirteen-jointed antennæ with two ring-joints, the stigmal club small, and the marginal vein thickened. The species are European.

Xenodacnis (zen-ō-dak′nis), *n.* [NL. (Cabanis, 1873), < Gr. *ξένος*, strange, + NL. *Dacnis*, q. v.] A genus of guitguits or *Cœrebidæ*. The type is *X. parina* of Peru, 4½ inches long, the male of a nearly uniform dull purplish-blue, the wings and tail blackish edged with blue. The form is peculiar among the guitguits, the bill having a parine shape, though no nasal bristles.

xenoderm (zen′ō-dėrm), *n.* [< NL. *Xenoderma*.] A wart-snake of the subfamily *Xenodermatinæ*.

Xenoderma (zen-ō-dėr′mä), *n.* [NL. (Reinhardt), < Gr. *ξένος*, strange, + *δέρμα*, skin.] The typical genus of *Xenodermatinæ*, with granular scales, simple urosteges, and no frontal nor parietal plates. The genus has also been placed in *Nothopsidæ*. Also *Xenodermus*.

Xenodermatinæ (zen-ō-dėr-ma-tī′nē), *n. pl.* [NL., < *Xenoderma*(*t-*) + *-inæ*.] A subfamily of *Acrochordidæ* or wart-snakes, represented by the genus *Xenoderma*. Also *Xenodermina*.

xenodermine (zen-ō-dėr′min), *a.* [< *Xenoderma* + *-ine*[1].] Of or pertaining to the *Xenodermatinæ*.

Xenodermus (zen-ō-dėr′mus), *n.* [NL.] Same as *Xenoderma*.

xenodocheum, xenodochium (zen″ō-dō-kē′um, -kī′um), *n.*; pl. *xenodochea*, *xenodochia* (-ä). [LL. *xenodochium*, < Gr. *ξενοδοχεῖον*, a place for strangers to lodge in, a hotel, < *ξένος*, a stranger, + *δοχεῖον*, a receptacle, < *δέχεσθαι*, receive.] 1. In *classical antiq.*, a building for the reception of strangers.—2. In modern Greek lands, a hotel; an inn; also, a guest-house in a monastery.

xenodochy (zē-nod′ō-ki), *n.* [< Gr. *ξενοδοχία*, the entertainment of a stranger, < *ξένος*, a stranger, + *δοχή*, a receiving, < *δέχεσθαι*, receive.] 1. Reception of strangers; hospitality.—2. Same as *xenodocheum*.

xenogamy (zē-nog′a-mi), *n.* [< Gr. *ξένος*, strange, + *γάμος*, marriage.] In *bot.*, cross-fertilization in which pollination of a flower is effected by pollen from a flower of a different plant, but one of the same species. In contradistinction to *geitonogamy*, which see.

xenogenesis (zen-ō-jen′e-sis), *n.* [NL., < Gr. *ξένος*, stranger, + *γένεσις*, birth.] The generation of offspring which are supposed to pass through an entirely different life-cycle from that of the parents, and never exhibit the characters of the latter: a mode of biogenesis supposed by Milne-Edwards to occur, but not proved to have any existence in fact.

The term Heterogenesis . . . has unfortunately been used in a different sense [than that of the offspring being altogether and permanently unlike the parent], and M. Milne-Edwards has therefore substituted for it *Xenogenesis*, which means the generation of something foreign.

Huxley, Lay Sermons, p. 353.

xenogenetic (zen″ō-jē-net′ik), *a.* [< *xenogenesis* (*-et-*) + *-ic*.] Of the nature of or pertaining to xenogenesis.

I have dwelt upon the analogy of pathological modification, which is in favour of the *xenogenetic* origin of microzymes. *Huxley*, Lay Sermons (ed. 1871), p. 370.

xenogenic (zen-ō-jen′ik), *a.* [< *xenogen-y* + *-ic*.] Same as *xenogenetic*.

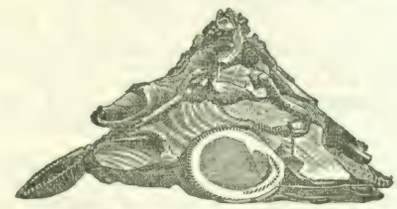
xenogeny (zē-noj′e-ni), *n.* [< Gr. *ξένος*, strange, + *-γενεια*, < *-γενης*, -born.] Same as *xenogenesis*.

xenolite (zen′ō-līt), *n.* [< Gr. *ξένος*, stranger, + *λίθος*, stone.] A silicate of aluminium, related to fibrolite, found at Petershoff, Finland.

xenomenia (zen-ō-mē′ni-ä), *n.* [NL., < Gr. *ξένος*, strange, + *μηνιαῖα*, menses.] A loss of blood occurring at the time of the menstrual flow elsewhere than from the uterus, and taking the place of the regular flow; vicarious menstruation. Compare *stigma*[1], 4.

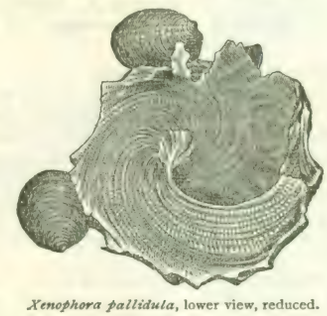
Xenomi (zē-nō′mī), *n. pl.* [NL., < Gr. *ξένος*, strange, + *ὦμος*, shoulder.] A suborder of fishes, resembling the *Haplomi*, but distinguished by peculiarities of the pectoral arch (whence the name). It consists of the family *Dallidæ* alone. See cut under *Dallia*.

xenomorphic (zen-ō-môr′fik), *a.* [< Gr. *ξένος*, strange, + *μορφή*, form.] In *lithol.*, noting the mineral constituents of a rock when they are bounded by planes not formed as the result of their own molecular structure, but the result of their contact with other minerals also forming constituents of the same rock, which having crystallized first have impressed their form on those adjacent to them: the counterpart of *idiomorphic*. Also called *allotriomorphic*.



xenomous (zē-nō′mus), *a.* [< NL. *Xenomi*.] Peculiar in the structure of the pectorals, as the Alaskan blackfish; of or pertaining to the *Xenomi*.

Xenopeltidæ (zen-ō-pel′ti-dē), *n. pl.* [NL., < *Xenopeltis* + *-idæ*.] A family of colubriform *Ophidia*, represented by the genus *Xenopeltis*. They have no supraorbital or postorbital bone, have a coronoid bone, premaxillary teeth, and gastrosteges, and have no rudiments of hind limbs.



Xenopeltis (zen-ō-pel′tis), *n.* [NL. (Reinwardt, 1827), < Gr. *ξένος*, strange, + *πέλτη*, a shield.] The typical genus of *Xenopeltidæ*, having the lower jaw produced, the teeth very fine, and no anal spurs. *X. unicolor*, formerly *Tortrix xenopeltis*, is a singular snake of nocturnal and carnivorous habits, found in Malaysia and some other regions.

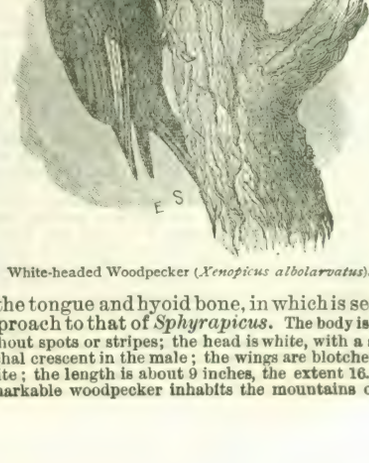
Xenophanean (zē-nof-a-nē′an), *a.* [< *Xenophanes* (see def.).] Pertaining to the doctrines of Xenophanes of Colophon, the founder of the Eleatic school of philosophy. He seems to have been the first of the Greeks to propound a monotheistic doctrine, probably of a pantheistic character; but he did not go to the length of denying the reality of the manifold, as Parmenides and his followers did.

Xenophora (zē-nof′ō-rä), *n.* [NL. (Fischer von Waldheim, 1807), also *Xenophorus* (Philippi, 1847), < Gr. *ξένος*, strange, + *-φορος*, < *φέρειν* = E. *bear*[1].] The typical genus of *Xenophoridæ*, so

Xenophora pallidula, side view, reduced.

Xenophora pallidula, lower view, reduced.

called from their carrying foreign objects attached to the shell. Formerly also called *Phorus* (a name too near the prior *Phora* in entomology). See also cut under *carrier-shell*.



Xenophoridæ (zen-ō-for′i-dē), *n. pl.* [NL., < *Xenophora* + *-idæ*.] A family of tænioglossate gastropods, typified by the genus *Xenophora*: formerly called *Phoridæ* (a name preoccupied in entomology). They are known as *carrier-shells*, *conchologists*, and *mineralogists*. See cuts under *carrier-shell* and *Xenophora*.

xenophoroid (zē-nof′ō-roid), *a.* and *n.* **I.** *a.* Of or relating to the *Xenophoridæ*.

II. *n.* Any member of this family.

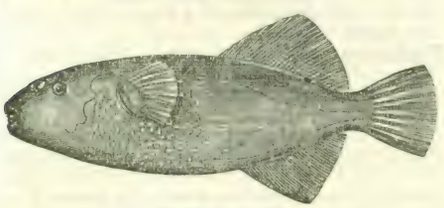
xenophthalmia (zen-of-thal′mi-ä), *n.* [NL., < Gr. *ξένος*, strange, + *ὀφθαλμία*, ophthalmia.] Conjunctivitis excited by the presence of a foreign body.

Xenopicus (zen-ō-pī′kus), *n.* [NL. (S. F. Baird, 1858), < Gr. *ξένος*, strange, + L. *picus*, a woodpecker.] An isolated genus of North American woodpeckers, based on the *Picus albolarvatus* of Cassin, and characterized by the structure

White-headed Woodpecker (*Xenopicus albolarvatus*).

of the tongue and hyoid bone, in which is seen an approach to that of *Sphyrapicus*. The body is black, without spots or stripes; the head is white, with a scarlet nuchal crescent in the male; the wings are blotched with white; the length is about 9 inches, the extent 16. This remarkable woodpecker inhabits the mountains of Cali-

fornia, Oregon, and Washington, where it is common in pine woods.



Xenopodidæ (zen-ō-pod′i-dē), *n. pl.* [NL., < *Xenopus* (*-pod-*) + *-idæ*.] A family of African aglossal or tongueless toads, typified by the genus *Xenopus:* same as *Dactylethridæ*. They are related to the American *Pipidæ*, but have upper teeth and some long tentacular processes on the head.

Xenops (zē′nops), *n.* [NL. (Illiger, 1811), < Gr. *ξένος*, strange, + *ὤψ*, face, appearance.] A genus of *Dendrocolaptidæ*, or South American tree-creepers, characterized by the short, compressed, and upturned bill, and ranging from Mexico to southern Brazil. There are 2 distinct species. *X. genibarbis* has the back olivaceous and the belly streaked; in *X. rutilans* the back is rufous and the belly is not streaked. They are very small birds, 4 or 5 inches long, both with a white cheek-stripe.

Xenops genibarbis.

Xenopterus (zē-nop′tę-rus), *n.* [NL., < Gr. *ξένος*, strange, + *πτερόν*, wing, fin.] A genus of plectognath fishes, of the family *Tetrodontidæ*, characterized by the infundibuliform nostrils and the peculiarity of the dermal ossifications. They inhabit the Indian archipelago. *X. naritus* is a typical example.

Xenopterus naritus.

xenopterygian (zē-nop-tę-rij′i-an), *a.* and *n.* **I.** *a.* Having the characters of or pertaining to the *Xenopterygii*.

II. *n.* A fish of this suborder.

Xenopterygii (zē-nop-tę-rij′i-ī), *n. pl.* [< Gr. *ξένος*, strange, + *πτέρυξ*, wing (fin).] A suborder of teleocephalous fishes, represented by the family *Gobiesocidæ*, and characterized by the development of a complicated suctorial organ in the pectoral region. The xenopterygians had usually been placed with the lump-fishes and snail-fishes, in consequence of their common possession of a sucking-disk, which, however, is formed differently in the present suborder, being chiefly developed from the skin of the breast, in connection with the ventral fins. They are mostly fishes of oblong or lengthened coniform shape, with scaleless skin and spineless fins, one posterior dorsal fin, more or less nearly opposite the anal, and the sucker either entire or divided. They are small fishes, most common in tropical and warm temperate seas between tide-marks, adherent to rocks. There are 10 genera and 25 or 30 species, as *Gobiesox mæandricus*, abundant in tide-pools on the Pacific coast of the United States.

Xenopus (zen′ō-pus), *n.* [NL. (Wagler, about 1830), < Gr. *ξένος*, strange, + *πούς* (*ποδ-*) = E. *foot*.] The typical genus of *Xenopodidæ*. There are several species, all of tropical Africa, as *X. lævis*. They are called *clawed toads*.

Xenorhina (zen-ō-rī′nä), *n.* [NL. (Peters, 1863), < Gr. *ξένος*, strange, + *ῥίς* (*ῥιν-*), nose, snout.] A genus of batrachians, peculiar to New Guinea, typical of the family *Xenorhinidæ*. The species is *X. oxycephala*.

Xenorhinidæ (zen-ō-rin′i-dē), *n. pl.* [NL., < *Xenorhina* + *-idæ*.] A family of Papuan batrachians, represented by the genus *Xenorhina*.

Xenorhipis (zen-ō-rī′pis), *n.* [NL. (Le Conte, 1866), < Gr. *ξένος*, strange, + *ῥιπίς*, also *ῥίψ*, wickerwork.] A genus of buprestid beetles, containing the single species *X. brendeli*, from Illinois, remarkable in that the male antennæ are flabellate, a unique structure in the family *Buprestidæ*.

Xenorhynchus (zen-ō-ring′kus), *n.* [NL. (Bonaparte, 1855), < Gr. *ξένος*, strange, + *ῥύγχος*, beak.] A genus of storks or *Ciconiinæ*, representing the Indian and Australian type of jabirus. *X. australis* is the black-necked stork (which see, under *stork*).

Xenos (zē′nos), *n.* [NL. (Rossi, 1792), < Gr. *ξένος*, strange.] A genus of parasitic strepsipters, of the family *Stylopidæ*, having four-jointed antennæ and four-jointed tarsi. The species are found in middle and southern Europe and in North and South America. They are among the most remarkable of insects, and the genus is historically notable as containing the earliest known strepsipters. Also, and preferably, *Xenus*.

Xenosauridæ (zen-ō-sâ′ri-dē), *n. pl.* [NL., < *Xenosaurus* + *-idæ*.] A family of American eriglossate lacertilians, related to the *Iguanidæ*, based on the genus *Xenosaurus*.

Xenosaurus (zen-ō-sâ′rus), *n.* [NL. (Peters, 1861), < Gr. *ξένος*, strange, + *σαῦρος*, a lizard.] The typical genus of *Xenosauridæ*, based on *X. grandis*, a Mexican lizard about 10 inches long.

xenotime (zen′ō-tīm), *n.* [< Gr. *ξένος* for *κενός*, empty, fruitless, vain, + *τιμή*, honor.] A native phosphate of yttrium, having a yellowish-brown color, and crystallizing in square octahedrons and prisms. It resembles zircon in form, but is inferior in hardness.

Xenotis (zē-nō′tis), *n.* [NL. (Jordan, 1877), also *Xenotes*, < Gr. *ξένος*, strange, + *οὖς* (*ὠτ-*), ear.] A genus of centrarchoid fishes, very near *Lepomis*, in which it is properly merged, but having very short, weak, and flexible gill-rakers, and no palatine teeth. *X. megalotis*, of the United States, known as the *long-eared sunfish*, is six inches long, highly colored, and abounds in many parts of the United States.

xenurine (zē-nū′rin), *n.* and *a.* [< *Xenurus* + *-ine*[1].] **I.** *n.* An armadillo of the genus *Xenurus;* a kabassou. In these forms of *Dasypodidæ* the buckler is more zoniferous than in the true dasypodines, and the tail is nearly naked; the feet are also somewhat peculiar in the proportions of the metacarpals and phalanges.

II. *a.* Of or pertaining to the genus *Xenurus*.

Xenurus (zē-nū′rus), *n.* [NL., < Gr. *ξένος*, strange, + *οὐρά*, tail.] **1†.** In *ornith.*, same as *Alectrurus*. *Boie*, 1826.—**2.** In *mammal.*, a genus of armadillos, named by Wagler in 1830; the xenurines or kabassous. There are 2 species,

Zoned Xenurine (*Xenurus unicinctus*).

X. unicinctus and *X. hispidus*, which inhabit tropical America, and burrow with great ease underground.

Xenus (zē′nus), *n.* [NL.: see *Xenos*.] **1.** In *entom.*, same as *Xenos*.—**2.** In *ornith.*, same as *Terekia* (where see cut). *J. J. Kaup*, 1829.

Xeocephus (zē-os′ē-fus), *n.* [NL. (Bonaparte, 1854), and *Xeocephalus* (G. R. Gray, 1869), and *Zeocephus* (R. B. Sharpe, 1879); formation uncertain.] A genus of *Muscicapidæ*, confined to the Philippines. *X. rufus* of Luzon is 7 inches long, and mostly of a cinnamon color. *X. cinnamomeus* of Basilan is similar, with a white belly. *X. cyanescens* is mostly of a grayish cobalt-blue, 8½ inches long, and found in Palawan.

xerafin (zer′a-fin), *n.* [Also *xeraphine*, *xerapheen*, *zeraphin*, also, as Pg., *xerafim;* < Pg. *xerafim*, *xarafim*, < Ar. *ashrafī* (cf. *sharāfī*, noble), applied prop. to the gold dinar, but also to the gold mohur; < *sharīf*, noble: see *sherif*.] An Indo-Portuguese silver coin formerly current in Goa. About 1835 it was worth 75 United States cents.

xeransis (zē-ran′sis), *n.* [NL., < Gr. *ξήρανσις*, a drying up, parching, < *ξηραίνειν*, dry up: see *xerasia*.] In *pathol.*, siccation; a drying up.

Xeranthemum (zē-ran′thē-mum), *n.* [NL. (Tournefort, 1700), so called from the scarious involucre; < Gr. *ξηρός*, dry, + *ἄνθεμον*, flower.] A genus of composite plants, of the tribe *Cynareæ* and subtribe *Carlininæ*. It is characterized by long-stalked solitary flower-heads with the outer flowers small, two-lipped, and neutral, the inner ones bisexual and slightly five-cleft, and by free filaments and chaffy aristate pappus. There are 6 species, natives of the Mediterranean region. They are hoary erect branching annuals, without spines, bearing alternate leaves which are narrow and entire. The scarious inner bracts of the showy flower-heads are rose-colored or whitish; from their permanence, *X. annuum*, the most frequently cultivated species, is known as *annual everlasting* or *immortelle*.

xerantic (zē-ran′tik), *a.* [< Gr. *ξηραντικός*, < *ξηραίνειν*, dry up: see *xerasia*.] Having drying properties; exsiccant.

xerasia (zē-rā′si-ä), *n.* [NL., < Gr. *ξηρασία*, a drying, a disease of the hair so called, < *ξηραίνειν*, dry, < *ξηρός*, dry.] A disease of the hair, characterized by excessive dryness and cessation of growth.

Xerobates (zē-rob′a-tēz), *n.* [NL. (Agassiz), < Gr. *ξηρός*, dry, + *βάτης*, one that treads, < *βαίνειν*, go.] A genus of tortoises, so called from inhabiting the dry pine-barrens of the southern United States: now often merged in *Testudo*. *X.* or *T. carolina* is the common gopher. See *gopher*, 3.

xerocollyrium (zē″rō-ko-lir′i-um), *n.* [LL., < Gr. *ξηροκολλούριον*, a dry or thick eye-salve, < *ξηρός*, dry, + *κολλούριον*, eye-salve: see *collyrium*.] A dry collyrium or eye-salve.

xeroderma (zē-rō-dėr′mä), *n.* [NL., < Gr. *ξηρός*, dry, + *δέρμα*, skin.] A mild form of ichthyosis, in which the skin is dry and harsh in consequence of diminished activity of the sudorific and sebaceous glands. Also called *dermatoxerasia* and *dryskin*.—**Xeroderma pigmentosum**, a disease of the skin, beginning usually in childhood, characterized by areas of capillary dilatation and pigment deposit, followed by localized atrophy of the skin alternating with small patches of hypertrophied epithelium.

xerodermia (zē-rō-dėr′mi-ä), *n.* [NL.] Same as *xeroderma*.

xerodes (zē-rō′dēz), *n.* [NL., < Gr. *ξηρώδης*, dryish, dry-looking, < *ξηρός*, dry, + *εἶδος*, form.] Any tumor attended with dryness.

xeroma (zē-rō′mä), *n.* [< Gr. *ξηρός*, dry, + *-oma*.] Same as *xerophthalmia*.

xeromyrum (zē-rom′i-rum), *n.* [NL., < Gr. *ξηρόμυρον*, a dry perfume, < *ξηρός*, dry, + *μύρον*, perfume, ointment.] A dry ointment.

xerophagy (zē-rof′a-ji), *n.* [< LL. *xerophagia*, < Gr. *ξηροφαγία*, the eating of dry food, abstinence, < *ξηρός*, dry, + *φαγεῖν*, eat.] The habit of living on dry food, especially a form of abstinence, as in the early church, in which only bread, herbs, salt, and water were consumed.

★**xerophil** (zē′rō-fil), *n.* [< Gr. *ξηρός*, dry, + *φιλεῖν*, love.] In *bot.*, a plant of Alphonse de Candolle's second "physiological group" in his natural system of geographical distribution. The plants of this group, like those of the first group, the megatherms, require a hot climate, but, unlike the latter, are adapted to one of great dryness only. They are chiefly found between latitudes 20° and 35° south and north of the equator, and embrace among the most characteristic families the *Zygophyllaceæ*, *Cactaceæ*, *Artocarpeæ*, *Proteaceæ*, and *Cycadaceæ*. Compare *megatherm*, *mesotherm*, ★*microtherm*, and *hekistotherm*.

xerophilous (zē-rof′i-lus), *a.* [NL., < Gr. *ξηρός*, dry, + *φιλεῖν*, love.] Loving dryness: in botany noting plants which are in various ways peculiarly adapted to dry, especially to hot and dry climates, as by possessing coriaceous leaves, succulent stems, etc.; specifically, belonging to the group of xerophils. See *xerophil*.

xerophthalmia (zē-rof-thal′mi-ä), *n.* [NL., < LL. *xerophthalmia*, < Gr. *ξηροφθαλμία*, dryness of the eyes, < *ξηρός*, dry, + *ὀφθαλμός*, eye.] A dry form of conjunctivitis, resulting in a thickening and skin-like condition of the conjunctiva. Also *xeroma*, and *xerosis of the conjunctiva*.

Xerophyllum (zē-rō-fil′um), *n.* [NL. (Richard, 1803), so called from the harsh dry leaves; < Gr. *ξηρός*, dry, + *φύλλον*, leaf.] **1.** A genus of monocotyledonous plants, family *Melanthiaceæ*. It is characterized by crowded linear radical leaves, flowers with three styles, and a loculicidal capsule. The 3 species are natives of the United States, and are known as *turkeybeard*. They are perennials, with a short thick woody rhizome, tall erect unbranched stem, and a great number of harsh rigid elongated leaves, usually forming a conspicuous basal tuft, and also numerous along the stem, but much smaller and thinner, finally diminished into bristles. The flowers are white and very showy, forming a long terminal raceme which is at first densely pyramidal or oblong and becomes afterward greatly elongated. *X. asphodeloides*, the eastern species, is a native of pine-barrens from New Jersey to Georgia; the western, *X. Douglasii*, with a smaller raceme, occurs from the Columbia river to Montana; the raceme of *X. tenax*, of California, is fragrant and dense, becoming over a foot in length.

2. [*l. c.*] A plant of this genus.

xerosis (zē-rō′sis), *n.* [NL., < Gr. *ξήρωσις*, a drying up, < *ξηρός*, dry: see *xerasia*.] Same as *xeransis*.—**Xerosis of the conjunctiva.** Same as *xerophthalmia*.

xerostomia (zē-rō-stō'mi-ą), *n.* [NL., < Gr. *ξηρός*, dry, + *στόμα*, mouth.] Abnormal dryness of the mouth.

xerotes (zē'rō-tēz), *n.* [NL., < Gr. *ξηρότης*, dryness, < *ξηρός*, dry.] In *med.*, a dry habit or disposition of the body.

xerotic (zē-rot'ik), *a.* [< *xerotes* + *-ic.*] Characterized by dryness; of the nature of or pertaining to xerotes or xerosis.

xerotribia (zē-rō-trib'i-ą), *n.* [NL., < Gr. *ξηροτριβία*, dry rubbing, < *ξηρός*, dry, + *τρίβειν*, rub.] Dry friction.

xerotripsis (zē-rō-trip'sis), *n.* [NL., < Gr. *ξηρός*, dry, + *τρῖψις*, rubbing, < *τρίβειν*, rub.] Same as *xerotribia*.

Xerus (zē'rus), *n.* [NL. (Hemprich and Ehrenberg), so called from the character of the fur; < Gr. *ξηρός*, dry.] A genus of African ground-squirrels, having dry, harsh fur, which in some cases is bristly and even spiny. They are of more or less terrestrial and fossorial habits, like spermophiles. The species are few. The best-known is *X. rutilans*, 11 inches long, the tail 9 more, and of a reddish-yellow color above, paler or whitish below. The red-footed is *X. erythropus*.

African Ground-squirrel (*Xerus rutilans*).

Xestia (zes'ti-ą), *n.* [NL. (Hübner, 1816), < Gr. *ξεστός*, smooth, smoothed by scraping, < *ξέειν*, scrape.] **1.** A genus of noctuid moths, of the family *Orthosiidæ*. Three species are known, two from Europe and one from North America. —**2.** A genus of coleopterous insects, of the family *Cerambycidæ*, named by Serville in 1834. About a dozen species are known, all South American.

Xestobium (zes-tō'bi-um), *n.* [NL. (Motschulsky, 1845), < Gr. *ξεστός*, smooth, dry, + *βιοῦν*, live.] A genus of bark-boring beetles, of the family *Ptinidæ*, having the prosternum very short and the tarsi broad. Three species are described from Europe, and three from North America. *X. affine* breeds in dead maple-stumps in the United States.

xi (zī), *n.* The Greek letter Ξ, *ξ*, corresponding to the English *x* and *z*.

Ximenia (zī-mē'ni-ą), *n.* [NL. (Plumier, 1703), named after Francisco *Ximenes*, a Spanish naturalist, who wrote in 1615 on medicinal plants.] A genus of plants, of the family *Olacaceæ*, type of the tribe *Ximenieæ*. Characterized by flowers with the calyx persistent unchanged, the petals inwardly bearded, the stamens in number more than double the petals and each bearing an oblong or linear anther. There are 5 species, natives chiefly of the tropics, one widely dispersed through both the Old and New Worlds, one Polynesian, and one South African. They are shrubs or trees, smooth or tomentose, often armed with spinescent branches. They bear alternate entire leaves, often in clusters. The flowers are whitish, larger than in most of the order, and arranged in short axillary cymes. *X. Americana*, a native of the West Indies, Florida, and Mexico, is known as *tallow-nut* (which see), in Florida as *hog-plum* and *wild lime*, and in the West Indies as *mountain-plum*, *seaside plum*, and *false sandalwood*.

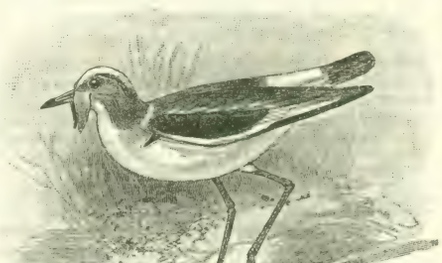
Xiphiadidæ (zif-i-ad'i-dē), *n. pl.* See *Xiphiidæ*[2].

Xiphianæ (zif-i-ā'nē), *n. pl.* See *Xiphiidæ*[2].

Xiphias (zif'i-as), *n.* [NL. (Linnæus, 1748), < L. *xiphias*, < Gr. *ξιφίας*, a swordfish, a sort of comet, < *ξίφος*, sword.] **1.** The typical genus of *Xiphiidæ*, now restricted to swordfishes without teeth or ventral fins, and thus exclusive of the sailfishes and spear-fishes (*Istiophorus* and *Tetrapturus*). The dorsal fins are two, the first high and falcate, and the second very small and situated on the tail, opposite the small second anal. In younger individuals, however, teeth are present, and the two dorsals are connected, so that the banner is more like that of a sailfish. The first anal resembles the first dorsal, but is smaller and less falcate; the pectorals are moderate and falcate. The caudal keel is single; the skin is rough and naked, or in the young has rudimentary scales. *X. gladius* is the common swordfish, widely dispersed in both Atlantic and Pacific Oceans, attaining a weight of 300 or 400 pounds, with the sword a yard long. It is dark-bluish above, dusky below, with the sword blackish on top.

2. In *astron.*: (*a*) A constellation made by Petrus Theodori in the fifteenth century, in the south pole of the ecliptic, and now named *Dorado*. (*b*) [*l. c.*] In older authors, a sword-shaped comet.

Xiphicera (zī-fis'ę-rą), *n.* [NL. (Latreille, 1825), < Gr. *ξίφος*, sword, + *κέρας*, horn.] A genus of orthopterous insects, of the family *Acridiidæ*, or forming a family *Xiphiceridæ*. They are very large strong grasshoppers with crested pronotum and ensiform antennæ. About 25 species have been described, mainly from South America. Others are found in Mexico, the West Indies, Australia, Java, China, and Corea. Also *Xiphocera* (Burmeister, 1838).



Xiphiceridæ (zif-i-ser'i-dē), *n. pl.* [NL. (S. H. Scudder, as *Xiphoceridæ*), < *Xiphicera* + *-idæ.*] A family of short-horned grasshoppers, founded on the genus *Xiphicera*, and containing some half-dozen genera of large tropical and subtropical forms.

Xiphidion (zī-fid'i-on), *n.* [NL. (Serville, 1831), also *Xiphidium* (Agassiz, 1846), erroneously *Xyphidium* (Fieber, 1854); < Gr. *ξιφίδιον*, dim. of *ξίφος*, sword.] **1.** In *entom.*, a genus of orthopterous insects, of the family *Locustidæ*, synonymous in part with *Orchelimum*. They are slender long-horned grasshoppers which lay their eggs in the pith of plants, thus sometimes damaging cereals, especially maize.

2. In *ichth.*, a genus of blennioid fishes: so called by Girard in 1859. Being preoccupied in entomology, the name has been changed to *Xiphister* (which see).

Xiphidiontidæ (zī-fid-i-on'ti-dē), *n. pl.* [NL., irreg. < *Xiphidion* + *-idæ.*] A family of fishes, the gunnels or gunnel-fishes: same as *Pholididæ*. See *rock-eel*.

Xiphidiopterus (zī-fid-i-op'te-rus), *n.* [NL. (Reichenbach, 1853), < Gr. *ξιφίδιον*, dim. of *ξίφος*, sword, + *πτερόν*, wing.] A genus of spur-winged plovers, of which the West African *X. albiceps* is the type. It is a remarkable bird, being the only one of these plovers presenting the combination of wattles and spurs and only three toes (see *spur-winged*); in consequence, it has been placed in five different genera.

White-crowned Lapwing (*Xiphidiopterus albiceps*).

It is known as the *black-shouldered* and *white-crowned lapwing*, and these color-marks are quite distinctive. It is a very rare bird, originally described by Gould from the Niger.

Xiphidiorhynchus (zī-fid″i-ō-ring'kus), *n.* [NL. (Reichenbach, 1845), < Gr. *ξιφίδιον*, dim. of *ξίφος*, sword, + *ῥύγχος*, snout.] An Australian genus of wading birds, resembling both stilts and avosets. The species is *X. pectoralis*. See *stilt*, *n.*, 6. Also called *Leptorhynchus* and *Cladorhynchus*.

Xiphidium (zī-fid'i-um), *n.* [NL., < Gr. *ξιφίδιον*, dim. of *ξίφος*, sword.] Same as *Xiphidion*, 1.

xiphihumeralis (zif-i-hū-mę-rā'lis), *n.*; pl. *xiphihumerales* (-lez). [NL. (sc. *musculus*), < *xiph(oid)* + *humerus.*] A muscle which in some animals passes from the xiphoid cartilage to the proximal end of the humerus.

Xiphiidæ[1] (zi-fī'i-dē), *n. pl.* In *mammal.* See *Ziphiidæ*.

Xiphiidæ[2] (zi-fī'i-dē), *n. pl.* [NL., < *Xiphias* + *-idæ.*] A family of fishes, typified by the genus *Xiphias;* the swordfishes. It has included forms now placed in *Istiophoridæ*. Exclusive of these, it is the same as *Xiphiinæ*. Also *Xiphioidæ*, *Xiphioides*, *Xiphiiformes*, *Xiphiadidæ*, and *Xiphianæ*. See cut under *swordfish*.

xiphiiform (zif'i-i-fôrm), *a.* Same as *xiphioid*[2].

Xiphiiformes (zif″i-i-fôr'mēz), *n. pl.* [NL., < *Xiphias* + L. *forma*, form.] Same as *Xiphiidæ*[2].

Xiphiinæ (zif-i-ī'nē), *n. pl.* [NL., < *Xiphias* + *-inæ.*] A subfamily of *Xiphiidæ*, represented by the true swordfishes alone, without teeth or ventral fins. See cut under *swordfish*.

xiphioid[1] (zif'i-oid), *a.* and *n.* In *mammal.* See *ziphioid*.

xiphioid[2] (zif'i-oid), *a.* and *n.* [< *Xiphias* + *-oid.*] **I.** *a.* Resembling the swordfish; related to the swordfish; belonging to the *Xiphiidæ*, or having their characters. Also *xiphiiform*.

II. *n.* A member of the family *Xiphiidæ*.

xiphiplastral (zif-i-plas'tral), *a.* [< *xiphiplastron* + *-al.*] Of the nature of, or pertaining to, the chelonian xiphiplastron. Also used substantively.

The imperfect left *xiphiplastral*.
Quart. Jour. Geol. Soc., XLV. 511.

xiphiplastron (zif-i-plas'tron), *n.*; pl. *xiphiplastra* (-trą). [NL., < Gr. *ξίφος*, a sword, + E. *plastron.*] The fourth lateral piece of the plastron of a turtle; one of the pair of terminal pieces of the plastron in *Chelonia*, called *xiphisternum* by some. See cuts under *plastron* and *Chelonia*.

Xiphister (zī-fis'tėr), *n.* [NL. (Jordan, 1879), < Gr. *ξιφιστήρ*, a sword-belt, < *ξίφος*, sword.] A genus of blennioid fishes, the type of which is the species called *Xiphidion mucosum* by Girard. This is found along the coast from Monterey to Alaska, reaching the length of 18 inches, and is abundant about tide-rocks, where it feeds on seaweeds. *X. rupestris* is a smaller but similar fish, found with the preceding; and a third member of the genus, of the same habitat and still smaller, is *X. chirus*.

Xiphisterinæ (zī-fis-te-rī'nē), *n. pl.* [NL., < *Xiphister* + *-inæ.*] In Jordan and Gilbert's classification, a subfamily of *Blenniidæ*, typified by the genus *Xiphister*.

xiphisternal (zif-i-stėr'nal), *a.* [< *xiphisternum* + *-al.*] **1.** In *anat.*, of the nature of the xiphisternum, or last sterneber of the sternum; pertaining to the xiphisternum; ensiform or xiphoid, as a cartilage or bone of the breast-bone.

Dissect out the *xiphisternal* cartilage of a recently-killed frog, and remove its membranous investment (perichondrium). *Huxley and Martin*, Elementary Biology, p. 128.

2. In *Chelonia*, xiphiplastral. See cuts under *Chelonia* and *plastron*.

xiphisternum (zif-i-stėr'num), *n.*; pl. *xiphisterna* (-nąą). [NL., prop. *xiphosternum*, < Gr. *ξίφος*, sword, + *στέρνον*, breast-bone.] **1.** The hindmost segment or division of the sternum, corresponding to the xiphoid appendage or ensiform cartilage of man. It is of various shapes in different animals, sometimes forked or double, there being a right and a left xiphisternum, as in some lizards. It succeeds the segment or segments called the *mesosternum*. See cuts under *mesosternum* and *sternum*.

2. The xiphiplastron of a turtle. See second cut under *Chelonia*.

Xiphiura (zif-i-ū'rą), *n. pl.* See *Xiphisura*.

Xiphius (zif'i-us), *n.* In *mammal.* See *Ziphius*.

Xiphocera, Xiphoceridæ. See *Xiphicera*, *Xiphiceridæ*.

Xiphocolaptes (zif″ō-kō-lap'tēz), *n.* [NL. (Lesson, 1840), < Gr. *ξίφος*, sword, + **κολαπτής*, taken for *κολαπτήρ*, a chisel: see *Dendrocolaptes*.] A genus of *Dendrocolaptidæ*, including some of the largest piculules, having the bill much compressed and moderately long (not half as long again as the tarsus). It includes about a dozen species of tropical America, averaging a foot long, which is large for this family, as *X. albicollis*, etc.

xiphodidymus (zif-ō-did'i-mus), *n.* [< Gr. *ξίφος*, sword, + *δίδυμος*, twin.] Same as *xiphopagus*.

Xiphodon (zif'ō-don), *n.* [NL. (Cuvier, 1822), < Gr. *ξίφος*, sword, + *ὀδούς* (*ὀδοντ-*) = E. *tooth.*] A genus of fossil artiodactyl mammals, of Eocene age and small size, now referred to the *Anoplotheriidæ*.

Xiphodontidæ (zif-ō-don'ti-dē), *n. pl.* [NL., < *Xiphodontus* + *-idæ.*] A family of anoplotherioid mammals, at one time recognized as composed of the 3 genera *Xiphodon*, *Cænotherium*, and *Microtherium*.

Xiphodontus (zif-ō-don'tus), *n.* [NL. (Westwood, 1838), < Gr. *ξίφος*, sword, + *ὀδούς* (*ὀδοντ-*) = E. *tooth.*] A genus of coleopterous insects, of the family *Lucanidæ*, having but one species, *X. antilope*, from South Africa, remarkable for its long sword-like mandibles.

xiphoid (zī'foid), *a.* and *n.* [< Gr. *ξιφοειδής*, sword-shaped, < *ξίφος*, sword, + *εἶδος*, form.] **I.** *a.* Shaped like or resembling a sword; ensiform.—**Xiphoid appendage, appendix,** or **cartilage,** the xiphisternum. See *cartilage*, and cuts under *mesosternum* and *sternum*. Also called *xiphoid process*.—**Xiphoid bone,** in *ornith.*, the occipital style of the cormorant and some related birds; a long sharp dagger-like or ensiform ossification in the nuchal ligament, attached to the occiput by its base, and pointing backward.

Yarrell designated the "occipital style" of Shufeldt as the *xiphoid bone*. *Science*, III. 404.

Xiphoid ligament, a small ligament connecting the ensiform cartilage or xiphisternum with the cartilage of the seventh rib on either side.—**Xiphoid process.** (*a*) In *anat.*, the ensiform appendage of the sternum; the xiphisternum. See cuts under *mesosternum* and *sternum*. (*b*) The telson of a crustacean, as the king-crab. See cut under *horseshoe-crab*.

II. *n.* The ensiform or xiphoid cartilage in man, or its representative in other animals. See *xiphisternum*, 1.

xiphoides (zī-foi′dēz), *n.* [NL.] In *anat.*, same as *xiphoid*.

xiphoidian (zī-foi′di-an), *a.* [< *xiphoid* + *-ian*.] In *anat.*, same as *xiphoid*.

xiphopagus (zī-fop′ą-gus), *n.*; pl. *xiphopagi* (-jī). [NL., < Gr. *ξίφος*, sword, + *πάγος*, that which is fixed or firmly set.] In *teratol.*, a double monster connected by a band extending from the ensiform cartilage to the umbilicus. The Siamese twins constituted a xiphopagus. Also *xiphodidymus*.

Xiphophorus (zī-fof′ō-rus), *n.* [NL. (Haeckel, 1848), < Gr. *ξιφοφόρος*, also *ξιφηφόρος*, bearing a sword, < *ξίφος*, sword, + *φέρειν* = E. *bear*[1].] In *ichth.*, a genus of cyprinoids, having in the male the lower rays of the caudal fin prolonged into a sword-shaped appendage, sometimes as long as all the rest of the fish. The anal fin of the male is also modified into an intromittent organ, having one or two enlarged rays with hook-like processes. A curious fish of this genus is *X. helleri* of Mexico.

xiphophyllous (zif-ō-fil′us), *a.* [< Gr. *ξίφος*, sword, + *φύλλον*, leaf.] In *bot.*, having ensiform leaves.

Xiphorhamphus (zif-ō-ram′fus), *n.* [NL. (Blyth, 1843), < Gr. *ξίφος*, sword, + *ῥάμφος*, beak.] **1.** A genus of timeliine birds of the eastern Himalayas. *X. superciliaris*, the only species, is 7½ inches long. The general color above is olivaceous-brown; over the eye is a white streak, but most of the plumage is of sober shades of ashy and rufous. See *Xiphorhynchus*, 2.

2. A genus of fishes. *Müller and Troschel*, 1844.

Xiphorhynchus (zif-ō-ring′kus), *n.* [NL. (Swainson, 1827, also *Ziphorhynchus*, 1837), < Gr. *ξίφος*, sword, + *ῥύγχος*, snout.] **1.** A genus of South American dendrocolaptine birds, named from the long, thin, and much-curved bill; the saberbills, as *X. procurvus*. This tree-creeper is 10 inches long, and mainly of a fulvous color, the head blackish with pale shaft-spots. The genus ranges from Costa Rica to southern Brazil and Bolivia, and contains 4 other species—*X. trochilirostris*, *X. lafresnayanus*, *X. pusillus*, and *X. pucherani*. In the last-named the bill is shorter and less curved, and there is no such white spot under the eye as all the rest have. See cut under *saberbill*.

2. A different genus of birds, named by Blyth in 1842 in the form *Xiphirhynchus*, and changed by him in 1843 to *Xiphorhamphus*.—**3.** A genus of *Dryophidæ*, or wood-snakes: so called from the acute appendage of the snout. *X. langaha* is the langaha of Madagascar. (See cut under *langaha*.) This genus was named by Wagler in 1830, but the name is preoccupied in ornithology.

4. A genus of fishes. *Agassiz*, 1829.

Xiphosoma (zif-ō-sō′mą), *n.* [NL. (Spix), < Gr. *ξίφος*, a sword, + *σῶμα*, body.] A genus of large serpents, of the family *Boidæ*, or boas. *X. caninum* is the dog-headed boa of South America.

xiphosternum (zif-ō-stėr′num), *n.* Same as *xiphisternum*. [Rare.]

Xiphosura (zif-ō-sū′rą), *n. pl.* [NL., irreg. < Gr. *ξίφος*, sword, + *οὐρά*, tail.] Same as *Xiphisura*: in this form, in Lankester's classification, brought under *Arachnida* as one of three orders (the other two being *Eurypterina* and *Trilobitæ*) brigaded under the name *Delobranchia*.

xiphosuran (zif-ō-sū′ran), *a.* and *n.* [< *Xiphosura* + *-an*.] **I.** *a.* Of or pertaining to the *Xiphosura*, as a horseshoe-crab.

II. *n.* A member of the group *Xiphosura*; a xiphosure.

xiphosure (zif′ō-sūr), *n.* One of the *Xiphosura*, as a horseshoe-crab.

xiphosurous (zif-ō-sū′rus), *a.* [< *Xiphosura* + *-ous*.] Same as *xiphosuran*.

Xiphoteuthis (zif-ō-tū′this), *n.* [NL., < Gr. *ξίφος*, sword, + *τευθίς*, squid.] A genus of belemnites, characterized by a very long, narrow, deeply chambered phragmacone. Only a single species is known, from the Lias. See *Belemnitidæ*.

Xiphotrygon (zif-ō-trī′gon), *n.* [NL. (Cope, 1879), < Gr. *ξίφος*, sword, + *τρυγών*, a sting-ray.] In *ichth.*, a genus of elasmobranchiate fishes, of the family *Dasyatidæ*.

Xiphura (zī-fū′rą), *n. pl.* The more proper form of *Xiphisura*.

xiphurous (zī-fū′rus), *a.* [< Gr. *ξίφος*, sword, + *οὐρά*, tail.] Having a long sharp telson like a dagger, as the king-crab; of or pertaining to the *Xiphosura* or *Xiphura*; xiphosuran. See cut under *horseshoe-crab*.

Xiphydria (zī-fid′ri-ą), *n.* [NL. (Latreille, 1802), < Gr. *ξιφύδριον*, a kind of shell-fish, < *ξίφος*, sword.] In *entom.*, a notable genus of hymenopterous insects, of the family *Uroceridæ*, or typical of a family *Xiphydriidæ*, having the ovipositor con-

White-horned Camel-wasp (*Xiphydria albicornis*), female, twice natural size.

siderably exserted, the neck elongate, and certain peculiar venational characters. Ten North American and three European species are known. *X. camelus* and *X. dromedarius* are British species, known as *camel-wasps* from their long neck. The white-horned camel-wasp is *X. albicornis*. They are found commonly in willows and hedges. Also *Xyphydria*, *Xyphidria*.

Xiphydriidæ (zif-i-drī′i-dē), *n. pl.* [NL., also *Xiphydriadæ* (Leach, 1819), *Xiphydrida*, *Xyphydriites*, etc.; < *Xiphydria* + *-idæ*.] A family of hymenopterous insects, named from the genus *Xiphydria*, now merged in *Uroceridæ*.

Xirichthys (zī-rik′this), *n.* Same as *Xyrichthys*. *De Kay*, 1842.

X-leg (eks′leg), *n.* Knock-knee. [Rare.]

Xmas. See *X*, 3.

xoanon (zō′ą-non), *n.*; pl. *xoana* (-nąą). [< Gr. *ξόανον*, a carved image, < *ξέειν*, scrape, carve, especially in wood.] In *anc. Gr. art*, a work of sculpture of the most ancient and primitive class, rudely formed in wood, the eyes being generally represented closed, and the limbs, when indicated at all, extended stiffly. The examples of these statues, representing deities, which were preserved in Greek historic times, were looked upon with much veneration as divine gifts fallen from heaven; they were usually cloaked with precious stuffs and rich embroideries. No specimen survives, but representations of these old works are found on painted vases. The term is sometimes applied attributively to primitive statues in stone advanced but little beyond the wooden prototypes, as the *xoanon* statue discovered by the French in Delos. See cut under *palladium*.

Xolmis (zol′mis), *n.* [NL. (Boie, 1828); also *Xolmus* (Swainson).] A genus of South American tyrant-flycatchers: a synonym both of *Tæniоptera* and of *Fluvicola*.

xonaltite (zō-nal′tīt), *n.* [< *Xonalta* (see def.) + *-ite*[2].] In *mineral.*, a hydrous silicate of calcium, occurring in massive form of a white or bluish-gray color.

Xorides (zor′i-dēz), *n.* [NL. (Latreille, 1809).] A genus of hymenopterous parasites, of the ichneumonid subfamily *Pimplinæ*, or giving name to an unused family *Xorididæ*, having the face narrowed, the cheeks tuberculate behind the eyes, and the tibiæ and tarsi long and slender. The species are peculiar to northern regions, 6 having been described from northern Europe, including 1 from Lapland, and 4 from British America.

Xorididæ† (zō-rid′i-dē), *n. pl.* [NL., < *Xorides* + *-idæ*.] A family of hymenopterous insects, named by Shuckard in 1840 from the genus *Xorides*, but now included in *Ichneumonidæ*. It has not even subfamily rank, its characters being shared ★by a number of genera of *Pimplinæ*.

X-ray. See *ray*.

XX, XXX. Symbols noting ale of certain qualities or degrees of strength, derived originally from marks on the brewers' casks.

Xya (zī′ą), *n.* [NL. (Latreille, 1809), < Gr. *ξύειν*, scrape, smooth, polish.] A genus of mole-crickets, of the orthopterous family *Gryllidæ*, having filiform ten-jointed antennæ and fossorial front legs. The species are mainly tropical; but one is European and one (*X. apicalis*) is North American. Also called *Tridactylus* and *Rhipipteryx*.

Xyela (zī-ē′lą), *n.* [NL. (Dalman, 1819), < Gr. *ξυήλη*, a plane or rasp, < *ξύειν*, scrape.] A genus of saw-flies, of the hymenopterous family *Tenthredinidæ*, giving name to the subfamily *Xyelinæ*, and having the fourth and following joints of the antennæ long, slender, and filiform. The species are small and have a remarkably long ovipositor. Six North American and seven European species are known. The generic name is a synonym of *Pinicola* (Brébisson, 1818).

Xyelinæ (zī-e-lī′nē), *n. pl.* [NL., < *Xyela* + *-inæ*.] A subfamily of the hymenopterous family *Tenthredinidæ*, founded on the genus *Xyela*, and having the antennæ nine- to thirteen-jointed, irregular, third joint very long, anterior wings with three marginal and four submarginal cells, and ovipositor long. Also *Xyelidæ*, *Xyelides*, *Xyelites*.

xylanthrax (zī-lan′thraks), *n.* [NL., < Gr. *ξύλον*, wood, + *ἄνθραξ*, coal.] Woodcoal: in distinction from *lithanthrax*.

Xyleborus (zī-leb′ō-rus), *n.* [NL. (Eichoff, 1864), < Gr. *ξυληβόρος*, eating wood, < *ξύλον*, wood, + *βορός*, devouring.] A notable genus of bark-boring beetles, of the family *Scolytidæ*, having the antennal funicle five-jointed, the club subglobose and subannulate, the tarsi with the first three joints subequal and simple, and the tibiæ with the outer edge curved and finely serrate. About 75 species are known, of which 14 inhabit North America. *X. dispar* is common to Europe and North America. It is known in the United States and Canada as the *pin-borer*, *shot-borer*, and *pear-blight beetle*. See these words, and cuts under *pin-borer* and *wood-engraver*.

xylem (zī′lem), *n.* [Irreg. < Gr. *ξύλον*, wood.] In *bot.*, that part of a fibrovascular bundle which contains ducts or tracheids—that is, the woody part. It conducts the sap upward and usually forms the inner face of the bundle. Compare *phloëm*, *protoxylem*, *leptoxylem*.

xylene (zī′lēn), *n.* [< Gr. *ξύλον*, wood, + *-ene*.] Any one of the three metameric dimethyl benzenes $C_6H_4(CH_3)_2$. They are volatile, inflammable liquids obtained from wood-spirit and from coal-tar. Also *xylol* (German).

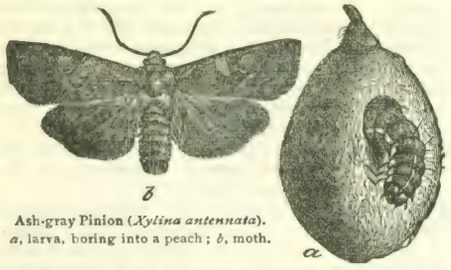
Xylestia (zī-les′ti-ą), *n.* [NL. (Clemens, 1859), < Gr. *ξύλον*, wood, + *ἐσθίειν*, eat.] A peculiar genus of North American tineid moths, allied to *Ochsenheimeria* and *Hapsifera* of the European fauna. *X. pruniramiella*, the type, feeds as a larva upon the black-knot of the plum (*Sphæria morbosa*), and upon the bark of dead or dying locust-trees.

Xyletinus (zil-e-tī′nus), *n.* [NL. (Latreille, 1829), irreg. < Gr. *ξύλον*, wood, + NL. *Ptinus*, q. v.] A genus of coleopterous insects, of the family *Ptinidæ*, comprising about 30 species, and very widely distributed. The elytra are striate and the antennæ serrate with joints nine to eleven, not elongate. Seven species occur in North America, as *X. pubescens*.

Xyleutes (zī-lū′tēz), *n.* [NL. (Hübner, 1816), < Gr. *ξυλεύς*, a wood-cutter, < *ξύλον*, wood.] A

Xyleutes (*Prionoxystus*) *robiniæ*, female, natural size.

genus of moths, of the family *Cossidæ*. *X.* (*Prionoxystus*) *robiniæ* is a common locust-borer of the United States. See *carpenter-moth*.



xylharmonica (zil-här-mon′i-ką), *n.* [< Gr. *ξύλον*, wood, + E. *harmonica*.] An enlarged and improved form of the xylosistron (which see).

Xylia (zil′i-ą), *n.* [NL. (Bentham, 1842), so called from the woody pod; < Gr. *ξύλον*, wood.] A genus of leguminous trees, of the family *Mimosaceæ*. It is characterized by a broadly falcate compressed woody two-valved pod with transverse obovate seeds. The three species are natives of tropical Asia and Madagascar. *Xylia xylocarpa* is a tall tree of tropical Asia, producing a hard wood and bearing bipinnate leaves of only two pinnæ, these with four or five pairs of large leaflets and an odd one. The small pale-green flowers are condensed into globose heads which form terminal racemes or axillary clusters. It is known as the *ironwood of Pegu*, ★or by its Burmese name, *pyengadu* (which see).

xylidine (zil′i-din), *n.* Dimethylamino-benzene.

Xylina (zil′i-nąą), *n.* [NL. (Treitschke, 1826), < Gr. *ξύλινος*, of wood, < *ξύλον*, wood.] A genus of noctuid moths, giving name to the *Xylinidæ*, and having the male antennæ simple, the proboscis short, the body robust, and the fore wings rounded at the apex. The larvæ usually live on trees, and the pupæ are subterranean. The genus is represented in all parts of the world, and the species number about 50,

of which 8 are European and about 20 North American. *X. antennata*, of the United States, is called the *ash-gray pinion*, and its larva bores into green apples and peaches,

Ash-gray Pinion (*Xylina antennata*).
a, larva, boring into a peach; *b*, moth.

and feeds upon the foliage of various trees. Three of the British species are fancifully named respectively the conformist, *X. furcifera* (*X. conformis*), the nonconformist, *X. lambda*, and the gray shoulder-knot, *X. ornithopus*.

Xylinidæ (zī-lin'i-dē), *n. pl.* [NL. (Guenée, 1852), ‹ *Xylina* + *-idæ*.] A family of noctuids, named from the genus *Xylina*, many of which are known as *shark-moths*. They have the antennæ almost always simple, well-developed palpi, thorax robust, wings oblong, with longitudinal markings, and somewhat plicated when at rest, giving the insect an elongated appearance. The family includes about 20 genera.

xylobalsamum (zī-lō-bal'sa-mum), *n.* [‹ L. *xylobalsamum*, ‹ Gr. *ξυλοβάλσαμον*, the wood of the balsam-tree, ‹ *ξύλον*, wood, + *βάλσαμον*, balsam.] 1. The wood, or particularly the dried twigs, of the balm-of-Gilead tree, *Balsamea Opobalsamum*. The wood is heavy, pinkish, and fragrant. A decoction of it, as also of the fruit (*carpobalsamum*), is given in the East as a carminative, etc. 2. The balsam obtained by decoction from this wood.

Xylobius (zī-lō'bi-us), *n.* [NL., ‹ Gr. *ξύλον*, wood, + *βίος*, life.] 1. A genus of beetles, of the family *Eucnemidæ*, named by Latreille in 1834, and containing two European species. Also called *Xylophilus*. — 2. A genus of fossil chilopod myriapods. *Dawson*, 1859.

xylocarp (zī'lō-kärp), *n.* [‹ Gr. *ξύλον*, wood, + *καρπός*, fruit.] In *bot.*, a hard and woody fruit.

xylocarpous (zī-lō-kär'pus), *a.* [As *xylocarp* + *-ous*.] Having fruit which becomes hard or woody.

xylochlore (zī'lō-klōr), *n.* [‹ Gr. *ξύλον*, wood, + *χλωρός*, greenish-yellow.] An olive-green crystalline mineral, closely resembling apophyllite, if not a variety of it.

Xylocopa (zī-lok'ō-pä), *n.* [NL. (Latreille, 1802), ‹ Gr. *ξύλον*, wood, + *-κοπος*, ‹ *κόπτειν*, cut.] An extensive genus of solitary bees, containing many of those large species known as *carpenter-bees*. They resemble bumblebees, from which they differ in having the abdomen usually naked, and in important venational characters. Their burrows

Virginian Carpenter-bee (*Xylocopa virginica*).
e, hind tarsus of female carpenter-bee; *c*, hind tarsus of bumblebee.

are formed in solid wood, and their cells are separated by partitions usually made of agglutinated sawdust, and provisioned with pollen upon which the larvæ feed. *X. violacea* is the common European species, and *X. virginica* the common one in the United States. See also *carpenter-bee* (with cut).

Xylocopus (zī-lok'ō-pus), *n.* [NL. (Cabanis, 1863), ‹ Gr. *ξύλον*, wood, + *-κοπος*, ‹ *κόπτειν*, cut.] A genus of woodpeckers, such as *Picus minor* and *P. major*, respectively the lesser and greater spotted woodpeckers of Europe · generally considered a synonym of *Picus* proper. See *Dendrocopus*, 2, and cut under *Picus*.

xylogen (zī'lō-jen), *n.* [‹ Gr. *ξύλον*, wood, + *-γενης*, producing.] 1. Same as *lignin*. — 2. Wood or xylem in a formative state.

xylograph (zī'lō-gràf), *n.* [‹ Gr. *ξύλον*, wood, + *γράφειν*, engrave, write.] 1. (*a*) An engraving on wood. (*b*) An impression or print from a wood-block. In both senses the term is most commonly applied to old work, especially to that of the very earliest period. — 2. A mechanical copy of the grain of wood, executed by a method of nature-printing, and used as a surface decoration. The wood to be copied is treated chemically so that the grain remains in relief and serves to give an impression in a suitable pigment.

xylographer (zī-log'ra-fėr), *n.* [‹ *xylograph-y* + *-er*[1].] An engraver on wood, especially one of the earliest wood-engravers, as of the fifteenth century.

xylographic (zī-lō-graf'ik), *a.* [‹ *xylograph-y* + *-ic*.] Of or pertaining to xylography; cut in or on wood.

Some of these changes of form, otherwise inexplicable, since they are from simpler and easier forms to others more complicated and seemingly more difficult, can be readily accounted for by the fact that the runes were essentially a *xylographic* script.
Isaac Taylor, The Alphabet, II. 221.

xylographical (zī-lō-graf'i-kal), *a.* [‹ *xylographic* + *-al*.] Same as *xylographic*.

Xylographus (zī-log'ra-fus), *n.* [NL. (Dejean, 1834): see *xylograph*.] A genus of coleopterous insects of the family *Cioidæ*, distinguished mainly by the structure of the legs. About a dozen species are known, most of which are South American. Two, however, are from southern Europe, one is from Algeria, and one from Madagascar.

xylography (zī-log'ra-fi), *n.* [= F. *xylographie*; ‹ Gr. *ξύλον*, wood, + *-γραφία*, ‹ *γράφειν*, engrave, write. Cf. *ξυλογραφεῖν*, write on wood.] 1. Engraving on wood: a word used only by bibliographers, and chiefly for the woodcut work of the fifteenth century. — 2. A process of decorative painting on wood. A selected pattern or design is drawn on wood and is then engraved, or the design is reproduced on zinc by the ordinary method. An electrotype cast is taken from the woodcut or zinc plate, and smooth surfaces of wood are printed from the electrotype, under a regulated pressure, with pigments prepared for the purpose. The color penetrates the wood, leaving no outside film, and after being French polished, or covered with a fluid enamel, the wood may be washed, scrubbed, or even sandpapered without destroying the pattern. *Ure*.

xyloid (zī'loid), *a.* [‹ Gr. *ξυλοειδής*, like wood, ‹ *ξύλον*, wood, + *εἶδος*, form.] Woody; of the nature of, resembling, or pertaining to xylem or wood; ligneous.

xyloidine (zī-loi'din), *n.* [As *xyloid* + *-ine*[2].] An explosive compound produced by the action of strong nitric acid upon starch or woody fiber. It somewhat resembles guncotton in its nature. Also called *xylidine*.

xylol, xylole (zī'lol, zī'lōl), *n.* [‹ Gr. *ξύλον*, wood, + L. *oleum*, oil.] Same as *xylene*.

xyloma (zī-lō'mä), *n.*; pl. *xylomata* (-ma-tä). [NL., ‹ Gr. *ξύλον*, wood, + *-oma*.] In *bot.*, a scleriotoid body in certain fungi which produces sporogenous structures in its interior.

Xylomelum (zī-lō-mē'lum), *n.* [NL. (Smith, 1798), so called from the woody apple-like fruit; ‹ Gr. *ξύλον*, wood, + *μῆλον*, apple.] A genus of dicotyledonous plants, of the family *Proteaceæ* and tribe *Grevillieæ*. It is characterized by opposite leaves, densely spicate flowers, an ovary with two ovules laterally affixed, and a hard, nearly indehiscent, somewhat ovoid fruit. The 4 species are all Australian. They are trees or tall shrubs, with opposite entire or spiny-toothed leaves. The flowers are of medium size, sessile in pairs under the bracts of a dense spike, which is commonly perfect below, but in the upper part sterile. The spikes are opposite or axillary, or crowded into a terminal cluster which finally becomes lateral. *X. pyriforme*, the wooden-pear tree of New South Wales, is remarkable for its fruit, which is exactly like a common pear in size and shape, but attached by the broad end and composed of a hard woody substance difficult to cut; when ripe it splits lengthwise, discharging a flat winged seed. The tree grows from 20 to 40 feet high, 6 to 8 inches in diameter, producing a dark-reddish wood.

Xylomiges (zī-lom'i-jēz), *n.* [NL. (Guenée, 1852, as *Xylomyges*), ‹ Gr. *ξυλομιγής*, mixed with wood, ‹ *ξύλον*, wood, + *μιγνύναι*, mix.] A genus of noctuid moths, of the family *Apamidæ*, comprising species of moderate size, robust body, short proboscis, and palpi hardly reaching above the head. The genus is wide-spread, but contains comparatively few species, of which 15 inhabit the United States. See *silver-cloud*.

xylonite (zī'lō-nīt), *n.* [Irreg. ‹ Gr. *ξύλον*, wood, + *-ite*.] Same as *celluloid*.

Xylonomus (zī-lon'ō-mus), *n.* [NL. (Gravenhorst, 1829), ‹ Gr. *ξύλον*, wood, + *νέμειν*, graze, feed.] An important genus of hymenopterous parasites, of the ichneumonid subfamily *Pimplinæ*, having very long legs and antennæ, and the marginal cell of the fore wing extending nearly to the apex of the wing. The species are rather large, are wide-spread, and are parasitic upon the larvæ of the larger wood-boring beetles, such as the *Cerambycidæ*; 20 are known in Europe, and 14 have been described from the United States.

xylopal (zī-lō'pal), *n.* [‹ Gr. *ξύλον*, wood, + *ὀπάλλιος*, opal.] Same as *wood-opal*.

Xylophaga[1] (zī-lof'a-gä), *n.* [NL. (Turton, 1822), ‹ Gr. *ξυλοφάγος*, wood-eating, ‹ *ξύλον*, wood, + *φαγεῖν*, eat.] 1. A genus of boring bivalves, of the family *Pholadidæ*, as *X. dorsalis*. — 2. [*l. c.*] A member of this genus.

Xylophaga looks like a very short ship-worm, making burrows in floating wood, against the grain, about an inch long. *P. P. Carpenter*, Lectures on Mollusca (1861), p. 99.

Xylophaga[2] (zī-lof'a-gä), *n. pl.* [NL.: see *Xylophaga*[1].] 1. A series of *Hymenoptera ditrocha*, in Hartig's classification (1837), containing only the family *Uroceridæ*: distinguished from the *Phyllophaga* on the one hand and the *Parasitica* on the other. Compare these two words. — 2. A group of rhynchophorous insects. *Motschulsky*, 1845.

xylophagan (zī-lof'a-gan), *a.* and *n.* [‹ *Xylophaga* + *-an*.] I. *a.* In *entom.*, of or pertaining to the *Xylophaga*, in either sense.

II. *n.* A member of the *Xylophaga*, in either sense.

xylophage (zī'lō-fāj), *n.* [‹ *Xylophagus*.] A xylophagous insect. [Rare.]

Wood yellowish, . . . of a somewhat unequal coarse fiber, soon attacked by *xylophages*.
Kurz, Flora Brit. Burmah.

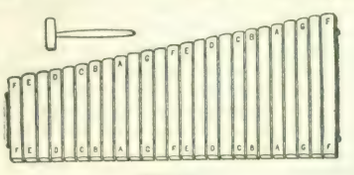
Xylophagi (zī-lof'a-jī), *n. pl.* [NL., pl. of *Xylophagus*, q. v.] 1. In Latreille's system of classification, the second family of his tetramerous *Coleoptera*, containing many forms now distributed among the *Bostrichidæ*, *Mycetophagidæ*, *Cioidæ*, *Lathridiidæ*, *Cucujidæ*, *Colydiidæ*, and *Trogositidæ*. — 2. In Meigen's classification, same as *Xylophagidæ*.

Xylophagidæ (zī-lō-faj'i-dē), *n. pl.* [NL. (Stephens, 1829), ‹ *Xylophagus* + *-idæ*.] A family of brachycerous dipterous insects, typified by the genus *Xylophagus*. They have the costal vein encompassing the entire wing, and the tibiæ spurred. Their larvæ live in dead and decaying wood, and the adults are found most commonly on tree-trunks in high places in the woods. About 60 species are known. Compare *Beridæ*.

xylophagous (zī-lof'a-gus), *a.* [‹ Gr. *ξυλοφάγος*, wood-eating, ‹ *ξύλον*, wood, + *φαγεῖν*, eat.] 1. Wood-eating; habitually feeding upon wood; lignivorous, as an insect. See *Cis* (with cut). — 2. Perforating and destroying as if eating timber, as a mollusk or a crustacean.

Xylophagus (zī-lof'a-gus), *n.* [NL. (Meigen, 1803): see *xylophagous*.] The typical genus of *Xylophagidæ*. The larvæ live in garden-mold or under the bark of decaying trees, and the adult flies are remarkable for their resemblance to certain hymenopterous insects. They are rather large, almost naked, blue or black in color, often with a broad brownish band on the abdomen. A dozen or more species are known, of which eight are North American. Also incorrectly *Xilophagus* (Latreille, 1829).

Xylophasia (zī-lō-fā'si-ä), *n.* [NL. (Stephens, 1829), ‹ Gr. *ξύλον*, wood, + *φάσις*, an appearance.] A genus of noctuid moths, of the family *Apamidæ*, allied to *Xylomiges*, but having the palpi reaching above the head. *X. hepatica* is the clouded brindle-moth. *X. polyodon* is the dark arches, expanding about 2 inches. Many of the species formerly included in this genus are now placed in *Hadena* and *Mamestra*.



xylophilan (zī-lof'i-lan), *n.* [‹ *Xylophili* + *-an*.] Any member of the *Xylophili*.

Xylophili (zī-lof'i-lī), *n. pl.* [NL. (Latreille, 1825), pl. of *Xylophilus*: see *xylophilous*.] A group of scarabæoid beetles, including several genera of the modern family *Scarabæidæ*: corresponding to the families *Dynastidæ* and *Rutelidæ* of Macleay.

xylophilous (zī-lof'i-lus), *a.* [‹ NL. *Xylophilus*, ‹ Gr. *ξύλον*, wood, + *φιλεῖν*, love.] Fond of wood, as an insect; living or feeding upon wood.

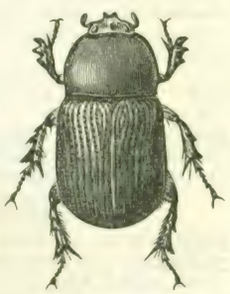
Xylophilus (zī-lof'i-lus), *n.* [NL. (Latreille, 1825): see *xylophilous*.] 1. A genus of small beetles, of the family *Anthicidæ*. It is represented in many parts of the world, and comprises more than 40 species, of which 16 are found in the United States, as *X. melsheimeri*, remarkable in that the males have flabellate antennæ. 2. Same as *Xylobius*, 1. *Mannerheim*.

xylophone (zī'lō-fōn), *n.* [‹ Gr. *ξύλον*, wood, + *φωνή*, voice.] A musical instrument consisting of a graduated series of wooden bars, often supported on bands of straw, and sounded by means

Xylophone.

of small wooden hammers or by rubbing with rosined gloves. The tone is often agreeable and effective. Also *gigelira*, *sticcada*, and *straw-fiddle*.

Xylopia (zī-lō′pi-ạ), *n.* [NL. (Linnæus, 1759), for **Xylopicros*, so called from the bitter wood; < Gr. *ξύλον*, wood, + *πικρός*, bitter.] A genus of plants, of the family *Anonaceæ*, type of the tribe *Xylopieæ*. It is characterized by flowers with a conical receptacle bearing externally numerous stamens with truncate anthers, in the center excavated and containing from one to five carpels, each with two to six ovules. There are about 60 species, natives of the tropics, chiefly in America, but with several in India and Africa. They are trees or shrubs with coriaceous and commonly two-ranked leaves. The flowers are solitary or clustered in the axils, and are nearly or quite sessile, each with six petals, the outer elongated, thick, boat-shaped, curving, erect, and almost meeting at the summit, surpassing the three inner petals. The fruit consists of oblong or elongated berries produced on a convex receptacle. *X. Æthiopica*, of western tropical Africa, is the source of African, negro, or Guinea pepper; it is a tree with pointed ovate leaves, and a fruit consisting of several dry black quill-like aromatic carpels about 2 inches long. These are sold in native markets as a stimulant and condiment, and were formerly imported into Europe, forming the *piper Æthiopicum* of old writers. For *X. polycarpa*, of tropical Africa, see *yellow dye-tree* (under *yellow*). From the pervasive flavor of their wood various American species are called *bitter-wood*, especially *X. glabra* in the West Indies and *X. frutescens* in Guiana. The fruit of *X. sericea* in Brazil serves as a spice, and its bark torn from the tree in ribbon-like strips is twisted into coarse cordage, and would be available for matting. *X. frutescens*, known in Brazil as *embira*, has similar uses. Several species have formerly been classed under the genera *Unona* and *Uvaria*.



Xylopieæ (zī-lō-pī′ē-ē), *n. pl.* [NL. (Endlicher, 1839), < *Xylopia* + *-eæ*.] A tribe of dicotyledonous choripetalous plants, of the family *Anonaceæ*. It is characterized by densely crowded stamens, and thick exterior petals which are connivent or scarcely open; the inner ones are included and smaller, and are sometimes minute or absent. It includes 14 genera, chiefly of tropical trees.

Xylopinus (zī-lō-pī′nus), *n.* [NL. (Le Conte, 1862), < Gr. *ξύλον*, wood, + *πεινᾶν*, be hungry.] A genus of tenebrionid beetles, peculiar to North America, having the antennæ slender with the distal joints triangular, the anterior tarsi of the male little dilated, and the anterior margin of the front not reflexed. Three species are known. They live under the bark of dead trees.

xylopyrography (zī″lō-pī-rog′rạ-fi), *n.* [NL., < Gr. *ξύλον*, wood, + *πῦρ*, fire, + *-γραφία*, < *γράφειν*, write.] Same as *poker-painting*.

xyloretine (zī-lō-rē′tin), *n.* [For **xylorrhetine*; < Gr. *ξύλον*, wood, + *ῥητίνη*, resin: see *resin*.] A subfossil resinous substance, found in connection with the pine-trunks of the peat-marshes of Holtegaard in Denmark.

Xyloryctes (zī-lō-rik′tēz), *n.* [NL. (Hope, 1837), < Gr. *ξύλον*, wood, + *ὀρύκτης*, a digger.] A peculiar genus of scarabæid beetles, having the head of the male armed with a long horn, and the female head tuberculate. The genus corresponds in the western hemisphere to the eastern *Oryctes*. *X. satyrus* is rather common in the eastern United States. Its larva is said to injure the roots of ash-trees.

Xyloryctes satyrus, female, natural size.

xylosistron (zī-lō-sis′-tron), *n.* [< Gr. *ξύλον*, wood, + *σεῖστρον*, sistrum: see *sistrum*.] A musical instrument, invented by Uthe in 1807, resembling Chladni's euphonium, but having wooden instead of glass rods. Compare *xylharmonica*.

xylostein (zī-los′tē-in), *n.* [< NL. *Xylosteum* (see def.) (< Gr. *ξύλον*, wood, + *ὀστέον*, bone) + *-in*2.] An indifferent bitter principle which has been isolated from the seeds of *Lonicera Xylosteum*, a species of honeysuckle.

Xylostroma (zī-lō-strō′mạ), *n.* [NL., < Gr. *ξύλον*, wood, + *στρῶμα*, anything spread or laid out.] A genus or form-genus of polyporoid fungi, which continues indefinitely, without fruiting, as a thick dense leathery sheet covering the wood upon which it lives.

xylostromatoid (zī-lō-strō′mạ-toid), *a.* [< NL. *Xylostroma*(*t-*) + *-oid*.] In *bot.*, resembling the genus or form-genus *Xylostroma*.

Xylota (zī-lō′tạ), *n.* [NL. (Meigen, 1822), < Gr. *ξύλον*, wood.] A large genus of syrphid flies, comprising medium-sized or large species, slender, with the abdomen more or less red, yellow, or metallic. More than 40 species are found in North America, and about 15 in Europe. The larvæ are found in decaying wood, and the adults frequent the foliage of bushes in blossom.

Xyloteles (zī-lot′e-lēz), *n.* [NL. (Newman, 1840), < Gr. *ξύλον*, wood, + *τέλος*, end.] A genus of Polynesian cerambycid beetles, comprising about a dozen species from New Zealand and the Philippines.

Xyloterus (zī-lot′ẹ-rus), *n.* [NL. (Erichson, 1836), < Gr. *ξύλον*, wood, + *τερεῖν*, bore.] **1.** A genus of bark-boring beetles, containing several very destructive species, as *X. bivittatus*, which seriously injures the spruce in North America. Five species occur in the United States.—**2.** A genus of horntails, comprising two European species. *Hartig*, 1837.

xylotile (zī′lō-tīl), *n.* [< Gr. *ξύλον*, wood, + *τίλος*, down.] A fibrous wood-brown mineral, probably an altered form of asbestos.

xylotomic (zī-lō-tom′ik), *a.* Of or pertaining to xylotomy.

xylotomist (zī-lot′ō-mist), *n.* One who is versed in or practises xylotomy.

xylotomous (zī-lot′ō-mus), *a.* [< Gr. *ξύλον*, wood, + *-τομος*, < *τέμνειν*, *ταμεῖν*, cut.] Wood-cutting, as an insect.

xylotomy (zī-lot′ō-mi), *n.* [< Gr. *ξύλον*, wood, + *-τομία*, < *τέμνειν*, *ταμεῖν*, cut.] The act or art of cutting sections of wood, as with the microtome, for microscopic examination.

> The United States Civil Service Commission announces an open competitive examination for assistant in *xylotomy* . . . on February 26, 1913.
>
> *Announcement of U. S. Civil Service Commission.*

Xylotrogi (zī-lō-trō′jī), *n. pl.* [NL., < Gr. *ξύλον*, wood, + *τρώγειν*, gnaw.] In Latreille's classification, a group of sericorn beetles, distinguished from the *Malacodermi* and *Sternoxi*.

Xylotrypes (zī-lō-trī′pēz), *n.* [NL. (Dejean, 1834, as *Xylotrupes*), < Gr. *ξύλον*, wood, + *τρυπᾶν*, bore.] A genus of very large lamellicorn beetles, related to *Dynastes*, as *X. gideon* of Malacca, which attacks the cocoanut. The cephalic horn of the males is always forked, and the thoracic horn sometimes bifid. About a dozen species are known, belonging mainly to the Australasian fauna.

Xyrichthys (zī-rik′this), *n.* [NL. (Cuvier and Valenciennes, 1839), also *Xirichthys*, *Zyrichthys*; < Gr. *ξυρόν*, a razor, + *ἰχθύς*, a fish.] In *ichth.*, a genus of brilliantly colored labroid fishes, of tropical seas, known as *razor-fishes*. *X. psittacus*, of the West Indies and Europe, is rose-red with a large blotch on each side below the pectorals.

Xyridaceæ (zī-ri-dā′sē-ē), *n. pl.* [NL. (Lindley, 1836), < *Xyris* (*-rid-*) + *-aceæ*.] A family of monocotyledonous plants of the order *Xyridales*, both family and order being typified by the genus *Xyris*. It is characterized by slightly irregular bisexual flowers, sessile and solitary under imbricated bracts in a terminal head. The perianth consists of three equal broad-spreading delicate corolla-lobes, and a single large petaloid caducous sepal which wraps around the corolla, or is in the tropical American genus *Abolboda* absent. There are about 48 species, belonging mostly to the genus *Xyris*, the others to *Abolboda*. They are usually perennials, growing in tufts in wet places, chiefly in warm countries. They resemble the sedges and rushes in habit, the *Baloskionaceæ* in the structure of their seeds, and the spiderworts in that of their ovules.

xyridaceous (zī-ri-dā′shius), *a.* Characterized like *Xyris*; belonging to the *Xyridaceæ*.

Xyrideæ (zī-rid′ē-ē), *n. pl.* [NL. (Salisbury, 1812), < *Xyris* (*Xyrid-*) + *-eæ*.] Same as *Xyridaceæ*.

Xyris (zī′ris), *n.* [NL. (Gronovius, 1737; earlier in Lobel, 1581), so called from the sharp-edged leaves; < Gr. *ξυρίς*, a species of *Iris*, perhaps *I. fœtidissima*, < *ξυρόν*, a razor, < *ξύειν*, scrape.] A genus of plants, type of the family *Xyridaceæ*. It is characterized by flowers with a broad petaloid sepal which is very caducous, and a style without any appendage. About 40 species are recognized by recent authors. They are tufted herbs, the stems usually flattish and two-edged, with linear rigid or grass-like leaves, and small globose or ovoid flower-heads with very closely imbricated rigid bracts. They are known as *yellow-eyed grass*, from the yellow petals; 20 species occur in the southern United States, mostly in sands and pine-barrens; 4 extend northward, of which *X. Caroliniana*, with a flattish scape, occurs from Massachusetts to Florida, and *X. flexuosa*, with a twisted scape, from Maine and Minnesota to Texas and Florida; *X. fimbriata* and *X. arenicola* occur in pine-barrens from New Jersey southward. The leaves and roots of *X. Indica* are used as a remedy against leprosy and the itch in India, as are also those of *X. Americana* in Guiana.

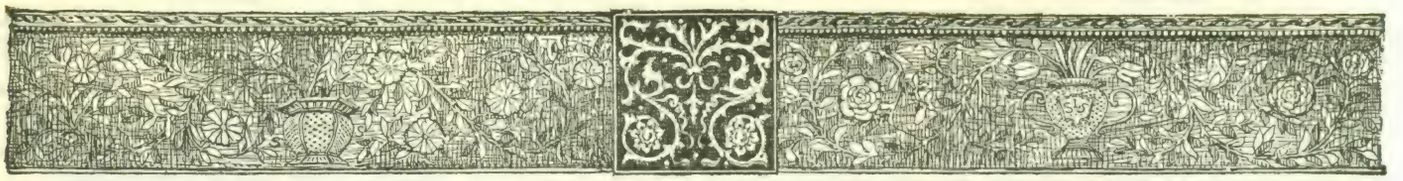
xyst (zist), *n.* [< L. *xystus*, also *xystum*, < Gr. *ξυστός*, a covered portico (so called from its polished floor), < *ξυστός*, scraped, smoothed, polished, < *ξύειν*, scrape, plane, smooth, polish.] In *anc. arch.*, a covered portico or open court, of great length in proportion to its width, in which athletes performed their exercises; or, in Roman villas, sometimes, a garden walk planted with trees. Also *xystos*, *xystus*.

Xysta (zis′tạ), *n.* [NL. (Meigen, 1824), < Gr. *ξυστός*: see *xyst*.] **1.** A genus of dipterous insects, belonging to the *Muscidæ calyptratæ* and subfamily *Phasiinæ*. They are medium-sized or small somewhat hairy flies of black or gray color, whose metamorphoses are not known. Few species have been described, of which but one is North American.

2. A genus of tenebrionid beetles, synonymous with *Elæodes* (Eschscholtz, 1829).

xystarch (zis′tärk), *n.* [< LL. *xystarches*, < Gr. *ξυστάρχης*, the director of a xyst, < *ξυστός*, a covered portico, xyst, + *ἄρχειν*, rule.] An Athenian officer who presided over the gymnastic exercises of the xyst.

xyster (zis′tėr), *n.* [< Gr. *ξυστήρ*, a scraping-tool, < *ξύειν*, scrape: see *xyst*.] **1.** A surgeons' instrument for scraping bones.—**2.** [*cap.*] [NL.] A genus of fishes. *Lacépède*.



Xysticus (zis′ti-kus), *n.* [NL. (Koch, 1835), < Gr. *ξυστικός*, of or for scraping, < *ξυστός*, scraped: see *xyst*.] A large genus of laterigrade spiders, of the family *Thomisidæ*. About 30 species are described from North America.

xystos (zis′tos), *n.* [NL. or L.: see *xyst*.] Same as *xyst*.

Xystrocera (zis-tros′ẹ-rạ), *n.* [NL. (Serville, 1834), < Gr. *ξύστρα*, a scraper, + *κέρας*, horn.] In *entom.*, a genus of tropical longicorn beetles of large size, and usually of a reddish-yellow color variegated with metallic green. About 30 species are known, nearly all from African and Australasian faunas.

Xystroplites (zis-trop-lī′tēz), *n.* [NL. (Jordan MSS., Cope, 1877), < Gr. *ξύστρα*, a scraper (< *ξύειν*, scrape), + *ὁπλίτης*, armed.] A genus of centrarchoid fishes, nearly equivalent to *Eupomotis*, with blunt pharyngeal teeth. A species found in Texas is called *Lepomis heros*.

xystus (zis′tus), *n.* **1.** Same as *xyst*.—**2.** [*cap.*] [NL.] A generic name variously applied to certain hymenopterous, coleopterous, and lepidopterous insects.

★**1.** The twenty-fifth letter in the English alphabet. It has both a vowel and a consonant value. The character (as was pointed out under *U*) is the finally established Greek form of the sign added by the Greeks next after *T* (which had been the last Phenician letter) to express the *oo* (ö)-sound; *U* and *V* are other forms of it, which have kept more nearly their original place and value. As a Greek vowel, *Y* underwent a phonetic change which made of it the equivalent of the present French *u*, German *ü*, a rounded *i*, or a blending of the *i*- and *u*-sounds; and in the first century B. C. it was added by the Romans to their alphabet (which had till then ended with *x*) to express this sound in the Greek words borrowed into their language. With the same value it passed also into Anglo-Saxon use; but its sound gradually changed to that of a pure or unrounded *i;* and then its further development into a sign for both vowel and consonant is analogous with the partial differentiation of *U* or *V* and *W* (see *W*). It differs from *w*, the other character having the double value of vowel and consonant, in being not only exchanged with *i* in diphthongs and vowel-digraphs — as *ai ay, ei ey, oi oy* — but also commonly used by itself as the vowel of a syllable, as in *by, deny, sylph, lying,* taking the place of *i* both at the end of a word (since no proper English word except the pronoun *I* is allowed to end with *i*) and elsewhere, and constantly exchanging with *i* and *ie* in the different inflectional forms of the same words: as, *pony, ponies; pretty, prettier; deny, denies, denied, denier;* and so on. In Anglo-Saxon *y* properly expressed the mixed sound *ü;* but it early began to interchange with *i*, and in Middle English the two became convertible, *y* being often substituted for *i* as being more legible, and as affording, especially at the end of a word, an opportunity for a calligraphic flourish. Hence its present prevalence at the end of words, while in the inflected forms the older *i* is retained, *families*, the plural of *familie*, remaining beside *family*, the flourished spelling, without the original final *e*, of *familie*. As a vowel-sign, *y* is a superfluity in our alphabet, signifying nothing which would not be just as well signified by *i*. The consonant *y* is really a different letter, representing the Middle English *ȝ*, the Anglo-Saxon *g*. The value is that of a semivowel, related to the *i*-sounds (*ī* and *ē*) precisely as *w* is related to the *u*-sounds (*ū* and *oo* or *ö*); if at all dwelt on or prolonged, it becomes an *ī* or *ē*. With this value it stands always before another vowel, as in *yam, ye, yield, you, Yule*. In very many words it is a matter of comparative indifference, and subject to constant variation in practice, whether an *i* before a vowel shall be pronounced as a vowel, making a separate syllable, or as *y*, combining into one syllable with its successor. In the respellings for pronunciation of this dictionary, such cases are often written with an *i* in the same syllable with the following vowel: examples are *cor-dial, fo-lio, fa-shient, e-ras-tian*. The semivowel *y*-sound is not only thus written with *y* and with *i* (sometimes also with *e*, as in the ending *-ceous*), but it is sounded without being written in a large class of words as the first element of what is called "long *u*" (that is, *yoo:* see *U*), as in *use, union:* and then, even when the *oo* (ö) part of the combination is reduced by slighting even to the neutral-vowel sound (*ŭ* or *u* or *ē*), the *y* remains: hence, *fig'yėr*, not *fig'ėr*, for *fig'ūr* (*fig'yör*). In all these varieties of designation, the semivowel *y*-sound is a much rarer element than the *w*-sound in English utterance, making but ⅔ of one per cent. of the latter, while the *w* is 2½ per cent. The character *y* in the archaic forms or abbreviations *ye, yat, yc, yt*, etc., is neither the Greek *y* nor the Anglo-Saxon *y* (*ȝ*), but a form of the Anglo-Saxon and Middle English þ, now written *th*, and is to be pronounced, of course, as *th*.

2. As a symbol: (*a*) In *chem.*, the symbol of *yttrium*. (*b*) In *ornith.*, in myological formulas, the symbol of the accessory semitendinosus. *A. H. Garrod.* (*c*) In *math.*: (1) [*l. c.*] In algebra, the second of the variables or unknown quantities. (2) [*l. c.*] In analytical geometry, the symbol of the ordinate or other rectilinear point-coördinate. (3) In mechanics, the component of a force in the direction of the axis of *y*. (*d*) As a medieval Roman numeral, the symbol for 150, and with a line drawn above it (Ȳ), 150,000.—**3.** [*l. c.*] An abbreviation of *year*.—**Yn function.** See *function*.

Y[2] (wī), *n.* [From the letter *Y*.] Something resembling the letter Y in shape. Specifically—(*a*) A forked clamp for holding drills or other tools. (*b*) One of the forked supports in the angle of which is placed either a telescope or one of the extremities of the axis about which a telescope or other instrument or apparatus turns. (*c*) Same as *Y-track*. (*d*) A two-way pipe or coupling used to unite a hot- and cold-water pipe in one discharge, as in a bath-tub; a Y-pipe or Y-cross. (*e*) In *entom.*, a Y-moth.

Y[3]†. An old mode of writing the pronoun *I*.

> For the hy sory nicht and day,
> *Y* may say, hay wayleway!
> *Y* luf the mar than mi lif. *Rel. Antiq.*, I. 145.

y-. See *i-*[1]. For Middle English words with this prefix, see *i-*, or the form without the prefix.

-y[1]. [Early mod. E. also *-ie, -ye;* < ME. *-y, -ie, -ye, -i, -iȝ,* < AS. *-ig* = D. *-ig* = OHG. *-ig, -ic,* MHG. *-ic, -ec,* G. *-ig* = Icel. *-igr, -ugr* = Sw. Dan. *-ig* = Goth. *-ags* (cf. L. *-ic-us* = Gr. *-ικ-ός*), an adj. suffix, as in AS. *stānig*, stony, *īsig*, icy, *deáwig*, dewy, etc. This suffix is often spelled *-ey*, especially when attached to a word ending in *-y*, as in *clayey, skyey*.] A very common suffix used to form adjectives from nouns, and sometimes from verbs, such adjectives denoting 'having,' 'covered with,' 'full of,' etc., the thing expressed by the noun, as in *stony, rocky, icy, watery, rainy, dewy, meaty, juicy, mealy, salty, peppery, powdery, flowery, spotty, speckly*, etc. It may be used with almost any noun, but is found chiefly with monosyllables, while examples of its use with trisyllables are rare.

-y[2]. [Also *-ie* (rarely *-ee*); < ME. *-ye, -ie* (rare); a dim. suffix, prob. due to a merging of the familiar adj. suffix *-y*[1], *-ie*[1], with the orig. fem. suffix *-ie*[3], *-y*[3], and perhaps in some cases with the D. dim. suffix *-je*, which is short for *-jen*, a later var. of *-ken* (see *-kin*).] A diminutive suffix, appearing chiefly in childish names of animals, etc., as *kitty, doggy, piggy, birdy, froggy, mousy*, and similar names, or familiar forms of personal names, as *Katy* or *Kitty* (diminutive of *Kate*), *Jenny, Hetty, Fanny, Willy, Johnny, Tommy*, etc., such names being often spelled with *-ie*, as *Willie, Davie*, etc., a spelling common in Scotch use, and also in general use in names of girls, as *Katie, Jennie, Hettie, Carrie, Lizzie, Nellie, Annie*, etc. Such names coincide in terminal form with some feminine names not actually diminutive, as *Mary, Lucy, Lily*, formerly and sometimes still written *Marie, Lucie, Lillie*, etc. The diminutive termination is not used, except as above, in English literary speech, but it is common in Scotch, as in *beastie, mannie, lassie*, sometimes with a second diminutive suffix, as in *lassiekie*, etc.

-y[3]. [Early mod. E. also *-ye, -ie;* < ME. *-ie, -ye,* < OF. *-ie*, F. *-ie* = Sp. *-ia*, in some words of Gr. origin *-ία* = Pg. It. *-ia*, < L. *-ia* = Gr. *-ία*, a common term. of fem. abstract (and concrete) nouns, as in L. *familia*, family, *mania* (< Gr. *μανία*), madness, etc. See def. Cf. *-cy, -ency, -ce, -ence*, etc.] A termination of nouns from the Latin or Greek, or of modern formation on the Latin or Greek model. Such nouns are or were originally abstract, but many are now concrete. Examples are *family, innocency, homily, theory, geography, philosophy, philology*, etc.; the list is innumerable. Besides words from the Latin and Greek, many other words have the termination *-y*, either after the analogy of the Latin and Greek termination, or from some other source. As the termination in such cases usually has no significance, and is therefore not used as formative within the meaning assigned to that word, such words, which are very numerous and intractable to classification, are here ignored.

ya[1]†. An old spelling of *yea*.

ya[2] (yä), *pron.* A dialectal form of *you*.

yacare (yak'a-re), *n.* [Braz.] Same as *jacare*.

yacca (yak'ä), *n.* [W. Ind.] Either of two West Indian evergreens, *Nageia Purdieana* and *N. coriacea*, trees becoming respectively 100 feet and 50 feet high, and affording timber suitable for cabinet and plain purposes.

yacca-tree (yak'ä-trē), *n.* Same as *yacca*.

yacca-wood (yak'ä-wůd), *n.* The wood of the yacca-tree.

★**yacht** (yot), *n.* [Formerly also *yatcht, yatch* (cf. F. *yacht*, < E.); = G. *jacht*, < MD. *jacht*, D. *jagt*, a yacht, lit. a chase, hunting (= OHG. **jagōt*, MHG. *jagāt*, G. *jagd*, chase, hunting), < *jagen* = OHG. *jagōn*, MHG. G. *jagen*, hunt.] A vessel propelled either by sails or by steam, most often light or comparatively small, but sometimes of large size, used for pleasure-trips or for racing, or as a vessel of state to convey persons of distinction by water. There are two distinct types of sailing yacht: the racer with large spars and sails and fine lines, but sacrificing comfort to speed; and the commodious well-proportioned cruising-yacht. Sailing yachts are seldom or never of a more elaborate rig than that of the schooner; but steam-vessels of every class from launches up are common as yachts.

> I sailed this morning with his Majesty in one of his *yachts* (or pleasure-boats), vessels not known among us till the Dutch East India Company presented that curious piece to the king. *Evelyn*, Diary, Oct. 1, 1661.
>
> *Yatcht*, a Dutch Vessel or Pleasure boat about the bigness of our Barge. *Blount*, Glossographia (1670).
>
> *Yacht*, a small sort of a Ship, built rather for Swiftness and Pleasure than for Merchandize or Warlike Service. *E. Phillips*, 1706.

yacht (yot), *v. i.* [< *yacht, n.*] To sail or cruise in a yacht.

> The young English . . . seek for travels as dangerous as war, diving into Maelstroms, . . . *yachting* among the icebergs of Lancaster Sound. *Emerson*, Power.

yacht-built (yot'bilt), *a.* Constructed on the model of a yacht.

> On the coast of Florida, there are the skimming-dish, the pumpkin-seed, and the flat-iron models, all half-round *yacht-built* boats, broad and beamy, cat-rigged or sloop-rigged; they all pound and spank in a sea-way, and are very wet. *J. A. Henshall*, Forest and Stream, XIII. 683.

yacht-club (yot'klub), *n.* A club or union of yacht-owners for racing purposes, the promotion of yachting, etc., usually presided over by a commodore.

yachter (yot'ėr), *n.* [< *yacht* + *-er*[1].] One who commands a yacht; also, one who sails in a yacht; a yachtsman.

yachting (yot'ing), *n.* [Verbal n. of *yacht, v.*] The art of navigating a yacht; the sport of sailing or traveling in a yacht. Also used attributively: as, a *yachting* voyage; a *yachting* suit.

yachtsman (yots'mạn), *n.*; pl. *yachtsmen* (-men). One who keeps or sails a yacht.

> The men . . . were hauling up the mainsail, Claud and Freddy lending superfluous aid, and making themselves very hot over it, as the manner of *yachtsmen* is. *W. E. Norris*, Matrimony, v.

yachtsmanship (yots'mạn-ship), *n.* [< *yachtsman* + *-ship.*] The art or science of sailing or managing a yacht. Also *yachtmanship*.

> The partisans of English *yachtmanship* need not be disconcerted. *St. James's Gazette*, Sept. 8, 1886. (*Encyc. Dict.*)

yaft. A Middle English form of *gave*, preterit of *give*[1].

yaff (yaf), *v. i.* [Imitative; cf. *yap*[1] and *waff*[2].] To bark like an angry dog; yelp; hence, to talk pertly. [Prov. Eng. and Scotch.]

> This said, up came a *yaffing* cur.
> *A. Scott*, The Hare's Complaint. (*Jamieson.*)

yaffil (yaf'il), *n.* Same as *yaffle*[1].

yaffingale (yaf'ing-gāl), *n.* [Appar. altered from *yaffle*[1], with term. conformed to that of *nightingale.*] Same as *yaffle*[1]. Also *yappingale*. [Prov. Eng.]

> I am woodman of the woods,
> And hear the garnet-headed *yaffingale*
> Mock them. *Tennyson*, Last Tournament.

yaffle[1] (yaf'l), *n.* [Imitative; cf. *yaff.*] The green woodpecker, *Gecinus viridis:* from its loud laughing notes. Also *yaffil, yaffler, yaffingale*. See cut under *popinjay*. [Prov. Eng.]

> The Green Woodpecker, Gecinus or Picus viridis, though almost unknown in Scotland or Ireland, is the commonest; frequenting wooded districts, and more often heard than seen, its laughing cry (whence the name "Yaffil" or "*Yaffle*," by which it is in many parts known) and undulating flight afford equally good means of recognition. *Encyc. Brit.*, XXIV. 651.

yaffle[2] (yaf'l), *n.* [Also *yaffel;* origin obscure.] 1. An armful. [Prov. Eng.]—2. A pile of codfish to be carried from the flakes to the storehouse. [Local, Massachusetts.]

yaffle[2] (yaf'l), *v. i.*; pret. and pp. *yaffled*, ppr. *yaffling*. [< *yaffle*[2], *n.*] To transport yaffles of fish: as, "now, boys, go to *yaffling*." [Provincetown, Massachusetts.]

yaffler (yaf'lėr), *n.* Same as *yaffle*[1]. [Prov. Eng.]

yager (yā'gėr), *n.* [< G. *jäger* (= D. *jager*), a huntsman, < *jagen*, hunt: see *yacht*. Cf. *jäger*.] 1. Formerly, a member of various bodies of light infantry in the armies of different German

states, recruited largely from foresters, etc.; now, a member of certain special battalions or corps of infantry or cavalry, generally organized as riflemen.—2. Same as *jäger*.

yagger (yag'ėr), *n.* [< D. *jager*, a huntsman, < *jagen*, hunt: see *yacht*.] A ranger about the country; a traveling peddler. [Shetland Islands.]

I would take the lad for a *yagger*, but he has rather ower good havings, and he has no pack. *Scott*, Pirate, v.

yaguarundi (yag-wą-run'di), *n.* [Also *jaguarundi*, *yaguarondi*; Guarani: see *jaguar*.] A wild cat of Mexico and Central and South America, *Felis jaguarundi*. This cat is nearly as large as the ocelot, but entirely without spots, in which respect, as well as in its slender form, it resembles the eyra, and has thus a musteline rather than a feline aspect. The tail is as long as the body exclusive of the head and neck. The general color is a uniform grizzled brownish-gray, the individual hairs being annulated and tipped with blackish; kittens are more rufous brown. The yaguarundi ranges northward nearly or quite through Mexico, and of late years has generally been included among the mammals of the United States.

yah (yä), *interj.* An interjection of disgust.

Yahoo (yä-hö'), *n.* [A made name, prob. meant to suggest disgust; cf. *yah*, an interj. of disgust.] 1. A name given by Swift, in "Gulliver's Travels," to a feigned race of brutes having the form of man and all his degrading passions. They are placed in contrast with the Houyhnhnms, or horses endowed with reason, the whole being designed as a satire on the human race.

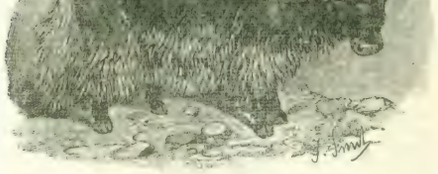
He [the Houyhnhnm] was extremely curious to know "from what part of the country I came, and how I was taught to imitate a rational creature; because the *Yahoos* (whom he saw I exactly resembled in my head, hands, and face, that were only visible), with some appearance of cunning, and the strongest disposition to mischief, were observed to be the most unteachable of all brutes."
Swift, Gulliver's Travels, iv. 3.

Hence—2. [*l. c.*] A rough, brutal, uncouth character.

A *yahoo* of a stable-boy.
Graves, Spiritual Quixote, iv. 10. (*Davies.*)

"What sort of fellow is he? . . . A *Yahoo*, I suppose." "Not at all. He is a capital fellow,—a perfect gentleman." *H. Kingsley*, Ravenshoe, lv.

3. [*l. c.*] A greenhorn; a back-country lout. *Bartlett.* [Southwestern U. S.]



Yahveh (yä'vā), *n.* Same as *Jehovah*.

Yahvist (yä'vist), *n.* Same as *Jehovist*.

Yahvistic (yä-vis'tik), *a.* Same as *Jehovistic*.

yaip, *v. i.* Same as *yaup*[2].

yak (yak), *n.* [< Tibetan *gyag*.] The wild ox of Tibet, *Poëphagus grunniens*, or any of its domesticated varieties; the grunting ox. The yak is a remarkable instance of the development of the pelage under climatic influences. The modification is like that seen in the musk-ox of arctic regions, *Ovibos moschatus*, though altitude has done for the yak what has resulted from latitude in the case of the musk-ox. The body is covered with very long hair hanging from the shoulders, sides, and hips nearly to the ground, and the tail bears a heavy brush of long hairs. The wild animal, which inhabits the mountains of Tibet about the snow-line and descends into the valleys in winter, is of a blackish color; the back is humped; and the general form is not unlike that of the bison, though the long hair gives the animal a different appearance. The actual relationships of the yak are with the humped Asiatic cattle of which the zebu is the best-known domesticated stock. The yak is of great economic importance to the Tibetans, and has been domesticated. In this state it sports in many color-variations, like other cattle. It is used as a beast of burden, makes excellent beef, and yields rich milk and butter; the long silky hair is spun and woven for many fabrics. The tails when mounted furnish the fly-snappers or chowries much used in India, and they are also dyed in various

Yak (*Poëphagus grunniens*).

colors as decorations and ceremonial insignia. The elephant-headed god Ganesa is usually represented as flourishing the chowry with his trunk over the heads of various personages of the Hindu pantheon. Yaks have often been taken to Europe, where they are kept in menageries, and have repeatedly been bred in confinement. The yak crosses easily with some other cattle, producing various mixed breeds. See also cut under *Artiodactyla*.—**Yak lace**, a heavy and rather coarse lace made from the silky hair of the yak: at one time much used for trimming outer garments.

yakin (yä'kin), *n.* A large Himalayan antelope, *Budorcas taxicolor*, inhabiting high mountain-ranges. The relationships of the yakin are with the rupicaprine and nemorhedine antelopes, as the European chamois, the Asiatic gorals, and the American Rocky Mountain goat.

yakopu (yak'ō-pö), *n.* A weapon like the kuttar, used by the people of Java and Sumatra.

yaksha (yak'shä), *n.* [Skt.] In *Hindu myth.*, one of a class of demigods who attend Kuvera, the god of riches, and guard his treasures.

Yakut (ya-köt'), *n.* A member of a people of Turkish or mixed Turkish origin, dwelling in Siberia in the neighborhood of the Lena.

yald[1] (yäld), *a.* Same as *yeld*[1].

yald[2], **yauld** (yâld), *a.* [Prob. var. of **yeld*, < Icel. *gildr* = Sw. Dan. *gild*, stout, brawny, of full size.] Supple; active; athletic. [Scotch.]

Bein' *yald* and stout, he wheelit about,
And kluve his heid in twaine.
Hogg, Mountain Bard, p. 43. (*Jamieson.*)

Yale lock. See *lock*[1].

yallow (yal'ō), *a.* A dialectal variant of *yellow*. *George Eliot*, Silas Marner, xi.

yam (yam), *n.* [= F. *igname*, < Sp. *ignama*, *igname*, *iñame*, *ñame* = Pg. *inhame* (NL. *inhame*), < African (in Pg. rendering) *inhame*, (in NL. rendering) *inamia*, Wolof *nyámbi*, in other dialects *dyóma*, *yóma*.] 1. A tuberous root of a plant of the genus *Dioscorea*, particularly if belonging to one of numerous species cultivated for their esculent roots; also, such a plant itself. The plant is commonly a slender twining high-climbing vine, in some species prickly; the root is fleshy, often very large, sometimes a shapeless mass, sometimes long and cylindraceous, varying in color from white through purple to nearly black. The yam is propagated by cuttings from the root, or also in some species by axillary bulblets. The root contains a large amount of starch, sometimes 25 per cent., is hence highly nutritious, and in tropical lands largely takes the place of the potato of temperate climates. It lacks, however, the dry mealiness of the potato, and is on the whole rather coarse, and not as a rule highly esteemed by people of European races. It is cooked by baking or boiling, and is in the West Indies sometimes converted into a meal used for making cakes and puddings. *D. sativa* is an ordinary species (the *hoi* of the Hawaiians) with unarmed stem and an acrid root which requires soaking before boiling; it is a profitable source of starch. *D. alata*, the red or white yam, the *uvi* of the Fiji Islands, has a winged, not prickly stem, supported in culture by reeds; its tubers attain sometimes a length of 8 feet and a weight of 100 pounds. *D. aculeata*, the *kawai* of the Fijis, has prickly stems not requiring support. *D. divaricata*, the Chinese or Japanese yam, is hardy in temperate climates, and excited considerable interest in Europe and America, at the time of the potato-rot, as a possible substitute for that crop. The tuber is pure-white within, of a flaky consistency, and of a taste agreeable to many. It grows 3 feet deep, however, enlarging somewhat toward the bottom, hence is very difficult to gather. *D. sativa* also is hardy in the southern United States, but the true yam is there little cultivated. (See def. 2.) These species present many varieties, and various other species are more or less cultivated.

Branch of Female Plant of Yam (*Dioscorea alata*).

The negro *yams* are a yearly crop, but the white *yams* will last in the ground for several years.
T. Roughley, Jamaica Planter's Guide (1823), p. 317.

2. By transference, a variety of the sweet-potato. [Southern U. S.]

De *yam* will grow, de cotton blow,
We'll hab de rice an' corn.
Whittier, Song of the Negro Boatmen.

3. Any plant of the family *Dioscoreaceæ*. *Lindley.*—**Chinese yam.** See def. 1.—**Common** or **cultivated yam**, *Dioscorea sativa*.—**Japanese yam.** See def. 1, and cut under *Dioscorea*.—**Kawai yam.** See def. 1.—**Negro yam**, *Dioscorea sativa*, of the West Indies.—**Port Moniz yam.** See *Tamus*.—**Red yam.** See def. 1.—**Tivoli yam**, *Dioscorea nummularia*, of the Malayan and Pacific islands.—**Uvi yam.** See def. 1.—**White yam.** See def. 1.—**Wild yam**, any native species of yam. Specifically—(*a*) The wild yam-root, *Dioscorea villosa*, of North America, a delicate and pretty twining vine, extending north to Canada. The root is esteemed by eclectics a cure for bilious colic, and is used by the southern negroes against rheumatism: hence called *colic-root* and *rheumatism-root*. (*b*) See *Rajania*.—**Winged yam**, *Dioscorea alata*.—**Yam family**, the plant-family *Dioscoreaceæ*.

Yama (yam'ä), *n.* [Skt. *Yama*, prob. lit. 'the twin.'] In *early Hindu myth.*, the first mortal, son of the sun (*Vivasvant*) and progenitor of the human race, who went first to the other world, and ruled as king of those who followed him thither; later, the god of departed spirits and the appointed judge and punisher of the dead. He is in modern Hindu art generally represented as crowned and seated on a buffalo, which he guides by the horns. He is four-armed, and of austere countenance. In one hand he holds a mace, in another a noose which is used to draw out of the bodies of men the souls which are doomed to appear before his judgment-seat. His garments are of the color of fire; his skin is of a bluish green.

yamadou (yam'ą-dö), *n.* An oil obtained from the tallow-nutmeg, *Myristica sebifera*. See *nutmeg*, 2.

yama-mai (yam'ä-mī'), *n.* [NL. (Guérin Ménéville, 1861), < Jap. *yama-mai*, lit. 'worm of the mountains.'] A large saturniid moth, whose larva feeds on the oak *Quercus serrata* in Japan, and furnishes silk of excellent quality which has long been utilized in the manufacture of the heavier native silk fabrics. The worm has been reared in Europe and in the United States, but has not been commercially successful in those countries. See *silkworm*, 1.

yam-bean (yam'bēn), *n.* A leguminous plant, *Cacara erosa*, widely cultivated in the tropics for its pods, which are used as a vegetable, and for its tubers, which are edible cooked or raw, and furnish in large quantity a starch said to be fully equal to arrowroot. The tubers are borne at intervals along the cord-like roots. Other species have sometimes been included in *Cacara erosa*, and some of them are likewise cultivated in the tropics. In the Fiji Islands it is called *yaka* or *wa yaka*.

yammer (yam'ėr), *v. i.* [Also *yaumer*, *yamer*; < ME. *gamuren*, *gomeren*, *geomeren*, < AS. *geómerian* (= OHG. *jāmarōn*, MHG. *jāmeren*, G. *jammern*), lament, groan, < *geómor*, sad, mournful (= OS. *jāmar* = OHG. *jāmar*, sad, > OHG. *jāmar*, MHG. *jāmor*, G. *jammer*, lamentation, misery).] 1. To lament; wail; shriek; yell; cry aloud; whimper loudly; whine. [Prov. Eng. and Scotch.]

As for the White Maiden of Avenel, she is seen to *yammer* and wail before ony o' 'em dies. *Scott*, Monastery, iv.

"The child is doing as well as possible," said Miss Grizzy; "To be sure it does *yammer* constantly—that can't be denied." *Miss Ferrier*, Marriage, xviii.

2. To yearn; desire. [Prov. Eng.]

I *yammer* to hear how things turned eawt.
Tim Bobbin, in Mackay's Lost Beauties of the Eng. Lang.

yammering (yam'ėr-ing), *n.* [Also *yaumering*; verbal n. of *yammer*, *v.*] A crying, whining, or grumbling. [Prov. Eng. and Scotch.]

They ill-thrawn folk . . . would tear the congregation to pieces wi' their bickerings and *yaumerings*.
W. Black, In Far Lochaber, ix.

yammerly (yam'ėr-li), *adv.* [< ME. *gamerly*, *gomerly*, < AS. **geómorlīce*, < *geómorlīc*, lamentable, < *geómor*, sad: see *yammer*, *v.*] Piteously. *Gawayne.*

yamp (yamp), *n.* [Shoshone *yampa*.] An umbelliferous plant, *Carum Gairdneri*, found from California to Wyoming and Washington; also, *C. Kellogii*, of central California. These plants have fascicled tuberous roots, which are an important food of the Indians.

yamph (yamf), *v. i.* [Cf. *yaff*, *yap*[1].] To bark continuously. *Halliwell.* [Prov. Eng.]

yamun (yä'mun), *n.* [Chinese, < *ya*, the marquee of a general, + *mun*, a two-leaved door, a gate.] The official and private residence of a Chinese mandarin who holds a seal; the place where a mandarin transacts the business of the region or department under his care, and where he lives; a mandarin's office, court, residence, etc.

The three *yamuns* at our feet, with their quaint towers, grand old trees, flags, and the broad Pearl River on the other side of the city, are the only elements of positive beauty in the landscape.
Lady Brassey, Voyage of Sunbeam, II. xxii.

Tsung li yamun, the bureau or department of the Chinese government which attends to foreign affairs; the Chinese "Foreign Office." It was established in 1860, is composed of eleven members, and forms the channel of communication between the foreign ministers and the throne. *Giles.*

yang (yang), *v. i.* [Imitative.] To cry as the wild goose; honk.

yang (yang), *n.* [< *yang*, *v.*] The cry of the wild goose; a honk.

yang-kin (yang'kēn'), *n.* [Chinese.] A Chinese dulcimer.

yank[1] (yangk), *v.* [Perhaps a nasalized form of *yack*, found in sense of 'talk fast', prob. orig. move quickly, < Sw. dial. *jakka*, rove about, a secondary form of Icel. *jaga*, move about, = Sw. *jaga* = Dan. *jage*, hunt, chase, hurry, = D.

jagen = G. *jagen*, hunt: see *yacht*. The Sw. Dan. sense 'hunt' appears to be due to G., and the word does not seem to be old in Scand., or to exist in AS., etc. *Yank* has prob. been confused in part, as to meaning, with *yark*, *yerk;* and the whole series to which it belongs is dialectal, and without early record.] **I.** *intrans.* 1. To be in active motion; move or work quickly; bustle. *Imp. Dict.*—2. To talk fast or constantly; scold; nag. *Imp. Dict.*

II. *trans.* To move, carry, bring, take, etc., with a sudden jerk or jerking motion: usually with *along*, *over*, or *out:* as, to *yank* a fish *out* of the water. [Colloq.]

I don't see the fun of being *yanked* all *over* the United States in the middle of August.
C. D. Warner, Their Pilgrimage, p. 201.

When the butt of a room goes on the drink, or takes to moping by himself, measures are necessary to *yank* him *out* of himself. *R. Kipling*, Only a Subaltern.

I guess th' best thing we can do is t' *yank* our traps *out* of that cave an' get started again.
T. A. Janvier, Aztec Treasure-house, x.

yank[1] (yangk), *n.* [< *yank*[1], *v.*] 1. A quick, sharp stroke; a buffet. [Scotch.]

I took up my neive an' gae him a *yank* on the haffat tell I gart his bit brass cap rattle against the wa'.
Hogg, Brownie of Bodsbeck, xiv.

2. A jerk or twitch. [Colloq., U. S.]—3. *pl.* Leggings or long gaiters worn in England by agricultural laborers. *Halliwell.*

Yank[2] (yangk), *n.* [An abbr. of *Yankee.*] A Yankee. [Colloq. or vulgar.]

"The *Yank*" or the equally grovelling "nigger," one or the other, which we do not know, has corrupted "Pollard of Richmond." *The Nation*, IV. 286.

[The word acquired during the war of the rebellion wide currency as a nickname or contemptuous epithet among the Confederates for a Union soldier, the Confederates themselves being in like spirit dubbed *Johnnies* or *Rebs* by the Union soldiers.]

yankee[1]† (yang'kē), *a.* [A dubious word, in spelling prob. conformed to *Yankee*[2], being, if a genuine word, prob. for **yankie* or **yanky*, smart, active (as a noun, Sc. *yankie*, a sharp, clever, forward woman), < *yank*[1] + *-ie*[1] or *-y*[1], equiv. to *yanking*, active: see *yanking*. Cf. *Yankee*[2].] Spanking; excellent. Also used adverbially.

You may wish to know the origin of the term Yankee. Take the best account of it which your friend can procure. It was a cant, favorite word with farmer Jonathan Hastings, of Cambridge, about 1713. Two aged ministers, who were at the college in that town, have told me they remembered it to have been then in use among the students, but had no recollection of it before that period. The inventor used it to express excellency. A *Yankee* good horse, or *Yankee* cider and the like, were an excellent good horse and excellent cider.
★ *Dr. W. Gordon*, Hist. Amer. War (ed. 1789), I. 324.

Yankee[2] (yang'kē), *n.* and *a.* [Formerly also *Yankey* and **Yanky* (in pl. *Yankies*); origin uncertain. (*a*) According to a common statement, *Yankee*, as used in the plural *Yankees*, is a var. of *Yenkees* or *Yengees* or *Yaunghees*, a name said to have been given by the Massachusetts Indians to the English colonists, being, it is supposed, an Indian corruption of the E. word *English*, or, as some think, of the F. *Anglais*, English (in the latter case the statement must refer to the Indians of Canada, the only ones in contact with the French). The word is said to have been adopted by the Dutch on the Hudson, who applied it to the people of New England (it is said, "in contempt," but prob. not more in contempt than any other designation of them). (*b*) In another view, the name *Yankee* was derived from the adj. *yankee* as given under *yankee*[1]. Some connect *yankee*[1] with the preceding theory by assuming it to be a corruption of the Indian *Yengees* or *Yenkees* or *Yankees* as applied to the English, as if 'English' articles meant necessarily 'excellent' articles. Others identify *Yankee*[2] with *yankee*[1], 'excellent, smart'; but this sense does not seem to have been common, if existent, in New England use; and the theory is otherwise untenable.] **I.** *n.* 1. A citizen of New England.

From meanness first this Portsmouth *Yankey* rose,
And still to meanness all his conduct flows.
Oppression, A Poem by an American (Boston, 1765).
[(*Webster.*)

When *Yankies*, skill'd in martial rule,
First put the British troops to school.
Trumbull, McFingal, i.

Yankies—a term formerly of derision, but now merely of distinction, given to the people of the four eastern States. *Trumbull's McFingal* (5th Eng. ed.), Editor's note.

For ourselves, now, we do not entertain a doubt that the sobriquet of *Yankees*, which is in every man's mouth, and of which the derivation appears to puzzle all our philologists, is nothing but a slight corruption of the word "Yengeese," the term applied to the "English" by the tribes to whom they first became known. We have no other authority for this derivation than conjecture, and conjectures that are purely our own; but it is so very plausible as almost to carry conviction of itself.
J. F. Cooper, Oak Openings, p. 28.

Yankee, in the American use, does not mean a citizen of the United States as opposed to a foreigner, but a citizen of the Northern New England States (Massachusetts, Connecticut, &c.), opposed to a Virginian, a Kentuckian, &c.
De Quincey, Style, Note 1.

We have the present *Yankee*, full of expedients, half-master of all trades, inventive in all but the beautiful, full of shifts, not yet capable of comfort.
Lowell, Biglow Papers, 1st ser., Int.

2. By extension, a native of the United States. [Chiefly a European use.]—3. A soldier of the Federal armies: so called by the Confederates during the war of secession. See *Yank*[2].—4. A glass of whisky sweetened with molasses. *Bartlett.* [New Eng.] [Colloq. in all uses.]

II. *a.* Of, pertaining to, or characteristic of the Yankees: as, *Yankee* smartness or invention; *Yankee* notions.

Codfish, tinware, apple-brandy, Weathersfield onions, wooden bowls, and other articles of *Yankee* barter.
Irving, Knickerbocker, p. 276.

Examine him outside and in, I'd thank ye,
Morals, Parisian—manners, perfect *Yankee.*
Lord Houghton, A Knock at the Door (quoted in [N. and Q., 7th ser., XI. 106).

Yankee nation, the United States. [Humorous.]—**Yankee notions.** See *notion.*

Yankeedom (yang'kē-dum), *n.* [< *Yankee*[2] + *-dom.*] 1. The region inhabited by Yankees, in any sense of that word.

Located as it is on the confines of Egypt and of *Yankeedom* in this State [Illinois], it has done a good work in both sections. *The Independent*, quoted in Bartlett's [Americanisms, p. 768.

2. Yankees collectively considered.

Up the turning viâ Galileo they climb, to the Basilica at the top, . . . hackneyed as only *Yankeedom* and Cockneydom, rushing hand in hand through all earth's sacrednesses, can hackney. *Rhoda Broughton*, Alas, viii.

Yankee-Doodle† (yang'kē-dō'dl), *n.* A Yankee: a humorous use, from a popular air so named. [Rare.]

I might have withheld these political noodles
From knocking their heads against hot *Yankee Doodles.*
Moore, Parody of a Celebrated Letter.

Yankeefied (yang'kē-fīd), *a.* [< *Yankee*[2] + *-fy* + *-ed*[2].] Having the appearance or manner of a Yankee; characteristic of a Yankee. [Colloq.]

The Colonel whittled away at a bit of stick in the most *Yankeefied* way possible.
A Stray Yankee in Texas, p. 113. (*Bartlett.*)

Yankee-gang (yang'kē-gang), *n.* An arrangement in a sawmill (in Canada) adapted for logs of 21 inches or less in diameter. It consists of two sets of gang-saws, having parallel ways in the immediate vicinity of each other. One is the slabbing-gang, which reduces the log to a balk and slab-boards. The balk is then shifted to the stock-gang, which rips it into lumber. *E. H. Knight.*

Yankeeism (yang'kē-izm), *n.* [< *Yankee*[2] + *-ism.*] 1. Yankee ways or characteristics.

"I confess I had feared that Lily's impetuous ways—her—her—" "'Flamboyant *Yankeeism*,' Mr. Gore-Thompson called it," suggested Mrs. Clay. "We are from the Southwest originally," rather stiffly answered Mrs. Floyd-Curtis, who took *Yankeeism* to cover the reproach of a New England birthplace.
Mrs. Burton Harrison, The Anglomaniacs, i.

2. A locution or a practice characteristic of Yankees, specifically of the inhabitants of New England.

Cussedness . . . and cuss, . . . in such phrases as "He done it out o' pure cussedness," and "He is a nateral cuss," have been commonly thought *Yankeeisms.* . . . But neither is our own. *Lowell*, Biglow Papers, 2d ser., Int.

3. A measuring-rod or -stick of the exact length of 3 feet or 36 imperial inches; a yardstick.

You would not, sir: had I the *yeard* in hand,
Ide measure your pate for this delusion.
Heywood, Fair Maid of the Exchange (Works, ed. 1874, II. 40).

4. The fundamental unit of English long measure. The prototype of the British imperial yard (to which the United States Office of Weights and Measures conforms, though without express authority) was legalized in 1855. It is a bar made of a kind of bronze or gun-metal known as *Baily's metal*. It has a square section of 1 inch on the sides, and is 38 inches long. But at 1 inch from each end a well is drilled into one of its surfaces so that the bottom is in the central plane of the bar, and into the bottom of the well is sunk a gold plug, upon whose mat surface is engraved one of the two defining lines. The yard is defined as the distance between these lines at 62° F., with the understanding that the bar is to be supported in a particular manner, and that the thermometers are to be constructed according to certain rules. The lines are designed to be looked at with the microscopes of a comparator; but they are not so free from blur that their middles can be determined more nearly than to a millionth part of the distance between them. This standard was made after the practical destruction of the previous legal prototype, that of 1760, in the burning of the Houses of Parliament, October 16th, 1834, and was legalized as a new prototype because its length agreed with what had been recognized in 1819 by the Standards Commission as the scientific standard yard—namely, with a certain scale, or rather with Captain Kater's measures of that scale, known as *Shuckburgh's scale*, having been made in 1794 by Troughton for Sir George Shuckburgh, who in his comparisons of it first introduced the comparator with micrometer microscopes. This scale was a copy of another which had been made for the Royal Society in 1742, from which the standard of 1760 was copied. This was a bar having upon one side two gold studs, each with a dot pricked upon it; and it was used by bringing the points of a beam-compass into these dots, which had thus soon become badly worn. Older standards still extant are those of Queen Elizabeth and of Henry VII. The latter is shorter than the present yard by one thousandth part of its length, or about $\frac{1}{27}$ of an inch. It is said that the yard was made to be of the length of Henry I.'s arm—doubtless a fable, even if believed by that monarch himself. Customary units are not changed so easily. Yet it is true that there appear to be no traces in the measures of buildings earlier than the twelfth century of the use of a yard equal to ours, nor of its subdivisions; while in the later Norman and Gothic structures a foot equal to the third of our yard has often clearly been used. But the Gothic architects of England more usually employed a foot of 13¼ modern inches, a unit probably derived from France; and the oldest works show a foot of 12½ modern inches, no doubt the old Saxon foot, agreeing very nearly with the Rhineland foot of modern Germany. Some British remains, as Stonehenge, were evidently constructed with Roman measures. The Standards Commission of 1819 reported that 37 inches of cloth were frequently given for each yard, which is almost precisely Rhenish measure. They also found local yards of 38 and 40 inches. As a cloth measure, the yard is divided into 4 quarters = 16 nails. (See *cloth-measure*, under *measure*.) A square yard contains 9 square feet, and a cubic yard 27 cubic feet. Contracted *yd*.

A good oke staffe, a *yard* and a halfe,
Each one had in his hande.
Robin Hood and the Peddlers (Child's Ballads, V. 244).

That there might be no Abuse in Measures, he [Henry I.] ordained a Measure made by the Length of his own Arm, which is called a *Yard*.
Baker, Chronicles, p. 38.

5. *Naut.*, a long cylindrical spar having a rounded taper toward each end, slung crosswise to a mast and used for suspending certain of the sails called either *square* or *lateen sails* according as the yard is suspended at right angles or obliquely. Yards have sheave-holes near their extremities for the sheets reeving through. Either end of a yard, or rather that part of it which is outside the sheave-hole, is called the *yard-arm;* the *quarter* of a yard is about half-way between the sheave-hole and the slings. Going upward from the deck, the yards are known as the *lower yards*, *topsail-*, *topgallant-*, and *royal-yards*, except where double topsails are used, when the topsail-yard is replaced by the lower and upper topsail-yards. Lower yards and topsail-yards are sometimes made of iron, and hollow. See cuts at *abox*, *a-cocktill*, *cockscomb*, and *ship*.

I boarded the king's ship; . . . on the topmast,
The *yards*, and bowsprit would I flame.
Shak., Tempest, i. 2. 200.

Three new topsails, . . . with stops and frapping-lines, were bent to the *yards*, close-reefed, sheeted home, and hoisted.
R. H. Dana, Jr., Before the Mast, p. 260.

To divide him inventorially would dizzy the arithmetic of memory, and yet but *yaw* neither, in respect of his quick sail. *Shak.*, Hamlet, v. 2. 120.

She steered wild, *yawed*, and decreased in her rate of sailing. *Marryat*, Frank Mildmay, xx. (*Davies.*)

The language [German] has such a fatal genius for going stern foremost, for *yawing*, and for not minding the helm without some ten minutes' notice in advance, that he must be a great sailor indeed who can safely make it the vehicle for anything but imperishable commodities.
Lowell, Among my Books, 1st ser., p. 293.

The sun flashed on her streaming ebony black sides as she *yawed* to the great ocean swell that chased her.
W. C. Russell, Sailor's Sweetheart, v.

II. *trans.* To move aside; move from one side to the other. [Rare.]

My eyes! how she [a mare] did pitch! . . .
And *yaw'd* her head about all sorts of ways.
Hood, Sailor's Apology for Bow-legs.

yaw[1] (yâ), *n.* [< *yaw*[1], *v.*] *Naut.*, a temporary deviation of a ship or vessel from the direct line of her course.

O, the *yaws* that she will make!
Fletcher and Massinger, A Very Woman, iii. 5.

He did not see a light just before us, which had been hid by the studding-sails from the man at the helm, but by an accidental *yaw* of the ship was discovered.
B. Franklin, Autobiography, p. 264.

A very red-faced, thick-lipped countryman, . . . as soon as the Prince hailed him, jovially, if somewhat thickly, answered. At the same time he gave a beery *yaw* in the saddle. *R. L. Stevenson*, Prince Otto, i. 4.

yaw[2] (yâ), *n.* [Corrupt. (pl.) of F. *pias, pians*, < Tupi-Guarani word: cf. Guarani *pias* (*Montoya*). *T. Platt, Jr.*] One of the tubercles which are characteristic of the disease known as yaws.

yaw[2] (yâ), *v. i.* [< *yaw*[2], *n.*] To rise in blisters, breaking in white froth, as cane-juice in the sugar-works.

yaw[3] (yâ), *n.* [< *yaw*[1], *v.* ?] A thin or defective place in cloth.

yawd (yâd), *n.* A Scotch form of *jade*[1].

yawey (yâ'i), *a.* [< *yaw*[2] + *-ey.*] Pertaining to or characteristic of the yaws.

That yaws is a communicable disease is beyond question; but that it has always arisen by conveyance of *yawey* matter from a previous case is neither proved nor probable. *Encyc. Brit.*, XXIV. 732.

yawl[1] (yâl), *v. i.* [Also *yowl;* formerly also *yole* and *gowl;* < ME. *goulen*, < Icel. *gaula* = LG. *gaulen* = G. *jaulen*, howl, yell; an imitative word, like *howl;* it may be regarded as a more sonorous form of *yell*[1].] To cry out; howl; yell.

He hurtez of the houndez, & thay
Ful 3omerly *3aule* & 3elle.
Sir Gawayne and the Green Knight (E. E. T. S.), l. 1451.

My little legs still crossing
His: either kicking this way, that way sprawling,
Or, if hee but remov'd me, straitwaies *yawling*.
Heywood, Dialogues (Works, ed. Pearson, 1874, VI. 201).

Then yelp'd the cur, and *yawl'd* the cat.
Tennyson, The Goose.

★ **yawl**[2] (yâl), *n.* [Sometimes also *yaul;* < MD. **jolle* (in dim. *jolleken*), D. *jol*, a yawl, skiff, = Dan. *jolle* = Sw. *julle*, a yawl, jolly-boat. Cf. *jolly-boat.*] 1. A ship's small boat, usually rowed by four or six oars; a jolly-boat.—2. The smallest boat used by fishermen. See cut under *rowlock*.—3. A sail-boat or small yacht of the cutter class, with a jigger and short main-boom.

yawn (yân), *v.* [Early mod. E. *yane*, dial. *gaun, goan;* < ME. *ganon, gonen, ganen, gonen*, < AS. *gānian* = LG. *janen* = OHG. *geinōn*, MHG. *geinen*, yawn; a secondary form, parallel to AS. *ginian* = OHG. *ginēn*, MHG. *ginen, genen*, G. *gähnen*, yawn; both being derived from a strong verb, AS. *ginan* (pret. **gān*), in comp. *tō-ginen*, gape apart, = Icel. *gīna*, gape: see further under *begin*. The form *yawn*, < AS. *gānian*, instead of **yone* (yōn), is irreg., but is parallel with *broad* (brôd), < AS. *brād*. The initial *y* for *g* is also irregular; it is prob. due to an AS. var. **geánian*, or to conformation with *yave* for *gave*, etc.] **I.** *intrans.* 1. To gape; open; stand wide.

Then from the *yawning* wound with fury tore
The spear, pursu'd by gushing streams of gore.
Pope, Iliad, xii. 479.

Crowds that stream from *yawning* doors.
Tennyson, In Memoriam, lxx.

The cracks and rents that had fissured their [the kilns'] walls, from the fierce heat that once blazed within, were *yawning* hideously. *Geikie*, Geol. Sketches, i.

Specifically—2. To open the mouth wide. (*a*) Voluntarily.

The crocodiles not only know the voice of the priests when they call unto them, and endure to be handled and stroked by them, but also *yawn* and offer their teeth unto them to be picked and cleansed with their hands.
Holland, tr. of Plutarch, p. 794.

(*b*) Involuntarily, as through drowsiness or dullness; gape; oscitate. Compare *yawning*.

When a man *yawneth* he cannot hear so well.
Bacon, Nat. Hist., § 283.

At every line they stretch, they *yawn*, they doze.
Pope, Dunciad, ii. 390.

And, leaning back, he *yawned* and fell asleep,
Lulled by the chant monotonous and deep.
Longfellow, Wayside Inn, The Sicilian's Tale.

3. To gape, as in hunger or thirst for something; hence, to be eager; long.

The chiefest thing which lay-reformers *yawn* for is that the clergy may through conformity in state and condition be apostolical, poor as the Apostles of Christ were poor.
Hooker, Eccles. Polity, Pref., iv. § 3.

4. To be open-mouthed with surprise, bewilderment, etc.; be agape.

To *yawn*, be still, and wonder,
When one but of my ordinance stood up
To speak of peace or war. *Shak.*, Cor., iii. 2. 11.

II. *trans.* 1. To open; form by opening. [Rare.]

The groaning Earth began to reel and shake,
A horrid Thunder in her bowels rumbles, . . .
Tearing her Rocks, Vntill she *Yawn* a way
To let it out, and to let-in the Day.
Sylvester, tr. of Du Bartas's Weeks, ii., The Lawe.

2. To express or utter with a yawn.

"Heigho," *yawned* one day King Francis,
"Distance all value enhances!"
Browning, The Glove.

yawn (yân), *n.* [< *yawn, v.*] 1. The act of gaping or opening wide.

Sometimes with a mighty *yawn*, 'tis said,
Opens a dismal passage to the dead.
Addison, tr. from Silius Italicus's Punicorum, ii.

2. An involuntary opening of the mouth from drowsiness; oscitation. See *yawning*.

From every side they hurried in,
Rubbing their sleepy eyes with lazy wrists,
And doubling overhead their little fists
In backward *yawns*. *Keats*, Endymion, ii.

The family is astir; and member after member appears with the morning *yawn*.
C. D. Warner, Backlog Studies, p. 20.

3. An opening; a chasm. *Marston.*

But June is full of invitations sweet,
Forth from the chimney's *yawn* and thrice-read tomes.
Lowell, Under the Willows.

Through the *yawns* of the back-door, and sundry rents in the logs of the house, filter in, unweariedly, fine particles of snow. *S. Judd*, Margaret, i. 17.

yawner (yâ'nėr), *n.* One who yawns.

yawning (yâ'ning), *n.* [Verbal n. of *yawn, v.*] Gaping; oscitation; the taking of a deep inspiration, followed by a slight pause, and then a prolonged expiration, the mouth being more or less widely open. The act is reflex and involuntary in character, though it can often be partially repressed by a strong effort of the will. It is the physiological expression of fatigue and of a desire to sleep, but is also excited by insufficient oxygenation of the blood, and occurs therefore in conditions of lowered vitality, in the prodromal stage of many diseases, and after profuse losses of blood. The sight of another person yawning is also provocative of the act.

yawningly (yâ'ning-li), *adv.* In a yawning manner; with yawns or gapes.

Ye . . . that leaning upon your idle elbow *yawningly* patter out those prayers.
Bp. Hall, The Hypocrite, Sermon on 2 Tim. iii. 5.

Many were merely attracted by a new face, and, having stared me full in the title-page, walked off without saying a word; while others lingered *yawningly* through the preface, and, having gratified their short-lived curiosity, soon dropped off one by one.
Irving, Knickerbocker, p. 358.

ydle†, *a.* An obsolete spelling of *idle*.

ydrad†. A form of *drad*, obsolete past participle of *dread*.

Yet nothing did he dread, but ever was *ydrad*.
Spenser, F. Q., I. i. 2.

ye[1], **you** (yē, yö), *pron. pl.* (used also instead of *sing.*); poss. *your* or *yours*, obj. *you*, sometimes *ye*. [Two forms of the same word, representing historically the nom. and obj. respectively of the personal pronoun used as the plural of *thou* (see *thou*): (*a*) Nom. (and voc.) *ye*, early mod. E. also *yee*, < ME. *ye*, *ze*, < AS. *gē*, *ge* = OS. *gī*, *gi* = OFries. *gi*, *i* = MD. *ghy*, D. *gij* = LG. *jī* = OHG. MHG. *ir*, G. *ihr* = Icel. *ēr*, *ier* = Sw. Dan. *i* = Goth. *jus*, ye, = (with additional suffix) Gr. *ὑμεῖς*, *ὑμμες* = Skt. *yūyam*, ye; a pron. used as the pl. of *thou*, with which it is not etymologically related. (*b*) Nom. *you*, orig. obj. (dat. and acc.), taking the place of the nom. *ye*, because of the much greater frequency of the dat. and acc., and the tendency to make the three cases *ye*, *your*, *you*, conform to one base, a tendency assisted also by the fact that *ye* and *you* are usually unaccented, and therefore have the vowel more or less obscurely pronounced; < ME. *you*, *gou*, *yow*, < AS. *eów*, dat., *eów* (poet. *eówic*), acc., = OS. *iu* = OFries. *iuwe*, *iwe* = D. *u* = OHG. *iu* = Sw. Dan. *i* (prop. nom.) = Goth. *izwis*, you; cf. Gr. *ὑμῖν*, dat., *ὑμᾶς*, acc. The confusion of the two forms, and the use of *you* as nom., began in early mod. E., and is conspicuous in the Elizabethan dramas. In the authorized version of the Bible (1611), in which many usages already regarded as archaisms were purposely retained, the distinction between *ye*, nom., and *you*, obj., is carefully preserved. *Ye* still survives in religious and poetical use, while in ordinary colloquial and literary use *you* has superseded it. In provincial use, as in Irish, *ye* occurs for *you* both in nom. and obj., but in the obj. it is to be regarded rather as a shortening of the enclitic *you*: thus, *I tell you*, *I tell ye*. The *ye* may be further reduced, as in *thank you* > *thank ye* > *thankee* or *thanky*; *how do you do* > *how do ye do* > *how d'ye do* > *howdy do* > *howdy*, etc.] The personal pronoun of the second person, in the plural number: now commonly applied also (originally with some notion of distinction or compliment, as in the case of the royal *we*) to a single individual, in place of the singular forms *thee* and *thou*—a use resulting in the partial degradation of *thou* to a term of familiarity or of contempt. *Ye* is archaic, and little used except in exalted address and poetry. (*a*) As carefully discriminated, especially in the older English, the nominative and vocative being *ye* and the dative and accusative *you*.

He swor formest [first]
That *ze* schuld haue no harm, but hendely for gode
He praide *zou* com speke with him.
William of Palerne (E. E. T. S.), l. 269.

He zaue *zow* fyue wittes
For to worshepen hym ther-with while *ze* lyuen here.
Piers Plowman (C), ii. 15.

And he said unto the elders, Tarry *ye* here for us, until we come again unto *you*. Ex. xxiv. 14.

Wherefore, brethren, look *ye* out among *you* seven men of honest report. Acts vi. 3.

Yee Mannians, arme your selues, for feare of afterclaps.
Hakluyt's Voyages, I. 16.

Speed, Pegasus!—*ye* strains of great and small,
Ode, epic, elegy, have at *you* all!
Byron, Eng. Bards and Scotch Reviewers.

(*b*) As used without discrimination of case-form between nominative and objective.

Ye a great master are in your degree.
Spenser, Mother Hub. Tale, l. 546.

You lie, *ye* rogue. *Shak.*, 1 Hen. IV., ii. 2. 59.

The more shame for *ye*, holy men I thought *ye*.
Shak., Hen. VIII., iii. 1. 102.

You meaner beauties of the night, . . .
What are *you* when the moon shall rise?
Sir H. Wotton, To the Queen of Bohemia.

They have, like good sumpters, laid *ye* down their hors load of citations and fathers at your dore.
Milton, Church-Government, ii., Int.

(*c*) As used for a single subject.

Tho *ye* count me still the child,
Sweet mother, do *ye* love the child?
Tennyson, Gareth and Lynette.

To you. See *to*[1].—**You're another**, a familiar form of the tu quoque argument. See *tu quoque*.

I find little to interest and less to edify me in these international bandyings of "*You're another.*"
Lowell, Democracy.

You-uns (literally, you ones), you. Compare *we-uns*, under *we*. [Dialectal, southern U. S.]

"Mirandy Jane," the old woman interrupted, . . . "'pears like I hev hed the trouble o' raisin' a idjit in *you-uns!*"
M. N. Murfree, Prophet of the Great Smoky Mountains, i.

But I'll tell the yarn to *youans*.
John Hay, Mystery of Gilgal.

ye[2]†, *adv.* A Middle English form of *yea*.

ye[3]†, *n.* An obsolete variant of *eye*[1].

yea (yā), *adv.* [< ME. *ye*, *ze*, *yai*, *yo*, < AS. *geá* = OS. *ja* = OFries. *iē*, *gē* = D. *ja* = LG. *ja* = OHG. MHG. *jā*, G. *ja* = Icel. *jā* = Dan. Sw. *ja* = Goth. *ja*, yes, *jai*, truly, verily; perhaps = Lith. *ja* in *ja sakyti*, say yes, and Gr. *ἦ*, truly. Connection with AS. *ge* = Goth. *jah*, also, and, and with L. *jam*, now, Skt. *ya*, who, is uncertain. Hence ult. *yes*.] 1. Yes; ay: a word that expresses affirmation or assent: the opposite of *nay*: as, Will you go? *Yea*.

Swear not at all; . . . but let your communication be *Yea, yea;* Nay, nay. Mat. v. 37.

You promise to bear Faith and Loyalty to him: Say *Yea*. And King Edward said *Yea*, and kissed the King of France on the Mouth, as Lord of the Fee.
Baker, Chronicles, p. 117.

2. Indeed; verily; truly; it is so, or is it so? used to introduce a subject.

Yea, hath God said, Ye shall not eat of every tree of the garden? Gen. iii. 1.

Yea, mistress, are you so peremptory?
Shak., Pericles, ii. 5. 73.

Him I loved not. Why?
I deem'd him fool? *yea*, so?
Tennyson, Pelleas and Ettarre.

3. Used to intimate that something is to be added by way of intensiveness or amplification: Not this alone; not only so but also; what is more. Compare the similar use of *nay*.

Confess Christ and his truth, not only in heart, but also in tongue, *yea*, in very deed, which few gospellers do.
J. Bradford, Letters (Parker Soc., 1853), II. 202.

I therein do rejoice; *yea*, and will rejoice. Phil. i. 18.

One that composed your beauties, *yea*, and one
To whom you are but as a form in wax.
Shak., M. N. D., i. 1. 48.

Many of you, *yea* most,
Return no more. *Tennyson*, Holy Grail.

4. In the authorized version of the Bible, so; thus; true; real; consistent.

All the promises of God in him are *yea*, and in him Amen. 2 Cor. i. 20.

Yea is now used only in the sacred, solemn, or formal style. *Yea*, being mainly a word of assent, was formerly used chiefly in answer to questions framed affirmatively; *yes*, a stronger term, was chiefly used in answer to questions containing a negative or otherwise implying a doubt. But the distinction does not appear to have been rigidly maintained; and the assertions of the following quotations about *yea* and *yes*, like those about *nay* and *no* (see *no*[1]), must be taken with some allowance.

I woulde not here note by the way that Tyndall here translateth *no* for *nay*, for it is but a trifle and mistaking of the englishe worde, sauing that ye shoulde see that he, whych in two so plain englishe wordes, and so commen as is *naye* and *no*, cannot tell when he should take the tone, and when the tother, is not, for translating into englishe, a man very mete. For the vse of those two wordes in aunswering to a question is this. *No* [read *nay*] aunswereth the question framed by the affirmatiue. As, for ensample, if a manne should aske Tindall hymselfe: "ys an heretike mete to translate holy scripture into englishe?" Lo, to thys question, if he will aunswere trew englishe, he muste aunswere *nay*, and not *no*. But and if the question be asked hym thus, lo: "is not an heretyque mete to translate holy scripture into english?" To this question, lo, if he wil aunswer true english, he must aunswere *no*, & not *nay*. And a lyke difference is there betwene these two aduerbs, *ye* and *yes*. For if the questeion bee framed vnto Tindall by thaffirmatiue in thys fashion: "If an heretique falsely translate the newe testament into englishe, to make hys false heresyes seeme the worde of Godde, be hys bookes worthy to be burned?" To thys question asked in thys wyse, wy he wyl aunswere true englishe, he must aunswere *ye*, and not *yes*. But nowe if the question be asked hym thus, lo, by the negatiue: "If an heretike falsely translate the newe testament in-to englishe, to make hys false heresyes seme the word of God, be not his bokes well worthy to be burned?" To thys question in thys fashion framed, if he wyll aunswere trew englyshe, he maye not aunswere *ye*, but he must aunswere *yes*, and say "*yes*, mary, be they, bothe the translacion and the translatour, and al that wyll holde wyth them." And thys thing, lo, though it be no great matter, yet I haue thought it good to giue Tindall warning of, because I would haue him write true one way or other, that though I can not make him by no meane to write true matter, I would haue him yet at the lest wise write true englishe.
Sir T. More, The Confutacion of Tyndales Aunswere, made [Anno 1532, book iii., Workes, p. 448.

There is an example of the rejection of a needless subtlety in the case of our affirmative particles, *yea* and *yes*, *nay* and *no*, which were formerly distinguished in use, as the two affirmatives still are in our sister-tongues, the Danish and Swedish. The distinction was that *yea* and *nay* were answers to questions framed in the affirmative; as, Will he go? *Yea* or *Nay*. But if the question was framed in the negative, Will he not go? the answer was *Yes* or *No*. *G. P. Marsh*, Lects. on Eng. Lang., xxvi.

"What? sone," seide the couherde, "seidestow i was here?"
"*za*, sire, sertes," seide the childe.
William of Palerne (E. E. T. S.), l. 268.

'spring,' the opening of the year, = OBulg. *jarŭ*, spring, = Gr. *ὥρος*, a season, year, *ὥρα*, season, spring, year, hour, = Zend *yāre*, a year. From the Gr. *ὥρα* comes ult. E. *hour*, which is thus a doublet of *year*: see *hour*. Hence ult. *yore*.] 1. A full round of the seasons; the period of the earth's revolution round the sun; more accurately, the interval between one vernal equinox and the next, or one complete mean apparent circuit of the ecliptic by the sun, or mean motion through 360° of longitude. This is specifically the tropical year, which determines the sequence of the seasons (sometimes also called the *astronomical* or *solar year*). Its length is about 365 days, 5 hours, 48 minutes, 46 seconds. Owing to the precession of the equinoxes, this is less than the length of the *sidereal year*, the true period of the sun's revolution, or his return to the same place in relation to the fixed stars, which is 365d., 6h., 9m., 9.3s. The revolution from perihelion to perihelion, 365d., 6h., 13m., 48.1s., is the *anomalistic year*. Hence—2. The time in which any planet completes a revolution round the sun: as, the *year* of Jupiter or of Saturn.—3. A space of about 365 days, used in the civil or religious reckoning of time; especially, the usual period of 365 or 366 days, divided into twelve calendar months, now reckoned as beginning with the 1st of January and ending with the 31st of December: as, the *year* 1891 (see *legal year*, below); also, a period of approximately the same length in other calendars. Compare *calendar*.—4. A space of twelve calendar months without regard to the point from which they are reckoned: as, he sailed on June 1st, and was absent just one *year*.

At the *zeres* end thei comen azen, and founden the same Lettres and Figures, the whiche thei hadde writen the *zeer* before, withouten ony defaute.
Mandeville, Travels, p. 17.

Thei sholde not returne with-inne two *yere*, lesse than thei myght fynde the selde childe.
Merlin (E. E. T. S.), i. 29.

5. *pl.* Period of life; age: as, he is very vigorous for his *years:* often used specifically to note old age. See *in years*, below.

He is made as strong as brass, is of brave *years* too,
And doughty of complexion.
Fletcher, Rule a Wife, ii. 1.

He [Essex] . . . profess'd he would not contend with the Queen, nor excuse the Faults of his young *Years* either in whole or in part. *Baker*, Chronicles, p. 389.

He himselfe affected ease and quiet, now growing into *yeares*. *Evelyn*, Diary, Aug. 18, 1673.

What is there quite so profoundly human as an old man's memory of a mother who died in his earlier *years?*
O. W. Holmes, Professor, viii.

The older plural *year* still remains in popular language: as, the horse is ten *year* old.

And threescore *year* would make the world away.
Shak., Sonnets, xi.

Then you know a boy is an ass,
Then you know the worth of a lass,
Once you have come to forty *year*.
Thackeray, Age of Wisdom.

Anomalistic year. See *anomalistic.*—**Astral year.** Same as *sidereal year.*—**Astronomical year.** See def. 1.—**A year and a day,** the lapse of a year with a day added to it: in law constituting a period which in some cases determines a right or liability: as, where one is fatally wounded with murderous intent, the killing is murder if death ensues within *a year and a day.* See *day*[1].

I suere to you be the oth that I made to you when ye made me knyght that I shall seche hym a *yere and a day*, but with-ynne that space I may knowe trewe tidinges.
Merlin (E. E. T. S.), iii. 682.

See *bissextile.*—**Canicular year.** See *canicular.*—**Civil year,** the year in use in the ordinary affairs of life; the year recognized by the law; a year according to the calendar. It is either solar, like the civil year of Christian countries, or lunar, like the Mohammedan year, or lunisolar, like the Hebrew year.—**Climacteric years.** See *climacteric.*—**Common year,** a year of 365 days, as distinguished from a leap-year.—**Cynic year.** Same as *Sothic year.*—**Ecclesiastical year,** the year as arranged in the ecclesiastical calendar. For details of it, see *Sunday.*—**Eighty years' war.** See *war*[1].—**Embolismic year,** a year of thirteen months, occurring in a lunisolar calendar, like that of the Jews.—**Emergent year.** See *emergent.*—**Enneatical years†.** See *enneatic.*—**Estate for years.** See *estate.*—**Fiscal year.** See *fiscal.*—**Four years' limitation law.** See *limitation.*—**Gregorian year.** See *Gregorian.*—**Hebrew year,** a lunisolar year, composed of 12 or 13 months of 29 or 30 days. In every cycle of nineteen years, the 3d, 6th, 8th, 11th, 14th, 17th, and 19th are *embolismic years* and have 13 months, while the rest are *ordinary years* and have 12 months. Both the embolismic and the ordinary years are further distinguished as *regular, defective,* and *abundant.*—**Hundred years' war.** See *war*[1].—**In years,** advanced in age.

I am honest in my Inclinations,
And would not, wer't not to avoid Offence, make a
Lady a little *in Years* believe I think her young.
Etherege, Man of Mode, ii. 2.

Men *in Years* more calmly Wrongs resent.
Congreve, tr. of Ovid's Art of Love.

The lady, who was a little *in years*, having parted with her fortune to her dearest life, he left her.
Goldsmith, Register of Scotch Marriages.

Julian year. (*a*) A period of 365¼ days. (*b*) Incorrectly, a year of the Julian calendar.—**Leap year.** See *leap-year.*—**Legal year,** the year by which dates were reckoned, which until 1752 began March 25th: hence it was usual between January 1st and March 25th to date the year both ways, as February 19th, 1745–6 (that is, 1746 according to present reckoning).—**Lunar year,** a period consisting of 12 lunar months. The *lunar astronomical year* consists of 12 lunar synodical months, or 354 days, 8 hours, 48 minutes, 36 seconds. The *common lunar year* consists of 12 lunar civil months, or 354 days.—**Lunisolar year.** See *lunisolar.*—**Mohammedan year,** a purely lunar year of 12 months, having alternately 30 and 29 days, except that in certain years the last month has 30 days instead of 29. These years are the 2d, 5th, 7th, 10th, 13th, 16th, 18th, 21st, 24th, 26th, and 29th of each cycle of thirty years. The years are counted from the *hejira*, A. D. 622, July 15th.—**Natural year.** Same as *tropical year.*—**Planetary years.** See *planetary.*—**Platonic year,** a great cycle of years at the end of which it was supposed that the celestial bodies will be found in the same places they were in at the creation. Also called *great* or *perfect year.*—**Regnal, sabbatical, sidereal year.** See the adjectives.—**Seven years' war.** See *Silesian wars*, under *Silesian.*—**Solar year.** See def. 1.—**Sothic year.** See *Sothic.*—**Tenancy from year to year.** See *tenancy.*—**Term of years, term for years.** See *term*, 6 (*c*).—**Theban year.** See *Theban.*—**Thirty years' war.** See *thirty.*—**To be struck or stricken in years.** See *strike.*—**Tropical year.** See def. 1.—**Vague year,** an Egyptian year of 365 days. Called *vague*—that is, wandering—because in the course of 1507 years it begins at all seasons.—**Year by year,** from one year to another; with each succeeding year.

Disease, augmenting *year by year*,
Show'd the grim king by gradual steps brought near.
Crabbe, Works, I. 102.

Year, day, and waste, part of the sovereign's prerogative in England, whereby he was entitled to the profits for a year and a day of the lands held by persons attainted of petty treason or felony, together with the right of wasting them, afterward restoring them to the lord of the fee. It was abolished by the Felony Act, 1870.—**Year in, year out,** always; from one year to another.

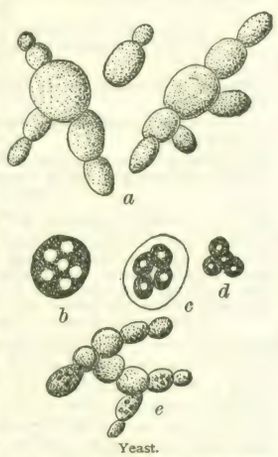
yearnful† (yėrn′fůl), *a.* [Also *yernful, ernful;* < *yearn*[2] + *-ful.*] Mournful; distressing.

Ala, Ala, was their *yernfull* note; their foode was the peoples almes. *Purchas*, Pilgrimage, p. 628.

But, oh musicke, as in joyfull tunes, thy mery notes I did borrow,
So now lend mee thy *yernfull* tunes, to utter my sorrow.
Damon and Pith., Old Plays, I. 195. (*Nares.*)

yearning[1] (yėr′ning), *n.* [< ME. *gernynge;* verbal n. of *yearn*[1], *v.*] The feeling of one who yearns; a strong feeling of tenderness, pity, or longing desire.



All the herte festenede in the *gernynge* of Ihesu es turned in-to the fyre of lufe.
Hampole, Prose Treatises (E. E. T. S.), p. 2.

The reveries of youth, in which so much energy is wasted, are the *yearnings* of a Spirit made for what it has not found but must forever seek as an Ideal.
Channing, Perfect Life, p. 176.

yearning[2] (yėr'ning), *n.* [Var. of *earning*[2].] Rennet. [Scotch.]

yearningly (yėr'ning-li), *adv.* In a yearning manner; with yearning.

yeast (yēst), *n.* [Formerly also *yest;* also dial. *east;* < ME. *zeest*, < AS. *gist, gyst* = D. *gest, gist* = MHG. *gest, jest*, G. *gäscht, gischt* = Icel. *jast, jastr* = Sw. *jäst* (cf. Dan. *gjær*), yeast; from a verb seen in OHG. *jesan*, MHG. *jesen, gesen, gern*, G. *gähren*, ferment, = Sw. *jäsa*, ferment, froth; akin to Gr. *ζέειν*, boil, seethe, (> *ζεστός*, boiled, boiling); Skt. √ *yas*, boil, froth.] **1.** A yellowish substance, having an acid reaction, produced during the alcoholic fermentation of saccharine fluids, rising partly to the surface in the form of a frothy, flocculent, viscid matter (*top* or *surface yeast*), and partly falling to the bottom (*bottom* or *sediment yeast*). Yeast consists of aggregations of minute cells, each cell constituting a distinct plant, *Saccharomyces cerevisiæ*. The yeast-plant is a saprophytic fungus, being generally regarded as a degenerate ascomycete. It exists under two ordinary conditions. In the first it is in the form of transparent round or oval cells, averaging .08 mm. (.003 inch) in diameter, which increase in countless numbers by budding — that is, by the formation of a small daughter-cell by the side of the mother-cell, from which it sooner or later separates. The other form consists of larger cells, which, by a division of their protoplasm, form four new cells within the parent-cell. These endogenously formed cells are regarded as corresponding to the ascospores of the typical *Ascomycetes*, to which, as stated above, they appear most closely related. The former notion that the yeast-plant was only the immature condition of a mold has been effectually exploded by the researches of Brefeld and others. Fermentation takes place sooner and goes on more rapidly when yeast is added than when the fluid is merely exposed to the atmosphere, beer-yeast possessing the property of setting up fermentation in the highest degree. Surface yeast is formed at from 65° to 77° F., and its action is rapid and irregular, whereas sediment yeast is formed at from 32° to 45°, and its action is slow and quiet. In their chemical relations the two do not appear to differ. Yeast varies in quality according to the nature of the liquid in which it is generated, and yeast-merchants distinguish several varieties, which are employed for different purposes according to their energy and activity. Hansen has made a thorough study of the several races or species, growing them in pure cultures. Yeast is employed to induce fermentation in the manufacture of beer and ale, and of distilled spirits, and is also the agent in producing the panary fermentation, whereby bread is rendered light, porous, and spongy. Beer-yeast is employed medicinally as a stimulant in low fevers, and is of great service in cases where, from inflammatory symptoms, wine is inadmissible. See *fermentation*.

Yeast.
a, yeast-plant (*Saccharomyces cerevisiæ*), showing increase by budding; *b*, a cell, showing the formation of the spores; *c*, a cell, containing four mature spores; *d*, the spores; *e*, germinating spores.

She consented that the village maiden should manufacture *yeast*, both liquid and in cakes.
Hawthorne, Seven Gables, v.

2. Spume or foam of water; froth.

Now the ship boring the moon with her mainmast, and anon swallowed with *yest* and froth.
Shak., W. T., iii. 3. 94.

They melt into thy *yeast* of waves, which mar
Alike the Armada's pride, or spoils of Trafalgar.
Byron, Childe Harold, iv. 181.

Artificial yeast, a dough of flour and a small quantity of common yeast, made into small cakes and dried. Kept free from moisture, it long retains its fermentative property. — **Beer-yeast**, the common yeast, *Saccharomyces cerevisiæ*, which is added to the wort of beer for the purpose of exciting fermentation. See def. 1. — **Bottom or sediment yeast.** See def. 1. — **German yeast**, common yeast collected, drained, and pressed till nearly dry. It can be so kept for several months, and is much used by bakers. — **Patent yeast**, yeast collected from a wort of malt and hop, and treated similarly to German yeast. — **Press-yeast**, yeast freed from water and other impurities, mixed with about 15 per cent. of starch, and pressed in bags as a preparation for storing. — **Surface or top yeast.** See def. 1.

yeast (yēst), *v. i.* [< *yeast, n.*] To ferment.

Yeasting youth
Will clear itself and crystal turn again.

II. *n.* **1.** The color of gold, butter, the neutral chromates of lead, potassa, etc., and of light of wave-length about 0.581 micron. It has some remarkable properties, which are due to the fact that by far the greater part of the visible spectrum consists of two regions, in either of which any three colors being taken a suitable mixture of the extreme ones will match the middle one, and that the yellow is about the middle of one of these regions which contains four fifths of all the visible light of the solar spectrum. This region is bounded by the scarlet and the emerald-green; the other by the emerald-green and the violet-blue. These three colors are thus the only ones which cannot be matched by mixtures of others. They are also more chromatic or high-colored than those which fall between them in the spectrum; for which reasons physicists regard these three colors as the elementary ones. (See *color*.) A remarkable property of yellow is that an increase of light merely intensifies the sensation with a slight heightening of the color, without changing the hue; while blue, on the other hand, is rendered pale by increased illumination, and all other colors are rendered yellowish. The name *yellow* is restricted to highly chromatic and luminous colors. When reduced in chroma, it becomes buff; when reduced in luminosity, a cool brown. Mixed with red, yellow goes over into orange; mixed with green, into yellow-green. Lemon-yellow and canary-yellow may be taken as pure yellows, the latter being a little greener. Sulphur-yellow is a little greenish; primrose is a little greenish and pale; gamboge is a very slightly orange yellow. By chrome-yellow is usually meant a little more orange and most intensely chromatic color. Indian, cadmium, and saffron yellows are orange-yellows; Naples yellow and maize-yellow are pale orange-yellows. Ocher-yellow, clay-yellow, and wax-yellow are of somewhat diminished chroma, the first a little orange, and the last a little green. It is impossible to describe the yellows more precisely, as the slightest causes—for example, a little thicker layer of paint, or illumination from another part of the sky—change their hues decidedly.

See *antimony*.—**Cassel yellow.** Same as *mineral yellow*.—**Chinese yellow.** Same as *king's yellow*.—**Cobalt yellow,** a pigment used by artists, composed of the double nitrite of potassium and cobalt. It is permanent, and more closely resembles the yellow of the spectrum than any other pigment.—**Fast yellow.** Same as *acid-yellow*.—**Fol's yellow,** a color formerly used in dyeing, made by heating carbolic acid and arsenic in a pot. It dyes wool and silk yellow, and gives red shades with lime.—**Imperial yellow,** in *ceram.*, a variety of Chinese porcelain having a uniform yellow glaze, said to be reserved for the use of the imperial family or court; also, by extension, porcelain of any make supposed to resemble this in color.—**Indian yellow,** a bright yellow pigment obtained in India. It is supposed to be the earth dug up from the stables where cows have been housed during the winter and fed on mango-leaves. In its crude form it comes in commerce in balls of from 3 to 5 inches, having an offensive urinous odor. It is an impure magnesium salt of euxanthic acid. For artistic purposes it is washed and levigated, the foreign material being carefully separated. Thus purified it gives an orange-yellow of great depth and beauty. It is quite permanent, and is used both as an oil and as a water color.—**King's yellow,** a pigment formed by subliming a mixture of arsenious oxid and sulphur. It consists of arsenious acid and arsenic trisulphid, or orpiment. Also *Chinese yellow*.—**Madder-yellow,** a lake prepared from madder-root. It is bright in tone, somewhat similar to Indian yellow, but more transparent.—**Manchester yellow,** a coal-tar color used in dyeing, being the sodium or calcium salt of dinitro-alpha-naphthol. It is applicable to silk and wool, producing shades from pale lemon to deep orange. It is not fast to light. It is also known as *Martius's yellow*, *naphthol yellow*, *golden yellow*, *saffron yellow*, *naphthalene yellow*.—**Mars yellow,** an artificially prepared oxid of iron, resembling the natural yellow ocher. It is used by artists as a pigment.—**Martius's yellow.** Same as *Manchester yellow*.—**Mineral yellow.** See *mineral*.—**Montpellier yellow.** Same as *mineral yellow*.—**Naples yellow,** a light-yellow pigment of various shades and of varying composition. The true pigment is a basic antimoniate of lead, but it is imitated by mixtures, as of cadmium-yellow and zinc-white, or of white lead and chrome-yellow. It has a good body, and is quite permanent.—**Paris yellow.** Same as *chrome-yellow*.—**Patent yellow.** Same as *mineral yellow*.—**Perfect yellow,** chromate of zinc, used as a pigment by artists. yellowham (yel'ō-ham), *n.* The European yellowhammer.

Yellow hammer, with its abbreviation *yellow Ham.*
Yarrell, Brit. Birds (4th ed.), II. 43, note. (*Encyc. Dict.*)

yellowhammer (yel'ō-ham″ėr), *n.* [Cf. dial. *yellowhomber, yellowomber;* < *yellow* + *hammer*[3], prop. *ammer:* see *hammer*[3].] 1. The yellow bunting, *Emberiza citrinella*, one of the commonest birds of the western Palearctic region. It is about 7 inches long; the head, cheeks, front of the neck, belly, and lower tail-coverts are of a bright yellow; the upper surface is partly yellow, but chiefly brown, the feathers on the top of the back being blackish in the middle, and the tail-feathers also blackish. The yellowhammer is a resident in Great Britain, and generally throughout Europe. In summer the well-known notes of the male are almost incessantly heard from the roadside hedge. Also called *goldhammer, yellowammer, yellowham, yellow-*

omber, yellow yoldring, yellow yorling, yellow yowley (and with variants *yeldring, yeldrock*); also *scribbling lark* and *writing lark* (from the scratchy markings of its eggs); and by various other local or provincial names, as *yite*.

2. In the United States, a local name given to the flicker, or golden-winged woodpecker, *Colaptes auratus* (see cut under *flicker*[2]). No bird much like or congeneric with the true yellowhammer exists in North America; but the name was probably bestowed upon the golden-winged woodpecker because the bird is extensively yellow and "hammers" trees. The European yellowhammer resembles and is congeneric with the ortolan of that country, *Emberiza hortulana;* and the United States bird which really looks something like the yellowhammer is the bobolink in the fall, when it is called *reed-bird, rice-bird,* and *ortolan*.

3†. A gold coin; a yellow boy. [Old slang.]

Is that he that has gold enough? would I had some of his *yellow-hammers!* *Shirley*, Bird in a Cage, ii. 1.

yellow-headed (yel'ō-hed″ed), *a.* Having the head yellow, or yellow on the head: as, the *yellow-headed* blackbird. See cut under *Xanthocephalus*.—**Yellow-headed tit** or **titmouse,** the gold tit, *Auriparus flaviceps*.

yellow-horned (yel'ō-hôrnd), *a.* Having yellow antennæ: as, the *yellow-horned* moth, *Cymatophora flavicornis*, a British noctuid.

yellowing (yel'ō-ing), *n.* [Verbal n. of *yellow*, *v.*] In *pin-manuf.*, the operation of boiling the pins in an acid solution preparatory to nurling or tinning.

yellowish (yel'ō-ish), *a.* [< *yellow* + *-ish*[1].] Tending to be yellow; somewhat yellow; yellowy: as, the *yellowish* monitor, *Varanus flavescens*.

In his youth he was unhealthy, and of an ill complexion (*yellowish*). *Aubrey*, Lives (Thomas Hobbes).

yellowishness (yel'ō-ish-nes), *n.* The state or property of being yellowish. *Boyle*.

yellow-jack (yel'ō-jak), *n.* See *yellow Jack*, under *jack*[1].

★**yellow-jacket** (yel'ō-jak″et), *n.* Any one of several species of true social wasps or hornets of the genus *Vespa*, which have the body more or less marked with yellow; any hornet, as *V. crabro*. See cut under *hornet*. *Vespa vulgaris*, an importation from Europe, is the common yellow-jacket of the United States.

into Central and South America, and is an abundant and well-known game-bird, especially during the autumnal migration, when it is found in flocks about the marshes, feeding upon fish-fry, mollusks, crustaceans, etc., and becoming fat and highly prized for the table. It is about 11 inches long, the bill 1½ inches, the tarsus about 2 inches. The name extends to a similar but larger species, the *T.* or *G. melanoleucus*, the two being distinguished as the *lesser* and *greater yellowlegs*. The latter is decidedly larger, beyond dimensions ever reached by the former, as length 13 to 14 inches, bill 2 or more, tarsus 2½, etc. These birds are also called *lesser* and *greater yellowshanks* and by various other names. See *tattler* and *Totanus*.

yellow-legged (yel'ō-leg″ed or -legd), *a.* Having yellow legs: as, the *yellow-legged* clearwing, a British hawk-moth, *Sesia cynipiformis* or *Trochilium cynipiforme*. The yellow-legged herring-gull is *Larus cachinnans* of Pallas. The so-called yellow-legged plover of the United States is the lesser yellowlegs, *Totanus flavipes*.—**Yellow-legged goose.** See *goose*.—**Yellow-legged sandpiper.** See *sandpiper*, and cut under *ruff*[2].

yeoman (yō'man), *n.*; pl. *yeomen* (-men). [Early mod. E. *yoman;* < ME. *yoman, yomon, zhoman, yeman, zeman, zheman;* not found in AS., but prob. existent as **gāman, *geáman, *gǣ-* (= OFries. *gāman, gāmon*, a villager (cf. *gāfolk*, people of a village), = MD. *goymannen*, arbitrators, = Icel. *gæimadhr*, a franklin—rare, and prob. < AS.); < AS. **gā, *geá, *gē*, a district or village, as in comp. *ēel-gē*, 'province of eels,' *Ohtga-gā, Noxga-gā* (= OFries. *gā, gō* (pl. *gāe*), a district village, = MD. *gouwe* (in comp. *goo-, goy-, go-*), a village, field, D. *gouw, gouwe*, a province, = MLG. *gō*, LG. *goë, gohe*, in comp. *go-*, a district, = OHG. *gowi, gouwi, gewi*, MHG. *gou, göu*, G. *gau*, a province, G. dial. *gäu*, the country, = Goth. *gawi*, a district), + *man*, man. The word has been erroneously explained otherwise: (*a*) A contraction of a supposed ME. **yeme-man*, 'a person in charge,' < *yeme*, care, + *man*. (*b*) < AS. *iuman*, a forefather, ancient, < *iu*, of yore, + *man*. (*c*) < AS. *iung man, geong man*, young man. (*d*) < AS. *guma*, man. (*e*) < AS. *gemæne*, common. These attempts are all wrong. That which refers to AS. *iung man, geong man*, finds some color in the use of *iung men* as a quasi-technical name for a bodyguard; but while the sense might seem to suit, it is impossible to derive ME. *zo-* or *ze-* from AS. *geong, iung*. The proper modern spelling is *yoman*, the *eo* being appar. due to an attempt to represent in one spelling the two variants *yeman* and *yoman;* the *eo* has no etymological justification, as it has to some extent in *people*.]

1†. A retainer; a guard.

zomen than dede the gates schette,
& wiztili than went the walles forto fende.
William of Palerne (E. E. T. S.), l. 3649.

There came a country gentleman (a sufficient yeoman) up to towne, who had severall sonnes, but one an extraordinary proper handsome fellowe, whom he did hope to have preferred to be a *yeoman of the guard*.
Aubrey, Lives (Walter Ralegh).

Yeoman's service, powerful or efficient aid, support, or help: in allusion to the strength and bravery of the yeomen in the English armies of early times.

I once did hold it, as our statists do,
A baseness to write fair, and labour'd much
How to forget that learning, but, sir, now

Robin Hood and the Potter (Child's Ballads, V. 32).

Next after the gentry, in respect of that political weight which depends on the ownership of land, was ranked the great body of freeholders, the *yeomanry* of the middle ages. *Stubbs*, Const. Hist., § 480.

2†. Service; retainers; those doing a vassal's service.

Then Robin Hood took those brethren good
To be of his *yeomandrie*.
Robin Hood and the Beggar (Child's Ballads, V. 257).

3†. That which befits a yeoman.

"Be mey trowet, thow seys soyt," seyde Roben,
"Thow seys god *yemenrey*."
Robin Hood and the Potter (Child's Ballads, V. 22).

4. A volunteer cavalry force originally embodied in Great Britain during the wars of the French revolution, and consisting to a great extent of gentlemen or wealthy farmers. They underwent six days of training, and attended a certain number of drills yearly, for which they received a money allowance. They furnished their own horses but had a small allowance for clothing—the government also supplying arms and ammunition. Unlike the ordinary volunteer force, the yeomanry cavalry might be called out to aid the civil power, in addition to being liable for service on invasion of the country by a foreign enemy. The yeomanry took an active part in the South African War. In 1901 it was remodeled, and in 1908 became part of the territorial force.

But you heed me no more than a goss-hawk minds a yellow *yoldring*. *Scott*, Abbot, xvii.

yolet, *v. i.* An obsolete variant of *yawl*[1].

yolk[1] (yōk), *n.* [Also *yelk*; < ME. *yolke, yelke*, < AS. *ġeolca*, yolk, lit. 'the yellow part,' < *geolu*, yellow: see *yellow*.] **1.** The yellow and principal substance of an egg, as distinguished from the white; that protoplasmic content of the ovum of any animal which forms the embryo in germination, with or without some additional substance which serves to nourish the embryo during its formation, as distinguished from a mass of albumen which may surround it, and from the egg-pod or shell which incloses the whole; the vitellus, whether formative wholly or in part. In holoblastic ova, which are usually of minute or microscopic size, the whole content of the cell-wall is yolk which undergoes complete segmentation, and is therefore formative or germinal vitellus, or morpholecithus. In large meroblastic eggs, however, such as those we eat of various birds and reptiles, the true germ-yolk forms only the nucleus and a relatively small part of the whole yolk-ball, which then consists mainly of food-yolk or tropholecithus. This is the yolk of ordinary language, forming a relatively large ball of usually yellow and minutely granular substance which floats in a mass of white or colorless albumen, inclosed in a delicate pellicle, or vitelline membrane, and is steadied or stayed in position by certain strands of stringy albumen forming the chalazæ. The quantity of germ- and of food-yolk relatively to each other and also to the amount of white varies much in different eggs, as does also the relative position of the two kinds of yolk. (See *ectolecithal, centrolecithal*.) In the largest eggs, as of birds, the great bulk results from the copiousness of the white and of the food-yolk, and the germ-yolk appears only at a point on the surface of the latter, where it forms the so-called tread or cicatricula. Some eggs contain more than one yolk, but this is rare and anomalous. See *egg, ovum*, and *vitellus*; also *segmentation of the vitellus* (under *segmentation*), and cuts under *gastrulation*.

The tother [man] was galowere thene the *golke* of a naye [an egg]. *Morte Arthure* (E. E. T. S.), l. 3284.

2. The vitellus, a part of the seed of plants, so named from its supposed analogy with the yolk of an egg.—3. The greasy sebaceous secretion or unctuous substance from the skin of the sheep, which renders the fleece soft and pliable; wool-oil.

Is not the *yoke*, or natural oiliness of the wool in the animal, more efficacious?
Agric. Surv. of Galloway, p. 283. (*Jamieson.*)

Food yolk. See *food-yolk*, *meroblastic*, and *tropholecithus*. —**Formative yolk**, germinal yolk, which enters into the formation of the embryo, as distinguished from the food-yolk, which does not undergo segmentation; morpholecithus; vitellus germinativus. See *holoblastic*.—**Glycerite of yolk of egg**, a mixture of yolk of egg (45 parts) with glycerin (55 parts), used as a vehicle for medicinal oils and resins.

yolk[2], *v.* See *yoke*[2]. *Halliwell.*

yolk-bag (yōk′bag), *n.* Same as *yolk-sac*.

And she ansuerde, "I am *yowre* and the childe *youre*, therfore do with me and with hym youre will."
Merlin (E. E. T. S.), i. 89.

2. Belonging to you: possessive and adjective in use, preceding the noun. While plural in form and original meaning, it is now commonly also used, like the nominative *you*, in addressing an individual.

"I haue no kynde knowyng," quod I, "to conceyue alle *zoure* wordes." *Piers Plowman* (B), viii. 57.

Promise unto the Lord *your* God, and keep it, all ye that are round about him.
Book of Common Prayer, Psalter, Ps. lxxvi. 11.

I leave it [the poem] to *your* honourable survey, and *your* honour to *your* heart's content.
Shak., Venus and Adonis, Ded. to the Earl of Southampton.

[*Your* was used formerly to denote a class or species well known. This use survives as an archaism, and now often adds a slurring or humorous significance.

Your serpent of Egypt is bred now of *your* mud by the operation of *your* sun. *Shak.*, A. and C., ii. 7. 29.

Your great Philosophers have been voluntarily poor.
Burton, Anat. of Mel., p. 352.]

yourn (yörn), *pron.* Yours. [Prov. Eng. and U. S.]

yours (yörz), *pron.* [< ME. *youres, goures*, etc.; with added poss. suffix, as in *ours, theirs*, etc.: see *your*.] That which belongs or those which belong to you: the possessive used without a following noun. Preceded by *of*, it is equivalent to the personal pronoun *you*: as, a friend *of yours*. Compare the similar phrases made with the other possessives in the independent form.

Ye cruell one! what glory can be got
In slaying him that would live gladly *yours!*
Spenser, Sonnets, lvii.

What 's mine is *yours* and what is *yours* is mine.
Shak., M. for M., v. 1. 543.

Yours is no love, Faith and Religion fly it.
Fletcher, Wife for a Month, i. 1.

If by Fate *yours* only must be Empire, then of necessitie ours among the rest must be subjection.
Milton, Hist. Eng., ii.

[*Yours* is sometimes used in specific senses without reference to a noun previously mentioned: (*a*) Your property. (*b*) The persons belonging to you; your friends or relatives.

Bothe to me & to myne mykull vnright,
And to yow & also *yours* 3omeryng [mourning] for euer.
Destruction of Troy (E. E. T. S.), l. 1722.

O God, I fear thy justice will take hold
On me, and you, and mine, and *yours* for this!
Shak., Rich. III., ii. 1. 132.

(*c*) Your letter: as, *yours* of the 16th inst. is at hand.

I have *yours* just now of the 19th.
Swift, To Dr. Sheridan, July 27, 1726.]

Abbreviated *yrs.*

Yours truly, yours to command, etc., phrases of conventional politeness immediately preceding the signature at the end of a letter: hence sometimes used playfully by a speaker in alluding to himself.

Yours truly, sir, has an eye for a fine woman and a fine horse. *W. Collins*, Armadale, II. 168. (*Hoppe.*)

yourself, yourselves (yōr-self', -selvz'), *pron.* [< ME. *your selven*, etc.: see *your* and *self*.] An emphatic or reflexive form of the second personal pronoun, *ye, you*. *Yourself* is used when a single person is addressed (compare *ye, your*), and *yourselves* when more than one. As nominatives, the words are used for emphasis, either in apposition with *you* or alone.

Ye se well *your-seluyn* the sothe at your egh,
Hit is no bote here to byde for baret with-oute.
Destruction of Troy (E. E. T. S.), l. 12333.

I knowe yow alle as wele or beter than ye do *youre-self*.
Merlin (E. E. T. S.), ii. 141.

Conversation is but carving;
Carve for all, *yourself* is starving.
Swift, Verses on a Lady.

In the objective case *yourself* or *yourselves* is commonly reflexive: when emphatic it is usually in apposition with *you*. Compare *himself, herself*, etc.

Call forth your actors by the scroll. Masters, spread *yourselves*. *Shak.*, M. N. D., i. 2. 16.

"Stay then a little," answered Julian, "here,
And keep *yourself*, none knowing, to *yourself*."
Tennyson, Lover's Tale, Golden Supper.

yourta, yourte, *n.* French spellings of *yurt*.

youse (yöz), *n.* [E. Ind.] The chetah or hunting-leopard, *Guepardus jubatus*. Also *youze*. See cut under *chetah*.

youth (yöth), *n.* [< ME. *youthe, youhthe, iouthe, zouthe, yhouthe, guwethe, guzethe, geoguthe, iuzethe*, etc., < AS. *geógoth, gióguth, iugoth* = OS. *juguth, jugud* = D. *jeugd* = OHG. *jugund*, MHG. *jugent*, G. *jugend*, youth; with abstract formative *-th* (*-oth*, etc.), < AS. *geong*, etc., young: see *young*. A "restored" form appears in *youngth*.] **1.** The condition of being young; youthfulness; youngness; juvenility.

These opinions have *youth* in their countenance; antiquity knew them not; it never thought nor dreamed of them. *Hooker*, Eccles. Polity, vi. 4.

In fact, there 's nothing that keeps its *youth*,
So far as I know, but a tree and truth.
O. W. Holmes, The Deacon's Masterpiece.

2. The age from puberty up to the attainment of full growth. In a general sense, youth denotes the whole early part of life, from infancy to maturity; but it is not unusual to divide the stages of life into infancy, childhood, youth, and manhood. Thus limited, youth includes that early period of manhood or womanhood upon which one enters at puberty, with the establishment of the sexual functions, and in which one continues until the skeleton is completely ossified by the consolidation of the epiphyses of the long bones, so that there is no further increase in stature, and all the teeth are in permanent functional position.

Therfore take hede bothe nyȝt & day
How fast ȝoure *youthe* dooth asswage.
Hymns to Virgin, etc. (E. E. T. S.), p. 79.

3. A young person; especially, a young man. In this sense it has a plural.

I gave it to a *youth*,
A kind of boy. *Shak.*, M. of V., v. 1. 161.

Seven *youths* from Athens yearly sent.
Dryden, Æneid, vi. 27.

For what in nature's dawn the child admired,
The *youth* endeavoured, and the man acquired.
Dryden, To Sir Godfrey Kneller, l. 144.

Just at the age 'twixt boy and *youth*,
When thought is speech, and speech is truth.
Scott, Marmion, ii., Int.

I had hardly ever seen a handsome *youth*; never in my life spoken to one. *Charlotte Brontë*, Jane Eyre, xii.

4. Young persons collectively.

Forget the present Flame, indulge a new,
Single the loveliest of the am'rous *Youth*.
Prior, Henry and Emma.

Even when our *youth*, leaving schools and universities, enter that most important period of life.
Burke, Rev. in France.

O ye! who teach the ingenuous *youth* of nations, . . .
I pray ye flog them upon all occasions.
Byron, Don Juan, ii. 1.

5†. Recentness; freshness; brief date. [Rare.]

Welcome hither;
If that the *youth* of my new interest here
Have power to bid you welcome.
Shak., M. of V., iii. 2. 224.

youthedet, *n.* A Middle English form of *youthhead*.

youthful (yöth'fûl), *a.* [< *youth* + *-ful*.] **1.** Possessing or characterized by youth; not yet aged; not yet arrived at mature years; being in the early stage of life; young; juvenile.

It was a *youthful* knight
Lov'd a gallant lady.
Constance of Cleveland (Child's Ballads, IV. 226).

As Clifford's young manhood had been lost, he was fond of feeling himself comparatively *youthful*, now, in apposition with the patriarchal age of Uncle Venner.
Hawthorne, Seven Gables, x.

2. Pertaining or belonging or suitable to the early part of life: as, *youthful* days; *youthful* age.

His *youthful* hose, well saved, a world too wide
For his shrunk shank.
Shak., As you Like it, ii. 7. 160.

Now no more shall these smooth brows be begirt
With *youthful* coronals, and lead the dance.
Fletcher, Faithful Shepherdess, i. 1.

The discrepancy . . . between her age, which was about seventy, and her dress, which would have been *youthful* for twenty-seven. *Dickens*, Dombey and Son, xxi.

Sometimes . . . the *youthful* spirit has come over me in such a rush of young blood that it has surprised me as much as the slaughtered Duncan's manifestation surprised Lady Macbeth.
O. W. Holmes, Over the Teacups, xii.

3. Fresh and vigorous, as in youth.

Perfect felicity, such as after millions of millions of ages is still *youthful* and flourishing. *Bentley.*

4. Early in time.

Here, as I point my sword, the sun arises,
Which is a great way growing on the south,
Weighing the *youthful* season of the year.
Shak., J. C., ii. 1. 108.

Nor of the larger stature & cubites of men in those *youthfull* times and age of the world.
Purchas, Pilgrimage, p. 39.

=Syn. 1–3. *Youthful, Juvenile, Boyish, Puerile. Youthful* is generally used in a good sense: as, *youthful* looks or sports; *juvenile* indifferently, but if in a bad sense not strongly so: as, the poem was a rather *juvenile* performance; *boyish* rather more often, but not necessarily, in some contempt: as, a *boyish* manner; *boyish* enthusiasm; *puerile* always in marked contempt, as a synonym for *silly*.

youthfullity (yöth'fûl-i-ti), *n.* [< *youthful* + *-ity*.] Youthfulness. [Nonce-word.]

You see my impetuosity does not abate much; no, nor my *youthfullity*. *Walpole*, Letters (1763), II. 461. (*Davies.*)

youthfully (yöth'fûl-i), *adv.* In a youthful manner.

Your attire . . . not *youthfully* wanton.
Bp. Hall, Works, I. 314. (*Richardson.*)

youthfulness (yöth'fûl-nes), *n.* The state or character of being youthful.

Lusty *youthfulness*. *Holland*, tr. of Plutarch, p. 764.

youthhead (yöth'hed), *n.* [< ME. *youthede*, *gouthede*, etc.; < *youth* + *-head*. Cf. *youthhood*.] Youth. [Obsolete or archaic.]

In gret perel is set *youthede*,
Delite so doth his bridil leede.
Rom. of the Rose, l. 4931.

A sharp Adversitie,
Danting the Rage of *youth-heid* furious.
Ramsay, Vertue and Vyce, st. 37.

In *youthhead*, happy season. *Southey.* (*Imp. Dict.*)

youthhood (yöth'hůd), *n.* [< ME. **youthehod*, *guwethehod*, < AS. *geoguthhād* (= OS. *jugudhēd*); as *youth* + *-hood*. Cf. *youthhead*.] Youth.

To rejuvenate them with the vigor of his own immortal *youthhood*. *G. D. Boardman*, Creative Week, p. 135.

The *youthhood* of Derry and Enniskillen determined to protect themselves.
W. S. Gregg, Irish Hist. for Eng. Readers, p. 76.

youthlike (yöth'līk), *a.* Having the characteristics of youth. [Rare.]

All such whom either youthful age or *youthlike* minds did fill with unlimited desires. *Sir P. Sidney*, Arcadia, iii.

youthly† (yöth'li), *a.* [< *youth* + *-ly*1.] Pertaining to youth; characteristic of youth; youthful.

The knight was fiers, and full of *youthly* heat.
Spenser, F. Q., I. v. 7.

That sooth'd you in your sins and *youthly* pomp.
Greene, James IV., v.

As touching my residence and abiding heere in Naples, my *youthlye* affections, my sportes and pleasures, . . . to me they bring more comfort and ioye then care and griefe. *Lyly*, Euphues, Anat. of Wit, p. 42.

youthly† (yöth'li), *adv.* [< *youth* + *-ly*2.] Youthfully.

And deckt himselfe with fethers *youthly* gay.
Spenser, F. Q., I. xi. 34.

youthnesst (yöth'nes), *n.* [< ME. *youthnesse*; < *youth* + *-ness*.] Youth; youthfulness.

Off his wickednesse don consentyngly,
And that he had don in his *youthnesse* soo,
With sore hert contrite all confessed thoo.
Rom. of Partenay (E. E. T. S.), l. 5221.

youthsome (yöth'sum), *a.* [< *youth* + *-some*.] Having the vigor, freshness, feelings, tastes, or appearance of youth; youthful; young. [Rare.]

To my uncle Fenner's, when at the alehouse I found him drinking, and very jolly and *youthsome*.
Pepys, Diary, Oct. 31, 1661.

youthwort† (yöth'wėrt), *n.* An old name of the sundew, *Drosera rotundifolia*.

youthy (yö'thi), *a.* [< *youth* + *-y*1.] Young; youthful. [Rare.]

Affecting a *youthier* turn than is consistent with my time of day. *Steele*, Spectator, No. 296.

When at college, Sterling had venerated and defended Shelley as a moralist as well as a poet, "being rather *youthy*." *Caroline Fox*, Journal, p. 133.

youze, *n.* See *youse*.

yovet. A Middle English form of *gave*, preterit of *give*1.

yow (you), *n.* A dialectal form of *ewe*1. See the quotation under *shearhog*.

yowet, *n.* An obsolete form of *yew*1.

yowl (youl), *v. i.* [Also *youl*; < ME. *yowlen*, *youlen*, also *zaulen*, < Icel. *gaula*, howl: see *yawl*1. Cf. *yell*.] To give a long distressful or mournful cry, as a dog; howl; hence, of persons, to yell; bawl.

The grete tour
Resouneth of his *youling* and clamour.
Chaucer, Knight's Tale, l. 420.

The man [milkman] comes *yowling* regularly at the stroke of seven. *Carlyle*, in Froude, Life in London, I. iii.

yowl (youl), *n.* [< *yowl*, *v.*] A long distressful or mournful cry, as that of a dog.

yowley (you'li), *n.* [One of numerous variant forms (see below), ult. < AS. *geolu*, yellow: see *yellow*.] The yellow bunting, *Emberiza citrinella*: more fully called, by reduplication, *yellow yowley*. Also *yeldring*, *yeldrin*, *yeldrock*, *yolding*, *yoldring*, *yoldrin*, *yolling*, *yorling*; also *yite*, *yoit*. See cut under *yellowhammer*. [Scotland and North of Ireland.]

yowling (you'ling), *n.* [< ME. *zowlyng*; verbal n. of *yowl*, *v.*] A howling; crying.

And with a greet *zowlyng* he wepte.
Wyclif, Gen. xxvii. 38.

Then the wind set up a howling,
And the poodle-dog a *yowling*.
Thackeray, White Squall.

yowp, *v. i.* A dialectal form of *yaup*2. *Halliwell.*

yoxt, *v. i.* A Middle English form of *yex*.

Yphantes, *n.* See *Hyphantes*, 1. *Vieillot*, 1816.

ypight†. Same as *pight*, an obsolete past participle of *pitch*1.

ypiked†, *a.* Same as *piked* for *picked*1.

ypocrite†, *n.* An old spelling of *hypocrite*.

ypointing (i-point'ing), *a.* [< *y-*, *i-*, + *pointing*. Like Shakspere's *yravish*, an infelicitous attempt at archaism, the prefix *y-* being confined to ME. use and there to words of AS. origin (or to verbs from early OF., some of which, in the pp., have *y-*); there may have been a ME. **ypointed*, but there could be no ME. **ypointing*. Milton herein, like Thomson later, was imitating Spenser, who archaized on principle but without knowledge.] Pointing. [Poetical.]

What needs my Shakspeare, for his honour'd bones,
The labour of an age in piled stones?
Or that his hallow'd reliques should be hid
Under a star-*ypointing* pyramid?
Milton, Epitaph on William Shakspeare.

Yponomeuta (i-pon-ō-mū'tä), *n.* [NL. (Latreille, 1796), prop. *Hyponomeuta*, < Gr. *ὑπονομεύειν*, undermine, < *ὑπόνομος*, going underground, underground, as a noun an underground passage, < *ὑπό*, under, + *νέμειν*, drive.] A notable genus of tineid moths, typical of the family *Yponomeutidæ*, comprising a number of rather large slender-bodied species, usually white or gray, and often with many small black spots. The larvæ live gregariously in a light web, and feed upon the foliage of different plants. About a dozen species are found in Europe and 1 in North America. *Y. cognatella* is exceedingly destructive to apple-trees, depriving them of their leaves.

Yponomeutidæ (i-pon-ō-mū'ti-dē), *n. pl.* [NL. (Stephens, 1829), < *Yponomeuta* + *-idæ*.] A family of tineid moths, based chiefly upon venational characters, but having a recognizable facies. The larvæ have 16 legs, and in general feed like those of the type genus. Those of *Atemelia*, however, bore into buds and young twigs. Some 14 genera have been placed in this family by Staudinger, but the important genus *Argyresthia* and its allies are removed to a distinct family, *Argyresthiidæ*, by Heinemann and others. Also *Hyponomeutidæ*.

ypreised†, *a.* An obsolete form of the past participle of *praise*.

For the more a man may do by so that he do hit,
The more is he worth and worthi of wyse and goode *ypreised*. *Piers Plowman* (C), xi. 310.

Ypres lace. See *lace*.

ypsiliform (ip'si-li-fôrm), *a.* [< Gr. *ὖ ψιλόν* (see *hypsiloid*) + L. *forma*, form.] Shaped like the Greek capital letter Υ; Y-shaped. The figure is also called *arietiform*, the symbol of the zodiacal sign *Aries* being the same.

The T-shaped [germinal spot] gradually passes into the *ypsiliform* figure, so called from its resemblance to the Greek Y. *Encyc. Brit.*, XX. 417.

ypsilo-. For words so beginning, see *hypsilo-*.

ypsiloid, *a.* Same as *hypsiloid*.

Ypsilophus (ip-sil'ō-fus), *n.* [NL. (Oken, 1815).] Same as *Ypsolophus*.

Ypsipetes (ip-sip'e-tēz), *n.* [NL. (Stephens, 1829), prop. *Hypsipetes*, < Gr. *ὑψιπετής*, fallen from heaven, < *ὖψι*, on high, + *πέτεσθαι*, fly.] A genus of geometrid moths, of the family *Larentidæ*, of wide distribution, but having few species.

Ypsolophus (ip-sol'ō-fus), *n.* [NL. (Fabricius, 1798), *Ypsilophus* (Oken, 1815), prop. *Hypsilophus*, < Gr. *ὑψίλοφος*, having a high crest, < *ὖψι*, on high, + *λόφος*, crest.] A prominent genus of tineid moths, of the family *Gelechiidæ*, having ocelli, and both fore and hind wings turned forward at tip. The larvæ are leaf-rollers. Nine species are known in Europe and fifteen in the United States.

yr. An abbreviation (*a*) of *year*; (*b*) of *your*; (*c*) of *younger*.

yravisht (i-rav'ish), *v. t.* A pseudo-archaic form of *ravish*. Compare *ypointing*.

The sum of this,
Brought hither to Pentapolis,
Y-ravished the regions round,
And every one with claps can sound,
"Our heir-apparent is a king!"
Shak., Pericles, iii., Prol., l. 35.

yrent, yront, *n.* and *a.* Old spellings of *iron*.

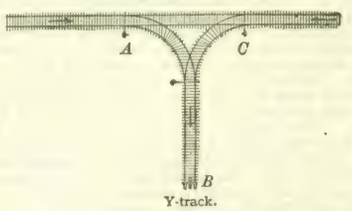
yrs. An abbreviation of *years* and of *yours*.

yset, *n.* An old spelling of *ice*.

ysenet, *pp.* A Middle English form of *seen*.

Ful longe were his legges and ful lene,
Ylik a staf; ther was no calf *ysene*.
Chaucer, Gen. Prol. to C. T., l. 592.

yslaked†. An obsolete preterit and past participle of *slake*.



Now sleep *yslaked* hath the rout.
Shak., Pericles, iii., Prol., l. 1.

ystle†, *n.* See *istle*.

ythe1**†**, *n.* Same as *ithe*.

ythe2**†**, *adv.* Same as *eath*.

Y-track (wī'trak), *n.* A short track laid at right angles (or approximately so) to a line of railway, with which it is connected by two switches — the whole resembling the letter Y. It is used instead of a turn-table for reversing engines or cars. In

Y-track.

operating it, an engine or car advancing toward *A* (heading as shown by the arrow) is switched at *A* to the track *B*, and then backed up over the switch *C* to the main track again, heading now in the reverse direction.

ytterbite (it′ėr-bīt), *n.* [< *Ytterby*, in Sweden, + *-ite*[2].] Same as *gadolinite*.

ytterbium (i-tėr′bi-um), *n.* [NL., < *Ytterby*, in Sweden.] Chemical symbol, Yb; atomic weight, 172.0. An element discovered by Marignac in gadolinite, in regard to which little is known. The spectrum of this metal is believed to be peculiar, and to justify its claim to be recognized as a distinct element.

yttria (it′ri-ạ), *n.* [NL., < *Ytter(by)*, in Sweden.] A metallic oxid or earth, having the appearance of a white powder, which is insipid, insoluble in water, and infusible. It dissolves in acids, forming salts. It has no action on vegetable colors. Yttria is the sesquioxid of yttrium, Y_2O_3. It occurs in certain rare minerals, and was first detected in gadolinite found at Ytterby, in Sweden. As thus far known it is probably a mixture of several oxids.

yttrialite (it′ri-ạ-līt), *n.* [< *yttria* + *-lite*.] A silicate of thorium and the yttrium earths, occurring in massive forms of a dark olive-green color. It is found with gadolinite and other rare species in Llano county, Texas.

yttric (it′rik), *a.* [< *yttr-ium* + *-ic*.] Related to or containing yttrium.

yttriferous (it-rif′ẹ-rus), *a.* [< NL. *yttrium*, q. v., + L. *ferre* = E. *bear*[1].] Containing or yielding yttrium.

yttrious (it′ri-us), *a.* [< *yttria* + *-ous*.] Pertaining to yttria; containing yttria: as, the *yttrious* oxid of gadolinite.

yttrium (it′ri-um), *n.* [NL., < *Ytter(by)*, in Sweden.] Chemical symbol, Y; atomic weight, 89. A metal, the base of the earth yttria. But little is known of this metal, and its atomic weight has never been satisfactorily determined. As obtained by Cleve, yttrium is a dark-gray powder exhibiting a metallic luster under the burnisher. It is related, with various other rare metals, to the cerium group, in regard to most of which, from their scarcity and their resemblance to one another, but little has been definitely made out.

yttrium-garnet (it′ri-um-gär″net), *n.* A variety of garnet containing a small amount of the yttrium earths.

yttrocerite (it-rō-sē′rīt), *n.* [< *yttr(ium)* + *cer(ium)* + *-ite*[2].] A mineral occurring very sparingly at Finbo and Broddbo, near Falun, in Sweden, embedded in quartz. Its color is violet-blue, inclining to gray and white. It occurs crystallized and massive, and is a fluoride of yttrium, cerium, and calcium.

yttrocolumbite (it″rō-kō-lum′bīt), *n.* [< *yttrium* + *columb(ic)* + *-ite*[2].] Same as *yttrotantalite*.

yttrogummite (it-rō-gum′īt), *n.* [< *yttrium* + *gummite*.] A mineral formed by the alteration of cleveite, and related to it as is ordinary gummite to uraninite.

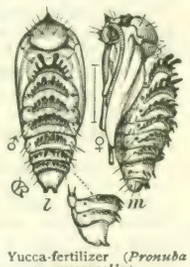
yttrotantalite (it-rō-tan′tạ-līt), *n.* [< *yttrium* + *tantalite*.] A rare mineral found at Ytterby, Sweden, of a black or brown color. It is a tantalate of yttrium, uranium, and iron, with calcium.

yttrotitanite (it-rō-tī′tạn-īt), *n.* [< *yttrium* + *titanite*.] Same as *keilhauite*. *Jour. Franklin Inst.*, CXXV. 338.

yu, yuh (yö), *n.* The Chinese name for nephrite or jade.

yuan (yü-ạn′), *n.* A Chinese silver coin worth about 47.7 United States cents.

Yucatecan (yö-kạ-tek′ạn), *a.* [< Sp. *Yucateco* (< *Yucatan*, Yucatan) + *-an*.] Pertaining or belonging to Yucatan, a region in southeastern Mexico.

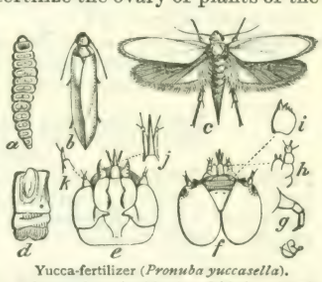


A fair sample of *Yucatecan* agriculture.
U. S. Cons. Rep., 1886, No. lxvii. p. 495.

★ **yucca** (yuk′ạ), *n.* [< Sp. *yucca*, now *yuca* (NL. *yucca*); of nat. W. Ind. (Carib) origin.] 1. A plant of the genus *Yucca*.—2. [*cap.*] [NL. (Dillenius, 1719).] A genus of liliaceous plants, type of the tribe *Yuccæ*. It is characterized by a distinct woody stem, numerous panicled roundish or bell-shaped flowers with nearly or quite separate perianth-segments, small anthers sessile on a club-shaped filament, and an ovary with numerous ovules. There are about 16 species, natives of the United States, Mexico, and Central America. They are low upright perennials, sometimes trees, often with numerous branches. Their leaves are linear-lanceolate and thick, usually rigid and spiny-tipped, and crowded at the apex of the stem or branch. The handsome pendulous flowers are large and usually white or cream-colored, attaining a length of 3 inches in *Y. baccata*, and form a showy terminal inflorescence often several feet long, seated among clustered leaves or raised on a bracted peduncle. The fruit is either a dry loculicidal capsule or a pendulous berry which is fleshy or pulpy, sometimes cylindrical and elongated; in *Y. brevifolia* it becomes dry and spongy. The rootstock is saponaceous, and in *Y. Treculeana* and other species is much used by the Mexicans for soap—being included with various similar products under the name *amole*. The leaves yield a coarse fiber; the taller species also produce a fibrous wood which is heavy, spongy, and difficult to cut or work; it shows distinct concentric rings, unlike that of most monocotyledonous plants. Some species are said to reach the height of 50 feet and the thickness of 5 feet. The species are most numerous in the southern United States and northern part of Mexico; one of them, *Y. glauca*, extends from New Mexico to the Dakotas; two are Californian; three are well-known plants of the Southern States, *Y. filamentosa*, *Y. aloifolia*, and *Y. gloriosa*, all decorative plants, mostly stemless, thriving in poor soil, even in drifting sand of the coast: their flowers are white, tinged sometimes with green, yellow, or purple; they furnish a harsh, brittle, but very strong fiber, called *dagger-fiber*, used for packing and as a rude cordage. From their sharp-pointed leaves with threads hanging from their edges, *Y. filamentosa* and *Y. aloifolia* are known as *Adam's needle and thread* and as *Eve's thread*; the former is also called *silk-grass* (which see), and sometimes *bear-grass*, its young pulpy stems being eaten by bears. *Y. aloifolia* is also known in the Southern States and in the West Indies as *Spanish dagger* and *dagger plant*. *Y. gloriosa* is the dwarf palmetto, or mound-lily. The preceding and several others are favorites in cultivation, chiefly under the name *yucca*; 8 species cultivated near Nice now begin to form a characteristic feature of some parts of the Mediterranean coast. Some species yield an edible fruit, as *Y. baccata*, the Spanish bayonet, or Mexican banana, a native of Mexico, extending into western Texas, New Mexico, and southern parts of Colorado and California; a strong coarse fiber, made into rope by the Mexicans, is procured from the leaves by macerating them in water. The name *Spanish bayonet* is also applied to other species, especially to *Y. constricta*, which occurs in Mexico and the United States to Kansas, grows from 9 to 15 feet high, and produces a light-brown or yellowish wood; and to *Y. Treculeana*, a long-leafed species of Texas and Mexico, sometimes 25 feet high and 2 feet thick, producing a bitter but sweetish fruit which is cooked and eaten by the Mexicans. It has its branches all near the top and produces great numbers of showy white flowers of a porcelain luster, followed by an edible berry. *Y. brevifolia*, known as *Joshua-tree*, native of Arizona near the southern boundary and of Mexico, is a tree sometimes 40 feet high and about 3 feet in diameter; its light soft wood is sometimes made into paper-pulp. *Y. Yucatana* of Central America is branched from the base.

Yucca gloriosa.

The great *Yuccas* . . . grow in the higher lands. . . . The old plants are exceedingly weird and picturesque.
Bailey, Cyclo. of Amer. Hort., IV. 2000.



yucca-borer (yuk′ạ-bōr″ėr), *n.* 1. A large North American moth, *Megathymus yuccæ*, whose larva bores into the roots of plants of the genus *Yucca*.—2. A Californian weevil, *Yuccaborus frontalis*.

Yucca-fertilizer (*Pronuba yuccasella*).

♂, male, ♀, female chrysalis; *l*, dorsal, *m*, lateral view; lower figure showing end of abdomen of male. (Line shows natural size.)

Yuccaborus (yu-kab′ō-rus), *n.* [NL. (Leconte, 1876), < *Yucca* + Gr. *βορός*, devouring, gluttonous.] A genus of weevils, of the family *Calandridæ*, containing a single species, *Y. frontalis*, of California, the yucca-borer.

yucca-fertilizer (yuk′ạ-fėr″ti-lī-zėr), *n.* A tineid moth, *Pronuba yuccasella*, which, by means of curiously modified mouth-parts, is enabled to pollenize and thus fertilize the ovary of plants of the genus *Yucca*, causing a development of the seed-pod, in which its larva feeds. Also called *yucca-pollenizer*.

Yucca-fertilizer (*Pronuba yuccasella*).

a, larva; *b*, moth with wings folded; *c*, female moth with wings expanded (all natural size). *d*, side view of one joint of larva; *e*, head of larva, from below; *f*, same, from above; *g*, leg of larva; *h*, maxilla; *i*, mandible; *j*, labial palpi and spinneret; *k*, antenna (all enlarged).

yuchten, *n.* Same as *juchten*.

yuck (yuk), *v. i.* [Also *yuke*, *yook*, *youk*; an unassibilated form (perhaps after D. *jeuken*, *joken* = LG. *jocken* = G. *jucken*) of *itch*, ult. AS. *giccan*, itch: see *itch*.] To itch. [Prov. Eng. and Scotch.]

yuck (yuk), *n.* [< *yuck*, *v.*] The itch, mange, or scabies. [Prov. Eng.]

yuckel (yuk′el), *n.* Same as *yockel* for *hickwall*. Also *yukkel*. [Prov. Eng.]

I feels sumhow as peert as a *yukkel*.
T. Hughes, Tom Brown at Oxford, II. xviii.

yucker (yuk′ėr), *n.* [Imitative, but prob. connected with *yuckel*.] The flicker, or golden-winged woodpecker, of eastern North America, *Colaptes auratus*. See cut under *flicker*[2]. [Local, U. S.]

yuft, *n.* Same as *juft* for *juchten*.

yug, yuga (yùg, yù′gạ), *n.* [Hind. *yug*, < Skt. *yuga*, an age, < √ *yuj*, join: see *yoke*[1].] One of the ages into which the Hindus divide the duration or existence of the world.

yuh, *n.* See *yu*.

Yuhina, *n.* [NL. (Hodgson, 1836), from a native name.] A genus of timeliine birds, also

Yuhina gularis.

called by Hodgson *Polyodon*, and by Cabanis *Odonterus*. Four species occur in the Himalayan region and western China—*Y. gularis*, *Y. diademata*, *Y. occipitalis*, and *Y. nigrimentum*.

yuke, *v.* and *n.* Same as *yuck*.

yukkel, *n.* Another spelling of *yuckel* for *hickwall*.

yulan (yö′lan), *n.* [Chinese, < *yu*, *yuh*, a gem (jade), + *lan*, plant.] A Chinese magnolia, *Magnolia conspicua*, with abundant large white flowers, appearing in spring before the leaves. It is a fine ornamental tree, in China 30 or 40 feet high, but in Europe and America smaller; in the United States it is only half-hardy at the north. A kindred hardy species, also from China, is *M. obovata*, with flowers pink-purple on the outside and white within, beginning to appear before the leaves.

Yule (yöl), *n.* [Also dial., in comp., *yu-* (*yu-batch*, *yu-block*, etc.); more prop., according to the ME. form, spelled **yool;* early mod. E. sometimes *ewle;* < ME. *yol*, *yole*, *gol*, December, < AS. *geól*, *gehhol*, *gehhel* (ML. *Giulus*), December (*se ærra geóla*, December, *se æftera geóla*, January, the months beginning respectively before and after the winter solstice), = Icel. *jōl* = Sw. Dan. *jul* (> MLG. *jul*), Yule, the Christmas feast; = Goth. *jiuleis* in *fruma jiuleis* (appar. 'first Yule'), applied, in a fragment of a calendar, appar. to November. The mod. E. use seems to be due to Scand. rather than to the AS. Origin unknown; according to a common view, the word is identified with Icel. *hjōl*, wheel, with the explanation that it refers to the sun's 'wheeling' or turning at the winter solstice. This notion, absurd with regard to the alleged connection of thought, is also phonetically impossible; the AS. word for *wheel* was *hweól*, and could have no connection with *geól*. Another explanation connects the word with *yawl*[1], *yowl*, howl, cry; as if *yule* was orig. the 'noise' of revelry. This is also untenable. The Goth. *jiuleis* implies an AS. **iūle*, an unstable form variable to **geóle* or *geól* (= Icel. *jōl*); the forms *gehhol*, *gehhel*, are rare, and may be mere blunders.] The season or feast of Christmas.

I crave in this court a crystemas gomen [sport],
For hit is *gol* & nwe yer.
Sir Gawayne and the Green Knight (E. E. T. S.), l. 284.

He made me gomane at *gole*, and gafe me gret gyftes.
Morte Arthure (E. E. T. S.), l. 2629.

At *ewle* we wonten gambole, daunce,
To carrole, and to sing,
To haue gud spiced sewe, and roste,
And plum-pies for a king.
Warner, Albion's England, v. 113.

They bring me sorrow touch'd with joy,
The merry merry bells of *Yule*.
Tennyson, In Memoriam, xxviii.

Yule block, clog, or **log.** Same as *Christmas log*. See *Christmas*.

A small portion of the *yule-block* was always preserved till the joyous season came again, when it was used for lighting the new Christmas block.
Hone, Year Book, col. 1110.

The burning of the *Yule log* is an ancient Christmas ceremony, transmitted to us from our Scandinavian ancestors, who, at their feast of Juul, at the winter solstice, used to kindle huge bonfires in honour of their god Thor.
Chambers's Book of Days, II. 735.

An enormous log glowing and blazing, and sending forth a vast volume of light and heat, . . . was the *Yule clog*, which the squire was particular in having brought in and illumined on a Christmas eve, according to ancient custom. *Irving*, Sketch-Book, p. 247.

Yule cake. Same as *Yule dough*. *Hone*, Every-Day Book, I. 1638.—**Yule candle,** a large candle used for light during the festivities of Christmas eve. In many places the exhaustion of the candle before the end of the evening was believed to portend ill luck, and any piece remaining was carefully preserved to be burnt out at the owner's likewake.

As an accompaniment to the Yule log, a candle of monstrous size, called the *Yule candle*, or Christmas candle, shed its light on the festive-board during the evening. *Chambers's Book of Days*, II. 735.

Yule dough (dialectal *doo*, *dow*), a cake made especially for Christmas time. Also called *baby-cake* (because representing in shape a baby, probably the infant Christ) and *Yule cake*.

The *Yule-Dough* (or *Dow*), a Kind of Baby or little Image of Paste, which our Bakers used formerly to bake at this Season, and present to their Customers, in the same Manner as the Chandlers gave Christmas Candles. *Bourne's Pop. Antiq.* (1777), p. 163.

In the north of England the common people still make a sort of little images at Christmas, which they call *Yule Doos*. *The Listener* (1836), I. 62 (quoted in N. and Q., [7th ser., XI. 6).

Yule (yöl), *v. i.*; pret. and pp. *Yuled*, ppr. *Yuling*. [< *Yule*, *n.*] To celebrate Yule or Christmas. *Halliwell; Jamieson.* [Prov. Eng. and Scotch.]

Yule-tide (yöl'tīd), *n.* The time or season of Yule or Christmas.

In the old clog almanacs, a wheel is the device employed for marking the season of *Yule-tide*. *Chambers's Book of Days*, II. 746.

Yuncinæ (yun-sī'nē), *n. pl.* [NL., prop. *Iynginæ*; < *Yunx*, prop. *Iynx* (*Iyng-*), + *-inæ*.] Same as *Iynginæ*. *G. R. Gray*, 1840.

yungan (yung'gan), *n.* [Native name in Australia.] The dugong. *E. P. Wright.*

Yungidæ, Yunginæ, *n. pl.* Same as *Iyngidæ*, *Iynginæ*.

Yunx (yungks), *n.* [NL. (Linnæus, 1766 or earlier), also *Jynx* and *Iynx*, < Gr. *ἴυγξ*, the wryneck.] 1. Same as *Iynx*.—2. [*l. c.*] The wryneck, *Iynx torquilla*. See cut under *wryneck*.

The *Yunx*, a genuine Woodpecker, hath a tail as long in proportion to his body, and marked with crosse-bars too. *John Ray*, in Ellis's Lit. Letters, p. 200.

yupon (yö'pon), *n.* Same as *yapon*. *Sportsman's Gazetteer.*

yure (yör), *n.* See *ewer*[3]. [Prov. Eng.]

yurt (yört), *n.* [Siberian.] One of the houses or huts, whether permanent or movable, of the natives of northern and central Asia. Also *yourta*, *yourte*, *jurt*.

It [the lake] is ten miles in circumference, and here and there are *yourtes* inhabited by the Mongols. *Huc*, Travels (trans. 1852), I. 206.

yutu (yö'tö), *n.* [Peruv.] A species of tinamou, found in Peru.

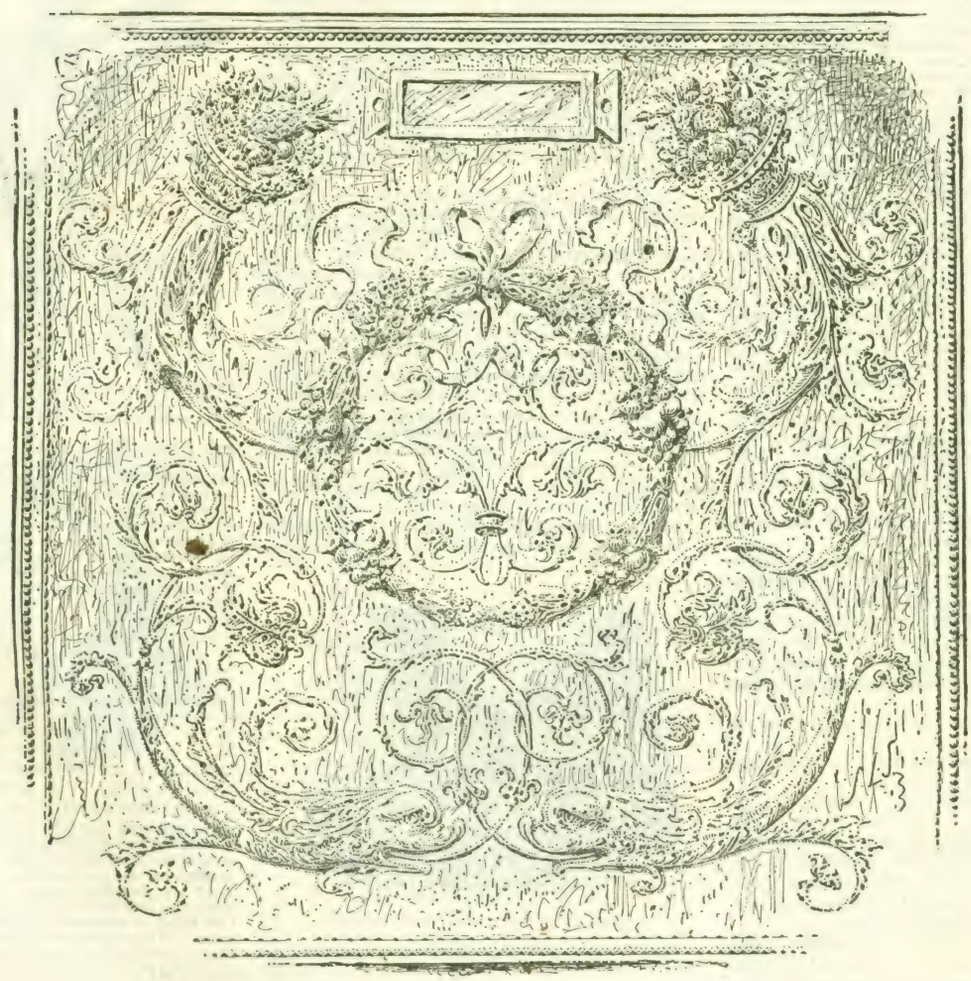
A partridge called *yutu* frequents the long grass. *Encyc. Brit.*, XVIII. 673.

yux†, *v.* and *n.* An obsolete variant of *yex*.

yve†, *n.* An old spelling of *ivy*[1].

yvel†, *a.*, *n.*, and *adv.* An old spelling of *evil*[1].

yvoire†, yvory†. Old spellings of *ivory*[1].

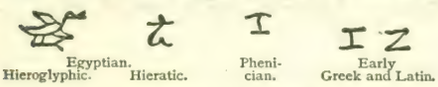


ywis†, *adv.* and *n.* See *iwis*.

ywrake†. An obsolete preterit of *wreak*[1].

ywriet. An obsolete past participle of *wry*[2].

ywroke†. An obsolete preterit of *wreak*[1].



yye†, *n.* A Middle English form of *eye*[1].

★ **1.** The twenty-sixth character in the English alphabet, and the last, as in that of the later Romans. In the Phenician system, from which ours comes through the Latin and Greek, it was the seventh sign. The comparison of ancient forms, including the Egyptian as perhaps the original (compare *A*), is as follows:

Egyptian. Hieroglyphic. | Hieratic. | Phenician. | Early Greek and Latin.

The same character has a corresponding place as *zeta* in the Greek series, and went over in that place to the Italian alphabets; but, about the third century B. C., it was dropped out by the Romans as not needed, and the newly devised G (see *G*) was put in its place. Then finally, some two centuries later, it was taken back (together with or soon after Y: see *Y*) to express in borrowed Greek words the peculiar double sound (*ds* or *sd*) which it had won in Greek usage, and so appeared anew in its old company, but with greatly altered position. It was not used in the oldest English, but came gradually in out of the French in the fifteenth century and later. With us, as in French, it has lost its value of a compound consonant, and expresses the sonant or voiced sibilant sound corresponding to *s* as surd or breathed sibilant. The proper *z*-sound is also, and even much oftener, written by *s*, as in *roses*, and in a few words (as *possess*, *dissolve*) by double *s*, and yet more rarely (for example, *sacrifice*) by *c*. The sound is a common one in our English pronunciation — not much less than 3 per cent. (the surd *s* being 4¾ per cent.). As initial, the character *z* is written mostly in words of Greek origin, but as final (almost always with silent *e* added) it is found in many Germanic words, as *freeze*, *graze*. It occurs sometimes double, as in *buzz*, *buzzard*. The corresponding sonant to our other sibilant (written in this work with *zh*, after the example of *sh*) is spelled with either *s* or *z*, as in *pleasure*, *azure*. It is the rarest of our consonant sounds, counting for only a fiftieth of 1 per cent. of our utterance. In certain Scotch words and names, as *capercailzie*, *Dalziel*, *z* is written for the *y*-sound. In the United States the character is generally called *zee*; in England, generally *zed* (from *zeta*); *izzard* (which see) is an old name for it.

2. As a symbol, in *math.*: (*a*) [*l. c.*] In algebra, the third variable or unknown quantity. (*b*) [*l. c.*] In analytical geometry, one of the system of point-coördinates in space. (*c*) In mechanics, the component of a force in the direction of the axis of *z*.

za† (zä), *n.* [An arbitrary syllable.] In *solmization*, a syllable once used for B♭.

za-. [< Gr. *ζα-*, inseparable prefix, intensive and augmentative.] An intensive or augmentative prefix sometimes used in forming modern scientific words to emphasize the character or quality noted by the element to which it is prefixed (like E. *very*, *a.*), as in *zalambdodont*, having teeth with a very V-shaped ridge, *Zalophus*, *Zamelodia*, *Zapus*, etc.

Zabaism, Zabism (zä′bä-izm, zā′bizm), *n.* Same as *Sabaism*.

zabra (zä′brä), *n.* [Sp. and Pg.] A small vessel used on the coasts of Spain.

> Portugal furnished and set foorth . . . ten Galeons, two *Zabraes*, 1300. Mariners. *Hakluyt's Voyages*, I. 592.
>
> Of the tenders and *zabras* seventeen were lost and eighteen returned. *Motley*, Hist. Netherlands, II. 507.

Zabridæ (zab′ri-dē), *n. pl.* [NL. (Hope, 1838), < *Zabrus* + *-idæ*.] A family of caraboid beetles, named from the genus *Zabrus*.

Zabrus (zā′brus), *n.* [NL. (Clairville, 1806), < Gr. *ζαβρός*, gluttonous.] An extensive genus of caraboid beetles. They are of medium or large size, black with metallic reflections, and remarkable in that many of them are rather phytophagous than carnivorous, particularly in the larval state. *Z. gibbus* of Europe is a noted enemy to cereal crops, its larva feeding on the stems just above the ground, and the beetle devouring the grain. Over 60 species are known, each occupying a narrowly restricted region in the Mediterranean fauna, except *Z. gibbus*, which extends into northern Europe.

zac (zak), *n.* Same as *zebuder*.

zacatilla (zä-kä-tē′lyä), *n.* See *cochineal*, 1.

zaffer, zaffre (zaf′ėr), *n.* [Also *zaffar*, *zaffir*, *zaffira*, *zaphara*, and *suphera*; < F. *zafre*, *safre*, *saffre* = Sp. *zafre* = It. *zaffera*; of Ar. origin; cf. *saffron*.] The residuum of cobalt-producing ores after the sulphur, arsenic, and other volatile matters have been more or less completely expelled by roasting. As the result of this process a grayish oxid of cobalt is left behind, which is mingled with various impurities, and usually with some sand. Zaffer is used in the manufacture of smalt, and in various other ways, as in furnishing the beautiful color known as *cobalt blue*, which is still of importance, although much less so since the discovery of a method of making artificial ultramarine.

zaffer-blue (zaf′ėr-blö), *n.* Same as *cobalt blue* (which see, under *blue*).

Zaglossus (za-glos′us), *n.* [NL. (Gill, 1877), < Gr. *ζα-* intensive + *γλῶσσα*, tongue.] The proper name of that genus of prickly anteaters which is better known by its synonyms, *Proechidna* and *Acanthoglossus* (which see).

Zaitha (zā′thä), *n.* [NL. (Amyot and Serville, 1843), < Heb. *zaith*.] A genus of waterbugs, of the family *Belostomatidæ*, peculiar to America. They somewhat resemble the species of *Belostoma*, but have a prolonged tapering head and long rostrum. *Z. fluminea* is a very common and wide-spread insect, of a yellowish color, found in the mud or among the weeds of ponds and streams from Maine to Texas.

zalambdodont (za-lam′dō-dont), *a.* [< Gr. *ζα-* intensive + *λάμβδα*, the letter λ, + *ὀδούς* (*ὀδοντ-*), = E. *tooth*.] Having short molar teeth with one V-shaped ridge; specifically, noting the *Zalambdodonta*: as, a *zalambdodont* dentition; a *zalambdodont* mammal: opposed to *dilambdodont*.

> The insectivores with *zalambdodont* dentition are the most primitive, or at least are generally so considered. *Stand. Nat. Hist.*, V. 136.

Zalambdodonta (za-lam-dō-don′tä), *n. pl.* [NL.: see *zalambdodont*.] A group or series of insectivorous mammals; a division of the suborder *Bestiæ*, or *Insectivora vera*, having short molars whose crowns present one V-shaped transverse ridge, a formation characteristic of the insectivores of tropical regions, which are thus contrasted with temperate and northerly forms (*Dilambdodonta*). The Madagascar tenrecs, the African golden moles, and the West Indian solenodons are examples. See cuts under *agouta*, *Chrysochloris*, *sokinah*, and *tenrec*.

Zalophus (zal′ō-fus), *n.* [NL. (Gill, 1867), < Gr. *ζα-* intensive + *λόφος*, crest.] A genus of otaries, or eared seals: so named from the high parietal crest or ridge of the skull. The common

California Sea-lion (*Zalophus Californianus*).

sea-lion of California is *Z. californianus* (formerly *Z. gillespiei*), and another inhabits Australia and New Zealand.

zamang (za-mang′), *n.* [S. Amer.] Same as *saman*. See *Pithecolobium* and *rain-tree*.

zambo, *n.* See *sambo*.

zambomba (Sp. pron. thàm-bōm′bä), *n.* [Sp.] A rude Spanish musical instrument, consisting of an earthen jar the top of which is covered with parchment, through which a stick is inserted. It is sounded by rubbing the stick with the finger, so as to set the air within the jar into sympathetic vibration.

Zamelodia (zam-e-lō′di-ä), *n.* [NL. (Coues, 1880), < Gr. *ζα-* intensive + *μελῳδία*, a singing, melody: see *melody*.] A genus of American song-grosbeaks. Two species occurring in the United States are the rose-breasted and the black-headed, *Z. ludoviciana* and *Z. melanocephala*. (See cut under *rose-breasted*.) The latter inhabits the western United States from the plains to the Pacific, where the former is not found, and extends into Mexico. The adult male has the crown and sides of the head, the back, the wings, and the tail black, the wings and tail much varied with white, and the neck all around and the under parts rich orange-brown, inclining to pure yellow on the belly and the lining of the wings. The bill and feet are grayish-blue. The length is about 8½ inches, the extent 12½. The female differs much from the male, but has the same rich yellow under wing-coverts. Also called *Habia*.

Zamia (zā′mi-ä), *n.* [NL. (Linnæus, 1763), < L. *zamia*, assumed to mean 'a fir-cone.'] **1.** A genus of gymnospermous plants, of the family *Cycadaceæ*, type of the tribe *Zamieæ*. It is characterized by a naked trunk partly or wholly above the

Female Plant of *Zamia pumila* (the waved line indicates the surface of the ground).

a, scale with one seed; *b*, the young female flower.

soil, pinnate leaves, and naked truncate strobile-scales, both the male and female cones being oblong and cylindrical and their scales similar. There are about 30 species, natives of tropical and subtropical North America. They produce a simple, lobed or branching caudex, sometimes a low trunk, often covered with scars. The stems increase in height by the yearly development of a crown of stiff fern-like leaves with firm rigid segments which are entire or serrate, parallel-nerved, and jointed at the broad base. *Z. pumila*, with a short globular or oblong, chiefly subterranean stem, occurs in low grounds in southern Florida. One other species, *Z. Floridana*, also occurs within the United States; they yield a starch known as *Florida arrow-root*, and are sometimes known by the name *coontie* (which see). *Z. integrifolia* is known as *wild sago* in Jamaica. From these and other dwarf species an excellent arrowroot is made in the Bahamas and elsewhere in the West Indies. Many species cultivated under glass as *zamia* belong to the genera *Encephalartos* and *Macrozamia*.

2. [*l. c.*] A plant of any of these genera.

Zamieæ (zā-mī′ē-ē), *n. pl.* [NL. (Miquel, 1842), < *Zamia* + *-eæ*.] A tribe of gymnospermous plants, of the family *Cycadaceæ*. It is characterized by a deciduous fertile strobile with peltate uniovulate scales; and by leaf-segments straight in the bud, not circinate as in *Cycas* and in ferns. It includes 68 species, of 9 genera, or all the plants of the order except the genus *Cycas*. They are singular plants, usually with a thick woody trunk and pinnate leaves; the principal genera are *Zamia* (the type), *Macrozamia*, *Ceratozamia*, *Dion*, and *Stangeria*. They occur mostly in tropical and subtropical North America, Africa, and Australia.

zamindar (zam′in-där), *n.* Same as *zemindar*.

zamindari (zam′in-dä-ri), *n.* Same as *zemindary*, 2.

Zamiostrobus (zā-mi-os′trō-bus), *n.* [NL., < L. *zamia*, assumed to mean 'a fir-cone,' + Gr. *στρόβος*, a top, cone: see *strobile*.] The generic name given by Endlicher in 1836 to certain fossil cones from the Greensand of England, since ascertained to be coniferous and not related to *Zamia*, as at first supposed. Other entirely different forms have been so called without warrant.

Zamites (zam-ī′tēz), *n.* [NL., < L. *zamia*, assumed to mean 'a fir-cone.'] The name given by Brongniart to certain fossil plants belonging

to the cycads, and considered to be more or less closely allied to the living *Zamieæ*. The genus *Zamites* first appears in the Trias, but is especially well developed in the Jurassic; it continued through the Cretaceous, and finally disappeared in the Miocene. More than 100 species have been described. The cycadaceous flora played an important part in the vegetation of Greenland and Spitzbergen during the Jurassic epoch, giving an almost tropical aspect to the forests of that region and epoch. Various other genera of cycads allied to *Zamites* have been established, chiefly, if not entirely, based on the forms of the leaves and their segments. Among these are *Glossozamites*, a genus with long elliptical leaves, found in the Lower Cretaceous; and *Otozamites*, with small elliptic-lanceolate leaves, divided into several groups in accordance with the very varying form of the segments of the leaf. The latter genus runs through the whole of the Jurassic, as far as the lower division of the Upper or White Jura, when it chiefly gives way to the genus *Zamites*. It has not been observed in the Jurassic rocks of the arctic regions. See *Otozamites*.

zamouse (za-mös′), *n.* [W. African.] A West African buffalo, or bush-ox, found in Sierra Leone. *Bos brachyceros*, the short-horned buffalo, having the ears fringed with hair, short horns depressed at base, and no dewlap.

zampogna (tsàm-pō′nyä), *n.* [It.] 1. Same as *bagpipe* and *hurdy-gurdy*.—2. Same as *shawm*.

zanana (za-nä′nä), *n.* Same as *zenana*.

Zanclodon (zang′klō-don), *n.* [NL. (Plein), < Gr. *ζάγκλον*, sickle, + *ὀδούς* (*ὀδοντ-*) = E. *tooth*.] A genus of dinosaurs, typical of the family *Zanclodontidæ*, having both fore and hind feet five-toed, no ascending astragalar process, broad and long pubes, and biconcave vertebræ.

Zanclodontidæ (zang-klō-don′ti-dē), *n. pl.* [NL., < *Zanclodon*(*t-*) + *-idæ*.] A family of carnivorous theropod dinosaurs, typified by the genus *Zanclodon*, from the Trias of Europe.

Zanclognatha (zang-klog′nā-thä), *n.* [NL. (Lederer, 1857), < Gr. *ζάγκλον*, sickle, + *γνάθος*, jaw.] A genus of small noctuid moths resembling pyralids. Ten European and several North American species are known. *Z. protumnusalis* feeds in the larval state on the dead leaves of oak and maple in the United States.

Zanclostomus (zang-klos′tō-mus), *n.* [NL. (Swainson, 1837), < Gr. *ζάγκλον*, sickle, + *στόμα*, mouth.] A genus of cuckoos, the type of which is *Z. javanicus* of Java, and to which were formerly referred some related African forms. The species named has exposed nostrils, bare orbits, no crest, white-tipped tail-feathers, and the mantle, wings, and tail glossed with bluish-green; the under parts are gray, buff, and chestnut-brown; the orbits are bright-blue, the eyes blackish, and the beak coral-red. The length is 18 inches, of which the tail makes more than half. This handsome cuckoo ranges from Tenasserim down the Malay peninsula, and also occurs in Sumatra, Borneo, and Java.

Zanclus (zang′klus), *n.* [NL. (Cuvier and Valenciennes, 1831), < Gr. *ζάγκλον*, sickle.] A genus of chætodontoid fishes based on a Pacific species, *Z. canescens*, a small fish of striking form and color.

Zanclus canescens.

zander (zan′dėr), *n.* [G.] The European pike-perch, *Sandrus lucioperca* (formerly *Lucioperca sandra*). It inhabits fresh waters of central Europe. Also *sander* and *zant*.

zand-mole (zand′mōl), *n.* [< D. *zandmol*; < *zand*, sand, + *mol*, mole.] Same as *sand-mole*. See cuts under *Bathyergus* and *Georychus*.

zanella (zā-nel′ä), *n.* A twilled fabric used for covering umbrellas. *Drapers' Dict.*

Zannichellia (zan-i-kel′i-ä), *n.* [NL. (Micheli, 1729), named after *Zannichelli* (1662–1729), author of a flora of Venice.] A genus of plants, of the family *Potamogetonaceæ*, type of the tribe *Zannichellieæ*. It is characterized by the absence of a perianth, by a single stamen, with slender filament, and slightly curved carpels. There are 2 or 3 species, widely distributed. *Z. palustris* is a native of brackish ditches and salt water throughout the world. It is a submerged slender aquatic with a filiform creeping stem, the capillary branches becoming twisted into matted floating masses. The leaves are chiefly opposite, linear or filiform; the flowers are minute, at first terminal, but becoming axillary. See *horned pondweed*, under *pondweed*.

Zannichellieæ (zan″i-ke-lī′ē-ē), *n. pl.* [NL. (Kunth, 1841), < *Zannichellia* + *-eæ*.] A tribe of monocotyledonous plants, of the family *Potamogetonaceæ*. It is characterized by axillary unisexual flowers, the male with a single stamen and globose pollen, the female with its two to nine carpels each containing a single pendulous orthotropous ovule. It includes 3 genera, of which *Zannichellia* is the type; the others, salt-water plants with a perianth of three hyaline segments, occur in the Mediterranean region (*Althenia*) and in Australia (*Lepilæna*). All are slender submerged aquatics growing from a filiform nodose creeping rootstock, and producing thread-like leaves and minute flowers.

Zanonia (zā-nō′ni-ä), *n.* [NL. (Linnæus, 1737), by transfer from an endogen so named by Plumier (1703) from Giacomo *Zanoni* (1615–82), author of a flora of Bologna, and director there of the botanic garden.] A genus of plants, of the family *Cucurbitaceæ*, type of the tribe *Zanonieæ*. It is characterized by entire leaves, and flowers with three calyx-lobes, five stamens, and three two-cleft styles. The only species, *Z. indica*, is a native of India and Ceylon. It is a shrubby climber with petioled ovate or oblong entire leaves and unbranched tendrils. The small flowers are borne in loose pendulous panicles. The fruit is cylindrical, club-shaped, or hemispherical, with a broadly three-valved apex, and containing large pendulous broadly winged seeds; it is known as *bandoleer-fruit* (which see).

Zanonieæ (zan-ō-nī′ē-ē), *n. pl.* [NL. (Blume, 1825), < *Zanonia* + *-eæ*.] A tribe of dicotyledonous plants, of the family *Cucurbitaceæ*. It is characterized by flowers with five stamens, free filaments, oblong one-celled anthers opening by a longitudinal slit, and an ovary with three thick placentæ on which the ovules are irregularly inserted. It includes 17 species, of 4 genera, of which *Zanonia* is the type; the others are also tropical climbing shrubs — one, *Gerrardanthus*, occurring in Africa, another, *Alsomitra*, including most of the species, extending through Asia, America, and Australia.

Zanora palm. See *palm*[2].

zant (zant), *n.* Same as *zander*.

Zante (zan′te), *n.* A contraction of *Zante-wood*.

Zantedeschia (zan-tē-des′ki-ä), *n.* [NL., named from Francesco *Zantedeschi*, who wrote on the plants of Brescia and Bergamo in 1824.] A name given by Sprengel in 1826 to *Aroides*, a plant genus also known by the name *Richardia* (which see).

Zante fustic. Same as *young fustic* (see under *fustic*). See also cut under *smoke-tree*.

Zante-wood (zan′te-wůd), *n.* 1. Same as *Zante fustic*.—2. Same as *satinwood*, *Peradenia Chloroxylon*.

zanthin, *n.* An erroneous form of *xánthin*.

zantho-. For words so beginning, see *xantho-*.

Zantiote (zan′ti-ōt), *n.* [< *Zante* (see def.) + *-ote*.] A native of Zante (ancient *Zacynthus*), one of the Ionian Islands.

zany (zā′ni), *n.*; pl. *zanies* (-niz). [< F. *zani*, < It. *zanni*, *zane*, a zany or clown; abbr. of *Giovanni*, John: see *John*, and cf. E. *Jack* in similar use.] 1. A comic performer, originating on the Italian stage, whose function it is to make awkward attempts at mimicking the tricks of the professional clown, or the acts of other performers; hence, an apish buffoon in general; a merry-andrew; an amusing fool.

> He's like a *zany* to a tumbler,
> That tries tricks after him to make men laugh.
> *B. Jonson*, Every Man out of his Humour, iv. 1.

> He teach thee; thou shalt like my *Zany* be,
> And feigne to do my cunning after me.
> *Heywood*, Four Prentises of London (Works, ed. 1874, II. 203).

> The English apes and very *zanies* be
> Of everything that they do hear and see.
> *Drayton*, To Henry Reynolds.

> Preacher at once, and *zany* of thy age!
> *Pope*, Dunciad, iii. 206.

> He [Granvelle] had been wont, in the days of his greatest insolence, to speak of the most eminent nobles as *zanies*, lunatics, and buffoons. *Motley*, Dutch Republic, I. 402.

2†. An attendant.

> Lady, Imperia the courtesan's *zany* hath brought you this letter from the poor gentleman in the deep dungeon, but would not stay till he had an answer.
> *Middleton*, Blurt, Master-Constable, iii. 1.

=**Syn. 1.** *Clown*, *Fool*, *Buffoon*, *Mimic*, *Zany*. "The *zany* in Shakespere's day was not so much a *buffoon* and *mimic* as the obsequious follower of a *buffoon* and the attenuated mime of a *mimic*. He was the vice, servant, or attendant of the professional *clown* or *fool*, who, dressed like his master, accompanied him on the stage or in the ring, following his movements, imitating his tricks, and adding to the general merriment by his ludicrous failures and comic imbecility. . . . The professional *clown* or *fool* might be clever and accomplished in his business, a skilful tumbler and mountebank, doing what he undertook to do thoroughly and well. But this was never the case with the *zany*. He was always slight and thin, well-meaning, but comparatively helpless, full of readiness, grimace, and alacrity, but also of incompetence, eagerly trying to imitate his superior, but ending in failure and absurdity. . . . We have ourselves seen the *clown* and the *zany* in the ring together, the *clown* doing clever tricks, the *zany* provoking immense laughter by his ludicrous failures in attempting to imitate them. Where there is only a single *clown*, he often combines both the characters, doing skilful tumbling on his own account, and playing the *zany* to the riders." (*Edinburgh Rev.*, July, 1869, art. 4.)

zany (zā′ni), *v. t.*; pret. and pp. *zanied*, ppr. *zanying*. [< *zany*, *n.*] To play the zany to; mimic; imitate apishly.

> All excellence
> In other madams do but *zany* hers.
> *Fletcher (and another ?)*, Queen of Corinth, i. 2.

> Laughs them to scorne, as man doth busie apes
> When they will *zanie* men.
> *Marston*, Antonio and Mellida, II., iv. 1.

zanyism (zā′ni-izm), *n.* [< *zany* + *-ism*.] 1. The act or practice of imitation or mimicry.—2. The condition or habits of a buffoon or a low clown: often used contemptuously.

Zanzalian (zan-zā′li-an), *n.* [< *Zanzalus* (see def.) + *-ian*.] A Jacobite of the East: so called occasionally from Zanzalus, a surname of Jacobus Baradæus. See *Jacobite*, 2.

zanze, *n.* [African.] An African musical instrument consisting of a wooden box in which a number of sonorous tongues of wood or metal are fixed. These are sounded by the finger or a stick.

Zanzibari (zan-zi-bä′ri), *a.* and *n.* I. *a.* Of or pertaining to Zanzibar, a sultanate of eastern Africa. It was in 1890 made a British protectorate, confined chiefly to the island of Zanzibar, while the coast of the neighboring mainland was ceded to Germany.

> The country is practically in the hands of Arabs and *Zanzibari* slavers and traders.
> *Appleton's Ann. Cyc.*, 1886, p. 372.

II. *n.* An inhabitant of Zanzibar.

zapateado (Sp. pron. thä-pä-tē-ä′dō), *n.* [Sp.] A Spanish dance in which the rhythm is marked by blows of the foot on the ground.

zaphara (zaf′a-rä), *n.* Same as *zaffer*.

Zaphrentidæ (zaf-ren′ti-dē), *n. pl.* [NL. (Edwards and Haime, 1850), < *Zaphrentis* + *-idæ*.] A family of Paleozoic rugose corals, typified by the genus *Zaphrentis*. They have a free and simple corallum, and a well-developed septal fossula formed by an inflection of the tabulæ on one side, or replaced by a cristiform process. The tabulæ are complete, but the dissepiments are deficient or irregular, and there is usually no columella.

Zaphrentis (zaf-ren′tis), *n.* [NL. (Rafinesque and Clifford, 1820), prob. < Gr. *ζα-* intensive + *φρήν*, brain.] 1. The typical genus of *Zaphrentidæ*. The species are deeply cupped, with many septa, and a peculiar pit on one side of the interior. *Z. cassedayi* is an example. They ranged from the Silurian to the Carboniferous period.

2. [*l. c.*] A species of this genus.

Zapodidæ (zā-pod′i-dē), *n. pl.* [NL., < *Zapus* (*-pod-*) + *-idæ*.] A family of rodent mammals, of the myomorphic series of the order *Rodentia*, framed by Coues for the reception of the jumping mouse of North America, *Zapus hudsonius*, a small mouse-like quadruped intermediate in some respects between the *Muridæ*, or mice proper, and the *Dipodidæ*, or jerboas of the Old World. By some the family is considered as a subfamily of *Dipodidæ*, under the names *Zapodinæ* and *Jaculinæ*. See *Zapus*, and cut under *deer-mouse*.

Zapodinæ (zap-ō-dī′nē), *n. pl.* [NL., < *Zapus* (*-pod-*) + *-inæ*.] The *Zapodidæ* as a subfamily of *Dipodidæ*.

zapotilla (zap-ō-til′ä), *n.* Same as *sapodilla*.

zaptieh (zäp′ti-e), *n.* [Turk.] A policeman.

Zapus (zā′pus), *n.* [NL. (Coues, 1876), < Gr. *ζα-* intensive + *πούς* = E. *foot*.] The only genus of *Zapodidæ*. *Z. hudsonius* is the common jumping mouse, or deer-mouse, of North America. See cut under *deer-mouse*.

Zaragoza mangrove. See *mangrove*.

zarape (za-rä′pe), *n.* [Sp. Amer.] Same as *serape*.

> Men wearing vermilion *zarapes* about their shoulders.
> *The Nation*, XLVIII. 311.

Zarathustrian (zar-a-thös′tri-an), *a.* and *n.* [< *Zarathustra* + *-ian*.] Same as *Zoroastrian*.

Zarathustrianism (zar-a-thös′tri-an-izm), *n.* [< *Zarathustrian* + *-ism*.] The religion of Zarathustra; Zoroastrianism.

Zarathustric (zar-a-thös′trik), *a.* Same as *Zoroastric*.

> It cannot be denied that the *Zarathustric* dogmas are pure old Aryan myths in a new shape.
> *Encyc. Brit.*, XX. 361.

Zarathustrism (zar-a-thös′trizm), *n.* [< *Zarathustra* (see *Zarathustrian*) + *-ism*.] Same as *Zarathustrianism*.

> Modern Brahmanism, *Zarathustrism*, and Buddhism.
> *E. B. Tylor*, Prim. Culture, I. 49.

zaratite (zar′a-tīt), *n.* [After Señor *Zarate*, a Spaniard.] A hydrous carbonate of nickel, occurring as an emerald-green incrustation on chromite. Also called *emerald nickel*.

zareba (zä-rē′bä), *n.* [Ar. *zarība*, a sheep-fold, a hunter's lurking-place.] In Sudan and adjoining regions, an inclosure against enemies

or wild animals, as by a thorn-hedge; a fortified camp in general. Also *zereba, zeriba.*

We employed ourselves until the camels should arrive in cutting thorn branches and constructing a *zareeba* or fenced camp, to protect our animals during the night.
Sir S. W. Baker, Heart of Africa, p. 85.

zarf (zärf), *n.* [Also *zurf;* < Ar. *zarf,* a vessel, a case.] A holder for a coffee-cup: a term used throughout the Levant. These holders are usually of metal and of ornamental design in openwork. Their immediate object is to prevent the hot cup from burning the fingers.

a, the Zarf; *b*, the Cup.

Some *zurfs* are of plain or gilt silver filigree.
E. W. Lane, Mod. Egyptians, I. 169, note.

zarnich (zär'nik), *n.* [Also *zarnec,* etc.; < Ar. *zernikh, azzernikh,* arsenic, < Gr. ἀρσενικόν, arsenic: see *arsenic.*] **1.** In *alchemy,* orpiment. — **2.** An old term embracing the native sulphids of arsenic, sandarac (or realgar) and orpiment.

zarzuela (Sp. pron. thär-thō̤-ā'lä), *n.* [Sp.] A short drama with incidental music, like a vaudeville. It is said to have been first introduced into Spain at Zarzuela in the seventeenth century.

zastruga (zas-trö'gä), *n.* [Russ.] One of a series of ridges, with corresponding depressions, rising in wave-like succession above the general level of the snow when this has been blown across by a long-continued wind.

zatain†, *n.* An old spelling of *satin.*

zati (zä'ti), *n.* [E. Ind.] The capped macaque of India and Ceylon, *Macacus pileolatus.*

Zauschneria (zâsh-nē'ri-ä), *n.* [NL. (Presl, 1836), named for *Zauschner,* a Bohemian botanist.] A genus of polypetalous plants, of the order *Onagraceæ.* It is characterized by flowers with four petals, eight stamens, and a four-celled ovary with numerous ovules, and, distinguishing it from the similar genus *Epilobium,* by a calyx with the tube suddenly expanding above the ovary into a funnel-shaped limb globose at the base. *Z. Californica,* a handsome plant of California, cultivated under the names of *Californian fuchsia* and *humming-bird's trumpet,* is a low branching shrub with sessile entire or minutely toothed leaves, and bright-crimson flowers which are solitary and sessile in the axils. Four other species have recently been described.

zax (zaks), *n.* [Perhaps a var. of *sax* (< AS. *seax,* etc.), a knife.] An instrument used by slaters for cutting and dressing slates; a kind of hatchet with a sharp point on the pole for perforating the slate to receive the nail or pin.

Z-crank (zē'- or zed'krangk), *n.* A peculiarly shaped crank in the cylinder of some marine steam-engines: so named from its zigzag form. *Simmonds.*

Flowering Plant of Maize (*Zea Mays*).
a, male flower; *b*, female flower.

Zea (zē'ä), *n.* [NL. (Linnæus, 1737; used earlier by Brunfels, 1530), < Gr. ζέα, ζειά, a sort of grain used as fodder for horses.] A genus of grasses, type of the tribe *Maydeæ.* It is characterized by monœcious flowers, the male forming a terminal panicle, the female a large axillary sessile spike wrapped in numerous leaf-like bracts or husks, and consisting of pistillate flowers densely aggregated in many rows upon a thick unjointed rachis. The only species, *Z. Mays,* the well-known Indian corn or maize, long cultivated throughout many warm and temperate regions, is supposed to be a native of America, but is not now known in a wild state. It is a tall plant with unbranched robust stems, large light-green leaves, a long-stalked terminal panicle (known as the *tassel*), and very thick fertile spikes from the husks of which project long green or purple slender styles known as the *silk.* The fruit is a hard roundish caryopsis (known as the *kernel*) partly inclosed by the chaffy remains of the four glumes and broad palet — the kernels and their rachis (the *cob*) forming the spike or *ear* of corn. The seeds furnish an invaluable food to man and to domestic animals; the stalks and leaves are used for fodder, and the husks are much used for filling mattresses and horse-collars, and for making door-mats; a coarse textile fabric, also, and paper of excellent quality, have been experimentally made from them. The cob, and sometimes the whole ear, is used as fuel. The chief value lies of course in the kernel. See *maize,* cut in preceding column, and cut under *husk.* Compare *corn*[1], 2, and ★*maize* in supplement.

zeal (zēl), *n.* [Early mod. E. *zele;* < OF. *zele,* F. *zèle* = Sp. Pg. It. *zelo,* < L. *zelus,* < Gr. ζῆλος, zeal (for *ζεσλος), < ζέειν (√ ζεσ), boil, akin to E. *yeast:* see *yeast.*] Passionate ardor in the pursuit of anything; intense interest or endeavor; eagerness to accomplish or obtain some object.

They have a *zeal* of [*for,* R. V.] God, but not according to knowledge. Rom. x. 2.

Let not my cold words here accuse my *zeal.*
Shak., Rich. II., i. 1. 47.

Controversial *zeal* soon turns its thoughts on force.
Burke, Rev. in France.

His fervent *zeal* for the interests of the state.
Macaulay, Warren Hastings.

= **Syn.** *Earnestness, Enthusiasm,* etc. (see *eagerness*), warmth, fervor, heartiness, energy.

zeal† (zēl), *v. i.* [< *zeal, n.*] To entertain zeal; be zealous.

Stiff followers, and such as *zeal* marvellously for those whom they have chosen for their masters.
Bacon, Controversies of Church of Eng.

zealant†, *n.* See *zelant.*

zealed† (zēld), *a.* [< *zeal* + *-ed*[2].] Filled with zeal; characterized by zeal.

Zealed religion.
Fletcher (and another), Love's Pilgrimage, iv. 2.

zealful† (zēl'fûl), *a.* [< *zeal* + *-ful.*] Full of zeal; zealous.

These dayes of Ours may shine
In *Zeal-full* Knowledge of the Truth divine.
Sylvester, tr. of Du Bartas's Weeks, ii., The Decay.

zealless (zēl'les), *a.* [< *zeal* + *-less.*] Lacking zeal. *Bp. Hall.*

zealot (zel'ọt), *n.* [< OF. *zelote,* < LL. *zelotes,* < Gr. ζηλωτής, a zealot, < ζῆλος, zeal: see *zeal.*] **1.** One who is zealous or full of zeal; one carried away by excess of zeal; an immoderate partizan: generally in a disparaging sense.

He was one of those furious *zealots* who blow the bellows of faction until the whole furnace of politics is red-hot with sparks and cinders.
Irving, Knickerbocker, p. 299.

Like all neutrals, he is liable to attack from the *zealots* of both parties. *Whipple,* Ess. and Rev., I. 62.

2. [*cap.*] One of a fanatical sect or party (the Zelotæ) among the Jews of Palestine under Roman dominion, who on account of their excesses in behalf of the Mosaic law were also called *Sicarii* or *Assassins.* The Zealots gained the ascendancy in a civil war, and withstood the Romans so fiercely as to bring about the total destruction of Jerusalem, A. D. 70. Zealots are also mentioned (perhaps by confusion) as a sect of the Essenes, similarly characterized by fanatical zeal for their ascetic practices.

That desperate Faction of the *Zealots,* who, like so many Firebrands scattered up and down among them [the Jews], soon put the whole Nation into Flames.
Stillingfleet, Sermons, I. viii.

zealotical (zē-lot'i-kal), *a.* [< *zealot* + *-ic-al.*] Having the character of a zealot; belonging to a body of zealots.

One Leviston, a *zealotical* Scotsman, a tailor, came with a gray suit of apparel [for a disguise] under his cloak.
Court and Times of Charles I., II. 80.

zealotism (zel'ọt-izm), *n.* [< *zealot* + *-ism.*] The character or conduct of a zealot. *Gray.*

zealotist (zel'ọt-ist), *n.* [< *zealot* + *-ist.*] A zealous partizan; one of a body of zealots. *Howell.*

zealotry (zel'ọt-ri), *n.* [< *zealot* + *-ry* (see *-ery*).] Behavior as a zealot; excessive or undue zeal; fanaticism.

Inquisitorial cruelty and party *zealotry.*
Coleridge. (*Imp. Dict.*)

Herod is outheroded, Sternhold is out-sternholded, with a *zealotry* of extravagance that really seems like wilful burlesque. *De Quincey,* Style, i.

zealous (zel'us), *a.* [< L. ML. *zelosus,* full of zeal, < *zelus,* zeal: see *zeal.* Cf. *jealous,* an older form of the same word.] **1.** Full of or incited by zeal; jealous for the good or the promotion of some person or object; ardent; eager; fervent; devoted.

That man loves not who is not *zealous* too.
Herrick, Zeal Required in Love.

The learned and pious Bishop of Alexandria, Dionysius, wrote to the *zealous* and factious Presbyter Novatus.
Bp. Gauden, Tears of the Church, p. 100. (*Davies.*)

The clergy of New England were, for the most part, *zealous* promoters of the revolution.
Emerson, Hist. Disc. at Concord.

2. Caused by or manifesting zeal; due to earnest devotion; of an ardent character or quality.

So sweet is *zealous* contemplation.
Shak., Rich. III., iii. 7. 94.

I will study
Service and friendship, with a *zealous* sorrow
For my past incivility towards ye.
Ford, Broken Heart, v. 1.

= **Syn. 1.** Forward, enthusiastic, fervid, keen. See *zeal.*

zealously (zel'us-li), *adv.* In a zealous manner; with passionate ardor; fervently; earnestly.

It is good to be *zealously* affected always in a good thing.
Gal. iv. 18.

Sir, I will amply extend myself to your use, and am very *zealously* afflicted, as not one of your least friends, for your crooked fate. *Beau. and Fl.,* Honest Man's Fortune, ii. 2.

zealousness (zel'us-nes), *n.* The quality of being zealous; ardor; zeal.

zealousy† (zel'us-i), *n.* [Early mod. E. *zelousie;* < *zealous* + *-y*[1]. Cf. *jealousy.*] **1.** Zealousness.

His hand eternity, his arm his force,
His armour *zealousy,* his breast-plate heaven.
Middleton, Solomon Paraphrased, v.

2. An old form of *jealousy.*

The *zelousie* and the eagre feersenes of Olimpias.
Udall, tr. of Apophthegms of Erasmus, p. 200, note.

zebec, zebeck, *n.* Same as *xebec.*

zebra (zē'brä), *n.* and *a.* [= F. *zèbre,* < Afri-★can *zebra.*] **I.** *n.* An African solidungulate mammal, related to the horse and ass, of the genus *Equus* and subgenus *Hippotigris,* having the body more or less completely striped. There are at least 4 well-marked species. One of these is the quagga. The second is the bonte-quagga, or Burchell's zebra. (See cut under *dauw.*) The third is the true zebra, *E.* (*H.*) *zebra,* of southern Africa, of a whitish color,

Zebra (*Equus* or *Hippotigris zebra*).

very fully and regularly striped with black: it is specifically called the *mountain zebra.* This zebra stands about 4½ feet high at the shoulder; the head is light, the ears are moderately large, the limbs slender, the mane is short, and the tail tufted. The general form is light and symmetrical, like that of most wild asses, and seems to indicate speed rather than bottom. The zebra is one of the most beautiful of animals, as it is also one of the wildest and least tractable. It has often been kept in confinement, and occasionally tamed, but generally retains its indomitable temper. It inhabits in herds the hilly and mountainous countries of South Africa, seeking the most secluded places; so that from the nature of its haunts, as well as its watchfulness, swiftness, and the acuteness of its senses, it is difficult to capture. It is, however, much hunted, and seems destined to extermination.

II. *a.* Resembling the stripes of a zebra; having stripes running along the sides: as, the *zebra* markings on certain spiders. *Staveley.*

zebra-caterpillar (zē'brä-kat″ėr-pil-är), *n.* The larva of *Mamestra picta,* a North American noctuid moth: so called from the longitudinal black and yellow stripes. It feeds on clover, peas, beans, cabbages, turnips, and various other cultivated plants. See cut on following page.

zebra-opossum (zē'brä-ō̤-pos″um), *n.* The zebra-wolf. See cut under *thylacine.*

Zebra-caterpillar and Moth (*Mamestra picta*).

zebra-parrakeet (zē′brä-par″ą-kēt), *n.* A kind of grass-parrakeet, *Melopsittacus undulatus*, much of whose plumage is barred. It is a common cage-bird. See cut under *Melopsittacus*.

Zebrapicus (zē-brą-pī′kus), *n.* [NL. (Malherbe, 1849), also *Zebripicus* (Bonaparte, 1854), ‹ *zebra*, q. v., + NL. *Picus*.] A genus of woodpeckers: so called from the extensive striping of the plumage. It has covered a number of American forms, but was based on the common red-bellied woodpecker of the United States, and is thus a synonym of *Centurus* (itself often merged in *Melanerpes*). See cut under *Centurus*.

zebra-plant (zē′brä-plant), *n.* A striped-leafed plant, *Calathea zebrina*. See *Maranta*.

zebra-poison (zē′brä-poi″zn), *n.* A succulent tree-like species of *Euphorbia*, of South Africa, the milky juice of which is said to be so poisonous as to kill zebras which drink water in which the branches have been placed.

zebra-shark (zē′brä-shärk), *n.* The tiger-shark.

zebra-spider (zē′brä-spī″dėr), *n.* A hunting-spider or wolf-spider. See *Lycosidæ*, and cuts under *tarantula* and *wolf-spider*.

zebra-swallowtail (zē′brä-swol″ō-tāl), *n.* The ajax, *Papilio* (or *Iphiclides*) *ajax*, a large swallow-tailed butterfly of North America, having yellowish-white wings barred with black. It is a handsome species, and occurs from Pennsylvania southward. The larva feeds on the papaw.

zebra-wolf (zē′brä-wůlf), *n.* The pouched dog or thylacine dasyure of Tasmania, *Dasyurus thylacinus* or *Thylacinus cynocephalus*, a large predaceous and carnivorous marsupial quadruped resembling a wolf in form, having the back and rump transversely striped (whence the name). See cut under *thylacine*.

zebra-wood (zē′brä-wůd), *n.* **1.** The wood of *Connarus Lambertii* (*Omphalobium Lambertii* of de Candolle), of the *Connaraceæ*, a tall tree of Guiana; also, the tree itself. The wood is hard and beautifully marked, and is much sought for use in making furniture. — **2.** The wood of a small evergreen, *Guettarda speciosa*, of the *Rubiaceæ*, found on tropical shores in both hemispheres. — **3.** In the West Indies, a shrub or small tree, a variety of *Eugenia fragrans*.

zebra-woodpecker (zē′brä-wůd″pek-ėr), *n.* Any one of the striped woodpeckers of Malherbe's genus *Zebrapicus*—that is, of *Centurus* in a usual sense. See cut under *Centurus*.

zebrine (zē′brin), *a.* [‹ *zebra* + *-ine*¹.] Resembling or related to the zebra; striped like a zebra; pertaining to the subgenus *Hippotigris*: correlated with *equine* and *asinine*. *Darwin*.

Zebu (*Bos indicus*, var.).

zebu (zē′bū), *n.* [‹ F. *zébu*, a name accepted by Buffon from the exhibitors of the animal at a French fair, and supposed by him to be an African word. If not invented, it is prob. intended to represent the E. Ind. *zobo*, q. v.] The Indian bull, ox, or cow; any individual or breed of *Bos indicus*, having a hump on the withers. The zebu has been domesticated from time immemorial, and is now known only in its artificial breeds. These are numerous, and very various in size, shape, and color, the processes of artificial selection having modified the original stock in almost every particular. The characteristic hump is sometimes double. The flesh is considered a delicacy. The size of different breeds of zebus varies much. Some are as large as ordinary cattle, others no larger than a common calf a month or two old. The color is usually light gray, varying to pure white. The bulls of the latter color are consecrated to Siva, and become Brahminy bulls, exempt from labor or molestation. Zebus are bred particularly in India, but also in China, Japan, and some parts of Africa. They are used as beasts of burden and of draft, and as riding-animals, as well as for beef. The stock from which they have descended is by some naturalists supposed to represent only a variety of *Bos taurus*, the original of the ordinary domestic ox. See cut in preceding column.

zebub (zē′bub), *n.* [‹ Ar. *zubāb*, *dhubāb*, Heb. *zebūb*, fly. Cf. *Beelzebub*.] A large Abyssinian fly noxious to cattle, like the tsetse and the zimb.

zebu-cattle (zē′bū-kat″l), *n.* The cattle of the eastern hemisphere which have a hump, like the zebu. *Darwin*.

zebuder, *n.* The Caucasian ibex. Also called *zac*.

zecchino (tsek-kē′nō), *n.* [It.: see *sequin*.] A gold coin of the Venetian republic, worth

Obverse. Reverse.

Zecchino of Paolo Raniero, Doge of Venice 1778–1789.—British Museum. (Size of original.)

rather more than 9*s*. English, or about $2.25: same as *sequin*.

zechin, *n.* A variant of *sequin*.

Zechstein (zek′stīn), *n.* [G., ‹ *zeche*, a mine, + *stein*, stone.] In *geol.*, the uppermost of the two divisions of the Permian, the lower being the so-called "Rothliegende." This twofold character of the Permian is a well-marked feature of the system in Germany, especially in the central part of that country; hence it is not infrequently called the *Dyas*, a word coined in imitation of the name *Trias*. At the bottom of the Zechstein is the "Kupferschiefer," a thin bed of dark-colored, bituminous, and cupriferous shale. The Zechstein proper is a calcareous rock, becoming dolomitic in its upper section, and containing, especially in Prussia, masses of rock-salt of extraordinary thickness. The Permian covers an extensive area in Russia, where, however, its dual character is much less distinctly marked than it is in Germany. In the east of England this feature of the Permian is clearly exhibited, and the so-called "Magnesian Limestone group" is the equivalent of the German Zechstein. No separation of the Permian into divisions has been satisfactorily made out in North America, where the break between that formation and the Carboniferous is far less distinct than it is in the regions of its typical development in Germany.

zed (zed), *n.* [= F. *zède*, ‹ L. *zeta*, ‹ Gr. *ζῆτα*, the name of the letter Z.] **1.** The letter Z, also called *zee* and sometimes *izzard*.

> *Zed*, thou unnecessary letter! *Shak.*, Lear, ii. 2. 69.

2. A metal bar rolled so as to have a cross-section resembling the letter Z.

> Angles, *Zeds*, Channels, Beams, Bars.
> *The Engineer*, LXXI. p. xxxviii. of adv'ts.

Zedland (zed′land), *n.* [‹ *zed* + *land*.] A designation of the western part of England, from the dialectal use there of the sound of *z* for that of *s*. *Halliwell*.

zedoary (zed′ō-ą-ri), *n.* [‹ F. *zédoaire* = Sp. Pg. *zedoaria* = It. *zettovario*: see *setwall*.] An East Indian drug, known in two varieties as *long* and *round* zedoary. According to some authorities these are both the product of the plant *Curcuma Zerumbeth*; according to others, only the long zedoary belongs to this species, the round to *C. aromatica*. Both varieties are aromatic, with a strong camphoraceous flavor and the odor of ginger. In medicine, zedoary acts like ginger, but is less effective. It is used in India in various alterative decoctions and in preparing kinds of incense. The rhizome of *C. aromatica*, like the related turmeric, is used in dyeing — its chief application.

Zeidæ (zē′i-dē), *n. pl.* [NL. (Swainson, 1839), ‹ *Zeus* + *-idæ*.] A family of acanthopterygian fishes, so named from the genus *Zeus*, but usually called *Zenidæ*. See cut under *dory*, 1.

zein (zē′in), *n.* [‹ *Zea* + *-in*².] A proteid obtained from maize, said to be allied to gluten. It has a yellowish color, and is soft, insipid, and elastic. It differs essentially from the gluten of wheat. Also *zeine*.

zeitgeist (tsīt′gīst), *n.* [G.; ‹ *zeit*, time (= E. *tide*), + *geist*, spirit (= E. *ghost*).] The spirit or genius of the time; that general drift of thought or feeling which particularly characterizes any period of time: a German word occasionally used in English.

zel (zel), *n.* [‹ Turk. Pers. *zil*, a bell, cymbal.] An Oriental form of cymbal.

> Where, some hours since, was heard the swell
> Of trumpet and the clash of *zel*,
> Bidding the bright-eyed sun farewell.
> *Moore*, Lalla Rookh, The Fire-Worshippers.

Zelanian (zē-lā′ni-ąn), *a.* [‹ NL. *Zelania* (*Nova Zelania*, New Zealand) + *-an*.] In *zoögeog.*, of or pertaining to New Zealand: more fully *Novo-Zelanian*. See *New Zealand subregion*, under *subregion*.

zelant†, *n.* [Also *zealant*; ‹ LL. *zelan(t-)s*, ppr. of *zelare*, have zeal for, ‹ L. *zelus*, zeal: see *zeal*.] A zealot. Also *zealant*.

> To certain *zealants* all speech of pacification is odious. *Bacon*, Unity in Religion (ed. Spedding, Ellis, and Heath).
>
> Advertisement touching an Holy War written [by Bacon] in the form of a Dialogue, in which the interlocutors represent a Moderate Divine, a Protestant *Zelant*, a Romish Catholic *Zelant* . . . *E. A. Abbott*, Bacon, p. 426.

zelator†, (zel′ā-tor), *n.* [‹ LL. *zelator*, ‹ *zelare*, have zeal for: see *zelant*.] A zealous partizan or promoter; a zealot.

> Many *zelatours* or fauourers of the publyke weale haue benne discouraged. *Sir T. Elyot*, The Governour, iii. 27.

Zele (zē′lē), *n.* [NL. (Curtis, 1831), said to be ‹ Gr. *ζήλη*, a female rival.] A genus of hymenopterous parasites, of the family *Braconidæ*, distinguished from *Macrocentrus* principally by having the abdomen inserted between the posterior coxæ. Nine North American and seven European species have been described. They are parasitic upon small lepidopterous larvæ.

Zelkova (zel-kō′vą), *n.* [NL., from Transcaucasian *tselkva*.] A name given by Spach in 1841 to *Abelicea*, a genus of dicotyledonous trees, of the family *Ulmaceæ* and tribe *Celtideæ*. It is characterized by monœcious or polygamous flowers, the male with a short-lobed perianth, the female with an eccentric two-parted style and uniovulate ovary, in fruit somewhat ventricose and drupaceous, smooth or veiny on the surface, and often keeled on the back, containing a compressed concave seed with broad cotyledons. There are 4 species, natives respectively of Crete, the Caucasian and Caspian region, Japan, and China. They are trees bearing alternate serrate or crenate feather-veined leaves, with narrow slender stipules. The flowers are sessile or short-pedicelled, the male in small clusters, the female solitary in the upper axils. *Abelicea ulmodes* (*Zelkova crenata* of Spach), the zelkova- or zelkona-tree of the Caucasus, reaches a considerable size, sometimes 80 feet high and 4 feet in diameter; in its scaly bark it resembles the plane-tree, in its leaves the elm; the small greenish-brown flowers have the odor of the elder, and are followed by roundish fruits of the size of a pea. Its timber is much prized; the sap-wood is light-colored and elastic; the hard heavy heart-wood takes a good polish, and is valued for furniture. For *Abelicea acuminata*, see *keyaki*.

zeloso (dze-lō′sō), *a.* [It.: see *zealous*.] Zealous: in *music*, marking passages to be rendered with zeal, enthusiasm, or energy.

zelotypia (zel-ō-tip′i-ą), *n.* [NL., ‹ Gr. *ζηλοτυπία*, jealousy, rivalry, ‹ *ζηλότυπος*, jealous, ‹ *ζῆλος*, zeal, + *τύπτειν*, strike: see *type*.] The exercise of morbid perseverance and energy in the prosecution of a project, especially one of a political or religious nature; a form of monomania sometimes manifesting itself in overzeal in attempts to gain supporters to any public cause.

zelotypic (zel-ō-tip′ik), *a.* [‹ *zelotypia* + *-ic*.] Pertaining to, characterized by, or exhibiting zelotypia.

zelousiet, *n.* See *zealousy*.

zemindar (zem′in-där), *n.* [Also *zamindar*; ‹ Pers. *zemīndār*, a landholder, ‹ *zemīn*, land, + *-dār*, holding.] Originally, one of a class of farmers of the revenue from land held in common by its cultivators, established by the Mogul government of India, every one in a specially assigned tract or district; now, in many provinces, a native landlord, regarded as a successor of the preceding, and similarly responsible for the land-tax, who under British regulations has become the actual proprietor of the soil under his jurisdiction, often with right of primogeniture.

> The *Zemindars* of Lower Bengal, the landed proprietary established by Lord Cornwallis, have the worst reputation as landlords, and appear to have frequently deserved it.
> *Maine*, Village Communities, p. 163.

zemindary (zem′in-dä-ri), *n.*; pl. *zemindaries* (-riz). [‹ Pers. *zemīndarī*, ‹ *zemīndār*, zemindar.] **1.** The office or jurisdiction of a zemindar. — **2.** The tract of territory administered

or controlled by a zemindar; also, the system of landholding and revenue-collection under zemindars. Also written *zamindari, zemindari, zemindaree, zemindarry*, etc.

Lord Cornwallis, with the best intentions, stereotyped the *zemindary* system in Bengal by giving to the middlemen or farmers of the revenue permanent rights of possession, subject to a quit rent to the Government.
Contemporary Rev., L. 61.

zemmi, zemni (zem'i, -ni), *n.* The blind mole-rat, *Spalax typhlus*. See cut under *mole-rat*.

zemstvo (zems'tvō), *n.* [Russ.] In Russia, a local elective assembly, of recent institution, for the oversight and regulation of affairs within its territory. There are zemstvos for the districts into which the governments are divided, and also for the governments themselves, with nominal jurisdiction of local taxation, schools, roads, public sanitation, etc., but subject to arbitrary interference by the provincial governors.

Zenaida (zē-nā'i-dä), *n.* [NL. (Bonaparte, 1838), < *Zénaïde*, daughter of Joseph Bonaparte, and wife of Charles Lucien Bonaparte.] A genus of American ground-doves, typical of the subfamily *Zenaidinæ*, containing such species as the West Indian *Z. amabilis*.

zenaide (zē-nā'id), *n.* A dove of the genus *Zenaida*.

Zenaidinæ (zē-nā-i-dī'nē), *n. pl.* [NL., < *Zenaida* + *-inæ*.] A subfamily of pigeons or doves, of the family *Columbidæ;* the ground-pigeons of America, distinguished from the more arboreal pigeons, or *Columbinæ* proper, by the greater size of the feet and the denudation of the scutellate tarsi. Numerous genera and species inhabit the warmer parts of America; 6 are found in the United States, of which the Carolina dove, *Zenaidura carolinensis*, is the best-known and most widely distributed. *Zenaida amabilis* is a West Indian species, found also in Florida. The group embraces the smallest birds of the family, as the diminutive ground-dove of the Southern States, *Chamæpelia* (or *Columbigallina*) *passerina*. See cuts under *dove, ground-dove, Melopelia*, and *Scardafella*.

zenaidine (zē-nā'i-din), *a.* [< *Zenaidinæ*.] Pertaining to or resembling the genus *Zenaida*. *Coues*.

Zenaidura (zē-nā-i-dū'rä), *n.* [NL. (Bonaparte, 1854), < *Zenaida*, q. v., + Gr. *οὐρά*, tail.] That genus of *Columbidæ* which contains the Carolina dove, or mourning-dove, *Z. carolinensis:* so called from the peculiarity of the tail, which has fourteen instead of twelve feathers. The long cuneate tail gives this genus the aspect of *Ectopistes* (which belongs to a different subfamily). See cut under *dove*, and compare that under *passenger-pigeon*. Also, incorrectly, *Zenædura*.

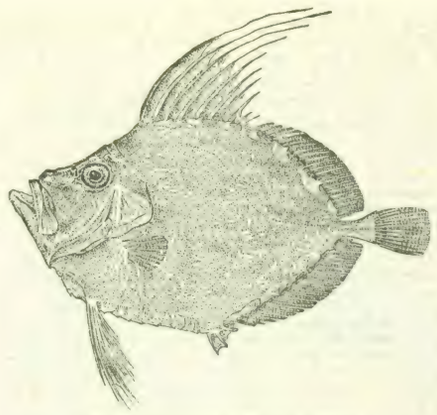
zenana (ze-nä'nä), *n.* [Also *zanana;* < Pers. *zenāna*, belonging to women, < *zen*, a woman, = Gr. *γυνή*, a woman: see *queen*[1].] In India, that part of the house in which the females of a family are secluded; an East Indian harem.

I wandered through a *zenana* which was full of women's clothes, fans, slippers, musical instruments, flowers, gilt chairs, and damask curtains.
W. H. Russell, Diary in India, I. 338.

Zenana missions, Protestant Christian missions to the women of India, conducted by female missionaries from Great Britain and the United States.

Zend (zend), *n.* [See *Zend-Avesta*.] The name commonly given to the language of the Avesta: an ancient form of Iranian or Persian. It was deciphered in the present century, largely by means of its resemblance to Sanskrit. See *Zend-Avesta*.

zendal silk. Same as *sendal*.



Zend-Avesta (zen-dä-ves'tä), *n.* [More properly *Avesta*, since *Zendavesta* is literally the Avesta with its Zend or commentary.] The sacred scriptures of the Zoroastrian religion, ascribed to Zoroaster, and consisting of the *Vendidad*, the *Yasna* (including the *Gāthās*), the *Yashts*, and a few other pieces. Compare *Zend*.

zendel (zen'del), *n.* Same as *sendal*.

zendik (zen'dik), *n.* [Ar. *zendīq*.] A name given in the East not only to disbelievers in revealed religion, but also to such persons as are accused of magical heresy.

zenick, zenik (zē'nik), *n.* [African.] The African suricate, *Rhyzæna tetradactyla* or *Suricata zenick*. See cut under *suricate*.

Zenidæ (zen'i-dē), *n. pl.* [NL., < *Zeus* (*Zen-*) + *-idæ*.] A family of physoclistous acanthopterygian fishes, typified by the genus *Zeus;* the dories. The body is short, high and deep, and much compressed; the large mouth is terminal, with protractile upper jaw and small teeth in narrow bands or single file; the dorsal fin is emarginate or divided, with strong spines anteriorly; the anal is spined or spineless; the ventrals are thoracic, and have one spine and five to eight rays; the caudal is usually not forked; the lateral line is obscure and unarmed; pyloric cæca are extremely numerous; and the vertebræ are about thirty-two. These are fishes of warm seas, of singular appearance, represented by 5 genera and about 10 species. Also called *Cyttidæ*,

Zenopsis ocellatus, of the family *Zenidæ*.

and formerly *Cyttina*. The name is also written *Zeidæ*. See *Zeus*, 2, and cut under *dory*.

Zeninæ (zē-nī'nē), *n. pl.* [NL., < *Zeus* (*Zen-*) + *-inæ*.] A subfamily of *Zenidæ*, without palatine teeth, with scales minute if present, and very strong anal spines. See *Zeus*, 2.

zenith (zē'nith), *n.* [ME. *senyth*, < OF. *cenith, zenith*, F. *zénith* (> G. *zenith* = D. Sw. *zenit* = Russ. *zenitŭ*), < Sp. *zenit*, OSp. *zenith* = Pg. *zenith, zenit*, a corruption (prob. due to a misreading of *m* as *ni*) of **zemt*, < Ar. *semt, samt*, in *semt er-ras, samt ur-ras*, the zenith, vertical point of the heavens, lit. 'way of the head': *semt, samt*, way, road, path, tract, quarter; *al*, the; *ras*, head. Cf. *azimuth*.] 1. The vertical point of the heavens at any place, or the point directly above an observer's head; the upper pole of the celestial horizon. The opposed pole is the nadir.—2. Figuratively, the highest point, or summit, as of one's fortune; the culmination.

By my prescience
I find my *zenith* doth depend upon
A most auspicious star.
Shak., Tempest, i. 2. 181.

Dead! in that crowning grace of time,
That triumph of life's *zenith* hour!
Whittier, Rantoul.

Reflex zenith-tube. See *reflex*.

zenithal (zē'nith-al), *a.* [< *zenith* + *-al*.] Of or pertaining to the zenith.

The deep *zenithal* blue. *Tyndall*, Glaciers of the Alps, v.

Zenithal map-projection. See *projection*.

zenith-collimator (zē'nith-kol″i-mā-tor), *n.* A collimator arranged so that its optical axis is vertical, instead of horizontal as usually is the case. In Kater's vertical collimator the telescope is carried by an annular iron float, floating upon mercury. Other forms are also used in which the adjustment to verticality is made by means of spirit-levels. Also called *vertical collimator*.

zenith-distance (zē'nith-dis″tans), *n.* The arc intercepted between any body and the zenith, being the same as the co-altitude of the body.

zenith-sector (zē'nith-sek″tor), *n.* An astronomical instrument for measuring with great accuracy the zenith-distances of stars which pass near the zenith. It is specially used for this purpose in English trigonometrical surveys in determining latitudes. It consists essentially, as its name implies, of an arc of a divided circle, with appliances for determining accurately its zenith-reading. See *sector*.

zenith-telescope (zē'nith-tel″e-skōp), *n.* An important geodetical instrument for measuring the difference of zenith-distances of pairs of stars north and south of the zenith. It consists of a somewhat large telescope pointing nearly to the zenith, but having a moderate range of motion in altitude regulated by a fine tangent screw. The instrument also carries a vertical setting-circle with a very delicate level, having its tube perpendicular to the horizontal axis of the telescope. There is at the eyepiece a thread micrometer, working vertically. The telescope, with its horizontal axis, is mounted upon a very long vertical axis arranged with two stops, so that the telescope can be carried round from the north to the south part of the meridian. The difference of zenith-distances of a pair of stars, one north and the other south, having been observed, the latitude of the station is equal to the mean of their declinations added to half the excess of the southern over the northern zenith-distance. The instrument is the invention of Captain A. Talcott, U. S. A.; but it is said the principle is due to the early astronomer Horrocks.

Zenker's degeneration. Same as *waxy degeneration* (*b*). See *waxy*[1].

zenoid (zē'noid), *a.* and *n.* [< *Zeus* (*Zen-*) + *-oid*.] I. *a.* Of or relating to the *Zenidæ*.

II. *n.* One of the *Zenidæ*.

Zenonian (zē-nō'ni-an), *a.* and *n.* [< L. *Zeno*(*n-*), < Gr. *Ζήνων*, Zeno (see def.), + *-ian*.] I. *a.* Of or pertaining to any one of the name of Zeno. Specifically—(*a*) Pertaining to the doctrines and arguments of Zeno of Elea, a philosopher of the fifth century B. C. Zeno's four arguments against motion, which are celebrated, are as follows: First, a body passing over any space must first pass the middle point, and before it can do that it must pass the point midway between that and the starting-place, and so on *ad infinitum*. This *regressus ad infinitum* was regarded as in some way absurd. The second argument is called *the Achilles*, or *Achilles and the tortoise*. Achilles cannot overtake the tortoise, because it will take him a certain time to reach the starting-point of the tortoise, and when he has reached it the tortoise will still have the start, and so on *ad infinitum;* and thus he will be the sum of an infinite series of times in reaching the tortoise, which will be an infinite time. The third argument is that a flying arrow at any time occupies a space no larger than itself, and in this space it has no room for motion, and therefore at no time has it any motion. The fourth argument is quite obscure, but it concludes from the consideration of relative motions that the whole of a time is equal to its half. Zeno may have come upon the difficulty that half an infinite number is equal to the number itself. Aristotle calls Zeno the inventor of dialectic—that is, of abstract logical reasoning reposing upon the principle of contradiction, as opposed to mere inference by vague association with some general experience. The Zenonian arguments are in point of fact attempts at such reasoning; but they are gross logical fallacies, arising from the fact that the reasoning is not carried out abstractly, but contents itself with reaching contradictions with ordinary inexact experience. They have been considered wonderful by those students who have come to philosophy by the way of theology or natural history without proper training in mathematics and logic; and fallacies of the same nature are committed every day, even in mathematical works. Zenonian minds find some difficulty in reasoning either about discrete or about continuous infinity, because these characters are neither of them directly presented to us in experience, and therefore elude associational reasoning. With finite quantity they find no such difficulty. But in really logical reasoning, since finite quantity is distinguished from infinite quantity in being subject to a certain general and complicated condition to which the latter is not subject, the latter is more simple than the former; and from a similar cause continuous infinity is more easily reasoned about, with logical accuracy, than discrete infinity.

Gorgias's sceptical development of the *Zenonian* logic.
Encyc. Brit., XXIV. 779.

(*b*) Pertaining to Zeno of Citium, the founder of the Stoic school of philosophy, who lived between 350 and 250 B. C. He committed suicide at an advanced age.

II. *n.* A Stoic.

Zenonic (zē-non'ik), *a.* [< *Zeno*(*n-*) + *-ic*.] Same as *Zenonian*.

Heraclitus's system was the polar antithesis to this *Zenonic* position. *The Academy*, April 21, 1888, p. 278.

Zenopsis (zē-nop'sis), *n.* [NL. (Gill, 1862), < *Zeus* (*Zen-*) + Gr. *ὄψις*, aspect.] A genus of dories, of the subfamily *Zeninæ*, differing from *Zeus* mainly in having only three instead of four anal spines. The type is *Z. nebulosus* of Japan; another species is *Z. ocellatus* of the New England coast, of a nearly plain silvery color, but with a black lateral ocellus. See cut under *Zenidæ*.

zenu (zē'nō), *n.* The goitered antelope, or yellow goat, *Procapra gutturosa*. See *dzeren*.

zeolite (zē'ō-līt), *n.* [So called by Cronstedt from boiling and swelling when heated by the blowpipe; < Gr. *ζέειν*, boil, foam, + *λίθος*, stone.] A generic name of a group of hydrated double silicates in which the principal bases are aluminium and calcium or sodium. They are closely allied to the feldspars among anhydrous silicates. They are decomposed by acids, often with gelatinization; and most of them intumesce before the blowpipe. Among them are analcite, chabazite, harmotome, stilbite, etc. They occur most commonly in cavities and veins in basic igneous rocks, as basalt or diabase, as at Bergen Hill, New Jersey; they thus often fill the cavities in amygdaloid.

zeolitic (zē-ō-lit'ik), *a.* [< *zeolite* + *-ic*.] Pertaining to zeolite; consisting of zeolite or resembling it.

zeolitiform (zē-ō-lit'i-fôrm), *a.* [< *zeolite* + L. *forma*, form.] Having the form of zeolite.

zeolitization (zē-ō-lit-i-zā'shon), *n.* [< *zeolite* + *-ize* + *-ation*.] The process by which a mineral is converted into a zeolite by alteration—for example, nepheline into thomsonite.

zeorine (zē'ō-rin), *a.* [< *Zeora*, a genus of lichens, + *-ine*[1].] In *bot.*, noting, in lichens, an apothecium in which a proper exciple is inclosed in the thalline exciple.

Zephiroth (zef'i-roth), *n. pl.* Same as *Sephiroth*.

Zephronia (zef-rō'ni-ä), *n.* [NL. (J. E. Gray, 1842).] Same as *Sphærotherium*.

Zephroniidæ (zef-rō-nī'i-dē), *n. pl.* [NL., < *Zephronia* + *-idæ*.] Same as *Sphærotheriidæ*. *J. E. Gray*.

zephyr (zef'ėr), *n.* [< F. *zéphire* = Sp. *zéfiro* = Pg. *zephyro* = It. *zeffiro, zefiro*, < L. *zephyrus*, < Gr. *ζέφυρος*, the west wind; cf. *ζόφος*, darkness, gloom, the west.] 1. The west wind; poetically, any soft, mild, gentle breeze.

As gentle
As *zephyrs* blowing below the violet,
Not wagging his sweet head.
Shak., Cymbeline, iv. 2. 172.

2. In *entom.*, a butterfly of the genus *Zephyrus*.—3. A trade-name for a textile fabric or yarn,

very fine and light of its kind, and for some other things of similar qualities: chiefly in attributive use: as, *zephyr* worsted; *zephyr* crackers (that is, biscuits).

Homespuns, Flannels, *Zephyrs*, Challies.
Newspaper Advertisement.

Zephyr cloth, a thin, finely spun woolen cloth made in Belgium, thinner than tweed, and employed for women's gowns. *Dict. of Needlework.*—**Zephyr flannel.** See *flannel*.

Zephyranthes (zef-i-ran′thēz), *n.* [NL., so called in allusion to the slender, easily agitated stalks; < Gr. *ζέφυρος*, the west wind, + *ἄνθος*, flower.] A name given by Herbert in 1821 to *Atamosco*, a genus of monocotyledonous plants, of the family *Amaryllidaceæ*. It is characterized by one-flowered scapes, and flowers with a short or rather long perianth-tube, sometimes with small scales around the stamens, slender separate filaments, oblong or linear versatile anthers, and numerous biseriate ovules in the three ovary-cells. There are about 30 species, occurring in America from Pennsylvania to the Argentine Republic, six of which occur in the southern United States. They are bulbous plants with a few linear or thong-shaped leaves, and an elongated scape bearing a handsome erect or slightly declined solitary flower, either pink, white, purple, or yellowish. They are known in general as *swamp-lily*. *Atamosco Atamasco*, found from Alabama to Pennsylvania, with rose-colored flowers, is cultivated under the name of *fairy-lily* or *atamasco-lily*; and *Atamosco candida* (*Zephyranthes candida* of Herbert), of Lima and Buenos Ayres, with white flowers and small rush-like leaves, under the name of *Peruvian swamp-lily*.

Zephyrus (zef′i-rus), *n.* [< L. *Zephyrus*, < Gr. *Ζέφυρος*, a personification of *ζέφυρος*, the west wind.] 1. In *classical myth.*, a personification of the west wind, poetically regarded as the mildest and gentlest of all the sylvan deities.

Whan *Zephirus* eek with his sweete breeth
Inspired hath in every holt and heeth
The tendre croppes.
Chaucer, Gen. Prol. to C. T., l. 5.

Courteous *Zephyrus*
On his dewy wings carries perfumes to cheer us.
Fletcher (and another), Sea Voyage, ii. 1.

2. [NL. (Dalman, 1816).] In *entom.*, a genus of butterflies, of the family *Lycænidæ*, chiefly of Europe and Asia, characterized by peculiarities of the wing-venation; the zephyrs.

zerda (zėr′dä), *n.* A small African fox; a fennec. The name is applied to two very different animals: (*a*) *Vulpes* or *Fennecus zerda*, a small true fox. See *fox*[1], and cut under *fennec*. (*b*) *Otocyon* or *Megalotis lalandi*. See *Megalotinæ*.

zereba, zeriba, *n.* See *zareba*.

Zerene (zē-rē′nē), *n.* [NL. (Hübner, 1816; Treitschke, 1825), prop. *Xerene*, < Gr. *ξηραίνειν*, dry up.] A notable genus of geometrid moths, typical of a family *Zerenidæ* or subfamily *Zereninæ*. They have broad, entire, and slightly hyaline wings; the body is slender, and the male antennæ are plumose, with the branches long, slender, and slightly frizzled. The most noted species is *Z. (Cingilia) catinaria* of the United States, a white moth, often with blackish dots, whose greenish-yellow black-spotted larva feeds on a variety of forest-plants.

Zerenidæ (zē-ren′i-dē), *n. pl.* [NL. (Guenée, 1844), < *Zerene* + *-idæ*.] A family of geometrid moths, comprising many beautiful forms, usually white or yellow, spotted with black. It includes 20 genera, of which *Abraxas* is the most important. From their maculation they are known as *panther-*, *jaguar-*, or *magpie-moths*, and one genus is called *Pantherodes*.

Zereninæ (zer-ē-nī′nē), *n. pl.* [NL., < *Zerene* + *-inæ*.] The *Zerenidæ* as a subfamily of *Geometridæ*.

zero (zē′rō), *n.* [< F. *zéro*, < It. Sp. *zero*, contr. of **zefro*, *zifro*, < Ar. *sifr*, cipher: see *cipher*, of which *zero* is a doublet.] 1. Cipher; the figure 0, which stands for naught in the Arabic notation for numbers.

As to number, they [the teeth of fishes] range from *zero* to countless quantities. *Owen*, Anat., § 70.

2. The defect of all quantity considered as quantity; the origin of measurement stated as at a distance from itself; nothing, quantitatively regarded. Upon a thermometer or any similar scale zero is the line from which all the divisions are measured in the positive and negative directions. Upon the centigrade and Réaumur's thermometers, it is the point at which the mercury stands when the thermometer is plunged into a mass of melting ice coarsely pulverized, from which some makers allow the water to drain off, but it is better not to do so. For some years after a thermometer, of the earlier kinds of glass, is made the zero rises—that is, the melting-point of ice stands higher and higher upon the scale. Upon the Fahrenheit thermometer the distance on the glass stem between the melting-point of ice and the temperature of steam at one English atmosphere of tension is divided into 180 degrees, and 32 such degrees below the melting-point of ice is marked as zero.

If the directions of all the external forces pass through the origin, their moments are *zero*, and the angular momentum of the system will remain constant.
Clerk Maxwell, Matter and Motion, art. lxxi.

Hence—3. Figuratively, the bottom of the scale; the lowest point or ebb; a state of nullity or inanition.

The diplomatic circle [in Constantinople] was at *zero*.
Stratford Canning, in Dict. Nat. Biog., VIII. 432.

Absolute zero of temperature. See *absolute*.—**Displacement of zero.** See *displacement*.—**Zero magnet**, a magnet used for adjusting the zero reading of a galvanometer or similar instrument.—**Zero potential**, in *elect.* See *potential*.

zeroaxial (zē-rō-ak′si-al), *a.* [< *zero* + *axial*.] Having an axis composed of zeros.—**Zeroaxial determinant.** See *determinant*.

zerumbet (zē-rum′bet), *n.* An East Indian drug—according to some, the same as cassumunar. It has sometimes been confounded with the round zedoary.

zest (zest), *n.* [< OF. *zeste*, one of the partitions which divide the kernel of a walnut, also the peel of an orange or lemon, < L. *schistos*, < Gr. *σχιστός*, divided, cleft: see *schist*.] 1. The dry woody membrane covering or forming the partitions of a walnut or other nut or fruit, as an orange or a lemon. [Obsolete, or only French.]—2. A piece of the outer rind of an orange or lemon used as a flavoring or for preserving; also, oil squeezed from such a rind to flavor liquor, etc. *Imp. Dict.*—3. Relish imparted or afforded by anything; piquant nature or quality; agreeableness; charm; piquancy.

The *zest*
Of some wild tale or brutal jest
Hath to loud laughter stirred the rest.
Scott, Rokeby, iii. 15.

4. Keen relish or enjoyment of anything; stimulated taste or interest; hearty satisfaction; gusto.

Some forms of hypochondria, in which this extreme somatic insensibility and absence of *zest* leave the intellect and memory unaffected. *J. Ward*, Encyc. Brit., XX. 84.

zest (zest), *v. t.* [< *zest*, *n.*] 1. To add a zest or relish to; make piquant, literally or figuratively.

My Lord, when my wine 's right I never care it should be *zested*. *Cibber*, Careless Husband, iii. (*Davies.*)

Hundreds sunk to the bottom by one broadside furnish out the topic of the day, and *zest* his coffee.
Goldsmith, Abuse of our Enemies.

2. To cut, as the peel of an orange or a lemon from top to bottom into thin slips, or to squeeze, as orange-peel, over the surface of anything. *Imp. Dict.*

zeta[1] (zē′tä), *n.* [Gr. *ζῆτα*, the letter *z*, *ζ*: see *Z*, *zed*.] The sixth letter of the Greek alphabet, corresponding to the English *Z*.—**Zeta function**, one of a series of functions connected with elliptic integrals of the second kind, and derived from Jacobi's zeta function, Z*u*, which differs only by a multiple of *u* from $\int \mathrm{dn}^2 u.\,du$, so that

$$Zu + Zv - Z(u+v) = k^2 \mathrm{sn}\,u.\,\mathrm{sn}\,v.\,\mathrm{sn}(u+v).$$

zeta[2] (zē′tä), *n.* [< LL. *zeta* for *dixeta*, a chamber, dwelling, < Gr. *δίαιτα*, way of living, mode of life, dwelling: see *diet*[1].] A little closet or chamber: applied by some writers to the room over the porch of a Christian church where the porter or sexton lived and kept the church documents. *Britton.*

zetetic (zē-tet′ik), *a.* and *n.* [< Gr. *ζητητικός*, < *ζητεῖν*, seek, inquire.] I. *a.* Proceeding by inquiry; seeking.—**The zetetic method**, in *math.*, the analytical method used in endeavoring to discover the value of unknown quantities or to find the solution of a problem. [Rare.]

II. *n.* A seeker: a name adopted by some of the Pyrrhonists.

zetetics (zē-tet′iks), *n.* [Pl. of *zetetic* (see *-ics*).] That part of algebra which consists in the direct search after unknown quantities. [Rare.]

Zeuctocœlomata (zūk″tō-sē-lō′ma-tä), *n. pl.* [NL., < Gr. *ζευκτός*, joined, + *κοίλωμα*, a hollow, cavity: see *cœloma*.] Animals having a primitive archenteron in the embryo, with paired or yoked cœlomatic sacs or diverticula, as mollusks, worms, crustaceans, insects, and vertebrates: more fully called *Metazoa zeuctocœlomata*. *A. Hyatt.*

zeuctocœlomatic (zūk-tō-sē-lō-mat′ik), *a.* [< *Zeuctocœlomata* + *-ic*.] Of or pertaining to the *Zeuctocœlomata*.

zeuctocœlomic (zūk″tō-sē-lom′ik), *a.* Same as *zeuctocœlomatic*.

Zeuglodon (zūg′lō-don), *n.* [NL. (Owen), < Gr. *ζεύγλη*, the strap or loop of a yoke (< *ζευγνύναι*, yoke, join), + *ὀδούς* (*ὀδοντ-*) = E. *tooth*.] 1. The typical genus of the family *Zeuglodontidæ*. Several species have been described from the Eocene of the United States and of England, as *Z. cetoides* of the former country, said to have attained a length of 70 feet. The genus had before been named *Basilosaurus* by Harlan, on the supposition that these fossils were reptiles, and has also been called *Hydrarchos* (by Koch), *Polyptychodon* (by Emmons), *Phocodon*, and *Zygodon*. See cut under *Zeuglodontia*.

2. [*l. c.*] A member of this genus; a zeuglodont.

zeuglodont (zūg′lō-dont), *a.* and *n.* [As *Zeuglodon(t-)*.] I. *a.* Having teeth (apparently) yoked in pairs; having the characters of, or pertaining to, the *Zeuglodontia*.

II. *n.* A fossil cetacean of the suborder *Zeuglodontia*; a zeuglodon.

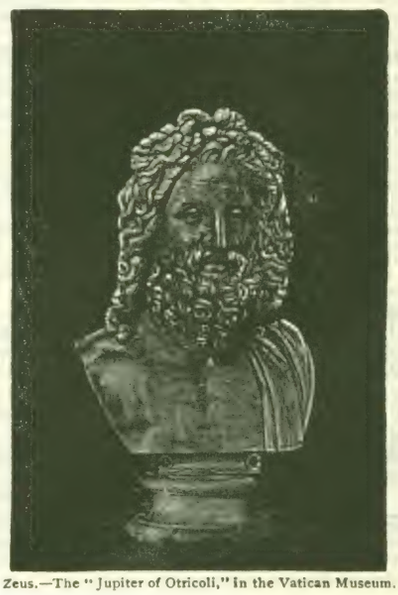
Zeuglodontia (zūg-lō-don′shi-ä), *n. pl.* [NL.: see *Zeuglodon*.] A suborder of *Cete* or *Cetacea*, represented by the zeuglodonts: sometimes made to consist of two families, the *Basilosauridæ* (or *Zeuglodontidæ*) and *Cynorcidæ*. The intermaxillaries were expanded forward, normally interposed between the maxillaries, forming the terminal as well as anterior margin of the upper jaw; and the nasal apertures were produced forward, with freely projecting nasal bones. The teeth of the intermaxillaries were conic, and those of the maxillaries were two- or three-rooted. Also called *Phocodontia* and *Archæoceti*. Also *Zeuglodontes*.

Posterior Tooth of one of the *Zeuglodontia*.

Zeuglodontidæ (zūg-lō-don′ti-dē), *n. pl.* [NL., < *Zeuglodon(t-)* + *-idæ*.] A family of fossil toothed cetaceans, typified by the genus *Zeuglodon*, and representative of the *Zeuglodontia*. These primitive cetaceans in some respects approached the seals, or pinniped mammals, and some of the characters of the fragmentary remains first discovered caused them to be mistaken for reptiles. Also called *Basilosauridæ*. See cut under *Zeuglodontia*.

zeuglodontoid (zūg-lō-don′toid), *a.* and *n.* [As *Zeuglodon(t-)* + *-oid*.] Same as *zeuglodont*.

zeugma (zūg′mä), *n.* [< Gr. *ζεῦγμα*, lit. a yoking, < *ζευγνύναι*, yoke, join: see *yoke*[1], *join*.] 1. A figure in grammar in which two nouns are joined to a verb suitable to only one of them, but suggesting another verb suitable to the other noun; or in which an adjective is similarly used with two nouns.—2. [*cap.*] [NL.] In *entom.*, a genus of hemipterous insects. *Westwood.*



zeugmatic (zūg-mat′ik), *a.* [< *zeugma(t-)* + *-ic*.] Pertaining to, or of the nature of, zeugma.

Zeugobranchia (zū-gō-brang′ki-ä), *n. pl.* [NL., < Gr. *ζεῦγος*, yoke, + *βράγχια*, gills.] Same as *Zygobranchiata*.

Zeugophora (zū-gof′ō-rä), *n.* [NL. (Kunze, 1818), < Gr. *ζεῦγος*, a yoke, + *-φορος*, < *φέρειν* = E. *bear*[1].] A genus of leaf-beetles, of the family *Chrysomelidæ*, having a lateral prothoracic tubercle and emarginate eyes. The geographical distribution of this genus is remarkable, for of the 20 or more species known two are found in Ceylon and Farther India, while the rest are North European and North American.

zeunerite (zī′nėr-īt), *n.* [Named after Director *Zeuner*, of Freiberg.] A hydrous arseniate of copper and uranium, occurring in bright-green tetragonal crystals, isomorphous with torbernite.

Zeus (zūs), *n.* [< Gr. *Ζεύς* (gen. *Διός*, also *Ζηνός*) = L. *Jovis* (gen.), *Ju-piter*, etc.: see *Jove*, *Jupiter*, *deity*.] 1. In *Gr. myth.*, the chief and master of the gods, the supreme deity, omnipres-

Zeus.—The "Jupiter of Otricoli," in the Vatican Museum.

ent and all-powerful, generally looked upon as the son of Kronos and Rhea, and held to have dethroned and succeeded his father. In a narrower sense, he was the god of the heavens, and controlled all celestial phenomena, as rains, snows, and tempests, heat and cold, and the lightning. His consort was Hera. Zeus was worshiped universally; but the most renowned of his sanctuaries were those of Olympia in Elis and Dodona in Epirus. In art Zeus was represented as a majestic and powerful figure, with full beard and flowing hair, in early works sometimes fully draped, but in later art, in general, only lightly draped in the himation. The type fixed by Phidias in the second half of the fifth century B. C., in his great chryselephantine statue for the temple at Olympia, influenced all artists who came after him. The usual attributes of the god are a long staff or scepter, the thunderbolt, the eagle, and sometimes a figure of Victory borne on one hand. The head is generally encircled by a fillet or a wreath; in later sculptures the hair rises from the brow in luxuriant locks like a crown, and falls in masses on either side of the face. Compare *Jupiter*. See cut on preceding page, and cut under *thunderbolt*.

2. [NL. (Linnæus, 1758).] In *ichth.*, a genus of acanthopterygian fishes, typical of the family *Zenidæ*. It includes several fishes of remarkable appearance, as the John-dory, *Z. faber*, well known in classic times. See cut under *dory*, 1.

Zeuzera (zū-zē′rạ), *n.* [NL. (Latreille, 1805): a corrupt form of unascertained origin.] An important genus of moths, of the family *Cossidæ*, or typical of a family *Zeuzeridæ*, having the antennæ of the male unequally pectinate and bare at the tips. The genus has a wide distribution, and comprises about 30 species. *Z. pyrina*, the wood-leopard, is common to Europe and the United States; its larva bores into the branches of the elm, maple, linden, ash, and many other trees.

zeuzerian (zū-zē′ri-ạn), *a.* and *n.* [< *Zeuzera* + *-ian*.] **I.** *a.* Resembling or related to a moth of the genus *Zeuzera;* of or pertaining to the *Zeuzeridæ*.

II. *n.* A moth of this genus or family.

Zeuzeridæ (zū-zer′i-dē), *n. pl.* [NL. (Newman, 1833), < *Zeuzera* + *-idæ*.] A family of bombycid moths, founded on the genus *Zeuzera:* synonymous with *Cossidæ*. Also *Zeuzerides* and *Zeuzeridi*.

zeylanite (zē′lạn-īt), *n.* Same as *ceylonite*.

zibeline (zib′e-lin), *n.* and *a.* [F., < It. *zibellino*, < ML. *sabellinus*, < *sabellum*, sable: see *sable*.] **I.**† *n.* A fur, generally thought to be the same as sable.

II. *a.* Of, pertaining to, or related to the sable, *Mustela zibellina*. See *sable*.

In 1188 or thereabout no person was allowed to wear garments of vair, gray, *zibeline*, or scarlet color.
W. A. Hammond, in Pop. Sci. Mo., XXXVII. 34.

zibet (zib′et), *n.* [See *civet*[1].] A digitigrade carnivorous quadruped, of the family *Viverridæ*, *Viverra zibetha*, a kind of civet found in India and some of the adjacent islands; the Asiatic or Indian civet. It secretes an odoriferous substance like that of other civets, and when tamed in the countries where it is found it lives in the houses like a domestic cat. The zibet is upward of 2 feet long, the tail about 10 inches. The form resembles that of other civets, and the fur is similarly marked in spots and lines of black and white, with rings of the same on the tail. It is sometimes reared for its civet in establishments conducted for that purpose. Also *zibeth*.

zibetum (zib′e-tum), *n.* [NL., < *zibet*.] The odoriferous substance of the zibet; a sort of civet.

ziczac, *n.* See *sicsac*.

ziega (zē′gạ), *n.* Curd produced from milk by adding acetic acid after rennet has ceased to cause coagulation. *Brande and Cox.*

Zieria (zēr′i-ạ), *n.* [NL. (Sir J. E. Smith, 1798), named after J. *Zier*, member of the Linnean Society of London.] A genus of plants, of the family *Rutaceæ* and tribe *Boronieæ*. It is characterized by opposite leaves usually of three leaflets, and flowers with four spreading free petals, and four stamens inserted on the glands of the disk. They are shrubs and trees, sometimes warty or covered with woolly or stellate hairs, bearing petioled glandular-dotted leaves, which are trifoliate or the upper ones sometimes undivided. The small white flowers are usually grouped in axillary or terminal panicles. There are about 10 species of Australia and Tasmania. *Z. Smithii*, a shrub or small tree, is known as *sandfly-bush* and, from the fetid wood, as *stinkwood*.

Ziervogel's process. See *process*.

zietrisikite (zē-tri-sē′kīt), *n.* [< *Zietrisika* (see def.) + *-ite*[2].] In *mineral.*, a mineral resin closely related to ozocerite, found at Zietrisika in Moldavia.

Zif (zif), *n.* [< Heb. *Ziv*.] A Hebrew month: same as *Iyar*. 1 Ki. vi. 1 [*Ziv*, R. V.].

Ziffius† (zif′i-us), *n.* A misspelling of *Xiphias*.

Huge *Ziffius*, whom Mariners eschew.
Spenser, F. Q., II. xii. 24.

ziganka (zi-gan′kạ), *n.* [Russ.] 1. A Russian country-dance.—2. Music for such a dance, which is quick in pace and usually founded on a drone-bass.

zigzack†, *n.* See *zigzag*.

zigzag (zig′zag), *n.* and *a.* [Formerly also *zigzack;* < F. *zigzag*, < G. *zickzack*, zigzag, a varied redupl. of *zacke*, a sharp point, prong, tooth, dentil: see *tack*[1]. Cf. G. *zickzack segeln*, 'sail zigzag,' tack.] **I.** *n.* 1. A sharp turning back and forth or in and out; an irregular, abrupt angulation; one of a series of sharp turns in a linear or curvilinear course: nearly always in the plural.

Cracks and *zigzags* of the head. *Pope*, Dunciad, i. 124.

I looked wistfully, as we rattled into dreary Andermatt, at the great white *zigzags* of the Oberalp road climbing away to the left. *H. James, Jr.*, Trans. Sketches, p. 248.

2. A formation with a succession of sharp turnings or angles; something that has a number of abrupt angulations, like those of chain-lightning.

A *zigzag* . . . will be seen to be simply a twill worked backwards and forwards. *A. Barlow*, Weaving, p. 99.

Long brown kaftans, upon the breasts of which had been sewn *zigzags* of red cloth.
G. Kennan, The Century, XXXVIII. 69.

Specifically—(*a*) A winding path with sharp turns, as up the side of a steep mountain.

How proudly he talks
Of *zigzags* and walks!
Swift, My Lady's Lamentation.

(*b*) In *fort.*, a trench of approach against a fortress, so constructed that the line of trench may not be enfiladed by the defenders: same as *boyau*. (*c*) In *arch.*, same as *chevron*, 2. (*d*) In the *fisheries*, a salmon-stair or fishway.

3. In *entom.*, a British moth, *Ocneria dispar*.—**Billet and zigzag.** See *billet*[2].

II. *a.* Having sharp and quick turns or flexures; turning frequently back and forth; in *bot.*, angularly bent from side to side.

The road is steep and runs on *zigzag* terraces.
Longfellow, Hyperion, iii. 2.

I went through the *zigzag* passages [of a sap].
J. K. Hosmer, The Color-Guard, xiv.

Zigzag molding, in *arch.* See *chevron*, 2, *dancette*, 2.

zigzag (zig′zag), *adv.* [< *zigzag*, *a.*] In a zigzag manner; with frequent sharp turns.

We patroled about, *zig-zag*, as we could; the crowd . . . having no chief or regulator.
Mme. D'Arblay, Diary and Letters, IV. 235.

What you, Reader, and I
Would call going *zig-zag*.
Barham, Ingoldsby Legends, II. 173.

zigzag (zig′zag), *v.*; pret. and pp. *zigzagged*, ppr. *zigzagging*. [< *zigzag*, *n.*] **I.** *intrans.* To move or advance in a zigzag fashion; form zigzags in a course; turn sharply back and forth.

It was only by *zigzagging* in the most cautious manner . . . that we avoided getting floated altogether.
O'Donovan, Merv, xv.

Dread, uncanny thing,
With fuzzy breast and leathern wing;
In mad, *zigzagging* flight.
J. W. Riley, The Bat.

II. *trans.* To form in zigzags, or with short turns or angles. *T. Warton*.

zigzaggery (zig′zag-ėr-i), *n.* [< *zigzag* + *-ery*.] The character of being zigzag; angular crookedness. [Rare.]

When my uncle Toby discovered the transverse *zigzaggery* of my father's approaches towards it [his coat-pocket], it instantly brought into his mind those he had done duty in before the gate of St. Nicholas.
Sterne, Tristram Shandy, iii. 3.

zigzaggy (zig′zag-i), *a.* [< *zigzag* + *-y*[1].] Having sharp and quick turns; zigzag.

The *zig-zaggy* pattern by Saxons invented
Was cleverly chisell'd, and well represented.
Barham, Ingoldsby Legends, II. 295.

zillah (zil′ạ), *n.* [Hind.] In Hindustan, an administrative division of a province.

zimb (zimb), *n.* [Ar. *zimb*, a fly.] A dipterous insect of Abyssinia, resembling and related to the tsetse of southern Africa, and very destructive to cattle.

zimbi (zim′bi), *n.* [< Kongo *njimbu*, bead.] A money-cowry, as *Cypræa moneta*. See *cowry*.

The cowry shells, which, under one name or another—chamgos, *zimbis*, bouges, porcelanes, etc.—have long been used in the East Indies as small money.
Jevons, Money and Mech. of Exchange, p. 24.

ziment-water (zi-ment′wâ″tėr), *n.* [After G. *ziment-, cement-wasser*, 'cement-water,' cf. *cementkupfer*, copper deposited in water.] Water found in copper-mines; water impregnated with copper.

Zimmermann's corpuscles, Zimmermann's particles. Blood-plates.

zimocca (zi-mok′ạ), *n.* A kind of commercial sponge, *Euspongia zimocca*, a bath-sponge of fine quality.

zimome, *n.* See *zymome*.

zinc (zingk), *n.* [Also sometimes *zink*, the spelling *zinc* being after the F. form of the original; < F. *zinc* = Sw. Dan. *zink* = Russ. *tsinkŭ* (NL. *zincum*), < G. *zink*, zinc; connection with G. *zinn*, = E. *tin*, is doubtful.] Chemical symbol, Zn; atomic weight, 65.7. One of the useful metals, more tenacious than lead and tin, but malleable only at a temperature between 200° and 300° F. Its ores have long been known, and the manufacture of brass from it has been practised to a considerable extent. Zinc is believed to have been first distinctly recognized as a metal by Paracelsus about the beginning of the seventeenth century; but in the metallic state it has been of importance in the arts only since the beginning of the nineteenth century. Native zinc is not positively known to occur; if existing at all, it is exceedingly rare. Its ores, however, are widely disseminated, especially the combination with sulphur, called *blende*, which is almost as invariably present in greater or less quantity in metalliferous veins as is galena. The localities where zinc ores are abundant enough to be worked with profit are, however, not numerous. The uses of zinc are numerous and important. In combination with copper it forms the well-known alloy called *brass*, which has been known for an indefinite period; it is also one of the ingredients of German silver. Zinc is largely used in the metallic form for roofing and for cornices and the like, also for coating or "galvanizing" sheet-iron to protect it from rusting, and as the electropositive element in many batteries. It is also somewhat extensively used as a paint, in the form of the oxid. This metal is usually a little more expensive than lead, and from half to a third as valuable as copper. Zinc belongs to the magnesium group of metals, in which are comprised glucinum, magnesium, zinc, and cadmium; these are all volatile, burning with a bright flame when heated in the air; they all form one chlorid and one oxid only. The common commercial name of zinc, as offered for sale in flat cakes or ingots, is *spelter*.—**Butter of zinc.** See *butter*[1].—**Chlorid-of-zinc paste.** See *paste*[1].—**Flowers of zinc,** zinc oxid.—**Granulated zinc,** zinc reduced to the form of granules by pouring the molten metal into water.—**Oleate-of-zinc ointment.** See *ointment*.—**Precipitated carbonate of zinc.** See *precipitate*.—**Red oxid of zinc, red zinc ore.** Same as *zincite*.—**Ruby of zinc.** See *ruby*.—**Zinc ash,** the impure gray oxid formed when zinc is heated in contact with air.—**Zinc caustic,** a mixture of 1 part of zinc chlorid to 2 or 3 of flour.—**Zinc cement,** a cement composed of zinc oxid made into a paste with a solution of zinc chlorid. It hardens quickly, and may be used for stopping teeth and for other purposes. A cheaper form of zinc cement is made from commercial zinc white mixed with an equal weight of fine sand and made into a paste with a solution of zinc chlorid, and is used to fill cracks in metallic apparatus, and to cement glass, crockery, etc. *E. H. Knight.*—**Zinc colloid,** a solution of 4 parts of zinc sulphate in 100 parts of styptic collodion.—**Zinc green, ointment, plaster, soap, white.** See the nouns.

zinc (zingk), *v. t.*; pret. and pp. *zincked*, ppr. *zincking*. [< *zinc*, *n.*] To coat or cover with zinc.

All the conditions under which the *zincked* pipe is to be used should be carefully considered.
Jour. Franklin Inst., CXXX. 401.

zinc-amyl (zingk′am″il), *n.* A colorless transparent liquid, $Zn(C_5H_{11})_2$, composed of zinc and amyl. When exposed to the air it absorbs oxygen rapidly, emitting fumes, but does not take fire spontaneously.

zinc-blende (zingk′blend), *n.* Native sulphid of zinc; sphalerite. Also called simply *blende*.

zinc-bloom (zingk′blōm), *n.* Same as *hydrozincite*.

zinc-colic (zingk′kol″ik), *n.* A form of colic thought to be caused by zinc-oxid poisoning.

zinc-ethyl (zingk′eth″il), *n.* A colorless volatile liquid, $Zn(C_2H_5)_2$, having a peculiar but not unpleasant smell, composed of zinc and the radical ethyl. It has powerful affinities for oxygen, igniting spontaneously on exposure to air. It is formed by heating zinc with ethyl iodide under pressure. *Brande and Cox.*

zincic (zin′sik), *a.* See *zinckic*.

zinciferous, zincification, zincify, zincite. See *zinkiferous*, etc.

zinckenite (zing′ken-īt), *n.* [Named after J. K. L. *Zincken* (1790–1862), a German metallurgist, mineralogist, and mining official.] A steel-gray mineral consisting of the sulphids of antimony and lead.

zinckic (zing′kik), *a.* [< *zinc* (*zink*) + *-ic*.] Related to, containing, or consisting of zinc. Also *zincic*.

zinckiferous (zing-kif′e-rus), *a.* See *zinkiferous*.

zincking (zingk′ing), *n.* [Verbal n. of *zinc*, *v.*] The act of coating iron with zinc from a weak solution of sulphate of zinc, or from the double salt of chlorid of zinc and sal ammoniac.

zinckite, *n.* See *zinkite*.

zincky, *a.* See *zinky*.

zinc-methyl (zingk′meth″il), *n.* A disagreeable-smelling mobile liquid, $Zn(CH_3)_2$, fuming in the air and readily igniting.

zinco (zing′kō), *n.* [Short for *zincograph*.] A plate in relief for printing, made by etching with acid a design on prepared zinc. [Eng.]

zinco (zing′kō), *v. i.* [< *zinco*, *n.*] To etch with acid a zinc plate containing on its surface a design intended for printing by typographic methods. [Eng.]

Drawings Wanted (on litho paper for *zincoing*) for a Provincial Journal. *Athenæum*, No. 3235, p. 591.

zincode (zing′kōd), *n.* [< NL. *zincum*, zinc, + Gr. ὁδός, way (cf. *anode*, *cathode*).] The negative pole of a voltaic battery; the anode of an electrolytic cell.

zincograph (zing′kō-gràf), *n.* [See *zincography*.] A plate or a picture produced by zincography. Also *zincotype*.

Reproduced in *zincograph* by the aid of photography. *Edinburgh Rev.*, CXLV. 231.

zincograph (zing′kō-gràf), *v. i.* [< *zincograph*, *n.*] To transfer a design to the surface of a zinc plate with intent to etch it and make therefrom a plate in relief.

zincographer (zing-kog′ra-fėr), *n.* [< *zincograph-y* + *-er*[1].] One who makes zincographic plates.

zincographic (zing-kō-graf′ik), *a.* [< *zincograph-y* + *-ic*.] Relating to zincography.

zincographical (zing-kō-graf′i-kal), *a.* [< *zincographic* + *-al*.] Same as *zincographic*.

zincography (zing-kog′ra-fi), *n.* [< NL. *zincum*, zinc, + Gr. *-γραφια*, < *γράφειν*, write.] The art of producing on zinc a printing surface in relief by etching with dilute acid the unprotected parts of the plate. Compare *paniconography*.

zincoid (zing′koid), *a.* [< NL. *zincum*, zinc, + Gr. *εἶδος*, form.] Of, pertaining to, or resembling zinc.—**Zincoid pole** of a voltaic cell, the negative pole, or zincode, constituted by the zincous plate connected with a copper plate which forms the positive pole; the anode of an electrolytic cell. See *chlorous pole*, under *chlorous*.

zincolysis (zing-kol′i-sis), *n.* [NL., < *zincum*, zinc, + Gr. *λύσις*, dissolving.] A mode of decomposition occasioned by an electrical current; electrolysis.

zincolyte (zing′kō-līt), *n.* [< NL. *zincum*, zinc, + Gr. *λυτός*, verbal adj. of *λύειν*, dissolve.] A body decomposable by electricity; an electrolyte.

zincopolar (zing′kō-pō″lär), *a.* [< NL. *zincum*, zinc, + E. *polar*.] Having the same polarity as the zinc plate in a galvanic cell.

zincotype (zing′kō-tīp), *n.* [< NL. *zincum*, zinc, + Gr. *τύπος*, type.] Same as *zincograph*.

The two volumes are copiously illustrated by a *zincotype* process. *Athenæum*, No. 3233, p. 492.

zincous (zing′kus), *a.* [< *zinc* + *-ous*.] Pertaining to zinc, or to the negative pole of a voltaic battery.—**Zincous element**, the basic or primary element of a binary compound.—**Zincous pole**, that pole of a particle of zinc, or of hydrochloric acid, which has the attraction or affinity which is characteristic of zinc, or the zincous attraction.

zinc-plating (zingk′plā″ting), *n.* Plating in zinc, executed with a preparation made of coarse rasped or granulated zinc boiled in a mixture of sal ammoniac and water. The deposit has a silvery brightness, and can be used as a first coat for articles to be twice plated, since any other metal can be deposited upon zinc. *E. H. Knight.*

zinc-salt (zingk′sâlt), *n.* A salt of which zinc is the base.

zinc-spinel (zingk′spin″el), *n.* Same as *gahnite*.

zinc-vitriol (zingk′vit″ri-ol), *n.* In *chem.*, zinc sulphate; white vitriol ($ZnSO_4 + 7H_2O$). It is found as a native mineral (goslarite), as a product of the oxidation of zinc-blende, and can also be prepared by dissolving zinc in dilute sulphuric acid, and by roasting native zinc sulphuret. It is used as a dryer in oil-paints and varnishes, as a mordant in dyeing, as a disinfectant, and sometimes as a source of oxygen.

Zingaro, Zingano (zing′ga-rō, -nō), *n.*; pl. *Zingari*, *Zingani* (-rē, -nē). [It.: see *Gipsy*.] A Gipsy.

zingel (zing′el), *n.* [G.; cf. *umzingeln*, encircle (see *cingle*).] A fish of the family *Percidæ*,

Zingel (*Zingel zingel*).

Zingel zingel of the Danube and its tributaries, allied to the genus *Aspro*. This fish is sometimes a foot long, and is of a greenish-brown color, lighter on the side and whitish on the belly, and marked with four brownish-black bands.

zinghot, *n.* [Appar. intended for *zinco*, It. form of *zinc*.] Same as *zinc*.

For cobolt and *zingho*, your brother and I have made all inquiries. *Walpole*, To Mann, July 31, 1743.

Zingian (zin′ji-an), *a.* and *n.* A name sometimes given to the South African family of tongues: same as *Bantu*.

Zingiber (zin′ji-bėr), *n.* [NL., < L. *zingiber*, < Gr. *ζιγγίβερις*, ginger: see *ginger*.] A spelling given by Burmann, Adanson, and others to *Zinziber*, established by Patrick Brown in 1756, a genus of plants, type of the family *Zinziberaceæ* and of the tribe *Zinzibereæ*. It is characterized by a cone-like inflorescence, each flower having a three-celled ovary and a stamen composed of a short filament and an anther with contiguous cells having the connective extended into a long linear appendage—the two lateral stamens either absent or represented by two small adnate staminodes. About 40 species are recognized by recent authors. They are natives of India and of islands of the Pacific and Indian oceans. They are leafy plants with horizontal tuberous rootstocks, the sterile stems differing from the flower-bearing ones. The dense cone of flowers is composed of imbricated bracts, each with from one to three flowers and spathaceous bractlets. The inflorescence is sometimes borne on a leafless scape, more or less covered with sheaths, in other species terminating a leafy stem, or apparently lateral upon a recurved peduncle. Each flower produces a membranous or hyaline tubular calyx, and a cylindrical corolla-tube dilated into narrow spreading lobes, the posterior one erect and incurved. The fruit is a globose or oblong capsule, finally irregularly ruptured, and discharging rather large oblong seeds with a lacerate aril which is sometimes much larger than the seed. The pungently aromatic roots of several species are the source of the ginger of commerce, especially those of *Zinziber Zingiber*, the ginger-plant of India (see cut under *ginger*). The root of *Z. Cassumunar*, of India, is used as a tonic and stimulant, and is cultivated under the name of *cassumunar ginger* or *Bengal root*.

Zingiberaceæ (zin″ji-be-rā′sē-ē), *n. pl.* [NL. (Richard, 1808), < *Zingiber* + *-aceæ*.] An improper spelling of *Zinziberaceæ*, a family of monocotyledonous plants, of the order *Scitaminales*. It is characterized by irregular flowers with distinct calyx and corolla, inferior ovary, usually arillate seeds, and an embryo in a canal in the center of the albumen. There are about 300 species, of 39 genera, classed in 3 tribes, of which *Zinziber*, *Hedychium*, and *Costus* are the types. They are perennial tropical herbs growing from a horizontal thickened rootstock, their leaves chiefly radical, large and ornamental, with numerous parallel veins diverging obliquely from the midrib. Their flowers are often of great beauty, as in species of *Hedychium*, *Languas*, *Curcuma*, and *Kæmpferia*; in many, especially *Mantisia*, they resemble orchids. They have a strong tendency to petaloid development, producing richly colored bracts in *Curcuma*; three petaloid staminodes and two scales usually represent the five imperfect stamens. The family contains many of the most stimulating aromatics, products derived chiefly from the root or rhizome of the plants ginger, galangale, and zedoary, of the genera *Zinziber*, *Languas*, and *Curcuma*; also from the fruit or seeds, as cardamoms and grains-of-paradise, from species of *Amomum* and *Elettaria*. The family also yields the valuable dye turmeric and arrowroot from *Curcuma*. The mucilaginous juice of species of *Costus* is used in medicine, and the fruit of *Globba* is edible.

zingiberaceous (zin″ji-be-rā′shius), *a.* Of or pertaining to ginger, or the *Zinziberaceæ*.

Zingibereæ (zin-ji-bē′rē-ē), *n. pl.* [NL. (Meissner, 1842), < *Zingiber* + *-eæ*.] An improper spelling of *Zinzibereæ*, a tribe of plants, of the family *Zinziberaceæ*, typified by the genus *Zinziber*. It is characterized by flowers with a tubular or spathaceous calyx and a single stamen, the two lateral undeveloped stamens being often represented by petaloid staminodes; and by an ovary with three cells or three parietal placentæ, and a slender free style which at its apex clasps the two anther-cells. It embraces 16 genera, principally tropical, including the large and important aromatic genera *Amomum*, *Curcuma*, and *Languas* (besides *Zinziber*), as also many of the most highly ornamental plants of the family.

zink, *n.* See *zinc*.

zinke (tsing′ke), *n.* [G. *zinke*, a cornet.] A ★small cornet of wood or horn, once very common in Germany. It had usually seven finger-holes, and a cupped mouthpiece. It was made in several sizes, and both straight and curved. The serpent is properly a development of the old zinke or cornetto.

zinkiferous (zing-kif′e-rus), *a.* [Also *zinciferous*, *zinckiferous*; < *zinc* (*zink*) + L. *ferre* = E. *bear*[1].] Containing or producing zinc: as, *zinkiferous* ore.

zinkification (zing″ki-fi-kā′shon), *n.* [Also *zincification*; < *zinkify* + *-ation* (see *-fy*).] The process of coating or impregnating an object with zinc, or the state resulting from such process.

zinkify (zing′ki-fī), *v. t.*; pret. and pp. *zinkified*, ppr. *zinkifying*. [Also *zincify*; < *zinc* (*zink*) + L. *-ficare*, < *facere*, make.] To cover or impregnate with zinc.

zinkite (zing′kīt), *n.* [Also *zincite*, *zinckite*; < *zinc* (*zink*) + *-ite*[2].] A native oxid of zinc, found at Franklin Furnace and Stirling Hill, near Ogdensburg, in Sussex county, New Jersey. It is brittle, translucent, of a deep-red color, sometimes inclining to yellowish. Also called *red zinc ore*, or *red oxid of zinc*.

zinky (zing′ki), *a.* [Also *zincky*; < *zinc* (*zink*) + *-y*[1].] Pertaining to zinc; containing zinc; having the appearance of zinc.

The *Zincky* Ores [of common galena] are said to be greyer than other Ores. *Kirwan*, Mineralogy (1796), II. 218.

Zinnia (zin′i-ą), *n.* [NL., named after J. G. *Zinn* (1727–59), who wrote on the plants of Göttingen.] 1. A name given by Linnæus in 1759 to *Crassina*, a genus of composite plants. It is characterized by solitary radiate flower-heads with a conical or cylindrical receptacle, the flowers both of the disk and ray being fertile, and those of the ray almost or quite without a tube, and persistent upon the ripened achene; the achenes of the inner flowers each bear from one to three awns. There are 12 species, natives of Mexico, Texas, and Arizona, 2 of which, long cultivated in gardens, are now widely naturalized. They are annuals, perennials, or sometimes shrubby plants, bearing opposite entire leaves and rather large and showy flower-heads peduncled at the ends of the branches or in the forks between them. Five species occur within the United States, mostly with light-yellow or sulphur-colored rays. The cultivated species are chiefly of various shades of deep red; they have been called *youth-and-old-age*, from the lasting and somewhat rigid rays and the continued production of new disk-flowers; but are more usually known by the name *zinnia*, especially in the common double form.

2. [*l. c.*] A plant of this genus.

Zinn's corona. An arterial plexus about the optic nerve, in the sclerotic.

Zinn's ligament. See *ligament of Zinn*, under *ligament*.

Zinn's membrane. The anterior lamella of the iris of the eye.

Zinn's zonule. See *zonule of Zinn*, under *zonule*.

zinnwaldite (zin′wol-dīt), *n.* [< *Zinnwald* (see def.) + *-ite*[2].] A kind of mica related to lepidolite, but containing both lithium and iron: it is often found associated with tin ores, as at Zinnwald in the Erzgebirge.

Zinziber, Zinziberaceæ, etc. Same as *Zingiber*, etc.

Zion (zī′on), *n.* [Also *Sion*, LL. *Sion*, Gr. *Ζιών*, Heb. *Tsiyōn*, orig. a hill.] Figuratively, the house or household of God, as consisting of the chosen people, the Israelites; the theocracy, or church of God; hence, the church in general, or heaven as the final gathering-place of true believers: so called from Mount Zion, the holy hill of Jerusalem, the center of ancient Hebrew worship.

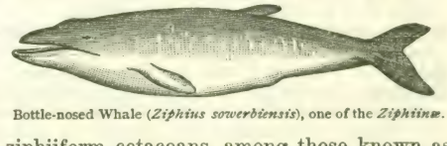
Zion spreadeth forth her hands, and there is none to comfort her. Lam. i. 17.

★ Let *Zion* and her sons rejoice. *Watts.*

Zionist (zī′on-ist), *n.* One who advocates the colonization of Hebrews in Palestine.

Zionward (zī′on-wärd), *adv.* [< *Zion* + *-ward*.] Toward Zion, in the figurative sense; toward the goal of salvation; heavenward.

If I were like you, I should have my face *Zionward*, though prejudice and error might occasionally fling a mist over the glorious vision before me. *Charlotte Brontë*, in Mrs. Gaskell, viii.



zip (zip), *n.* [Imitative.] The sound of a bullet passing through the air or striking against an object.

The ping, *zip*, *zip*, of bullets, and the wounded men limping from the front, . . . were a prelude to the storm to come. *The Century*, XXX. 134.

Ziphiidæ (zi-fī′i-dē), *n. pl.* [NL., < *Ziphius* + *-idæ*.] The *Ziphiinæ* rated as a family apart from *Physeteridæ*, and divided into *Ziphiinæ* and *Anarnacinæ*. Also, more properly, *Xiphiidæ*.

ziphiiform (zif′i-i-fôrm), *a.* Same as *ziphioid*.

Ziphiinæ (zif-i-ī′nē), *n. pl.* [NL., prop. **Xiphiinæ*; < *Ziphius* + *-inæ*.] A subfamily of *Physeteridæ*, named from the genus *Ziphius*, often elevated to the rank of a family; the ziphioid or

Bottle-nosed Whale (*Ziphius sowerbiensis*), one of the *Ziphiinæ*.

ziphiiform cetaceans, among those known as *bottlenoses* and *cow-fishes*. They have most of the lower teeth rudimentary or concealed, a distinct lacrymal bone, and a prolonged snout or rostrum above which the rest of the head rises abruptly in globose form; there is a small falcate dorsal fin; the flippers are small, with five digits; and the single median blow-hole is crescentic, as in dolphins. Several genera besides *Ziphius* have been recognized, of which *Hyperoödon* is the most prominent; but their synonyms are involved, and some distinctions which have been drawn are not clear.

ziphioid (zif'i-oid), *a.* and *n.* **I.** *a.* Resembling or related to a cetacean of the genus *Ziphius*.

II. *n.* Any member of the *Ziphiidæ* or *Ziphiinæ*.

Also written *xiphioid*.

ziphisternum, *n.* See *xiphisternum*.

Ziphius (zif'i-us), *n.* [NL. (Cuvier, 1834), prop. *Xiphius*, < Gr. *ξιφίος*, the sword-fish, < *ξίφος*, a sword.] 1. A genus of odontocete cetaceans, or toothed whales, taken as type of the *Ziphiinæ:* used with varying restrictions, and in some acceptations synonymous with *Mesoplodon*. It was based originally on a skull discovered in 1804 on the coast of France, and supposed to be fossil; the species was named *Z. cavirostris* by Cuvier. Numerous living individuals have since been found in various seas. There is normally one conical tooth on each side of the lower jaw; the vertebræ are forty-nine in number; and the anterior cervicals are ankylosed, but the posterior are free. These whales are among those known as *bottle-nosed whales* and *cow-fishes*, and attain a length of from 15 to 20 feet. The genus is distinct from *Hyperoödon;* but variations in the dentition have been noted, and the relations of some forms known as *Mesoplodon* are in question. Also called *Diodon*.

2. [*l. c.*] A whale of this genus.

Ziphorhynchus, *n.* See *Xiphorhynchus*.

zippeite (zip'ē-īt), *n.* [Named after F. X. M. *Zippe*, a German mineralogist.] A basic sulphate of uranium, occurring in delicate needle-like crystals of a bright-yellow color: it is found at Joachimsthal.

zircon (zėr'kon), *n.* [Cf. Sp. *azarcón* = Pg. *azarcão, zarcão,* < Ar. *zarkūn*, cinnabar, vermilion, < Pers. *zargūn*, gold-colored: see *jargon*[2].] A mineral occurring in tetragonal crystals of adamantine luster and yellowish to brownish or reddish color: its hardness is somewhat greater than that of quartz. The reddish-orange variety is sometimes called *hyacinth* in jewelry. The colorless, yellowish, or smoky zircon of Ceylon is there called *jargon*. Zircon consists of the oxids of silicon and zirconium (SiO_2ZrO_2), and is usually regarded as a silicate of zirconium, though sometimes classed with the oxids of titanium (rutile) and tin (cassiterite), which have a similar form. See *zirconium*.

zirconate (zėr'kō-nāt), *n.* [< *zircon(ic)* + *-ate*[1].] ★A salt of zirconic acid.

zirconia (zėr-kō'ni-ą), *n.* [NL., < *zircon*.] An oxid, ZrO_2, of the metal zirconium, resembling alumina in appearance. It is so hard as to scratch glass.—**Zirconia light,** an intensely brilliant light, differing from the ordinary oxyhydrogen light or lime-light only in that it is produced from zirconia cones acted on by oxygen and a highly carbureted gas, in place of the less durable lime balls of the other method.

zirconian (zėr-kō'ni-an), *a.* [< *zirconia* + *-an*.] Same as *zirconic*. *Pop. Sci. News*, XXIII. 60.

zirconic (zėr-kon'ik), *a.* [< *zirconia, zirconium,* + *-ic*.] Of, pertaining to, or containing zirconia or zirconium.—**Zirconic acid,** an acid containing zirconium, not capable of existing in the free state, but forming definite salts.

zirconite (zėr'kon-īt), *n.* [< *zircon* + *-ite*[2].] A variety of zircon.

zirconium (zėr-kō'ni-um), *n.* [NL., < *zircon*.] Chemical symbol, Zr; atomic weight, 90.6. The metal contained in zirconia. It is commonly obtained in the form of a black powder, but is also known in the crystalline state, forming highly lustrous blackish-gray laminæ, having a specific gravity of 4.25. The amorphous metal takes fire when gently heated in the air, but the crystalline variety requires an intense heat for its ignition. The common acids do not attack it. Zirconium is a remarkable element in that it is very widely and generally diffused in nature, but nowhere, so far as is known, found in any one locality in large quantity; in this respect it has a decided resemblance to titanium. The form in which it occurs is that of the silicate (zircon), and usually in minute or even microscopic crystals, which have been detected in many granitic and syenitic rocks, as well as in various gneisses and crystalline schists. Zircon has been found also, but less abundantly, in some eruptive rocks, both ancient and modern. Zirconium is chemically most closely related to titanium, and both these metals have certain affinities with silicon, forming dioxids and volatile tetrachlorids, as does that non-metallic element.

zirconoid (zėr'kō-noid), *n.* [< *zircon* + *-oid*.] In *crystal.*, a double eight-sided pyramid belonging to the tetragonal system: so called because it is a common form with zircon.

zircon-syenite (zėr'kon-sī″e-nīt), *n.* See *elæolite-syenite*.

Z-iron (zē'- or zed'ī″ėrn), *n.* See *angle-iron*.

Zirphæa (zėr-fē'ą), *n.* [NL. (J. E. Gray, as *Zirfæa*).] In *conch.*, a genus of bivalves, of the family *Pholadidæ*. *Z. crispata* is called *date-fish* in California, where it is available for food.

zither (zith'ėr), *n.* [< G. *zither* = E. *cither, cithara*, q. v.] Same as *cithern*.

zitherist (zith'ėr-ist), *n.* [< *zither* + *-ist*.] A player on the cithern.

zithern (zith'ėrn), *n.* [Altered form of *zither*, after *cithern* as related to *cither, cithara*.] Same as *cithern*.

Zizania (zī-zā'ni-ą), *n.* [NL. (Gronovius, 1742), < LL. *zizania*, pl., tares, < Gr. *ζιζάνιον*, darnel, tare.] A genus of grasses, of the tribe *Oryzeæ*. It is characterized by numerous narrow unisexual spikelets in a long loose androgynous panicle, each spikelet having two glumes and six stamens or two more or less connate styles. The only species, *Z. aquatica*, is distributed in North America from New Brunswick to Manitoba and southward to Florida and Texas, also occurring in Japan and eastern Russia. It is a tall aquatic grass with long flat leaves and large terminal panicles with numerous slender elongated branches, made highly ornamental by the pendent red or purplish anthers.

Flowering Plant of *Zizania aquatica*.
a, branch of the panicle with male flowers; *b*, branch of the panicle with female flowers; *c*, male flower; *d*, female flower.

It is the favorite food of wild ducks, and the seeds are sold to plant in artificial fish-ponds to shade the young fish, and along watercourses to attract fowl. It is known as *wild, water,* or *Indian rice*. See *Indian rice* (*a*) under *rice*[1].

zizany† (ziz'ą-ni), *n.* [< F. *zizanie*, < LL. *zizania:* see *Zizania*.] Darnel.

They all stand or fall to their own masters, and many holy and excellent persons God has dispersed, as wheat among the tares and *zizany*.
Evelyn, True Religion, II. 314.

Ziziphora (zī-zif'ō-rą), *n.* [NL. (Linnæus, 1737).] A genus of dicotyledonous plants, of the family *Menthaceæ* and tribe *Saturejeæ*. It is characterized by a tubular thirteen-nerved two-lipped calyx, with the throat villous within, and commonly closed after flowering by connivent teeth. There are about 8 species, natives of eastern and central Asia and of southern parts of the Mediterranean region. They are low annuals or spreading undershrubs, usually hoary with close hairs, and bearing small leaves which are nearly or quite entire. The flowers form axillary clusters, commonly crowded upon the upper part of the stem.

Zizypheæ (zī-zif'ē-ē), *n. pl.* [NL. (Brongniart, 1843), < *Zizyphus* + *-eæ*.] A tribe of dicotyledonous choripetalous plants, of the family *Rhamnaceæ*. It is characterized by a superior or half-superior ovary, by a disk filling the calyx-tube, and by a drupaceous juicy or fleshy fruit with a one- to three-celled stone. It includes 13 genera, of which *Zizyphus* is the type. They are shrubs or trees, mainly of the northern hemisphere; one, *Œnoplia*, becomes a shrubby climber in *Œ. scandens*, the supple-jack of the southern United States.

Zizyphus (ziz'i-fus), *n.* [NL. (Adanson, 1763), < L. *zizyphus*, < Gr. *ζίζυφος*, the jujube-tree: see *jujube*.] A genus of dicotyledonous plants, of the family *Rhamnaceæ*, type of the tribe *Zizypheæ*. It is characterized by thorny branches, triple-nerved leaves, and cymose flowers each with five petals, and by a usually two-celled ovary immersed in the disk, and bearing two or three conical divergent styles. There are 40 species, natives chiefly of tropical Asia and America, occurring rarely in Africa and Australia. They are shrubs or trees, often decumbent or sarmentose, commonly covered with hooked spines. The leaves are alternate, coriaceous, entire or crenate, three- to five-nerved, and mostly arranged in two ranks. One or both of the stipules are spinescent, often ending in a hook. The small greenish flowers form short few-flowered axillary cymes. The fruit is a globose or oblong drupe, with a woody or bony stone, containing one to three seeds. The species are known in general as *jujube-tree;* the name *jujube* is given especially to the fruit of *Z. Zizyphus*, of the Mediterranean region, which is there commonly eaten fresh, or used as a cough remedy when dried. *Z. Jujuba*, of India and China, also furnishes an excellent fruit, cultivated in numerous forms by the Chinese; a variety is known as the *Chinese date*. The true jujube does not now usually enter into the confection known as *jujube-paste*, but is commonly replaced by gum arabic or gelatin. *Z. Lotus*, the sadr, is one of the reputed sources of the classical lotus-food. (See *lotus-tree*, 1.) Many other species bear edible fruit, as *Z. mucronata*, of Africa, which is there made into bread and into a pleasant beverage; several are valued for ornament on account of their foliage, or for hedges on account of their spines, especially *Z. Zizyphus*, and also *Z. Spina-Christi*, one of the Christ's-thorns (for which see *nebbuk-tree*). *Z. nummularia*, of Persia and India, is known as *camel's-thorn* (which see). *Z. Chloroxylon* is an important timber-tree of Jamaica, there known as *cog-wood*. *Z. obtusifolia* occurs from Texas to Arizona and is known as *lote-bush* and *Texas buckthorn*. *Krugiodendron ferreum*, black iron-wood, and *Colubrina reclinata*, nakedwood, are two Florida species formerly referred to this genus by some authors.

Zn. In *chem.*, the symbol for *zinc*.

zoa, *n.* Plural of *zoön*.

zoadula† (zō-ad'ū-lą), *n.*; pl. *zoadulæ* (-lē). [NL., < Gr. *ζωή*, life, + *-ad*[2] + dim. *-ula*.] In *bot.*, Gaillon's term for a zoöspore.

zoæa, zoæal. See *zoëa, zoëal*.

zoamylin (zō-am'i-lin), *n.* [< Gr. *ζωή*, life, + *amylin*.] Same as *glycogen*.

Zoanthacea (zō-an-thā'sē-ą), *n. pl.* [NL., < *Zoanthus* + *-acea*.] A suborder of *Actiniaria*, containing permanently attached forms, as *Zoanthus* and related genera.

zoanthacean (zō-an-thā'sē-an), *a.* and *n.* [< *Zoanthacea* + *-an*.] **I.** *a.* Of or pertaining to the *Zoanthacea;* zoanthoid.

II. *n.* Any member of the *Zoanthacea*.

Zoantharia (zō-an-thā'ri-ą), *n. pl.* [NL. (De Blainville, 1830), < Gr. *ζῷον*, animal (see *zoön*), + *ἄνθος*, flower, + *-aria*.] A division (order or subclass) of *Actinozoa*, containing the hexamerous or hexacoralline forms; the helianthoid polyps, or animal-flowers, contrasted with the *Alcyonaria*, and characterized by the normal disposition of their soft parts in sixes, or multiples of six (not in eights, as in the *Alcyonaria* or *Octocoralla*), and by the possession of simple (not fringed) and usually numerous tentacles: so called from the resemblance of some of them, as the sea-anemones, to flowers. The *Zoantharia* correspond to the *Hexacoralla* or *Coralligena*, and were divided by Milne-Edwards into three suborders (or orders): *Malacodermata*, with the corallum absent or rudimentary, as in sea anemones; *Sclerobasica*, with external non-calcareous corallum, as the black corals of the family *Antipathidæ;* and *Sclerodermata*, with internal calcareous corallum, as the ordinary hard corals, or stone-corals. See the technical names.

zoantharian (zō-an-thā'ri-an), *a.* and *n.* **I.** *a.* Having the characters of or pertaining to the *Zoantharia*.

II. *n.* A member of the *Zoantharia*, as a sea-anemone.

Zoanthidæ (zō-an'thi-dē), *n. pl.* [NL. (J. E. Gray, 1840), < *Zoanthus* + *-idæ*.] A family of zoantharian or hexacoralline actinozoans, typified by the genus *Zoanthus*. They are sea-anemones in which the individual polyps are ordinarily united by a common creeping stolon, or connective cœnosarc; they multiply by buds which remain thus adherent. They have no true skeleton, but are often incrusted with sand; the mesenteric septa are numerous, and of two sorts (one small and sterile, the other large and perfect and furnished with reproductive organs), generally alternating. Like most other sea-anemones, these are fixed organisms, incapable of locomotion; and they include all the colonial forms. They are of world-wide distribution. Also *Zoantheæ*.

Zoanthinæ (zō-an-thī'nē), *n. pl.* [NL., < *Zoanthus* + *-inæ*.] The *Zoanthidæ* named as a subfamily. *Edwards and Haime*, 1851.

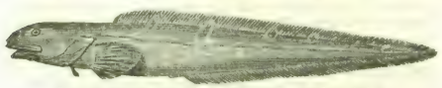
zoanthodeme (zō-an'thō-dēm), *n.* [< Gr. *ζῷον*, animal, + *ἄνθος*, a flower, + *δέμα*, a bundle; literally, 'a bundle of animal-flowers.'] A compound zoantharian; the whole organism constituted by the coherent zoöids produced by the budding of a single actinozoan polyp.

zoanthodemic (zō-an-thō-dem'ik), *a.* [< *zoanthodeme* + *-ic*.] Of the nature of or pertaining to a zoanthodeme.

zoanthoid (zō-an'thoid), *a.* [< *Zoanthus* + *-oid*.] Same as *zoantharian*.

zoanthropic (zō-an-throp'ik), *a.* [< *zoanthrop-y* + *-ic*.] Of the nature of or pertaining to zoanthropy: as, *zoanthropic* mania or delusion; *zoanthropic* literature. This is the generic name of such delusions, which take various forms, some of which are specified according to the animal concerned, as lycanthropy.

zoanthropy (zō-an'thrō-pi), *n.* [< Gr. *ζῷον*, animal, + *ἄνθρωπος*, man. Cf. *lycanthropy*.] A form of insanity in which a person believes himself to be one of the lower animals.



Zoanthus (zō-an'thus), *n.* [NL. (Cuvier, 1827), < Gr. *ζῷον*, animal, + *ἄνθος*, flower.] The typical genus of *Zoanthidæ*. The individual polyps are lengthened, and elevated upon a footstalk springing from the connective cœnosarc common to the several zoöids of the compound organism; the mouth is linear and transverse, and surrounded by short slender rays or tentacles. The best-known species is *Z. couchi* of the European coasts; numerous others inhabit tropical seas, as *Z. solanderi*. Also *Zoanthas* (Lamarck, 1810), *Zoantha*.

Zoanthus couchi, two thirds natural size.
a, polyp, closed; *b*, the same, expanded; *c*, stolon.

Zoarces (zō-är'sēz), *n.* [NL. (Cuvier, 1829), also *Zoarcæus, Zoarchus*, and *Zoarcus*, < Gr. ζωαρκής, life-supporting, < ζωή, life, + ἀρκεῖν, assist, defend.] The name-giving genus of *Zoarcidæ*, including such species as *Z. viviparus*, the so-called viviparous blenny (formerly *Blennius viviparus*). This is a large eelpout, with an elongate compressed body, tapering behind, heavy oblong head, a large mouth, strong conic teeth in several series, a long low dorsal fin some of the hinder rays of which are developed as sharp spines, broad pectoral fins, and jugular ventrals of three or four soft rays; the scales are small, not imbricated, but embedded in the skin. Another species, with an increased number of fin-rays and vertebræ, is *Z.* (*Macrozoarces*) *anguillaris*, known as *mutton-fish* and *mother of eels*, found from Labrador to the Middle States, 20 inches long, of a reddish-brown color mottled with olive, with a dark streak across the cheek.

Zoarcidæ (zō-är'si-dē), *n. pl.* [NL., < *Zoarces* + *-idæ*.] A family of fishes, named from the

Lycodes vahli, one of the *Zoarcidæ* (or *Lycodidæ*).

genus *Zoarces:* now generally called *Lycodidæ* (which see). Also *Zoarceidæ, Zoarchidæ.*

zoaria, *n.* Plural of *zoarium.*

zoarial (zō-ā'ri-al), *a.* [< *zoari-um* + *-al.*] Of or pertaining to a zoarium; composing or composed of a zoarium.

zoarium (zō-ā'ri-um), *n.*; pl. *zoaria* (-ä). [NL., < Gr. ζῳάριον, dim. of ζῷον, an animal.] A polyzoary; the colony or aggregate of the polypides of a polyzoan; the polypidom or polypary of the moss-animalcules.

zobo (zō'bō), *n.* [Also *zhobo, dsomo*, etc., < Tibetan *mdzopo*, the male, *mdzomo*, the female of the *mdzo*, a hybrid of the yak and the so-called zebu. Cf. *zebu.*] A breed of zebu-cattle, supposed to be a hybrid of the common zebu with the yak, reared in the western Himalayan region for its flesh and milk, and also as a beast of burden.

zocco (zok'ō), *n.* [It., < L. *soccus*, sock: see *sock*[1], *socle.*] A socle.

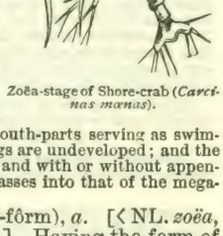
zoccolo, zocle (zok'ō-lō, zō'kl), *n.* [< It. *zoccolo*, < *zocco:* see *zocco.*] A socle.

zodiac (zō'di-ak), *n.* [Formerly also *zodiack;* < ME. *zodiac, zodiak*, < OF. *zodiac, zodiaque*, F. *zodiaque* = Sp. *zodiaco* = Pg. It. *zodiaco*, < L. *zodiacus*, the zodiac (L. *orbis signifer*), also adj., of the zodiac, < Gr. ζωδιακός, the zodiac, prop. adj., 'of animals,' sc. κύκλος, also called ὁ κύκλος ὁ τῶν ζῳδίων, or ὁ τῶν ζῳδίων κύκλος, 'the circle of animals' (also ἡ ζωδιακή, sc. ὁδός, way), the ref. being to the constellations figured as animals; < ζῴδιον, dim. of ζῷον, animal: see *zoön.*] 1. A belt of twelve constellations, extending about 8° on each side of the ecliptic. The constellations are ♈, Aries; ♉, Taurus; ♊, Gemini; ♋, Cancer; ♌, Leo; ♍, Virgo; ♎, Libra; ♏, Scorpio; ♐, Sagittarius; ♑, Capricornus; ♒, Aquarius; ♓, Pisces. The zodiac is also divided into twelve equal parts called *signs*, named after these constellations, and the first point of the sign Aries begins at the vernal equinox. The above symbols refer to the signs. The signs have been carried back by the precession of the equinoxes until they are now 25° behind the corresponding constellations on the average. But the position of the vernal equinox was originally, no doubt, between Aries and Taurus. There is strong evidence that the zodiac was formed at Babylon about 2100 B. C. There is a poetical description of the heavens written by Aratus in Macedonia in latitude about 41°, and about 270 B. C. But the appearances described were never to be seen in that latitude, nor in any latitude in that age. Thus, he mentions that the head of the Dragon — that is, Etamin (γ Draconis) — and the waist of Cepheus — that is, Ficares (ε Cephei) — are on the circle of perpetual apparition. Now, this was true only in the latitude of Babylon, 22½° N., about 2200 B. C. He also describes pretty carefully the most southerly stars seen, mentioning the star now called the *Peacock's eye* (α Pavonis), as well as Canopus (α Argus), but saying that there are no bright stars between the latter and Cetus, so that α Phœnicis must have been invisible. Now these descriptions will suit only a station of latitude 32° N. to 35° N., and an epoch between 1500 B. C. and 2200 B. C. Aratus also describes the courses of the tropics among the stars. That of the tropic of Cancer best agrees with 2200 B. C., that of the tropic of Capricorn with 2000 B. C. The equator is also described in a manner which answers perfectly to 2100 B. C. Finally, there are twelve descriptions of the appearances of the heavens at the rising of each of the constellations of the zodiac, which, while not very decisive, are not in positive disagreement with the other indications. But there is no doubt that the early part of the poem (written long before the precession of the equinoxes was suspected) copies indirectly early Accadian records. The zodiac was, therefore, formed before 2000 B. C. It cannot have been formed very long before, since there is much reason to believe that the constellation Aries either contained the sun or rose just before the sun at the time of the vernal equinox. Now, it was about 2100 B. C. when the vernal equinox fell upon the last point of Aries, and the other constellations were in similar mean positions. Some highly competent writers, however, regard the first formation of the zodiac as vastly more ancient. Several of the ancient constellation figures have a remarkably Babylonian character, as Virgo, Capricornus, Sagittarius, Centaurus, and Ophiuchus; one (Cepheus) has a barbarian name; and nearly all may be explained from Babylonian mythology. Two at least of the symbols for signs, those of Gemini and Scorpio, much resemble the Babylonian ideographs for the corresponding months. Yet the origin of the Bears, Auriga, Pegasus, Lyra, and Corona was probably not Babylonian. Moreover, certain subjects of common Babylonian fable, such as the tree of life, are not found among the constellations. It is noticeable that it was about 2300 B. C. that He and Ho are said to have reformed the Chinese calendar and divided the heavens into seasons; but the attempt to connect our constellations with the Chinese asterisms has conspicuously failed. The figures of the Chinese zodiac are Tiger, Rabbit, Dragon, Serpent, Horse, Ram, Ape, Cock, Dog, Pig, Rat, Bull. The zodiac was marked out by the ancients as distinct from the rest of the heavens because the apparent places of the sun, moon, and the planets known to them were always within it. This, however, does not hold good of all the newly discovered planetoids. See cuts under constellations named.

2. Figuratively, a round or circuit; a zone; a complete course.

> The Poet . . . goeth hand in hand with Nature, not inclosed within the narrow warrant of her guifts, but freely ranging onely within the *Zodiack* of his owne wit.
> *Sir P. Sidney*, Apol. for Poetrie.
>
> In your yeares *zodiacke* may you fairely moue,
> Shin'd on by angels, blest with goodness, loue.
> *Dekker*, Londons Tempe.

3. In *her.*, a bearing representing a part of the imaginary zodiacal circle, forming an arched bend or bend sinister, and with several of the signs upon it, the number being specified in the blazon.—**Lunar zodiac**, a circle of 27 or 28 asterisms, or groups of stars, selected and established to mark the moon's daily progress around the heavens. It was used in ancient India, in China, and in Arabia, with only minor variations in the star-groups selected. Its place of origin is uncertain and disputed.—**Zodiac ring**, a ring decorated with one of the signs of the zodiac, either as the sign under which the possessor was born, or perhaps the ★ sign influencing a certain part of the body.



zodiacal (zō-dī'a-kal), *a.* [< *zodiac* + *-al.*] Of or pertaining to the zodiac: as, the *zodiacal* signs; *zodiacal* planets.—**Zodiacal light**, a luminous tract of the sky, of an elongated triangular figure, lying nearly in the ecliptic, its base being on the horizon, and its apex at varying altitudes, seen at certain seasons of the year either in the west after sunset or in the east before sunrise. It appears with greatest brilliance within the tropics, where it sometimes rivals the Milky Way. Its nature is unknown; the most plausible hypothesis, supported by many of the most eminent modern astronomers, is that it is the glow from a cloud of meteoric matter revolving round the sun.—**Zodiacal parallel.** See *parallel.*

zodiophilous (zō-di-of'i-lus), *a.* [< Gr. ζῴδιον, dim. of ζῷον, animal, + φιλεῖν, love.] In *bot.*, animal-loving: applied to those flowers which from their structure are especially adapted for fertilization by animals: it is the converse of *anthophilous*, said of the animals concerned.

zoëa, zoœa (zō-ē'ä), *n.*; pl. *zoëæ, zoœæ* (-ē), rarely *zoëas* (-äz). [NL., < Gr. ζῷον, animal.] The name given by Bose (1802) to the larvæ of certain decapod crustaceans under the impression that they were adults constituting a distinct genus. The name is retained for the zoëa-stage, and for the animal itself in this stage. The zoëa is also called the *copepod-stage*, intervening in some crustaceans between the nauplius-stage and the schizopod-stage; in others, in which a nauplius-stage is apparently wanting, the zoëa passes into the megalopa-stage. Also *zoæa, zœa.*

zoëa-form (zō-ē'ä-fôrm), *n.* The zoëa or zoëa-stage of a crustacean.

zoëal, zoœal (zō-ē'al), *a.* Of the nature of a zoëa; pertaining to a zoëa or to the zoëa-stage; zoëform. Also *zoæal.*

Zoëa-stage of Shore-crab (*Carcinas mœnas*).

zoëa-stage (zō-ē'ä-stāj), *n.* That early stage of certain crustaceans which is a zoëa. In this stage of development the cephalothorax is relatively stout and usually spined, with conspicuous eyes, and long fringed antennæ and mouth-parts serving as swimming-organs; the thoracic legs are undeveloped; and the abdomen is long and slender and with or without appendages. This stage usually passes into that of the megalopa.

zoëform, zoœform (zō'ē-fôrm), *a.* [< NL. *zoëa*, q. v., + L. *forma*, form.] Having the form of a zoëa; being or resembling a zoëa.

zoëpraxiscope (zō-ē-prak'si-skōp), *n.* Same as *zoöpraxinoscope.*

zoëther (zō-ē'thėr), *n.* [< Gr. ζωή, life, + E. (*e*)*ther.*] A supposed substance which manifests the phenomena of animal magnetism and the like: same as *protyle.*

zoëtheric (zō-ē-ther'ik), *a.* [< *zoëther* + *-ic.*] Having the character of zoëther; relating to zoëther in any way.

zoëtic (zō-et'ik), *a.* [Irreg. < Gr. ζωή, life, + *-t-ic.*] Pertaining to life; vital.

zoëtrope (zō'ē-trōp), *n.* [< Gr. ζωή, life, + τρόπος, a turning.] An optical instrument which exhibits pictures as if alive and in action, depending, like the thaumatrope, the phenakistoscope, etc., on the persistence of vision. It consists of a cylinder open at the top, with a series of slits in its circumference. A series of pictures representing the different attitudes successively assumed by an object in performing any act from its beginning to its close, as by a horseman in leaping a gate or an acrobat in performing a somersault, is arranged along the interior circumference. The instrument is then set in rapid motion, and the person applying his eye to the slits sees through them the figure appearing as if endowed with life and activity and performing the act intended. Compare *zoögyroscope* and *zoöpraxinoscope.* Also *zoötrope* and *wheel of life.*

zoëtropic (zō-ē-trop'ik), *a.* [< *zoëtrope* + *-ic.*] Pertaining to or resembling the zoëtrope; adapted to or shown by the zoëtrope.

zoiatria (zō-i-at'ri-ä), *n.* [NL., < Gr. ζῷον, an animal, + ἰατρεία, healing, < ἰατρεύειν, heal, < ἰατρός, a physician: see *iatric.*] Veterinary surgery.

zoic (zō'ik), *a.* [< Gr. ζωικός, of animals, < ζῷον, animal.] Of or pertaining to animals or living beings; relating to or characterized by animal life; marked by the presence of life.

Zoilean (zō-il'ē-an), *a.* [< L. *Zoilus*, < Gr. Ζώιλος, Zoilus (see def.).] Characteristic of Zoilus, a Greek critic (about the fourth century B. C.), noted for his severe criticism of Homer; having the character of Zoilism.

Zoilism (zō'i-lizm), *n.* [< *Zoilus* (see *Zoilean*) + *-ism.*] Criticism like that of Zoilus; illiberal or carping criticism; unjust censure.

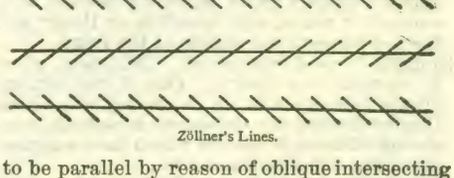
> Bring candid eyes unto the perusal of men's works, and let not *Zoilism* or detraction blast well-intended labours.
> *Sir T. Browne*, Christ. Mor., ii. 2.

Zoilist (zō'i-list), *n.* [< *Zoilus* (see *Zoilean*) + *-ist.*] An imitator of Zoilus; one who practises Zoilism; a carping critic.

> Out, rhyme; take 't as you list:
> A fico for the sour-brow'd *Zoilist!*
> *Marston*, What You Will, ii. 1.

zoisite (zoi'sīt), *n.* [Named by Werner in 1805 after Baron von *Zois*, from whom he received his specimen.] A mineral closely related to epidote, but orthorhombic in crystallization. It occurs in prismatic crystals, often deeply striated and rounded, also massive; it varies in color from white to yellow, greenish, and rose-red. Its composition is similar to that of epidote, except that it contains calcium and but little iron. Thulite is a variety of a rose-red color, found in Norway. Also called *saualpite.*

zoism (zō'izm), *n.* [< Gr. ζωή, life, + *-ism.*] The doctrine that the phenomena of life depend upon a peculiar vital principle; any vitalistic theory. [A word current from about 1840 to 1850.]



zoist (zō'ist), *n.* [< Gr. ζωή, life, + *-ist.*] One who studies the phenomena of life from the standpoint of zoism; one who upholds the theory or doctrine of zoism. See *zoism.*

zoistic (zō-is'tik), *a.* [< *zoist* + *-ic.*] 1. Pertaining to zoism or to the zoists: as, *zoistic* views. See *zoism.*—2. Pertaining to living organisms or to vitality; vitalistic; animal: as, *zoistic* magnetism (that is, animal magnetism). *Scoresby.*

Zolaism (zō'lä-izm), *n.* [< *Zola* (see def.) + *-ism.*] The characteristic quality of the works of Émile Zola (born 1840), a French novelist characterized by an excessively "realistic" treatment of the grosser phases of life; coarse "realism" or "naturalism."

> Set the maiden fancies wallowing in the troughs of *Zolaism*—
> Forward, forward, ay and backward, downward too into the abysm.
> *Tennyson*, Locksley Hall Sixty Years After.

Zöllner's lines. Parallel lines which seem not

Zöllner's Lines.

to be parallel by reason of oblique intersecting lines. Also called *Zöllner's pattern.*

zollverein (tsōl'fėr-īn″), *n.* [G., < *zoll* (= E. *toll*), custom, + *verein*, union, < *ver-* (= E. *for-*) + *ein* (= E. *one*), one.] 1. A union of German states for the maintenance of a common tariff, or uniform rates of duty on imports from other countries, and of free trade among themselves.

It began with an agreement in 1828 between Prussia and the grand duchy of Hesse, received a great development in 1834 and succeeding years, ultimately including all the German powers excepting Austria and a few small states, and is now coextensive with the German empire.

Hence—2. A commercial union, or customs-union, in general; any arrangement between a number of states for regulating rates of duty with reference to their common benefit.

The result would be a Protectionist group and an Australian *Zollverein*. *Fortnightly Rev.*, N. S., XXXIX. 296.

zomboruk (zom'bō-ruk), *n.* Same as *zumbooruk*.

zona (zō'nä), *n.*; pl. *zonæ* (-nē). [L.] 1. In ★*anat.*, a zone, belt, or girdle, or part likened to a zone: chiefly used in human anatomy.—2. Herpes zoster (which see, under *herpes*).—**Zona alba**, the white zone of the eyeball—a thickening of the sclerotic where the muscles are attached.—**Zona arcuata**, the inner zone of the basilar membrane, extending from the lower edge of the spiral groove of the cochlea to the external edge of the base of the outer rods of Corti.—**Zona cartilaginea**, the limbus of the spiral lamina.—**Zona choriacea**. Same as *zona cartilaginea*.—**Zona ciliaris**, the ciliary zone of the eye; the ring or belt of ciliary processes, or their impression upon the vitreous humor. See cut under *eye*[1].—**Zona denticulata**, the inner zone of the basilar membrane together with the limbus of the spiral lamina.—**Zona fasciculata**, the layer of the cortical part of the suprarenal body, just beneath the zona glomerulosa.—**Zona ganglionaris**, a collection of gray matter on the filaments of the cochlear branch of the auditory nerve.—**Zona glomerulosa**, the outer layer of the cortical part of the suprarenal body.—**Zona ignea**. Same as def. 2.—**Zona incerta**, a continuation of the formatio reticularis forward under the optic thalamus.—**Zona lævis**. Same as *zona arcuata*.—**Zona mediana**. Same as *zona cartilaginea*.—**Zona membranacea**. Same as *basilar membrane* (which see, under *basilar*).—**Zona nervea**. Same as *zona arcuata*.—**Zona orbicularis**, a collection of circular fibers in the capsular ligament of the hip-joint.—**Zona pectinata**, the outer zone of the basilar membrane, extending from the rods of Corti to the spiral ligament.—**Zona pellucida**, a transparent membrane surrounding the yolk of the ovum: so called from its appearance in the human ovum under the microscope. It is simply the wall of the ovum, corresponding to any other cell-wall. It is traversed by numerous, more or less evident, radiating pore-canals, through which spermatozoa are supposed to enter the ovum.—**Zona perforata**, the lower edge of the spiral groove of the cochlea.—**Zona radiata**, the zona pellucida when the radiating pore-canals are especially distinct.—**Zona repens**. Same as *herpes zoster*. See *herpes*.—**Zona reticularis**, the inner layer of the cortical portion of the suprarenal body.—**Zona serpiginosa**. Same as def. 2.—**Zona spongiosa**, the extreme dorsal tip of the posterior horn of the gray matter of the spinal cord.—**Zona tecta**, the inner part of the lamina spiralis membranacea, covered by the organ of Corti.—**Zona tendinosa**, a fibrous ring situated at each auriculoventricular opening in the heart.—**Zona Valsalvæ**, the membranous spiral lamina of the cochlea.—★**Zona volatica**. Same as def. 2.

zonal (zō'nal), *a.* [< LL. *zonalis*, < L. *zona*, zone: see *zone*.] 1. Having the character of a zone or belt.

Frequently storm clouds appeared *zonal*—that is, alternate portions positively and negatively electrified.
G. J. Symons, in Modern Meteorology, p. 163.

2. Of or pertaining to the rings, somites, or body-segments of an articulate or annulose animal; arthromeric; metameric: as, *zonal* symmetry, the serial homology or metameric symmetry of a segmented animal, as an arthropod or an annelid. See *symmetry*, 5 (*b*).—3. In *crystal.*, arranged in zones: as, the *zonal* structure of a mineral.—4. In *bot.*, noting that view of a diatom in which the zone or suture of the valves is presented to the eye—the "front view" of some writers.—5. In *hort.*, marked on the leaves with a zone or circle, as many pelargoniums, also called *horseshoe* geraniums.—**Zonal harmonic**. See *harmonic*.—**Zonal stratum**. See *stratum zonale*, under *stratum*.

zonally (zō'nal-i), *adv.* In a zonal manner; in zones, or in the form of a zone.

Crystals of the hyacinth variety of quartz . . . contain numerous inclusions of anhydrite arranged *zonally*.
Amer. Nat., XXIII. 814.

Zonaria[1] (zō-nā'ri-ä), *n.* [NL. (J. Agardh, 1841), fem. of L. *zonarius*: see *zonary*.] A small genus of widely distributed brown algæ, of the family *Dictyotaceæ*, having a more or less fan-shaped frond obscurely marked with concentric zones, and roundish or linear sori formed beneath the cuticle of the frond.

Zonaria[2] (zō-nā'ri-ä), *n. pl.* [NL., neut. pl. of L. *zonarius*: see *zonary*.] One of two primary groups (the other being *Discoidea*) into which Huxley divided the deciduate *Mammalia*, consisting of those *Deciduata* which have a zonary placenta: the *Zonoplacentalia*.

zonarioid (zō-nā'ri-oid), *a.* [< *Zonaria*[1] + *-oid*.] In *bot.*, pertaining to or resembling the genus *Zonaria*.

zonary (zō'na-ri), *a.* [< L. *zonarius*, < *zona*, a zone: see *zone*.] Pertaining to or characterized by a zone; having or presenting the form of a belt or girdle. A zonary placenta is one in which the fetal villi form a belt or zone. See *Zonaria*[2], *Zonoplacentalia*, and *zonular*.

The placenta of the dugong is *zonary* and non-deciduate. *Nature*, XL. 611.

zonate (zō'nāt), *a.* [< NL. *zonatus*, < L. *zona*, zone: see *zone*.] 1. In *bot.*, marked with zones or concentric bands of color.—2. In *zoöl.*, having zones of color or texture; belted, girdled, or ringed; zoned.

zonda (zon'dä), *n.* [Named from the village of *Zonda*.] A local foehn wind occurring at the eastern base of the Andes, in the vicinity of San Juan, Argentine Republic. It is a hot dry west wind blowing down from the Cordillera, and carrying clouds of dust and fine sand. It may occur at any season, but is especially frequent during July and August (midwinter), when its high temperature and parching effects are especially noticeable. The name is also applied to a hot dry north wind occurring on the Argentine plains during the summer, and reported especially from the vicinity of Mendoza. This is essentially a desert wind, charged with sand, and oppressive and suffocating in its effects.

zone (zōn), *n.* [< F. *zone*, < Sp. Pg. It. *zona*, < L. *zona*, < Gr. *ζώνη*, a girdle, belt, one of the zones of the sphere, < *ζωννύναι*, gird.] 1. A girdle or belt worn as an article of dress. [Now only poetical.]

Germinatio, in green, with a *zone* of gold about her waist.
B. Jonson, Masque of Beauty.

With a side
White as Hebe's, when her *zone*
Slipt its golden clasp, and down
Fell her kirtle to her feet. *Keats*, Fancy.

2. A belt or band round anything, as a stripe of different color or substance round an object; figuratively, any circumscribing or surrounding line, real or imaginary; a circuitous line, path, or course; an inclosing circle.

That milky way,
Which nightly, as a circling *zone*, thou seest
Powder'd with stars. *Milton*, P. L., vii. 580.

And four great *zones* of sculpture, set betwixt
With many a mystic symbol, gird the hall.
Tennyson, Holy Grail.

Very frequently the colors form stripes or *zones* in the stone [Egyptian jasper], which are probably the result of decomposition of the upper surface.
E. W. Streeter, Precious Stones, p. 201.

3. Specifically, in *geog.*, one of five arbitrary divisions of the earth's surface, bounded by lines parallel to the equator, each named according to its prevailing temperature; a climatic belt. These climatic zones are (*a*) the *torrid zone*, extending from tropic to tropic, or 23½° north and 23½° south of the equator; (*b*) two *temperate zones*, extending from the tropics to the polar circles—that is, from the parallel of 23½° north or south to that of 66½° north or south, and therefore called the *north temperate* and *south temperate zones*; and (*c*) two *frigid zones*, extending from the polar circles to the north and south poles respectively.

4. Any continuous tract or belt differing in character from adjoining tracts; a definite area or region within which some distinguishing circumstances exist or are established: as, the *zones* of natural history, distinguished by special forms of vegetable or animal life; a *zone* of free trade; a free *zone* on the border of a country or between adjoining states. Naturalists formerly divided the sea-bottom into five zones in accordance with the depth of water covering each, which was supposed to determine its fauna and flora. They were called respectively *littoral*, *circumlittoral*, *median*, *inframedian*, and *abyssal*. Later researches have proved that the assumed facts were to a great extent erroneous, organisms supposed to be confined to the littoral zone having been found at the greatest depths. In geology *zone* has nearly the same meaning as *horizon*. A stratum, or a group of strata, may be characterized by the presence of a certain assemblage of fossils, or by one particular fossil: in such cases the most abundant or typical fossil may give a name to the subdivision in which it occurs, which will then be designated as the *zone* of that particular species. Thus, the Lower and the Middle Lias have together been divided into twelve zones, each characterized by the presence of a certain species of ammonite: as, the "zone of the *Arietites* (*Ammonites*) *raricostatus*," etc.

They [the people of Savoy] would . . . lose their commercial *zone* or free frontier with Switzerland.
C. K. Adams, Democracy and Monarchy, ix.

The *zone* of youthful fancy . . . is now well passed; the *zone* of cultured imagination is still beyond us.
Stedman, Vict. Poets, p. 15.

How vast must have been that earlier period wherein were deposited those fine alternations of lime and clay which form hills, such as Mont Perrier, several hundred feet in height, divisible into distinct *zones*, each characterised by peculiar assemblages of fossils.
Geikie, Geol. Sketches, v.

Attacks of a spasmodic or of a lethargic nature in hysterical patients can often be excited by touching or pressing upon certain spots or *zones* on the surface of the body.
Lancet, 1886, II. 1243.

5. In *math.*, a part of the surface of a sphere included between two parallel planes.—6. In *crystal.*, a series of planes having their lines of intersection parallel.—**Annual zone**. Same as *annual ring* (which see, under *ring*[1]).—**Bathymetric zone**. See *bathymetric*.—**Cervical zone**, that part of the pregnant uterus, embracing about the lower fourth, within which attachment of the placenta is dangerous, as liable to cause alarming hemorrhage during childbirth. The centric attachment of the placenta in this zone constitutes placenta prævia (which see, under *placenta*).—**Ciliary zone**, in *anat.* See *ciliary*.—**Coralline zone**. See *coralline*.—**Epileptic zone**, an area of the skin covering the lower part of the face and the neck, irritation of which will excite an epileptic paroxysm. Brown-Séquard found that section of the spinal cord in the lumbar region in animals, usually guinea-pigs, was followed by epilepsy, and that the progeny of animals so treated had these epileptic zones.—**Epileptogenous** or **epileptogenic zone**. Same as *epileptic zone*.—**Hyperesthetic zone**, a hypersensitive portion of the integument, sometimes found, in cases of spinal paralysis, at the border of the affected part.—**Hypnogenic zone**, a place or region on the surface of the body stimulation or irritation of which tends to induce hypnotism. [Recent.]

Spots which have been described by Pitres as *hypnogenic zones*. *Björnström*, Hypnotism (trans.), p. 18.

Hysterogenic zone, a part of the surface of the body pressure upon which will excite a paroxysm in cases of hystero-epilepsy.—**Intermediary zone of the stomach**, that part of the wall of the stomach, near the pylorus, where the peptic glands begin to disappear.—**Isothermal zones**. See *isothermal*.—**Lissauer's zone**. Same as *Lissauer's tract* (which see, under *tract*[1]).—**Marginal zone**, the border where the synovial membrane is gradually converted into articular cartilage.—**Neutral, pectinate, pellucid, primordial zones**. See the adjectives.—**Posterior marginal zone**. Same as *Lissauer's tract* (which see, under *tract*[1]).—**Three-mile zone**. See *mile*.—**Zone of defense**, in *fort.*, the belt of territory around a fortification which falls under the effective fire of the besieged.—**Zone of Haller**. Same as *zone of Zinn*.—**Zone of Lissauer**. Same as *Lissauer's tract*. See *tract*[1].—**Zone of operations** (*milit.*), the region containing the lines of operations of an army, extending from the base of operations to the objective point. See *strategy*.—**Zone of vegetation**, a belt of characteristic vegetable growth following a particular line of altitude on mountain sides.—**Zone of Zinn**. Same as *zonule of Zinn*. See *zonule*.

zone (zōn), *v.*; pret. and pp. *zoned*, ppr. *zoning*. [< *zone*, *n.*] I. *trans.* To encircle with or as if with a zone; bring within a zone, or divide into zones or belts, in any sense.

I could hear he loved
Some fair immortal, and that his embrace
Had *zoned* her through the night.
Keats, Endymion, ii.

II. *intrans.* To be formed into zones.

What Mr. Lockyer had called the *zoning* of colour in the heavens. *Nature*, XXXVIII. 225.

zone-axis (zōn'ak*sis), *n.* In *crystal.*, the line in which all the planes of a zone would intersect if they were supposed to pass through the same point.

zoned (zōnd), *a.* [< *zone* + *-ed*[2].] 1. Wearing a zone, as a woman.—2. Having zones, or bands resembling zones; zonate.

zoneless (zōn'les), *a.* [< *zone* + *-less*.] Without a zone or girdle; ungirt; hence, loosely robed.

That reeling goddess with the *zoneless* waist.
Cowper, Task, iii. 52.

zonic (zō'nik), *n.* [< *zone* + *-ic*.] A girdle; a zone; a belt. [Rare.]

I know that the place where I was bred stands upon a *zonic* of coal. *Smollett*, Travels, iv. (*Davies*.)

zoniferous (zō-nif'e-rus), *a.* [< L. *zona*, zone, + *ferre* = E. *bear*[1].] Having or bearing a zone; zoned.

Zonites (zō-nī'tēz), *n.* [NL. (Montfort, 1810), < Gr. *ζωνίτης*, girded, < *ζώνη*, girdle: see *zone*.] In *conch.*, a genus of pulmonate gastropods, referred to the family *Helicidæ*, or to the *Limacidæ*, or to the *Vitrinidæ*, and giving name to the *Zonitinæ*. The species are numerous, as *Z. cellaria* (see *cellar-snail*). *Z. milium* is a very small species of the United States: *Z. umbilicata* is known as the *open snail*. The genus in a broad sense includes species of *Hyalina* and related forms; but it is also restricted to about a dozen species of the Mediterranean region, as *Z. algirus*.

Zonitidæ (zō-nit'i-dē), *n. pl.* [NL., < *Zonites* + *-idæ*.] A family of terrestrial gastropods, typified by the genus *Zonites*: same as *Vitrinidæ*. *Trans. New Zealand Inst.*, 1883.

Zonitinæ (zō-ni-tī'nē), *n. pl.* [NL., < *Zonites* + *-inæ*.] A subfamily of *Vitrinidæ* or another family, typified by the genus *Zonites*, and including forms with a helicoid shell (into which the animal can completely withdraw) and with lateral bicuspid and marginal acute teeth.

Zonitis (zō-nī'tis), *n.* [NL. (Fabricius, 1775), < Gr. *ζωνίτις*, fem. of *ζωνίτης*: see *Zonites*.] A genus of blister-beetles, of the family *Cantharidæ*, of wide distribution and comprising about 40 species, of which 6 are North American. They are very variable in color and size, but are distinguished by having the outer lobe of the maxilla not prolonged.

zonochlorite (zō-nō-klō'rīt), *n.* [< Gr. *ζώνη*, girdle, + *χλωρός*, greenish-yellow, + *-ite*[2].] A zeolitic mineral, perhaps related to thomsonite, occurring in massive form in cavities in amygdaloid: it often shows bands of different colors.

zonociliate (zō-nō-sil'i-āt), *a.* [< L. *zona*, zone, + NL. *ciliatus*, ciliate.] Zoned with a circlet

of cilia; encircled with cilia, as a trochosphere or telotrocha. See these words, and cut under *veliger*.

The fertilized egg of the Phylactolæma does not give rise to a *zonociliate* larva. *Encyc. Brit.*, XIX. 437.

zonoid (zō′noid), *a.* [< Gr. ζωνοειδής, like a girdle, < ζώνη, girdle, + εἶδος, form.] Like a zone; pertaining to zones; zonular. [Rare.]

zonoplacental (zō″nō-plā-sen′tal), *a.* [< L. *zona*, girdle, + NL. *placenta* + *-al*.] In *mammal.*, having a zonary deciduate placenta; of or pertaining to the *Zonoplacentalia*.

Zonoplacentalia (zō-nō-plas-en-tā′li-ä), *n. pl.* [NL.: see *zonoplacental*.] Those deciduate mammals in which the placenta is zonary, as contrasted with *Discoplacentalia;* the *Zonaria*. The carnivores, the elephant, and the hyrax are examples.

Zonotrichia (zō-nō-trik′i-ä), *n.* [NL. (Swainson, 1831), < Gr. ζώνη, girdle, + θρίξ (τριχ-), hair.] A genus of large and handsome American finches, of the family *Fringillidæ;* the crown-sparrows. The white-crowned is *Z. leucophrys*, abundant in many parts of North America. More numerous and familiar is the white-throated, or peabody-bird, *Z. albicollis*, whose white throat is sharply contrasted with the dark ash of the

White-throated Sparrow, or Peabody-bird (*Zonotrichia albicollis*).

breast. In the adult the head is striped with black and white, there is a distinct yellow spot before each eye, and the edge of the wing is yellow. The length is 6¾ inches, the extent 9½. This sparrow abounds in shrubbery of the eastern half of North America, and has a limpid pleasing song, some notes of which are rendered in the word *peabody*. *Z. querula* is Harris's finch, of the Missouri and Mississippi region; the male when adult has nearly the whole head hooded with jet-black. *Z. coronata*, of the Pacific slope, is the golden-crowned.

zonula (zō′nū-lä), *n.*; pl. *zonulæ* (-lē). [NL.: see *zonule*.] In *anat.* and *zoöl.*, a small zone, belt, or ring; a zonule.—**Zonula ciliaris.** Same as *zonule of Zinn*.—**Zonula of Zinn.** Same as *zonule of Zinn*.

zonular (zō′nū-lär), *a.* [< *zonule* + *-ar*³.] **1.** Of or pertaining to a zone or zonule; zonary; zoned.—**2.** In *zoöl.*, specifically, diffuse: applied to a diffuse form of placenta. See *zonary*.

The *zonular* type of a placenta. *Dana.*

Zonular cataract, a form of cataract, occurring usually in young children, in which the opacity is situated between the cortex and the nucleus of the lens.

zonule (zō′nūl), *n.* [< L. *zonula*, dim. of *zona*, girdle: see *zone*.] A little zone, belt, or band; a zonula.—**Zonule of Zinn,** the suspensory ligament of the crystalline lens of the eye. See under *suspensory*.

zonulet (zō′nū-let), *n.* [< *zonule* + *-et*.] A little zone or girdle.

That riband 'bout my Julia's waste,
. . . that *zonulet* of love.
Herrick, Upon Julia's Riband.

zonure (zō′nūr), *n.* [< NL. *Zonurus*.] Any lizard of the genus *Zonurus* in a broad sense, or of the family *Zonuridæ:* as, the rough-tailed *zonure*, *Zonurus cordylus*.

Zonuridæ (zō-nū′ri-dē), *n. pl.* [NL., < *Zonurus* + *-idæ*.] A South African and Madagascar family of agamoid eriglossate lacertilians, with cruciform interclavicles, short, simple tongue, and roofed-over supratemporal fossæ, typified by the genus *Zonurus*. The family was formerly much more loosely characterized, and then contained various forms from different parts of the world, which have since been separated as types of other families.

Zonurinæ (zō-nū-rī′nē), *n. pl.* [NL., < *Zonurus* + *-inæ*.] A subfamily of *Zonuridæ*, containing normally lacertiform species with well-developed limbs, and including the greater part of the family: distinguished from *Chamæsaurinæ*.

Zonurus (zō-nū′rus), *n.* [NL. (Merrem), < Gr. ζώνη, a belt, zone, + οὐρά, tail.] The typical

Zonure (*Zonurus giganteus*).

genus of *Zonuridæ:* so named from the rings of spiny scales on the tail, as of *Z. giganteus*.

Zoo (zō), *n.* [The first three letters of *zoölogical*, taken as forming one syllable.] With the definite article, the Zoölogical Gardens in London: also used of any similar collection of animals. [From a mere vulgarism, this corruption has passed into wide colloquial use.]

zoöamylin (zō-ō-am′i-lin), *n.* [< Gr. ζῷον, animal, + E. *amylin*.] Same as *glycogen*.

zoöbiotism (zō-ō-bī′ō-tizm) *n.* [< Gr. ζῷον, animal, + βίος, life, + *-t-* + *-ism*.] Same as *biotics*.

zoöblast (zō′ō-blast), *n.* [< Gr. ζῷον, animal, + βλαστός, germ.] An animal cell; a bioplast (which see).

Zoöcapsa (zō-ō-kap′sä), *n.* [NL., < Gr. ζῷον, animal, + L. *capsa*, box, chest: see *capsule*.] A genus of fossil barnacles belonging to the Liassic period.

zoöcarp (zō′ō-kärp), *n.* [< Gr. ζῷον, animal, + καρπός, fruit.] Same as *zoöspore*.

zoöcaulon (zō-ō-kâ′lon), *n.* [NL., < Gr. ζῷον, animal, + καυλός, stem, stalk: see *caul*³, *caulis*.] The erect branching tentaculiferous colony-stock of some infusorians, as of the genus *Dendrosoma*. *W. S. Kent.*

zoöchemical (zō-ō-kem′i-kal), *a.* [< *zoöchem-y* + *-ic-al*.] Of or pertaining to zoöchemistry.

zoöchemistry (zō-ō-kem′is-tri), *n.* [< Gr. ζῷον, animal, + E. *chemistry*.] Animal chemistry; the chemistry of the constituents of the animal body.

zoöchemy (zō′ō-kem-i), *n.* [< Gr. ζῷον, animal, + E. **chemy* (F. *chimie*): see *alchemy*.] Same as *zoöchemistry*. *Dunglison.*

zoöchlorella (zō″ō-klō-rel′ä), *n.*; pl. *zoöchlorellæ* (-ē). [NL., < Gr. ζῷον, animal, + χλωρός, pale-green, + dim. *-ella*.] One of the unicellular green algæ, which are found living symbiotically in various low invertebrates, as the hydras among polyps and the stentors among infusorians. Compare *zoöxanthella*.

zoöcyst (zō′ō-sist), *n.* [< Gr. ζῷον, animal, + κύστις, bladder.] A cyst, formed by various protozoans and protophytes, whose contents break up into many germinal granules or spores; a kind of sporocyst.

zoöcystic (zō-ō-sis′tik), *a.* [< *zoöcyst* + *-ic*.] Pertaining to or of the nature of a zoöcyst.

zoöcytial (zō-ō-sit′i-al), *a.* [< *zoöcytium* + *-al*.] Pertaining to or of the nature of a zoöcytium.

zoöcytium (zō-ō-sit′i-um), *n.*; pl. *zoöcytia* (-ä). [NL., < Gr. ζῷον, animal, + κύτος, cavity.] The common gelatinous matrix or support of certain compound or colonial infusorians, composed of a substance secreted by and containing the individual animalcules; an infusorial syncytium; a zoöthecium. Compare *zoödendrium*. See cut under *Epistylis*.

zoödendrial (zō-ō-den′dri-al), *a.* [< *zoödendri-um* + *-al*.] Of the nature of or pertaining to a zoödendrium.

zoödendrium (zō-ō-den′dri-um), *n.*; pl. *zoödendria* (-ä). [NL., < Gr. ζῷον, animal, + δένδρον, tree.] The zoöcytium or zoöthecium of certain infusorians, which is much branched or of arborescent form. *W. S. Kent.* See cut under *Epistylis*.

zoödynamic (zō″ō-dī-nam′ik), *a.* [< Gr. ζῷον, animal, + δυναμικός, dynamic: see *dynamic*.] Of or pertaining to zoödynamics.

zoödynamics (zō″ō-dī-nam′iks), *n.* [Pl. of *zoödynamic* (see *-ics*).] The dynamics of the animal body; the science of the vital powers of animals; animal physiology, as a branch of biology: correlated with *zoöphysics*.

zoœa, zoœal, *n.* See *zoëa, zoëal*.

zoœcial (zō-ē′shi-al), *a.* [< *zoœci-um* + *-al*.] Having the character of a zoœcium; of or pertaining to the zoœcia of polyzoans.

zoœcium (zō-ē′si-um), *n.*; pl. *zoœcia* (-ä). [< Gr. ζῷον, animal, + οἰκία, house.] The ectocyst, or outer chitinous or calcified cell, in which a polypide of the *Polyzoa* is lodged, and into which a polypide can be retracted after protrusion; one of the cells of the cœnœcium, containing a polypide. It is the cuticle of the polypide itself, dense and tough, or hard, changing without solution of continuity into the soft delicate pellicle at the mouth of the animalcule. In the ectoproctous polyzoans it forms a case or shield into which the soft protrusible parts of the polypide can be withdrawn. See *ectocyst*, and cut under *Plumatella*.

zoœform, *a.* See *zoëform*.

zoöerythrin (zō″ō-e-rith′rin), *n.* [< Gr. ζῷον, animal, + ἐρυθρός, red, + *-ine*².] **1.** A red coloring matter obtained from the plumage of the *Musophagidæ* or turakoos, giving a continuous spectrum. See *turacin*.—**2.** A kind of red pigment of the lipochrome series widely diffused in sponges, and regarded as having a respiratory function. *W. J. Sollas*, Encyc. Brit., XXII. 420.

Also *zoönerythrin*.

zoöfulvin (zō-ō-ful′vin), *n.* [< Gr. ζῷον, animal, + L. *fulvus*, tawny, + *-in*².] A yellow coloring matter obtained from the plumage of the *Musophagidæ* or turakoos, showing two absorptive bands not the same as those of turacin.

zoögamete (zō′ō-ga-mēt), *n.* [NL., < Gr. ζῷον, animal, + γαμετή, a wife, etc.] In *bot.*, a motile gamete. Also *planogamete*.

zoögamous (zō-og′a-mus), *a.* [< *zoögam-y* + *-ous*.] Of or pertaining to zoögamy; noting the pairing of animals or their sexual reproduction.

zoögamy (zō-og′a-mi), *n.* [< Gr. ζῷον, animal, + γάμος, marriage.] The coupling, mating, or pairing of animals of opposite sexes for the purpose of reproduction or propagation of their kind; sexual reproduction; gamogenesis.

zoögen (zō′ō-jen), *n.* [< Gr. ζῷον, animal, + *-γενής*, producing: see *-gen*.] A glairy organic substance found on the surface of the thermal waters of Baden and elsewhere. Also called ★*zoiodin*.

zoögenic (zō-ō-jen′ik), *a.* [< *zoögen* + *-ic*.] Of or pertaining to zoögeny, or the origination of animals.

zoögeny (zō-oj′e-ni), *n.* [< Gr. ζῷον, animal, + *-γένεια*, production: see *-geny*.] The fact or the doctrine of the origination of living beings and the formation of their parts or organs. Also *zoögony*.

zoögeog. An abbreviation, used in this work, of *zoögeography*.

zoögeographer (zō″ō-jē-og′ra-fėr), *n.* [< *zoögeograph-y* + *-er*¹.] One who studies the geographical distribution of animals, or is versed in zoögeography.

It is therefore . . . the business of the *zoogeographer*, who wishes to arrive at the truth, to ascertain what groups of animals are wanting in any particular locality.
Encyc. Brit., III. 738.

zoögeographic (zō-ō-jē-ō-graf′ik), *a.* [< *zoögeograph-y* + *-ic*.] Of or pertaining to zoögeography; faunistic; chorological.

zoögeographical (zō-ō-jē-ō-graf′i-kal), *a.* [< *zoögeographic* + *-al*.] Same as *zoögeographic*.

zoögeography (zō″ō-jē-og′ra-fi), *n.* [< Gr. ζῷον, animal, + E. *geography*.] The science or the description of the distribution of animals on the surface of the globe; faunal or faunistic zoölogy; animal chorology: correlated with *phytogeography*. This is an important branch of zoology, of much intrinsic interest in several respects, and of special significance in its bearing upon the questions of the origin of species and their modification under climatic and other physical conditions of environment. It has been much studied of late years with the result of mapping the land-surface of the globe into several major and numerous minor areas, which can be bounded and graphically represented in colors with almost the precision attained in depicting civil or political boundaries. Zoögeography is related to paleontology as the distribution of animals in space is related to their succession in time; but the principles of zoögeography are of course as applicable to any former as to the present dispersion of species on the face of the globe. See *province*, 6, and *region*, 7.

zoöglœa (zō-ō-glē′ä), *n.*; pl. *zoöglœæ* (-ē). [NL., < Gr. ζῷον, animal, + γλοιός, a sticky substance.] **1.** A peculiar colony of *Schizomycetes* in which they form a jelly-like mass by the swelling up of their cell-membranes. It was formerly regarded as a distinct genus, but is now known to be a kind of resting-stage in which the various elements are glued together by their greatly swollen and diffluent cell-walls becoming contiguous. It corresponds to the palmella stage of certain of the lower algæ.

Bacteria sometimes form a jelly-like mass by the swelling up of their cell-membranes; this is the *zoöglœa* stage.
Bessey, Botany, p. 212.

2. A massing together of micro-organisms which occurs in a certain stage of their development, the collection being surrounded by a gelatinoid envelop.

Liquids in which any of these Schizomycetes are actively developing themselves usually bear on their surface a gelatinous scum, which is termed by Prof. Cohn the *Zoöglœa*. *W. B. Carpenter*, Micros., § 303.

zoöglœic (zō-ō-glē'ik), *a.* [< *zoöglœa* + *-ic.*] Of the nature of zoöglœa; pertaining to zoöglœa.

zoöglœoid (zō-ō-glē'oid), *a.* [< *zoöglœa* + *-oid.*] In *bot.*, resembling, characteristic of, or belonging to the zoöglœa stage or condition of a micro-organism.

zoögonidium (zō″ō-gō-nid'i-um), *n.*; pl. *zoögonidia* (-ä). [NL., < Gr. ζῷον, animal, + NL. *gonidium.*] In *bot.*, a locomotive gonidium; a gonidium provided with cilia, and hence motile; a motile asexual reproductive cell.

Each *zoögonidium* breaks itself up into sixteen new *zoögonidia*, forming sixteen small and new colonies.
Bessey, Botany, p. 221.

zoögonous (zō-og'ō-nus), *a.* [< Gr. ζωογόνος, producing animals, < ζῷον, animal, + *-γονος*, producing: see *-gonous.*] Same as *viviparous.*

zoögony (zō-og'ō-ni), *n.* [< Gr. ζωογονία, production of animals, < ζῷον, animal, + *-γονία*, production: see *-gony.*] Same as *zoögeny.*

zoögraft (zō'ō-grȧft), *n.* [< Gr. ζῷον, animal, + E. *graft.*] In *surg.*, a piece of living tissue taken from one of the lower animals to supply a defect in the human body by grafting it on the latter. Also *zoöplastic graft.*

zoögrapher (zō-og'ra-fėr), *n.* [< *zoögraph-y* + *-er.*] A zoögraphist.

zoögraphic (zō-ō-graf'ik), *a.* [< *zoögraph-y* + *-ic.*] Descriptive of animals; pertaining to zoögraphy.

zoögraphical (zō-ō-graf'i-kal), *a.* [< *zoögraphic* + *-al.*] Same as *zoögraphic.*

zoögraphist (zō-og'ra-fist), *n.* [< *zoögraph-y* + *-ist.*] One who describes or depicts animals; a descriptive zoölogist.

zoögraphy (zō-og'ra-fi), *n.* [< Gr. ζῷον, animal, + *-γραφια*, < *γράφειν*, write.] The description of or a treatise on animals; descriptive zoölogy.

zoögyroscope (zō-ō-jī'rō-skōp), *n.* [< Gr. ζῷον, animal, + E. *gyroscope.*] An application of the principle of the zoëtrope in which a series of pictures are placed in a rotating frame, and, as they pass between a lantern and a lens, are thrown in extremely rapid succession on a screen, so as to form a continuous but constantly changing picture. This device is used in the exhibition of continuous series of instantaneous pictures of animals in motion, etc. *E. H. Knight.*

zoöid (zō'oid), *a.* and *n.* [< Gr. ζῳοειδής, like an animal, < ζῷον, animal, + εἶδος, form.] **I.** *a.* Like an animal; of the nature of animals; having an animal character, form, aspect, or mode of existence, as an organism endowed with life and motion. See II.

II. *n.* In *biol.*, something like an animal; that which is of the nature of an animal, yet is not an animal in an ordinary sense, and is not the whole of an animal in a strict sense; one of the "persons" or recognizably distinct entities which compose a zoön; that product of any organism, whether of animal, vegetable, or equivocal character, which is capable of spontaneous movements, and hence may have an existence more or less apart from or independent of the parent organism. The biological conception of a zoöid is a fundamental one, bordering upon an almost metaphysical definition of what may constitute individual identity or non-identity in a given case: the term covers a multitude of cases which seem at first sight to have little in common, and its use in ordinary zoölogy and botany is consequently various. The general sense of the word is subject to the following specifications: (*a*) An ambiguous or equivocal organic body intermediate between a plant and an animal, and not distinctly either one or the other; a micro-organism or microbe not amenable to ordinary classification in natural history, as bacteria, bacilli, and micrococci; a protistan, as a moner; one of the lowest protozoans; a protophyte. Such zoöids are microscopic, and for the most part of extreme minuteness. See the distinctive names, and *Monera*, *Primalia*, *Protista*, *Protophyta*, *Protozoa*. (*b*) One of certain peculiar cells of multicellular animals and plants which are endowed with special activities, have as it were an individuality of their own, and are capable of a sort of separate existence. Zoöids of this class are mainly germinal or reproductive. The female germ (ovum) and the corresponding male element are respectively types of the whole. They occur under many modifications, which receive distinctive names; many of the smallest and simplest forms are indifferently known as *spores*. See *spore*[2], *spore-formation*, *oöspore*, *zoöspore*, *sporozoöid*, *antherozoid*, *spermatozoöid*, and *spermatozoön*, with various cuts. The foregoing definitions are independent of any distinction to be drawn between plants and animals; the following are zoölogical. (*c*) Any animal organism which has acquired separate existence from another by partition of that other into two or more in the processes of fission, gemmation, and the like. Such cases are numerous and diverse. Viewing the zoön or zoölogical unit as the entire product of an impregnated ovum, the parts or persons into which it may be subsequently separated, without any true sexual generation, and consequently without the origination of a new zoön, are appropriately termed *zoöids*. The simplest case is when a zoön breaks into two or more pieces, and every piece proceeds to grow the part which it lacks, and thus becomes wholly like the organism from which it was detached. Various annelids offer a case in point. Another and large class of cases is furnished by hydrozoans which suffer segmentation directly, or detach from their main stock various parts, as free medusoids and the like, these zoöids serving to found new organisms. Allman defines the zoöid of a hydrozoan as a more or less independent product of non-sexual reproduction. Proliferation or strobilation of parts which may become detached is also well illustrated in the proglottides or deutoscolices which form the joints of tapeworms; these are zoöids in so far as the parent worm is concerned, consisting of detachable genitals containing the elements of a new sexual generation. A similar multiplication by zoöids without generation takes place among tunicates; it is unknown of true vertebrates. One of the most interesting cases is afforded in the parthenogenesis of some insects, as aphids, in which, by a sort of internal gemmation, swarms of zoöidal aphids are budded in succession from one another to several removes from the original impregnation. The term *zoöid* with some writers specifies all these "inferior individuals" which thus intervene in alternation of generation between the products of proper sexual reproduction; and such have been described as "the detached portions of an individual in discontinuous development." (*d*) Any one of the recognizably distinct persons of a compound organism, whether actually detached or detachable or not; any member of a colonial or social aggregate, as the polypites of a polypidom, the polypides of a polyzoary, and the like. Such zoöids offer every degree of separateness or separability. In some cases they are extremely numerous, all alike, and inseparable from the common stock which they fabricate and inhabit, as the members of a coral or seamat. In other cases they are less numerous, and but slightly connected, and all alike, as the several members of a composite sea-anemone of the genus *Zoanthus* (see cut there). But the zoöids of many hydrozoans, for instance, are quite different in both form and function, in the same individual, for the purpose of division of labor; and the zoöids which thus act as the different organs of one individual are commonly distinguished by name, as *gonozoöids*, *gasterozoöids*, *dactylozoöids*, *spirozoöids*, etc. See the distinctive names. Also *zoönite* (a mistaken use).

zoöidal (zō-oi'dal), *a.* [< *zoöid* + *-al.*] Same as *zoöid.*

zooks (zůks), *interj.* A minced oath: same as *gadzooks.* [Obsolete or (rarely) archaic.]

Zooks! see how brave they march.
Sheridan (?), The Camp, i. 2.

Zooks! are we pilchards, that they sweep the streets,
And count fair prize what comes into their net?
Browning, Fra Lippo Lippi.

★ **zoöl.** An abbreviation of *zoölogy.*

zoölater (zō-ol'a-tėr), *n.* [< *zoölatry*, after *idolater.*] One who worships animals or practises zoölatry.

zoölatria (zō-ō-lā'tri-ȧ), *n.* [NL.] Same as *zoölatry.*

The system of *zoolatria*, or animal worship, was said to have been introduced into Egypt by King Kekau of the IInd dynasty. *W. R. Cooper*, Archaic Dict., p. 57.

zoölatrous (zō-ol'a-trus), *a.* [< *zoölatr-y* + *-ous.*] Worshiping animals; practising zoölatry; of or relating to zoölatry.

zoölatry (zō-ol'a-tri), *n.* [< NL. *zoolatria*, < Gr. ζῷον, animal, + λατρεία, worship.] The worship of particular animals, as in the religion of the ancient Egyptians and of many other primitive peoples, either as representatives of deities, or on account of some fancied qualities or relations.

zoölite (zō'ō-līt), *n.* [< Gr. ζῷον, animal, + λίθος, stone (see *-lite*).] A fossil animal; an animal substance petrified. Also *zoölith.*

zoölith (zō'ō-lith), *n.* Same as *zoölite.*

zoölithic (zō-ō-lith'ik), *a.* [< *zoölith* + *-ic.*] Same as *zoölitic.*

zoölitic (zō-ō-lit'ik), *a.* [< *zoölite* + *-ic.*] Having the character of a zoölite; relating to zoölites. Also *zoölithic.*

zoöloger (zō-ol'ō-jėr), *n.* [< *zoölog-y* + *-er.*] A zoölogist. [Now rare.]

zoölogic (zō-ō-loj'ik), *a.* [< *zoölogy* + *-ic.*] Same as *zoölogical.*

zoölogical (zō-ō-loj'i-kal), *a.* [< *zoölogic* + *-al.*] Of or pertaining to zoölogy.—**Zoölogical garden**, a park or other large inclosure in which live animals are kept for public exhibition.—**Zoölogical province, region**, etc., in *zoögeog.*, one of the faunal areas, varying in extent, into which the land-surface of the globe is naturally divisible with reference to the geographical distribution of animals. (See *province*, 6, *region*, 7, and *zoögeography.*) Corresponding divisions of the waters of the globe may take the same name when their surface-extent is considered, or are distinctively named (see *Arctalia*, etc.). Zoölogical areas regarded vertically, or as to depth of water, are often called *zones* or *belts*. See *zone*, *n.*, 4.

zoölogically (zō-ō-loj'i-kal-i), *adv.* In the manner of a zoölogist; on the principles or according to the doctrines of zoölogy; from a zoölogical standpoint.

zoölogist (zō-ol'ō-jist), *n.* [< *zoölog-y* + *-ist.*] One who is versed in zoölogy; a biologist.

zoölogize (zō-ol'ō-jīz), *v. i.* To study zoölogy practically.

zoölogy (zō-ol'ō-ji), *n.* [= F. *zoologie* = Sp. *zoologia* = Pg. It. *zoologia* = G. *zoologie*, < NL. *zoologia*, < Gr. ζῷον, animal, + *-λογία*, < *λέγειν*, speak: see *-ology.*] **1.** The science of animals; the natural history of the animal kingdom; the body of fact and doctrine derived from the scientific study of that series of organisms whose highest term is man: correlated with *phytology* (or botany) as one of the two main branches of biology. The connotation which the term has acquired during the last fifty years is very extensive, as a result of the application to zoölogical science of the most general laws and principles of biology. So far is zoölogy freed from the former restriction of its scope to the mere formalities of description, classification, and nomenclature (which constitute only *systematic zoology*) that it now includes the results of all the biological sciences in so far as these are applicable to the study of animal structure and function. Such are *phylogeny*, or the origination of species, genera, etc.; *ontogeny*, or the origination of the individual animal; *embryology*, or the prenatal life-history of organisms; *paleontology* or *paleozoology*, the history of animals in geologic time; *zoögeography*, the history of animals as to their spatial relations; *zootomy* or *zoöphysics*, the comparative anatomy of animals; *zoödynamics* or *biodynamics*, animal physiology; *zoöchemistry*, the chemistry of animal substances and tissues; *zoöpsychology*, the science of animal instincts; *zoötechnics*, *bionomics*, or *thremmatology*, which regards the relations of living animals to man; and various other cognate branches of the general science. The name *zoölogy* is an old one, and some of its branches have been cultivated from antiquity. One of the earliest classifications of animals in which a modern zoölogical group can be clearly recognized is that ascribed to Moses, which was based primarily upon certain hygienic and sacerdotal considerations: for the "clean" beasts that "cleave the hoof" are ruminants; certain "unclean" birds are carrion-feeding birds of prey, as the vulture; and the non-ruminant artiodactyls (swine) are characterized with special emphasis. The germ of modern zoölogy, as of other sciences, is commonly ascribed to Aristotle. Though he tabulated no scheme, his three treatises on zoölogical subjects include a classification which shows great discernment. He divided the animal kingdom into two main branches: (1) Ἔναιμα, *Enæma*, or 'blooded' animals, in the four classes of mammals, birds, reptiles, and fishes—the *Vertebrata*, and nearly as they stand to-day; (2) Ἄναιμα, *Anæma*, or 'bloodless' animals, exactly the *Invertebrata*, of which he had four classes, his Μαλάκια being cephalopods; Μαλακόστρακα, crustaceans; Ἔντομα, insects (other arthropods than crustaceans); and Ὀστρακοδέρματα, univalve and bivalve mollusks (together with sea-urchins). Pliny the naturalist was an industrious and indiscriminate compiler; and no name of special note in zoölogy appears again until the middle of the sixteenth century, when the almost simultaneous works of three authors securely founded the science and greatly enlarged its scope. Wotton (1552) followed Aristotle, but added to the system the *Zoöphyta* (which long afterward became the *Vermes* of Linnæus and the *Radiata* of Cuvier, and continue to be the "zoöphytes" of the present day); Gesner and Belon published treatises in 1555; and in 1560 was started at Naples a society which had zoölogy among its objects, the Academia Secretorum Naturæ, suppressed by the church. The period between Gesner and Linnæus is sometimes styled the "heroic age" of zoölogy. The advance upon Gesner was comparatively unmarked for a hundred years from his death in 1565; but the latter half of the seventeenth century witnessed great progress. The collection of animals from distant parts of the world increased; such anatomical examinations as had been practicable and had long been practised without the aid of the microscope were carried on with that instrument; and several still-existing societies were founded—the Academia Naturæ Curiosorum (in 1651), the Royal Society (chartered in 1662), and soon afterward the Paris Academy, under Louis XIV. The immediate predecessor of Linnæus in this period was John Ray (1628–1705), who fixed the word *species* in the sense it was to bear from his day to Darwin, and did more than any other person to make the "Systema Naturæ" of the Swedish naturalist possible. This work passed through twelve editions (1735–68) in the lifetime of its author; the present binomial system of nomenclature was first applied consistently to zoölogy in the tenth edition (1758). Linnæus also gave fixity to certain graded groups above the species—namely, the genus, order, and class of the "Regnum Animale"—and he recognized the variety below the species. The classes in 1766 were six: *Mammalia*, with 7 orders; *Aves*, 6 orders; *Amphibia*, 3 orders; *Pisces*, 4 orders; *Insecta*, 7 orders; *Vermes*, 5 orders. The Linnean diagnoses were always crisp and sententious, if not always correct; and, faulty or inadequate as any of them may now appear to be, the practical convenience of this machinery of classification and nomenclature is inestimable. Though the notion of the fixity of species and other groups as special creations, to which this system gave rise, is now known to be radically fallacious, the Linnean classification acquired almost the character of dogma, such as had many centuries before attached to the writings of Aristotle and to the Mosaic traditions. This system may be said to have culminated with the close of the eighteenth century; and the early years of the nineteenth wrought important changes, both in form and substance, notably at the hands of Lamarck and Cuvier. Lamarck was the pivot upon which zoölogy turned from Linnæus to Darwin. His "Zoölogical Philosophy" of 1809 is separated by a half-century to a year from the "Systema Naturæ" of 1758, and by exactly a half-century from Darwin's "Origin of Species," which was first published in November, 1859. Lamarckianism brought up the whole subject of modern

evolution as opposed to special creation, and the variability of organisms by their appetency, as opposed to their fixity in character. Lamarck recognized the two Aristotelian main branches as *Vertebrata* and *Invertebrata*, the former with 4, the latter with 12 classes, and both with many ordinal and lower groups. Cuvier was profoundly versed in comparative anatomy, gave also special prominence to paleontology, and reached the conclusion (1812) that all animals are modeled upon four types, for which he adopted the names *Vertebrata*, with 4 classes; *Mollusca*, 6 classes; *Articulata*, 4 classes; *Radiata*, 5 classes — each with more or fewer orders. Except the first of these (borrowed from Lamarck and so from Aristotle), none of these "types" are found to hold; and few of the classes or orders are now accepted as framed by Cuvier, whose views and methods in the main were upheld in England by Owen. Cuvier's system was completed in 1829. Among the last notable views of classification before the appearance of Darwinism are those of Leuckart (1848), giving 5 types and 14 classes of invertebrates (without the protozoans); of H. Milne-Edwards (1855); and of L. Agassiz (1859). The period between Lamarck and Darwin was one of extraordinary activity in all branches of zoölogical investigation, involving the accumulation of a wealth of material, the description of thousands of new genera and species, and the multiplication of distinctions founded upon little difference; but philosophical generalizations did not keep pace with the elaboration of analytical details. Zoölogical systems in various departments became almost as numerous as the specialists engaged; and the subject acquired a huge literature, descriptive, iconographic, and classificatory, as well as controversial. This aspect of zoölogy has continued during the past thirty years or so (1859–96); but the real history of the zoölogy of this period is the history of Darwinian evolution, or the application of general principles of individual development (ontogeny) to the solution of broader biological problems (phylogeny) — the development of the theory of evolution being itself an illustration of its own underlying principle.

2. Zoögraphy; the written description of animals; a treatise on animals, especially a systematic treatise, or zoölogical system. Several of the main classificatory divisions of the animal kingdom represent formally named departments of systematic zoölogy. Such are *mammalogy* or *mastology* or *therology*, the formal science of mammals; *ornithology*, of birds; *herpetology*, of reptiles, including amphibians; *ichthyology*, of fishes in their several classes; *conchology* or *malacology*, of mollusks; *carcinology* or *crustaceology*, of crustaceans; *entomology*, of insects (more extensive than all the others combined); *helminthology*, of worms; and *zoöphytology*, of zoöphytes. From some of these again subdivisions are formed, in consequence either of the intrinsic importance of certain of their subjects or of the special activity of investigation of these subjects — as, for example, *anthropology* (including *ethnography* and *sociology*), or the particular study of man from a biological standpoint; *cetology*, the study of whales as differing much from ordinary mammals; *selachology*, of one of the classes of fishes; *ascidiology*, of the connecting links between invertebrates and ordinary vertebrates; and especially of *bacteriology*, the lately created science of microbes or micro-organisms, which probably of all the departments of zoölogy has the most direct and important bearing upon human welfare and happiness.

Zooloo, *n.* and *a.* See *Zulu*.

zoömagnetic (zō″ō-mag-net′ik), *a.* [< *zoömagnet(ism)* + *-ic*.] Of or pertaining to zoömagnetism.

zoömagnetism (zō-ō-mag′ne-tizm), *n.* [< Gr. *ζῷον*, animal, + E. *magnetism*.] Animal magnetism.

Turning to the other subjects of which Dr. Liébeault treats [in his Thérapeutique Suggestive, Paris, 1891], the most remarkable, and almost the most puzzling, chapter is on *zoomagnetism*.
Proc. Soc. Psychical Research (London), July, 1891, p. 291.

zoömancy (zō′ō-man-si), *n.* [< Gr. *ζῷον*, animal, + *μαντεία*, divination.] The pretended art of divination from observation of animals, or of their actions under given circumstances.

zoömantic (zō-ō-man′tik), *a.* [< *zoömancy* (*-mant-*) + *-ic*.] Of or pertaining to zoömancy.

zoömechanics (zō″ō-mē-kan′iks), *n.* [< Gr. *ζῷον*, animal, + E. *mechanics*.] Same as *zoödynamics*.

zoömelanin (zō-ō-mel′a-nin), *n.* [< Gr. *ζῷον*, animal, + *μέλας* (*μελαν-*), black, + *-in*².] A black pigment derived from the feathers of some birds.

zoömetric (zō-ō-met′rik), *a.* [< *zoömetr-y* + *-ic*.] Of or pertaining to zoömetry.

zoömetry (zō-om′e-tri), *n.* [< Gr. *ζῷον*, animal, + *-μετρία*, < *μέτρον*, measure.] Measurement of the proportionate lengths or sizes of the parts of animals: correlated with *anthropometry*.

zoömorphic (zō-ō-môr′fik), *a.* [< Gr. *ζῷον*, animal, + *μορφή*, form.] 1. Representative of animals, or of their characteristic forms, as a work of art; of or pertaining to zoömorphism: correlated with *anthropomorphic*. — 2. Especially, representing or symbolizing the conception of a god under the form of an animal whose characteristic traits or habits suggest the idea attached to the god. The most thoroughly zoömorphic religion was probably that of the ancient Egyptians, resulting in a complex system of zoölatry, many elements of which were appropriated and adapted by the Greeks and Romans.

Oghams, as is well known, occur on some of the crosses bearing the interlaced ornamentation and *zoomorphic* designs found on the Manx crosses.
N. and Q., 7th ser., II. 240.

Under Dynasty XII. the gods that had previously been represented in art as beasts appear in their later shapes, often half anthropomorphic half *zoömorphic*, dog-headed, cat-headed, hawk-headed, bull-headed men and women.
Nineteenth Century, XX. 428.

zoömorphism (zō-ō-môr′fizm), *n.* [< *zoömorph-ic* + *-ism*.] 1. The character of being zoömorphic; zoömorphic state or condition; representation or exhibition of animal forms as distinguished from the human form; especially, the characterization or symbolization of a god in animal form. Compare *anthropomorphism*. — 2. The conception or representation of men or supernal beings under the form of animals, or of men or gods transformed into beasts; the attribution of human or divine qualities to beings of animal form; worship of the images of animals; zoötheism.

Zoomorphism is much more absurd than Anthropomorphism after all. Surely the rational mode is to employ the highest conceptions you can, while freely acknowledging their utter inadequacy.
Mivart, Nature and Thought, p. 205.

zoömorphy (zō′ō-môr-fi), *n.* [< *zoömorph-ic* + *-y*³.] Same as *zoömorphism*.

zoön (zō′on), *n.*; pl. *zoa* (-ä). [NL., < Gr. *ζῷον*, an animal; cf. *ζωή*, life; < *ζάειν*, *ζῆν*, Ionic *ζώειν*, live.] An animal form containing all the elements of a typical organism of the group to which it belongs; a morphological individual regarded as the whole product of an impregnated ovum, which may or may not be divided into persons or zoöids without true generation. See *zoöid*.

It is urged that whether the development of the fertilized germ be continuous or discontinuous is a matter of secondary importance; that the totality of living tissue to which the fertilized germ gives rise in any one case, is the equivalent of the totality to which it gives rise in any other case, and that we must recognize this equivalence, whether such totality of living tissue takes a concrete or a discrete arrangement. In pursuance of this view a zoological individual is constituted either by any such single animal as a mammal or bird, which may properly claim the title of a *zoon*, or by any such group of animals as the numerous Medusæ that have been developed from the same egg, which are to be severally distinguished as zooids.
H. Spencer, Prin. of Biol., § 73.

Zoa impersonalia, organisms resulting from the coalescence or concrescence of zoöns, as of many sponges, which thus lose their "personality."

The remarkable cases [among sponges] of *zoa impersonalia*, or what we should call degraded colonies.
A. Hyatt, Proc. Bost. Soc. Nat. Hist. 1884, p. 99.

zoönal (zō′ō-nal), *a.* [Irreg. < *zoön* + *-al*.] Having the character of a zoön; of or pertaining to zoa.

zoönerythrin (zō″on-e-rith′rin), *n.* [Irreg. < Gr. *ζῷον*, animal, + *ἐρυθρός*, red, + *-in*².] Same as *zoöerythrin*. Also *zoönerythrine*.

zoönic (zō-on′ik), *a.* [Irreg. < Gr. *ζῷον*, animal, + *-ic*.] Relating to animals; obtained or derived from animal substance: as, *zoönic* acid. — **Zoönic acid**, a name given by Berthollet to acetic acid in combination with animal matter, obtained by distilling animal matter.

zoönite (zō′ō-nīt), *n.* [Irreg. < Gr. *ζῷον*, animal, + *-ite*².] 1. One of the rings, segments, or somites of which the body of a worm, crustacean, insect, vertebrate, or other segmented or articulated animal is composed; a zonule; a metamere or an arthromere of an articulated invertebrate; a diarthromere of a vertebrate: used generically of any segment, to which special names are given in special cases. — 2. Same as *zoöid*: a mistaken use of the word. *Eng. Cyclop.* (*Zoöl.*), IV. 561. (*Encyc. Dict.*)

zoönitic (zō-ō-nit′ik), *a.* [< *zoönite* + *-ic*.] Of or pertaining to a zoönite; somitic.

zoönomia (zō-ō-nō′mi-ä), *n.* [NL. (the title of a celebrated treatise by Dr. Erasmus Darwin): see *zoönomy*.] Same as *zoönomy*.

zoönomic (zō-ō-nom′ik), *a.* [< *zoönom-y* + *-ic*.] Of or pertaining to zoönomy.

zoönomist (zō-on′ō-mist), *n.* [< *zoönom-y* + *-ist*.] One who is versed in zoönomy; a biologist, in a broad sense.

zoönomy (zō-on′ō-mi), *n.* [< NL. *zoonomia*, < Gr. *ζῷον*, animal, + *νόμος*, law.] The laws of animal life collectively considered; the science which treats of the causes and relations of the phenomena of living animals; the vital economy of animals; animal physiology.

zoönosis (zō-on′ō-sis), *n.*; pl. *zoönoses* (-sēz). [NL., < Gr. *ζῷον*, animal, + *νόσος*, disease.] A disease communicated to man from the lower animals. Hydrophobia and glanders are examples of zoönoses.

zoönosology (zō″ō-nō-sol′ō-ji), *n.* [< Gr. *ζῷον*, animal, + E. *nosology*.] The classification of diseases affecting the lower animals; a system of zoöpathology; zoöpathy.

zoöparasite (zō-ō-par′a-sīt), *n.* [< Gr. *ζῷον*, animal, + *παράσιτος*, parasite.] A parasitic animal.

zoöpathology (zō″ō-pā-thol′ō-ji), *n.* [< Gr. *ζῷον*, animal, + E. *pathology*.] The study of disease in animals; veterinary pathology.

zoöpathy (zō-op′a-thi), *n.* [< Gr. *ζῷον*, animal, + *πάθος*, suffering.] Animal pathology; the science of the diseases of animals, excepting man. See *zoötherapy*.

Zoöphaga (zō-of′a-gä), *n. pl.* [NL., neut. pl. of *zoophagus*: see *zoöphagous*.] 1. [*l. c.*] Flesh-eating or carnivorous animals collectively considered: a term of no exact classificatory meaning. — 2. The carnivorous and insectivorous marsupials, as collectively distinguished from the herbivorous marsupials, or *Botanophaga*. The opossum is an example. — 3†. A division of gastropods including carnivorous forms. *Lamarck*, 1822.

zoöphagan (zō-of′a-gan), *n.* A carnivorous animal; a sarcophagan; especially, a member of the *Zoöphaga*, 2.

zoöphagous (zō-of′a-gus), *a.* [< NL. *zoophagus*, Gr. *ζωοφάγος*, living on animal food, < *ζῷον*, animal, + *φαγεῖν*, eat.] Devouring animals; sarcophagous; carnivorous: opposed to *phytophagous*. Specifically applied by Blyth, in editing Cuvier, to one of two primary types of placental *Mammalia*, including man, *Quadrumana*, *Carnivora*, and *Cetacea*; the last constituting the order *Isodontia*, the first three the order *Typodontia*.

zoöphilist (zō-of′i-list), *n.* [< *zoöphil-y* + *-ist*.] A lover of animals or living creatures; one whose sympathy embraces all living creation.

Our philosopher and *zoophilist* . . . advised those who consulted him as to the best manner of taking and destroying rats. *Southey*, The Doctor, ccxxviii. (*Davies.*)

The *zoöphilists* vowed their determination to force through Parliament a prohibitory act.
N. A. Rev., CXL. 207.

zoöphily (zō-of′i-li), *n.* [< Gr. *ζῷον*, animal, + *-φιλία*, love, < *φιλεῖν*, love.] A love of animals; a sympathy or tender care for living creatures which prevents all unnecessary acts of cruelty or destruction. *Cornhill Mag.*

zoöphoric (zō-ō-for′ik), *a.* [< *zoöphor-us* + *-ic*.] Bearing a living being, or a figure or figures of one or more men or animals: as, a *zoöphoric* column.

zoöphorus (zō-of′ō-rus), *n.* [NL., < Gr. *ζωοφόρος*, a frieze bearing the figures of living beings, < *ζῷον*, animal, + *-φορος*, < *φέρειν* = E. *bear*¹.] In *anc. arch.*, a continuous frieze, unbroken by triglyphs, carved in relief with figures of men and animals, as the Panathenaic frieze of the Parthenon, or the frieze of Phigaleia. Also ★*zophorus*. See cuts under *Doric* and *Hellenic*.

zoöphysics (zō-ō-fiz′iks), *n.* [< Gr. *ζῷον*, animal, + *φυσικά*, physics.] The study of the physical structure of animals; comparative anatomy as a branch of zoölogy: correlated with *zoödynamics*, or animal physiology.

Zoo-Dynamics, *Zoo-Physics*, Zoo-Chemistry. — The pursuit of the learned physician — anatomy and physiology: exemplified by Harvey, Haller, Hunter, Johann Müller.
Encyc. Brit., XXIV. 803.

Zoöphyta (zō-of′i-tä), *n. pl.* [NL., pl. of *zoöphyton*: see *zoöphyte*.] The alternative name of the Cuvierian *Radiata*; the *Phytozoa*; the animal-plants, or plant-like animals. In later systems, especially following the classification of Cuvier, the name has been much used for a large artificial and heterogeneous assemblage of the lower invertebrates, many of which, like the corallines, have a plant-like habit, and branch from a fixed base. It thus covers, or has covered, all the true cœlenterates (actinozoans, hydrozoans, and ctenophorans), all the echinoderms (starfishes, sea-urchins, holothurians, and crinoids), the polyzoans, the sponges, some of the worms which used to be classed as radiates, and all the infusorians and other protozoans known, having thus no better standing than "the radiate mob" of Cuvier. (See *Radiata*, 1.) In some of its various restricted applications, however, it has excluded certain forms that obviously belonged elsewhere, and the tendency has been to adapt the name to the cœlenterates, with or without the sponges. The proposition has been made, and by some accepted, to use the name in this strict sense, and instead of *Cœlentera* or *Cœlenterata*; in which case it would cover the *Actinozoa*, *Hydrozoa*, *Ctenophora*, and *Spongiæ*. The New Latin form of the term is attributed to Wotton (1492–1555), who in his "De Differentiis Animalium" (Paris, 1552) included under this name practically its present content: namely, holothurians, starfishes, jelly-fishes, sea-anemones, and sponges.

zoöphyte (zō′ō-fīt), *n.* [< NL. *zoöphyton*, < Gr. *ζωόφυτον* (Aristotle), lit. 'animal-plant,' < *ζῷον*, animal, + *φυτόν*, plant.] A member of the *Zoöphyta*, in any sense; a radiate; a phytozoan.

The term is a loose popular equivalent of the technical designation; but it is convenient, and may be employed for any of the *Zoöphyta* in a proper sense, as corals, sea-anemones, acalephs, and sponges. The chief objection to its use is its continued application to those polyzoans which are of coralline aspect, as these have no affinity with cœlenterates.—**Glass-rope zoöphytes**†, the glass-rope sponges, or *Hyalonemidæ* (which see).

zoöphyte-trough (zō′ō-fīt-trôf), *n.* A device for retaining living zoöphytes or infusoria which are to be examined under the microscope. It consists of a frame with two movable sides of glass, and a false bottom, also of glass, small enough to admit of the insertion of the sides between it and the frame. The upper edges of the sides are pressed together by a spring, and can be separated as desired by a wedge. *E. H. Knight.*

zoöphytic (zō-ō-fit′ik), *a.* [< *zoöphyte* + *-ic.*] Of the nature of a zoöphyte; of or pertaining to zoöphytes; phytozoic.—**Zoöphytic series**, the series of animals composing the *Zoöphyta* as defined by Haeckel and Huxley, beginning with the lowest sponges and ending with the highest cœlenterates.

zoöphytical (zō-ō-fit′i-kal), *a.* [< *zoöphytic* + *-al.*] Same as *zoöphytic.*

zoöphytoid (zō-of′i-toid), *a.* [< *zoöphyte* + *-oid.*] Resembling a zoöphyte; related to the zoöphytes.

zoöphytological (zō-ō-fī-tō-loj′i-kal), *a.* [< *zoöphytolog-y* + *-ical.*] Pertaining to zoöphytology.

zoöphytologist (zō″ō-fī-tol′ō-jist), *n.* [< *zoöphytolog-y* + *-ist.*] One who is versed in the natural history of zoöphytes. *R. F. Tomes*, Geol. Mag. (1885), p. 549.

zoöphytology (zō″ō-fī-tol′ō-ji), *n.* [< Gr. *ζῷον*, zoöphyte, + *-λογία*, < *λέγειν*, speak: see *-ology.*] The science or natural history of zoophytes.

zoöphyton (zō-of′i-ton), *n.*; pl. *zoöphyta* (-tä). [NL.: see *zoöphyte.*] A zoöphyte.

zoöplastic (zō-ō-plas′tik), *a.* [< Gr. *ζῷον*, animal, + *πλάσσειν*, form: see *plastic.*] In *surg.*, noting a plastic operation by which living tissue is transplanted from one of the lower animals to man; of or pertaining to zoögrafts.—**Zoöplastic graft.** Same as *zoögraft.*

zoöpraxinoscope (zō-ō-prak′si-nō-skōp), *n.* [< Gr. *ζῷον*, animal, + E. *praxinoscope.*] A philosophical toy, somewhat on the principle of the phenakistoscope, by which images of animals are made to execute natural movements upon a screen upon which they are thrown.

zoöpsychology (zō″ō-sī-kol′ō-ji), *n.* [< Gr. *ζῷον*, animal, + E. *psychology.*] The psychology of animals other than man; that body of fact or doctrine respecting the mental processes of animals derived from the study of their instincts, habits, movements, etc.

zoöscopic (zō-ō-skop′ik), *a.* [< *zoöscop-y* + *-ic.*] Of or pertaining to zoöscopy.

This condition of *zoöscopic* hallucination is one of the commonest among the phenomena of alcohol poisoning. *Science*, XV. 43.

zoöscopy (zō′ō-skō-pi), *n.* [< Gr. *ζῷον*, animal, + *-σκοπία*, < *σκοπεῖν*, view.] A kind of hallucination in which imaginary animal forms are perceived.

zoösperm (zō′ō-spėrm), *n.* [< Gr. *ζῷον*, animal, + *σπέρμα*, seed.] 1. Same as *zoöspermium.*—2. In *bot.*, same as *zoöspore.*

zoöspermatic (zō″ō-spėr-mat′ik), *a.* [< *zoösperm* + *-atic*2 (see *spermatic*).] Pertaining to, or of the nature of, a zoösperm; spermatozoic.

zoöspermium (zō-ō-spėr′mi-um), *n.*; pl. *zoöspermia* (-ä). [NL.: see *zoösperm.*] The sperm-cell, or male seed-cell; a spermatozoön. Also *zoösperm.*

zoösporange (zō′ō-spō-ranj), *n.* [< NL. *zoösporangium.*] Same as *zoösporangium.*

zoösporangial (zō″ō-spō-ran′ji-al), *a.* [< *zoösporangium* + *-al.*] Pertaining to a zoösporangium.

zoösporangium (zō″ō-spō-ran′ji-um), *n.*; pl. *zoösporangia* (-ä). [NL., < Gr. *ζῷον*, animal, + *σπορά*, seed, + *ἀγγεῖον*, vessel.] In *bot.*, a sporangium or spore-case in which zoöspores or zoögametes are produced. See *sporangium* and *zoöspore.*

There is then formed in each *zoösporangium* a number of zoöspores. *Farlow*, Marine Algæ, p. 14.

zoöspore (zō′ō-spōr), *n.* [< Gr. *ζῷον*, animal, + *σπορά*, seed: see *spore.*] 1. In *bot.*, a spore capable of moving about; a motile spore, or swarm-spore. Zoöspores are produced by many algæ, and occur also in some fungi (*Peronosporaceæ*, *Saprolegniaceæ*, *Myxomycetes*, etc.); they are spores destitute for a time of any cell-wall, and motile by means of either cilia or pseudopodia. See *spore*2, *macrozoöspore*, 2, and cut under *Chætophora.* Also *zoösperm.*

2. An animal spore; one of the minute flagelliform bodies which issue from the sporocyst of sporiparous animalcules; a swarm-spore. *Cienowski*, 1865.

Also *zoöcarp.*

Zoösporeæ (zō-ō-spō′rē-ē), *n. pl.* [NL. (Thuret): see *zoöspore.*] A term of doubtful application formerly used to designate a group containing both brown and grass-green algæ which reproduced by zoöspores. The group included the greater part of the *Chlorospermeæ* of Harvey, but is now widely separated under various families.

zoösporic (zō-ō-spor′ik), *a.* [< *zoöspore* + *-ic.*] Of the nature of a zoöspore; pertaining to zoöspores.

zoösporiferous (zō″ō-spō-rif′e-rus), *a.* [< *zoöspore* + L. *ferre* = E. *bear*1.] In *bot.*, bearing or producing zoöspores.

zoötaxy (zō′ō-tak-si), *n.* [< Gr. *ζῷον*, animal, + *τάξις*, arrangement.] The science of the classification of animals; systematic zoölogy. Compare *phytotaxy.*

zoötechnic (zō-ō-tek′nik), *a.* and *n.* [< *zoötechn-y* + *-ic.*] **I.** *a.* Of or pertaining to zoötechny.

II. *n.* Zoötechny.

zoötechnics (zō-ō-tek′niks), *n.* Same as *zoötechny.*

zoötechny (zō′ō-tek-ni), *n.* [< NL. *zoötechnia*, < Gr. *ζῷον*, animal, + *τέχνη*, art.] Domestication of animals; the breeding and keeping of animals in domestication or captivity. See *acclimatization.*

zoötheca (zō-ō-thē′kä), *n.*; pl. *zoöthecæ* (-sē). [NL., < Gr. *ζῷον*, animal, + *θήκη*, case.] The case or sheath of a zoösperm; a cell containing a spermatozoöid.

zoöthecal (zō-ō-thē′kal), *a.* [< *zoötheca* + *-al.*] Of the nature of or forming a zoötheca.

zoöthecial (zō-ō-thē′shial), *a.* [< *zoöthecium* + *-al.*] Of or pertaining to a zoöthecium.

zoöthecium (zō-ō-thē′shium), *n.*; pl. *zoöthecia* (-shiä). [NL., < Gr. *ζῷον*, animal, + *θηκίον*, casket, dim. of *θήκη*, case, chest: see *zoötheca.*] A compound tubular investment or domiciliary sheath in which certain infusorians are incased. Compare *zoöcytium*, *zoödendrium.*

For these aggregations of ordinary simple loricæ the distinctive title of *zoöthecia* has been adopted.
W. S. Kent, Manual of Infusoria, p. 61.

zoötheism (zō′ō-thē-izm), *n.* [< Gr. *ζῷον*, animal, + E. *theism*1.] The attribution of deity to an animal; the treatment of animals or animal forms as objects of worship. See *zoölatry* and *zoömorphism*, 2.

In the stage of barbarism all the phenomena of nature are attributed to the animals by which man is surrounded, or rather to the ancestral types of these animals, which are worshipped. This is the religion of *zoötheism.*
Pop. Sci. Mo., XXXVI. 63.

zoötheistic (zō″ō-thē-is′tik), *a.* Of or pertaining to zoötheism; relating to the worship of animals; zoölatrous. See *zoömorphic*, 2.

The prophets tried to pull the Israelites too-rapidly through the *zoötheistic* and physitheistic stages into monotheism. *Pop. Sci. Mo.*, XXXVI. 208.

zoötherapy (zō-ō-ther′a-pi), *n.* [< Gr. *ζῷον*, animal, + E. *therapy.*] The treatment of disease in the lower animals; veterinary therapeutics.

Zoötoca1 (zō-ot′ō-kä), *n.* [NL. (Wagler), < Gr. *ζωοτόκος*, viviparous, < *ζῷον*, animal, + *τίκτειν*, *τεκεῖν*, bring forth.] A genus of ovoviviparous lizards, of the family *Lacertidæ*, very near *Lacerta* proper. There are about 8 species, chiefly of southern Europe and of Africa, as the well-known *Z. vivipara.*

Zoötoca2 (zō-ot′ō-kä), *n. pl.* [NL., neut. pl.: see *Zoötoca*1.] Same as *Vivipara.* In its application to mammals, the term is traceable to Aristotle.

zoötocology (zō″ō-tō-kol′ō-ji), *n.* [< Gr. *ζωοτόκος*, viviparous, + *-λογία*, < *λέγειν*, speak: see *-ology.*] The biology of animals. See the quotation. [Rare.]

Dr. Field tells us we are all wrong in using the term biology, and that we ought to employ another; only he is not quite sure about the propriety of that which he proposes as a substitute. It is a somewhat hard one—*zootocology.* *Huxley*, Amer. Addresses, p. 138.

zoötomic (zō-ō-tom′ik), *a.* [< *zoötom-y* + *-ic.*] Same as *zoötomical.*

The *zootomic* and embryological works of the last ten years. *Nature*, XXXVII. 70.

zoötomical (zō-ō-tom′i-kal), *a.* [< *zoötomic* + *-al.*] Of or pertaining to zoötomy.

zoötomically (zō-ō-tom′i-kal-i), *adv.* By means of or according to the principles of zootomy.

Such being the position of apes as a whole, they are *zootomically* divisible into a number of more and more subordinate groups. *Encyc. Brit.*, II. 148.

zoötomist (zō-ot′ō-mist), *n.* [< *zoötom-y* + *-ist.*] One who dissects the bodies of animals; one who is versed in zoötomy; a comparative anatomist.

zoötomy (zō-ot′ō-mi), *n.* [< Gr. *ζῷον*, animal, + *-τομία*, < *τέμνειν*, *ταμεῖν*, cut.] The dissection or the anatomy of animals; specifically, the science, art, or practice of dissecting or anatomizing animals other than man: distinguished from *human anatomy*, *androtomy*, or *anthropotomy*: equivalent to *comparative anatomy* in a usual sense: correlated with *phytotomy*, or the dissection of plants. The zoötomy of living animals for other than surgical purposes is known as *vivisection.*

zoötrope (zō′ō-trōp), *n.* Same as *zoëtrope.*

An ingenious and effective application of the *zoötrope*, for the illustration of the relation between certain isomeric forms. *Sci. Amer. Supp.*, XXII. 9097.

zoötrophic (zō-ō-trof′ik), *a.* [< Gr. *ζῷον*, animal, + *-τροφος*, < *τρέφειν*, nourish.] Serving for the nourishment of animals; of or pertaining to animal alimentation.

zoöxanthella (zō″ō-zan-thel′ä), *n.*; pl. *zoöxanthellæ* (-ē). [NL., < Gr. *ζῷον*, animal, + *ξανθός*, yellow, + *-ella.*] One of the yellow pigmentary particles, or unicellular algæ, found living in certain radiolarians and turbellarians.

zoozoo (zō′zō), *n.* [Imitative; cf. *coo*, *croo.*] The wood-pigeon. [Prov. Eng.]

zope (zōp), *n.* [G.] A certain fresh-water bream of Europe, *Abramis ballerus.*

Zopherus (zof′e-rus), *n.* [NL. (Laporte, 1840), < Gr. *ζοφερός*, dusky, < *ζόφος*, darkness, gloom.] A genus of tenebrionid beetles, remarkable for their large size, bold sculpture, and special coloration, the elytra having shining callosities. About 15 species are known, all from South America, Mexico, and the southwestern United States.

zopilote (zō-pi-lō′te), *n.* [Also *tzopilotl*; Mex. Sp., < Nahuatl *tzopilotl.*] One of the smaller American vultures or *Cathartidæ*, as the turkey-buzzard or carrion-crow; a gallinazo; a urubu. See *aura*2, and cuts under *Cathartes* and *urubu.*

zopissa (zō-pis′ä), *n.* [NL., < Gr. *ζώπισσα*, pitch and wax from old ships, < *ζω-* (?) + *πίσσα*, pitch: see *pitch*2.] In *med.*, a mixture of pitch and tar, impregnated with salt water, scraped from the sides of ships, formerly used in external applications as having resolutive and desiccative properties. *Simmonds.*

zoppo (tsop′pō), *a.* [It.] In *music*, "limping," alternately with and without syncopation.—**Alla zoppa**, a duple or quadruple movement in which there is a syncopation in the midst of each measure, giving the metric figure | ♩ 𝅗𝅥 ♩ | ♩ 𝅗𝅥 ♩ |.

zorgite (zôr′gīt), *n.* [< *Zorge* (see def.) + *-ite*2.] A metallic mineral consisting of the selenides of lead and copper, found at Zorge, in the Harz mountains.

zoril, zorille (zor′il), *n.* [< F. *zorille* (Buffon), < Sp. *zorrilla*, *zorrillo* (> NL. *zorilla*), dim. of *zorra*, *zorro*, a fox.] 1. An African animal of the genus *Zorilla.*—2. Some Central or South American skunk; one of the *Mephitinæ*, as the conepate; a zorrino. See cut under *Conepatus.*

Zorilla (zō-ril′ä), *n.* [NL. (J. E. Gray): see *zoril.*] 1. A genus of African skunk-like quadrupeds, representing the subfamily *Zorillinæ.* The common zoril, or mariput, is *Z. striata* (or *Ictonyx zorilla*), a nocturnal, burrowing, carnivorous animal, capable of emitting a very fetid odor, like a skunk. It is as large as a small house-cat, and is entirely striped and spotted

Striped Zoril (*Zorilla striata*).

with black and white, thus closely resembling the small American skunk figured under *Spilogale.* The genus is also called *Rhabdogale* and *Ictonyx.* Its (NL.) name *Zorilla* dates from 1816; but *zorilla* as a specific New Latin name dates from 1776 (*J. C. D. Schreber*), having

long designated a composite species in which the African zoril was confounded with some American skunks: whence also the two senses of *zoril* (which see).

2. [*l. c.*] A zoril.

Zorillinæ (zor-i-lī'nē), *n. pl.* [NL., < *Zorilla* + *-inæ*.] An African subfamily of *Mustelidæ*, represented by the genus *Zorilla;* the zorils, or skunk-like quadrupeds of Africa. They are closely related to the American skunks, or *Mephitinæ*. See cut under *Zorilla*.

zorilline (zor'i-lin), *a.* Resembling or related to animals of the genus *Zorilla;* pertaining to the *Zorillinæ*.

Zoroaster (zō-rō-as'tėr), *n.* [NL. (Thomas, 1873), pun on *Zoroaster* (see *Zoroastrian*), involving NL. *aster*, starfish.] In *zoöl.*, a genus of starfishes, giving name to the *Zoroasteridæ*, and containing such species as *Z. fulgens*, of the North Atlantic.

Zoroasteridæ (zō″rō-as-ter'i-dē), *n. pl.* [NL., < *Zoroaster* + *-idæ*.] A family of starfishes, typified by the genus *Zoroaster*. It contains forms with very small body, very long arms, and quadriseriate water-feet, attaining a diameter of 8 or 10 inches.

Zoroastrian (zō-rō-as'tri-an), *a.* and *n.* [< L. *Zoroastres* (> E. *Zoroaster*), the L. form of the Old Pers. name *Zarathustra*, + *-ian*.] **I.** *a.* Of or pertaining to Zoroaster, the founder of the Mazdayasnian or ancient Persian religion; relating to or connected with Zoroastrianism.

II. *n.* One of the followers of Zoroaster, now represented by the Guebers and Parsees of Persia and India; a fire-worshiper.

Zoroastrianism (zō-rō-as'tri-an-izm), *n.* [< *Zoroastrian* + *-ism*.] The system of religious doctrine taught by Zoroaster and his followers in the Avesta; the religion prevalent in Persia till its overthrow by the Mohammedans in the seventh century, and still held by the Guebers and Parsees, and commonly, though incorrectly, called *fire-worship*. The religion is dual, recognizing two creative powers — Ormuzd (Ahuramazda), the god of light and creator of all that is good, with six principal and innumerable inferior amshaspands, or ministers of good, and Ahriman (Angramainyus), the god of darkness and creator of evil, with a corresponding number of devs, or ministers of evil. Zoroaster taught that Ormuzd created man with free will; that his state after death depends upon the preponderance of good or evil in his life, an intermediate state being provided for those in whom these principles are evenly balanced; and that Ormuzd will finally prevail over Ahriman in the constant war between them, and redeem him and his ministers, as well as man, from all evil.

Zoroastrism (zō-rō-as'trizm), *n.* [< L. *Zoroastres*, Zoroaster, + *-ism*.] Same as *Zoroastrianism*. [Rare.]

All these alleged facts conspire to prove that *Zoroastrism* and its Scriptures had their origin in eastern Iran before the rise of Median or Persian dominion.
Amer. Antiq., IX. 118.

zorra (zor'ä), *n.* [NL., < Sp. *zorra*, fem. of *zorro*, a fox.] A South American skunk: same as *atok*.

zorrino (thō-rē'nō), *n.* [Sp. Amer., dim. of Sp. *zorro*, fox.] A South American skunk. The skunks of the Neotropical region belong to the same subfamily (*Mephitinæ*) as the others of America, but are generically different, and like the conepate.

zorro (thor'ō), *n.* [Sp., a fox.] One of the South American fox-wolves, as *Canis azaræ*. *Encyc. Brit.*, XVIII. 353.

zorzico, *n.* [Basque.] A kind of song in quintuple or septuple rhythm common among the Basques.

Zosmeridæ (zos-mer'i-dē), *n. pl.* [NL. (Douglas and Scott, 1865), < *Zosmerus* + *-idæ*.] A family of heteropterous insects, of the superfamily *Coreoidea*, forming a transition between the *Lygæidæ* and the *Tingitidæ*, but by the structure of the abdomen more nearly related to the former than to the latter. It contains only the Old World genus *Zosmerus*.

Zosmerus (zos'mę-rus), *n.* [NL. (Laporte, 1833), irreg. < Gr. *ζῶμα*, a girdle, < *ζωννύναι*, girdle.] A genus of Old World heteropterous insects, typical of the family *Zosmeridæ*.

zoster (zos'tėr), *n.* [< Gr. *ζωστήρ*, a girdle, < *ζωννύναι*, girdle: see *zone*.] 1. In *anc. Gr. costume*, a belt or girdle; originally, a warriors' belt round the loins, afterward any girdle or zone, but chiefly one of a kind worn by men.

The chiton . . . is girt round under the breast, to keep it from falling, by a girdle (*zoster*). *Encyc. Brit.*, VI. 453.

2. Same as *herpes zoster* (which see, under *herpes*).

Zostera (zos-tē'rä), *n.* [NL. (Linnæus, 1747), so called from the long tape-like leaves; < Gr. *ζωστήρ*, a girdle: see *zoster*.] A genus of aquatic plants, of the family *Potamogetonaceæ* and tribe *Zostereæ*. It has monœcious flowers and ovoid carpels. The 6 species are natives of marine waters of both the old and the new world. They grow immersed in shallow bays and other waters, often forming large masses, growing from slender creeping rootstocks. The long narrowly linear two-ranked leaves are the place of attachment of great numbers of algæ, and the feeding-places of many of the smaller forms of animal life. *Z. marina* is known in America as *eel-grass* and in England

1, Flowering Plant of Grass-wrack or Eel-grass (*Zostera marina*); 2, the spadix; *a*, anther; *b*, pistil; *c*, fruit.

as *grass-wrack*, also as *turtle-grass*, *sweet-grass*, and *bell-ware;* when dried, it is used, under the name of *alva marina*, *sea-sedge*, or *sea-hay*, for stuffing mattresses and as bedding for horses. This, together with the related *Phucagrostis nodosa*, constitutes the glazier's-seaweed of England. *Z. nana* of Europe is known as *dwarf grass-wrack*.

Zostereæ (zos-tē'rę-ē), *n. pl.* [NL. (Dumortier, 1827), < *Zostera* + *-eæ*.] A tribe of monocotyledonous plants, of the family *Potamogetonaceæ*. It is characterized by unisexual flowers on a flattened spadix without a perianth, and with a subulate or capillary stigma. The 2 genera, *Phyllospadix* and *Zostera* (the type), are submerged grassy plants of sea-water, the former including 2 species, both natives of the Pacific coast of the United States.

Zosterops (zos'tę-rops), *n.* [NL. (Vigors and Horsfield, 1826), < Gr. *ζωστήρ*, a girdle, + *ὤψ*, eye.] 1. A very extensive genus of *Meliphagidæ* (also referred to the *Dicæidæ*), giving name to the subfamily *Zosteropinæ*, characterized among related genera by the absence or spurious character of the first primary, and named from the conspicuous orbital ring of most of its members. The genus is now held to cover a number of forms which have been made types of several (about 8) other genera. They are known as *white-eyes* and *silver-eyes*. The range of the genus in this broad sense is very extensive, embracing most of Africa, all of India, Ceylon, Burma, China, and Japan, the Malay Peninsula and Archipelago, the Papuan Islands, Australia, Tasmania, and most of the Polynesian islands, including New Zealand. The bill is about as long as the head, straight, and broad at the base. The pattern of coloration is characteristic, consisting of olives and yellows as the ground-colors, and the diagnostic white eye-ring of most species. The sexes are alike in plumage. The size is very small, only 4 or 5 inches. About 85 species are recognized as valid. The type is *Z. cærulescens*, of Aus-

Silver-eye or White-eye (*Zosterops cærulescens*).

tralia, the Chatham Islands, and New Zealand, the cerulean creeper, and rusty-sided warbler of the older ornithologists. *Z. madagascariensis* is the white-eyed warbler of Latham. *Z. olivacea* is the olive creeper of Bourbon (Réunion). *Z. mauritiana* is the Maurice warbler of Mauritius. *Z. lugubris*, *Z. borbonica*, *Z. chloronota*, *Z. fallax*, *Z. leucophæa*, *Z. muelleri*, *Z. finschi*, and *Z. senegalensis* have severally been made types of other genera. Some of these birds have been placed in *Dicæum*, and are among those known to the French ornithologists as *souimangas*.

2. [*l. c.*] Any bird of this genus.

zotheca (zō-thē'kä), *n.*; pl. *zothecæ* (-sē). [< Gr. *ζωθήκη*, < *ζῆν*, live, + *θήκη*, a receptacle: see *theca*.] In *anc. arch.*, a niche or an alcove; also, a small living-room, or room used by day, as opposed to a sleeping-room or dormitory.

Zouave (zȫ-äv'), *n.* [F., from the name of a Kabyle tribe in Algeria.] 1. A soldier belonging to a corps of light infantry in the French army, distinguished for their dash, intrepidity, and hardihood, and for their peculiar drill and showy Oriental uniform. The Zouaves were organized in Algeria in 1831, and consisted at first of two battalions chiefly of Kabyles and other natives, but ultimately became almost entirely French, with increased numbers. They served exclusively in Algeria till 1854, and afterward fought in European wars.

2. A member of one of the volunteer regiments of the Union army in the American civil war (1861–5) which adopted the name and to some extent imitated the dress of the French Zouaves. — **Papal or pontifical Zouaves**, a corps of French soldiers organized at Rome in 1860 for the defense of the temporal sovereignty of the Pope, under Gen. Lamoricière, one of the first commanders of the Algerian Zouaves. After obstinately resisting the entrance of the Italian government into Rome in 1870, they served in France against the Germans and the Commune, and in 1871 were disbanded.

Zouave-jacket (zȫ-äv'jak″et), *n.* 1. A short jacket, not reaching to the waist, cut away in front: a part of the Zouave uniform. — 2. A similar jacket, usually ornamented, with or without sleeves, worn by women.

zounds (zoundz), *interj.* [For *'swounds*, abbr. of *God's wounds*, referring to the wounds of Christ on the cross; one of the innumerable oaths having reference to Christ's passion.] An exclamation formerly used as an oath or as an expression of anger or wonder.

Zounds, sir! then I insist on your quitting the room directly. *Sheridan*, School for Scandal, v. 3.

zoutch (zouch), *v. t.* [Origin obscure.] To stew, as flounders, whitings, gudgeons, eels, etc., with just enough of liquid to cover them. [Prov. Eng.]

Zr. In *chem.*, the symbol for *zirconium*.

zucchetta (dsȕk-ket'tä), *n.* [It. *zucchetta*, a small gourd, a skullcap, dim. of *zucca*, a gourd.] 1. In the *Rom. Cath. Ch.*, the skullcap of an ecclesiastic, covering the tonsure. That of a priest is black, of a bishop purple, of a cardinal red, and of the Pope white. Also written *zucchetto*. — 2. A late form of burganet, distinguished by having a movable nasal, hinged cheek-pieces, and an articulated couvre nuque.

zufolo, zuffolo (dsö'fō-lō), *n.* [It. *zufolo*, < *zufolare*, hiss, whistle.] A little flute or flageolet, especially such as is used in teaching birds.

Zuggun falcon. See *falcon*.

zuisin, *n.* The American widgeon, *Mareca americana*. *Webster's Dict.*, 1890. [Local, U. S.]

zules, zulis, *n.* In *her.*, a chess rook used as a bearing.

Zulu (zȫ'lȫ), *n.* and *a.* [Also *Zooloo;* S. African.] **I.** *n.* A member of a warlike and superior branch of the Kafir race of South Africa, divided into many tribes. In the beginning of the nineteenth century several tribes of Zulus established a kingdom including the present British colony of Natal and the country north of it called Zululand, which was broken up and mostly absorbed by the British and the Boers during a succession of wars ending in 1883.

II. *a.* Of or pertaining to the Zulus: as, the *Zulu* language (a principal member of the Bantu group of languages) or government. — **Zulu cloth**, a fine twilled woolen cloth used as a background for embroidery. *Dict. of Needlework.*

Zulu-Kafir (zȫ'lȫ-kaf″ėr), *n.* Same as *Kafir*, 3.

zumbooruk (zum'bȫ-ruk), *n.* [Also *zumbooruck*, *zomboruk*, *zamboorak;* < Hind. Pers. Ar. *zanbūrak*, < Turk. *zanbūrak*, a small gun, dim. of Ar. *zanbūr*, a hornet.] A small cannon mounted on a swivel, usually shorter and with larger bore than the zingal. In English writings the name is especially applied to such a piece carried on a camel, the pivot which supports it being erected on the saddle in front of the rider.

Eighteen or twenty camels, caparisoned in the Rajah's colours of red and white, with *zomboruks*, or swivel guns, mounted on their backs.
W. H. Russell, Diary in India, II. 237.

zumologic, zumology, etc. Same as *zymologic*, etc.

Zuñi (zȫ'nyē), *n.* [Amer. Ind.] A member of the best-known community or tribe of the semi-civilized Pueblo Indians of New Mexico, living in a village of the same name on the Zuñi river, composed of large communal houses. See Cyc. of Names (Vol. XI.).

Zuñian (zȫ'ni-an), *a.* and *n.* [< *Zuñi* + *-an*.] **I.** *a.* Of or pertaining to the Zuñis.

All the *Zuñian* clay effigies of owls have horns on their heads. *Science*, VI. 266.

II. *n.* A Zuñi.

zunyite (zū'ni-īt), *n.* [< *Zuñi* (see def.) + *-ite*2.] A fluosilicate of aluminium, occurring in glassy transparent tetrahedral crystals of the hardness of quartz: found at the Zuñi mine in Colorado.

zurf (zėrf), *n.* Same as *zarf*.

zwanziger (tswän'tsi-gėr), *n.* [G., < *zwanzig*, twenty.] A silver coin of Austria of the nineteenth century, equivalent to 20 kreutzers, and worth 8⅓ pence English (about 17 cents).

zwieselite (tswē'zel-īt), *n.* [< *Zwiesel* (see def.) + *-ite*2.] A variety of triplite found near Zwiesel in Bavaria.

Zwinglian (zwing'- or tswing'gli-an), *a.* and *n.* [< *Zwingli* (see def.) + *-an*.] **I.** *a.* Of or pertaining to Ulrich (Huldreich) Zwingli (1484–1531), a Swiss religious reformer, or his doctrines. Zwingli's revolt from the Roman communion took place at Zürich in 1516, a year before Luther's, with whom he differed in denying the real presence in the eucharist in any sense, and upon other points.

II. *n.* A follower of Zwingli.

Zygadenus (zī-gad'e-nus), *n.* [NL. (Richard, 1803), named from the conspicuous pair of glands at the base of the sepals in *Z. glaberrimus*; < Gr. ζυγόν, a yoke, + ἀδήν, gland.] A spelling often given to *Zigadenus*, a genus of melanthiaceous plants. It is characterized by pedicelled flowers with a flattish perianth nearly equaled in its length by the stamens, and narrow angled seeds without prominent wings. The 10 species are natives of Siberia, and of North America including Mexico. They are perennials with a horizontal rootstock or a coated bulb, producing an erect stem unbranched beneath the terminal raceme or panicle, which consists of numerous whitish or greenish flowers. The long linear leaves are radical or crowded toward the base of the stem. The poisonous root of *Zigadenus venenosus* of the northwestern United States is known as *death camass* and as *hog's potato*, being innocuous to hogs and greedily eaten by them. *Z. elegans* extends northward to Kotzebue Sound. *Z. glaberrimus* and *Z. leimanthoides* are tall wand-like species with conspicuous white or cream-colored compound racemes resembling the black cohosh.

zygadite (zig'a-dīt), *n.* [< Gr. ζυγάδην, jointly, < ζυγόν, a yoke: see *yoke*1.] A variety of albite, occurring in thin tabular twin crystals: it is found at Andreasberg in the Harz.

Zygæna (zī-jē'nä), *n.* [NL. (Fabricius, 1775), < Gr. ζύγαινα, supposed to mean the hammer-headed shark.] **1.** In *entom.*, a genus of moths, typical of the family *Zygænidæ*, the species of which are known as *burnet-moths*, as *Z. minos*, the transparent burnet; *Z. trifolii*, the five-spotted burnet; *Z. loniceræ*, the narrow-bordered burnet; *Z. filipendulæ*, the six-spotted burnet; etc. It was at first coextensive with the family, but now includes only those forms that have the antennæ claviform, a little longer than the body; the wings elongate, and spotted; the palpi short, hairy, and acute; and the larvæ contracted, stout, hairy, and transforming in a fusiform parchment-like cocoon. Nearly 100 species are known, of which 52 occur in Europe, the others in Asia and Africa; 26 are British. The larvæ are remarkable in hibernating in the half-grown condition. Some entomologists change the name to *Anthrocera*, because it is the same as the genus *Zygæna* in ichthyology; but this is a mistake, for entomology has the prior claim upon the name, and it is the genus of fishes that should not be named *Zygæna*.

2. In *ichth.*, a genus of sharks, so named by Cuvier in 1817; the hammerheads: now called *Sphyrna* (which see). See cut under *hammerhead*.

zygænid (zī-jē'nid), *a.* and *n.* **I.** *a.* In *entom.* and *ichth.*, of or pertaining to the *Zygænidæ*, as a moth or a shark.

II. *n.* A member of the family *Zygænidæ*, whether in entomology or in ichthyology.

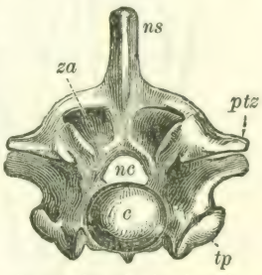
Also *zygenid*, *zygænoid*.

Zygænidæ (zī-jē'ni-dē), *n. pl.* [NL. (Leach, 1819), < *Zygæna*, 1, + *-idæ*.] **1.** In *entom.*, a family of moths, named from the genus *Zygæna*: also called *Anthroceridæ*. The family comprises a more or less definite and characteristic series of moths now placed in the superfamily *Tineoidea*. By most modern authors a section of the old family *Zygænidæ* is separated into a family *Agaristidæ*. The *Zygænidæ*, according to Hampson, have the antennæ often clubbed, frenulum present, hind wings with vein 1 *c* present, vein 8 remote from 7, connected with the cell by a bar, middle spurs of hind tibiæ short or absent, proboscis present. The larvæ are elliptical and flattened, often brightly colored. The European forms belong mainly to *Zygæna*, while the principal American genera are *Triprocris*, *Harrisina*, *Pyromorpha*, *Acoloithus*, and *Gingla*, the latter containing more than 100 South American species. *Euchromia* is another large genus, comprising more than 150 species, mainly South American. See cut under *Procris*. Also *Zygænæ*, *Zygænides*, *Zygænoidea*, and *Zygenides*.

2. In *ichth.*, a family of sharks, named from the genus *Zygæna*: now called *Sphyrnidæ* (which see). See cut under *hammerhead*.

zygænine (zī-jē'nin), *a.* [< *Zygæna* + *-ine*1.] In *ichth.*, same as *zygænid*.

zygænoid (zī-jē'noid), *a.* and *n.* [< *Zygæna* + *-oid*.] Same as *zygænid*.



zygal (zī'gal), *a.* [< *zyg-on* + *-al*.] **1.** Of or pertaining to a zygon; connecting, as a yoke. —**2.** Formed like the letter H, with a cross-bar connecting two other bars. See *zygon*.

The frequency of the *zygal* or H-shaped form of fissure [of the brain].

Buck's Handbook of Med. Sciences, VIII. 125.

[Rare in both uses.]

zygantrum (zī-gan'trum), *n.*; pl. *zygantra* (-trä). [NL., < Gr. ζυγόν, yoke, + ἄντρον, cave.] In *herpet.*, the fossa upon the posterior face of the neural arch of a vertebra of serpents and some lizards, for the reception of the zygosphene of a succeeding vertebra, the series of vertebræ being more effectively interlocked thereby than is accomplished by the zygapophyses alone. Compare cut under *zygosphene*.

Posterior face of a dorsal vertebra of the python, showing *za*, the zygantrum; *ptz*, postzygapophysis; *tp*, transverse process; *ns*, neural spine; *nc*, neural canal; *c*, convex posterior face of centrum.

The anterior surface of the arch above the neural canal is produced into a strong wedge-shaped zygosphene, which fits into a corresponding *zygantrum* of the next preceding vertebra, and on the posterior surface of the arch there is a *zygantrum* for the zygosphene of the next preceding [read succeeding] vertebra. *Huxley*, Anat. Vert., p. 201.

zygapophysial (zī-gap-ō-fiz'i-al), *a.* [< *zygapophysis* + *-al*.] Of or pertaining to a zygapophysis; articular, as a vertebral process.

zygapophysis (zī-ga-pof'i-sis), *n.*; pl. *zygapophyses* (-sēz). [NL., < Gr. ζυγόν, yoke, + ἀπόφυσις, process: see *apophysis*.] A process upon the neural arch of a vertebra corresponding to that called *oblique* or *articular* in human anatomy, provided with a facet for articulation with the same process of a preceding or succeeding vertebra, thus serving to interlock the series of vertebral arches. There are normally two pairs of zygapophyses to a vertebra, the two processes (right and left) which are situated upon the anterior border of any arch being called *prezygapophyses*, and those upon the posterior border, *postzygapophyses*. Each pair of any one vertebra articulates with the other pair of the next vertebra. See cuts under *cervical*, *dorsal*, *endoskeleton*, *hypapophysis*, *lumbar*, *vertebra*, *zygantrum*, and *zygosphene*.

zygite (zī'gīt), *n.* [Also erroneously *zeugite*; < Gr. ζυγίτης, < ζυγόν, yoke, cross-beam, thwart: see *zygon*.] In *Gr. antiq.*, an oarsman of the second or middle tier in a trireme. Compare *thranite* and *thalamite*.

Zygnema (zig-nē'mą), *n.* [NL. (Kützing, 1843), irreg. < Gr. ζυγόν, yoke, + νῆμα, thread.] A genus of fresh-water algæ, typical of the family *Zygnemaceæ*, having cells with two axile many-rayed chlorophyl-bodies near the central cell-nucleus, each containing a pyrenoid, and the zygospore undivided, mostly contracted, and developed in the middle space between two united pairing-cells or in one or the other of the conjugating-cells. Several of the species are among the commonest of fresh-water algæ in both stagnant and running water, forming dense bright-green masses. See cuts under *chlorophyl* and *conjugation*.

Zygnemaceæ (zig-nē-mā'sē-ē), *n. pl.* [NL., < *Zygnema* + *-aceæ*.] A very distinct family of fresh-water algæ, of the class *Conjugatæ*. The individual consists of a usually simple and unbranched filament of cells placed end to end, and the individuals are joined in filamentous families. The chromatophores are two in number, one each side of the central nucleus. Propagation is by means of zygospores which result from conjugation. See *Conjugatæ*, *conjugation* (with cut), and cut under *chlorophyl*.

Zygnemeæ (zig-nē'mē-ē), *n. pl.* [NL., < *Zygnema* + *-eæ*.] A former subfamily or tribe of fresh-water algæ, of the family *Zygnemaceæ*, characterized by having a mostly contracted, undivided zygospore, which after a period of rest develops into a germ-cell.

zygobranch (zī'gō-brangk), *a.* and *n.* [< Gr. ζυγόν, yoke, pair, + βράγχια, gills: see *branchiæ*.] **I.** *a.* Zygobranchiate.

II. *n.* A zygobranchiate mollusk.

Zygobranchia (zī-gō-brang'ki-ą), *n. pl.* [NL.: see *zygobranch*.] Same as *Zygobranchiata*.

Zygobranchiata (zī-gō-brang-ki-ā'tą), *n. pl.* [NL., neut. pl. of **zygobranchiatus*: see *zygobranchiate*.] An order or suborder of *Gastropoda*, having paired gill-combs, or right and left ctenidia, symmetrically disposed in the pallial chamber on each side of the neck, a pair of osphradia or olfactory tracts, paired nephridia of unequal size, and distinct sexes. As an ordinal group, it contains the ormers or sea-ears, the pleurotomarioids, the keyhole-limpets, and the true limpets, and is divided into *Ctenidiobranchiata* and *Phyllidiobranchiata* (the latter being the *Patellidæ* alone). Also called *Zeugobranchia*, *Zygobranchia*. See cuts under *abalone*, *Fissurellidæ*, *Patella*, *patelliform*, *Pleurotomaria*, *Pleurotomariidæ*, and *sea-ear*.

zygobranchiate (zī-gō-brang'ki-āt), *a.* and *n.* [< NL. **zygobranchiatus*, < Gr. ζυγόν, yoke, + βράγχια, gills: see *branchiate*.] **I.** *a.* Having paired and as it were yoked gills or ctenidia, as certain mollusks; having the characters of or pertaining to the *Zygobranchiata*; zygobranch.

II. *n.* Any member of the *Zygobranchiata*.

zygocardiac (zī-gō-kär'di-ak), *a.* [< Gr. ζυγόν, yoke, + καρδία = E. *heart*: see *cardiac*.] Noting a certain hard protuberance of the stomach of a crustacean, formed by a thickening of the chitinous lining of the cardiac division (in the crawfish an elongated posterolateral ossicle, connected with the lower end of the anterolateral ossicle, and passing upward and backward to become continuous with the pyloric ossicle): correlated with *pterocardiac* and *urocardiac*.

zygodactyl, zygodactyle (zī-gō-dak'til), *a.* and *n.* [< NL. **zygodactylus*, < Gr. ζυγόν, yoke, + δάκτυλος, finger, toe.] **I.** *a.* In *ornith.*, yoke-toed: noting those birds, or the feet of those birds, which have the toes disposed in pairs, two before and two behind. In all yoke-toed birds, excepting the trogons, it is the outer anterior toe which is reversed; in trogons, the inner anterior one. See cut under *pair-toed* and *parrot*.

II. *n.* A yoke-toed bird; a bird having the toes arranged in pairs.

Zygodactyla (zī-gō-dak'ti-lą), *n. pl.* [NL. (Brandt, 1835), fem. of **zygodactylus*: see *zygodactylous*.] **1.** A genus of acalephs, of the family *Æquoreidæ*. It includes some large jellyfishes, 6 or 8 inches in diameter, with long violet streamers, found in the north Atlantic waters.

2. A section of pachydermatous mammals, corresponding to the *Suidæ* in a broad sense; the swine. The name implied the cloven hoof of these animals, in distinction from the solidungulate or multungulate hoof of the quadrupeds with which swine were formerly classed as *Pachydermata*. See *Artiodactyla* (with cut).

Zygodactylæ (zī-gō-dak'ti-lē), *n. pl.* [NL.: see *Zygodactyla*.] A group of arboricole non-passerine birds whose toes are yoked in pairs, two before and two behind: synonymous with *Scansores* (which see). The group is artificial, being framed with reference to the single character expressed in the name, insistence upon which brings together some birds which belong to different orders, as *Psittaci* and *Picariæ*, separates the picarian families which are not yoke-toed from their near relatives which are yoke-toed, and ignores the exceptional zygodactylism of the trogons. Various attempts — as by Blyth (1849), Sundevall (1872), and Sclater (1880) — to restrict the name to a part of the birds it originally designated, and retain it in the system in a stricter sense, have not been entirely successful. Also *Zygodactyli*.

zygodactyle, *a.* and *n.* See *zygodactyl*.

zygodactylic (zī-gō-dak-til'ik), *a.* [< *zygodactyl* + *-ic*.] Same as *zygodactyl*.

zygodactylism (zī-gō-dak'ti-lizm), *n.* [< *zygodactyl* + *-ism*.] The yoking of the toes of a bird's foot in anterior and posterior pairs; the zygodactyl character or condition of a bird or its toes.

zygodactylous (zī-gō-dak'ti-lus), *a.* [< *zygodactyl* + *-ous*.] Same as *zygodactyl*.

Zygodon (zī'gō-don), *n.* [< Gr. ζυγόν, yoke, + ὀδούς (ὀδοντ-) = E. *tooth*.] In *zoöl.*, same as *Zeuglodon*, 1. *Owen*.

zygodont (zī'gō-dont), *a.* [< Gr. ζυγόν, yoke, + ὀδούς (ὀδοντ-) = E. *tooth*.] Noting molar teeth whose even number of cusps are paired and as it were yoked together; having such molars, as a mammal or a type of dentition.

It is thus probable that trigonodontie is to be regarded as an earlier and more primitive form of molar than those of the *zygodont* (quadritubercular) type.

Amer. Naturalist, XXII. 832.

Zygogomphia (zī-gō-gom'fi-ą), *n. pl.* [NL., < Gr. ζυγόν, yoke, + γομφίος, grinder-tooth.] In Ehrenberg's classification, a division of rotifers.

Zygogramma (zī-gō-gram'ą), *n.* [NL. (Chevrolat, 1843), < Gr. ζυγόν, yoke, + γράμμα, letter.] **1.** A notable genus of chrysomelid beetles, comprising about 70 American species, mainly from South America and Mexico. By most American coleopterists it is considered a subgenus of *Chrysomela*, from the typical forms of which it is separated by the possession of a tooth on the last tarsal joint.

2. A genus of reptiles. *Cope*, 1870.

zygoite (zī'gō-īt), *n.* [< Gr. ζυγόν, yoke, + *-ite*2.] An organism resulting from the process of zygosis or conjugation.

zygolabialis (zī-gō-lā-bi-ā'lis), *n.*; pl. *zygolabiales* (-lēz). [NL., < *zygo(ma)* + *labialis*, labial.] The lesser zygomatic muscle; the zygomaticus minor. *Coues*, 1887. See first cut under *muscle*[1].

zygoma (zī-gō'mą), *n.*; pl. *zygomata* (-ma-tą). [NL., < Gr. ζύγωμα, the zygomatic arch, also a yoke, bolt, bar, < ζυγοῦν, yoke, join, < ζυγόν, a yoke, joining: see *yoke*[1].] 1. The bony arch or arcade of the cheek, formed by the malar or jugal bone and its connections: so called because it serves to connect bones of the face with those of the skull about the ear. In mammals, including man, the zygoma consists of a malar bone connected behind with the squamosal bone, usually by a zygomatic process of the latter, and abutting in front against a protuberance of the superior maxillary bone, or of the frontal or the lacrymal bone, or any of these. It is usually a stout

Skull of Mylodon, a gigantic extinct sloth, showing the massive zygoma *z*, with strong superior and inferior processes *a*, *a'*. (Greatly reduced.)

bony arch, sometimes with a strong descending process, giving principal origin to a masseter muscle, and bridging over the temporal muscle. It is sometimes a slender rod, and may be imperfect, as in shrews. The part taken in its formation by the malar bone is very variable in extent. (See cut under *skull*.) Below mammals the construction of the zygoma posteriorly is entirely altered. In birds the arch is articulated there with the quadrate bone, or suspensorium of the lower jaw, representing the malleus of a mammal, and an additional bone, the quadratojugal, intervenes between the quadrate and the malar proper. In such cases the anterior connection is more particularly with the maxillary bone, or with this and the lacrymal, and the zygoma is generally a slender rod-like structure. (See cut under *Gallinæ*.) In reptiles further modifications occur, such as the completion of the arch behind by union of the jugal bone with the postfrontal and squamosal; or there may be no trace of a structure to which the term *zygoma* is properly applicable, as in the *Ophidia*, in which there is no jugal or quadratojugal bone. Among batrachians, as the frog, a zygomatic arch is represented by the connection of the maxillary bone, by means of a quadratojugal bone, with a bone called *temporomastoid* (see cuts there and under *Anura*). In any case a zygoma consists of a suborbital or postorbital series of ossifications in membrane, or membrane-bones, developed on the outer side of the maxillary arch of the embryo (the same that gives rise to the pterygopalatine bar), and when best differentiated is represented by lacrymal, maxillary, jugal, and quadratojugal bones; and its connection with the sphenoid, as occurs in man, is quite exceptional.

2. The malar or jugal bone itself, without its connections. [Rare.]—3†. The cavity under the zygomatic process of the temporal bone; the zygomatic fossa. *Brande.*

zygomatic (zī-gō-mat'ik), *a.* [< NL. *zygomaticus*, < *zygoma*, q. v.] In *zoöl.* and *anat.*, of or pertaining to the malar or jugal bone, or this bone and its connections; constituting or entering into the formation of the zygoma; jugal.—**Zygomatic apophysis.** Same as *zygomatic process.*—**Zygomatic arch**, the zygoma. See cut under *skull*.—**Zygomatic bone**, the malar.—**Zygomatic canals**, two canals in the malar bone of man, through which pass branches of the superior maxillary nerve; the temporomalar canals: (*a*) the *zygomaticofacial*, or *malar*, running between the orbital and anterior surfaces; (*b*) the *zygomaticotemporal*, or *temporal*, running between the orbital and temporal surfaces.—**Zygomatic crest**, that edge of the human alisphenoid which articulates with the malar.—**Zygomatic diameter**, the greatest distance between the zygomatic arches of the skull.—**Zygomatic fossa.** See *fossa*[1].—**Zygomatic glands**, lymph-nodes found along the course of the internal maxillary artery.—**Zygomatic muscle.** Same as *zygomaticus*.—**Zygomatic process.** See *process*, and cuts under *skull* and *temporal*[2].—**Zygomatic suture**, the squamozygomatic suture; the immovable connection of the squamosal, usually of its zygomatic process, with the malar or jugal bone.—**Zygomatic tuberosity**, that protuberance of the superior maxilla which articulates with the malar.

zygomatici, *n.* Plural of *zygomaticus*.

zygomatico-auricular (zī-gō-mat″i-kō-â-rik'ū-lär), *a.* 1. In *anat.* and *zoöl.*, of or pertaining to the zygoma and the auricle: as, a *zygomatico-auricular* muscle. See *zygomatico-auricularis*. —2. In *craniom.*, noting the ratio between the zygomatic and auricular diameters of the skull, called the *zygomatico-auricular index*.

zygomatico-auricularis (zī-gō-mat″i-kō-â-rik-ū-lā'ris), *n.* A muscle of the external ear of some animals, which arises from the zygoma and is inserted in the auricle; in man, the attrahens aurem.

A strong *zygomatico-auricularis* is also seen as we remove the integuments of the head [of the reindeer].
Proc. Acad. Nat. Sci. Phila., 1891, p. 232.

zygomaticofacial (zī-gō-mat″i-kō-fā'shąl), *a.* In *anat.*, of or pertaining to the zygoma and the face: specifying (*a*) the anterior connections of the zygoma, and (*b*) the anterior one of the two zygomatic canals which traverse the malar bone of man. See *zygomatic canals*, under *zygomatic*.

zygomaticotemporal (zī-gō-mat″i-kō-tem'pō-rąl), *a.* In *anat.*, of or pertaining to the zygoma and the temporal bone or fossa, specifying (*a*) the posterior connections of the zygoma with an element of the temporal bone, as the squamozygomatic of a mammal, and (*b*) the posterior one of the two zygomatic canals which traverse the malar bone of man. See *zygomatic canals*, under *zygomatic*.

zygomaticus (zī-gō-mat'i-kus), *n.*; pl. *zygomatici* (-sī). [NL.: see *zygomatic*.] One of several small subcutaneous muscles arising from or in relation with the zygoma, or malar bone.—**Zygomaticus auricularis**, a muscle of the external ear, the attrahens aurem of man, commonly called *zygomatico-auricularis* (which see).—**Zygomaticus major, zygomaticus minor**, two muscles of the face, arising from the malar bone, inserted into the orbicularis oris at the corner of the mouth, and serving to draw the corner of the mouth upward and outward, as in the act of laughing. The former is sometimes called *distortor oris*, and the latter *zygolabialis*. See first cut under *muscle*[1].

Zygomaturus (zī″gō-mą-tū'rus), *n.* [NL., < Gr. ζύγωμα, the zygomatic arch, + οὐρά, tail.] 1. A genus of large fossil marsupials from the Post-tertiary deposits of Australia.—2. [*l. c.*] A member of this genus. *Imp. Dict.*

zygomorphic (zī-gō-môr'fik), *a.* [< *zygomorph-ous* + *-ic*.] In *bot.*, same as *zygomorphous*.

zygomorphism (zī-gō-môr'fizm), *n.* [< *zygomorph-ous* + *-ism*.] The character of being zygomorphous.

zygomorphous (zī-gō-môr'fus), *a.* [< Gr. ζυγόν, yoke, + μορφή, form.] Yoke-shaped: specifically applied to flowers which can be bisected into similar halves in only one plane; monosymmetrical. Sachs extends the term to cases where bisection into similar halves is possible in two planes at right angles to one another, the halves of one section being different from the halves of the other. *Goebel.* Compare *actinomorphous*.

zygomorphy (zī'gō-môr-fi), *n.* [< *zygomorph-ous* + *-y*[3].] In *bot.*, same as *zygomorphism*.

zygomycete (zī-gō-mī'sēt), *n.* In *bot.*, a fungus belonging to the group *Zygomycetes*.

Zygomycetes (zī″gō-mī-sē'tēz), *n. pl.* [NL., < Gr. ζυγόν, yoke, + μύκης, pl. μύκητες, a mushroom.] A group of fungi characterized by the production of zygospores. It embraces the families *Mucoraceæ*, *Entomophthoraceæ*, *Mortierellaceæ*, etc.

zygomycetous (zī″gō-mī-sē'tus), *a.* In *bot.*, of or pertaining to the *Zygomycetes*.

zygon (zī'gon), *n.* [NL., < Gr. ζυγόν, a yoke, cross-bar: see *yoke*[1].] 1. A connecting rod or bar; a yoke in general.

Zygal fissures are defined as "H-shaped or quadradiate, presenting a pair of branches at either end of a connecting bar or yoke, the *zygon*." A zygal fissure contains a bar or *zygon*, a yoke in the most general sense. *B. G. Wilder.*

2. In *anat.*, an H-shaped fissure of the brain, as the paroccipital fissure. It consists of anterior and posterior stipes, anterior and posterior rami, and the connecting bar (the zygon in strictness). *B. G. Wilder.*

Zygonectes (zī-gō-nek'tēz), *n.* [NL. (Agassiz, 1854), so called because said to swim in pairs; < Gr. ζυγόν, yoke, + νήκτης, swimmer.] A large genus of small carnivorous American cyprinodonts; the top-minnows. They are closely related to the killifishes (*Fundulus*), the technical difference being chiefly in the smallness and backwardness of the dorsal fin, which has usually less than ten rays and is commonly inserted behind the front of the anal fin. The top-minnows are on the average smaller than the killifishes, being usually only 2 or 3 inches long. They are surface swimmers, and feed on insects. The species are numerous, and individuals abundant. One of the best-known is *Z. notatus*, common in ponds from Michigan to Alabama and Texas.

Zygopetalum (zī-gō-pet'ą-lum), *n.* [NL. (Hooker, 1827), so called with ref. to the union of the perianth with the foot of the column; < Gr. ζυγόν, yoke, + πέταλον, leaf (petal).] A genus of epiphytic orchids, of the tribe *Vandeæ*, type of the subtribe *Zygopetalinæ*. It is characterized by showy solitary or loosely racemed flowers with spreading sepals, the lateral ones united to the short foot of the incurved column; by a flattish lip, bearing a transverse crest at its base; and by an anther with four obovoid pollen-masses, attached by a rather broad stalk or gland. There are about 10 species, natives of tropical America from the West Indies and Colombia to Brazil. They have short leafy stems finally thickened into pseudobulbs. Their leaves are two-ranked, membranous or somewhat rigid, and slightly plicate or with elevated veins. They are highly prized in cultivation under glass, especially *Z. Mackaii*, the original species.

Zygophyceæ (zī-gō-fis'ē-ē), *n. pl.* [NL., < Gr. ζυγόν, yoke, + φῦκος, seaweed, + *-eæ*.] A former group of unicellular or multicellular freshwater algæ, not now accepted, with the cells single, or segregate, or geminate, or united in a series. Multiplication is effected by division in one direction, and by means of zygospores resulting from the conjugation of the cells. It embraced the families *Desmidiaceæ*, *Zygnemaceæ*, etc.

Zygophyllaceæ (zī″gō-fi-lā'sē-ē), *n. pl.* [NL., (Lindley, 1836), < *Zygophyll-um* + *-aceæ*.] A family of dicotyledonous choripetalous plants of the order *Geraniales*, typified by the genus *Zygophyllum*. It is characterized by flowers which usually bear a fleshy disk, five free glandless sepals, filaments augmented each by a small scale, and a furrowed angled or lobed ovary with two or more filiform ovules in each of the four or five cells. It includes about 150 species, classed in 27 genera, natives of tropical and warm climates, especially north of the equator. They are commonly shrubs or herbs with a woody base, bearing divaricate branches jointed at their nodes. Their leaves are usually opposite and pinnate or composed of two entire leaflets; the twin persistent stipules are sometimes developed into spines. The flowers are white, red, or yellow, very rarely blue, usually solitary in the axils of the stipules. The principal genera are *Zygophyllum* (the type), *Tribulus*, *Guaiacum*, and *Fagonia*; 16 genera are monotypic; two species of *Guaiacum* (lignum-vitæ) become moderate trees. The woody species are remarkable for the extreme hardness of their wood, and several, as *Guaiacum*, produce a bitter and acrid bark.

Zygophylleæ (zī-gō-fil'ē-ē), *n. pl.* [NL. (R. Brown, 1814), < *Zygophyll-um* + *-eæ*.] A tribe of dicotyledonous plants, belonging to the family *Zygophyllaceæ*, of which *Zygophyllum* is the type, and including 11 other genera.

Zygophyllum (zī-gō-fil'um), *n.* [NL. (Linnæus, 1735), < Gr. ζυγόν, yoke, + φύλλον, leaf.] A genus of plants, type of the family *Zygophyllaceæ*. It has opposite bifoliolate leaves, flowers with four or five petals, and a sessile ovary with the ovules fixed upon the axis. There are about 70 species, natives of the old world and of Australia. They are diminutive shrubs, often prostrate, and with spinescent branches. The leaves are opposite, usually composed of two fleshy leaflets armed at the base with spines which represent stipules. The flowers are white or yellow, usually marked near the base with a purple or red spot. *Z. Fabago* is the bean-caper of the Levant; its flower-buds are used as capers. The aromatic seeds of *Z. coccineum* are used by the Arabs as pepper. Several species are of local medicinal repute—*Z. Fabago* as a vermifuge, and *Z. simplex*, an Arabian plant of nauseous odor, as a remedy for diseases of the eye.

zygophyte (zī'gō-fīt), *n.* [NL., < Gr. ζυγόν, yoke, + φυτόν, plant.] A plant characterized by the production of zygospores; a plant in which reproduction consists in a confluence of two similar protoplasmic masses. See cut under *conjugation*, 4.

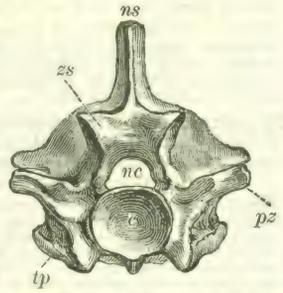
In most of these *zygophytes* there is no plain distinction of sex. *G. L. Goodale*, Physiol. Bot., p. 439.

zygopleural (zī-gō-plö'rąl), *a.* [< Gr. ζυγόν, yoke, + πλευρά, side.] Bilaterally symmetrical in a strict sense. Zygopleural forms are distinguished as *dipleural* and *tetrapleural*.

Zygosaurus (zī-gō-sâ'rus), *n.* [NL. (Eichwald, 1848), < Gr. ζυγόν, yoke, + σαῦρος, lizard.] A genus of labyrinthodonts, based on *Z. lucius* from the Middle Permian of Perm in Russia.

zygose (zī'gōs), *a.* [< Gr. ζυγόν, yoke, + *-ose* after *zygosis*.] In *bot.*, pertaining to or characteristic of zygosis or conjugation.

Zygoselmidæ (zī-gō-sel'mi-dē), *n. pl.* [NL., < *Zygoselmis* + *-idæ*.] A family of dimastigate eustomatous flagellate protozoans, named from the genus *Zygoselmis*. They have two similar vibratile flagella, and the endoplasm includes no pigmentary bands.



Zygoselmis (zī-gō-sel'mis), *n.* [NL., < Gr. ζυγόν, yoke, + σελμίς, noose.] The typical genus of *Zygoselmidæ*. These animalcules are highly plastic and variable in form, with two unequal flagella from the fore end, at the base of which are the mouth and pharynx. *Z. nebulosa* and *Z. inæqualis* inhabit fresh water.

zygosis (zī-gō'sis), *n.* [NL., < Gr. ζύγωσις, a joining (used in sense of balancing), < ζυγοῦν, join, yoke. see *zygoma*.] 1. Asexual intercourse of protoplasmic bodies, resulting in their confluence and coalescence; the process and result of conjugation in protozoans or other of the lowest organisms. See *conjugation*, 4.—2. [*cap.*] [NL. (Förster, 1869).] A genus of hymenopterous insects.—3. In *bot.*, conjugation; the fusion or union of two distinct cells or protoplasmic masses for reproduction. See *conjugation*, 4.

zygosperm (zī'gō-spėrm), *n.* [NL., < Gr. ζυγόν, yoke, + σπέρμα, seed.] In *bot.*, same as *zygospore*.

zygosphene (zī'gō-sfēn), *n.* [< Gr. ζυγόν, yoke, + σφήν, wedge.] In *herpet.*, the wedge-shaped process from the fore part of the neural arch

of the vertebræ of serpents and some lizards, which fits into a corresponding fossa, the zygantrum, on the posterior part of the neural arch of a preceding vertebra, and serves thus to interlock the series of arches more effectually than would be done by zygapophyses alone. Compare cut under *zygantrum*.

Anterior face of a dorsal vertebra of the python, showing *zs*, zygosphene; *pz*, prezygapophysis; *tp*, transverse process; *ns*, neural spine; *nc*, neural canal; *c*, centrum of the procœlian vertebra, whose concavity fits the convexity of the centrum shown under *zygantrum*.

zygosporangium (zī″gō-spō-ran′ji-um), *n.*; pl. *zygosporangia* (-ä). [NL., < Gr. *ζυγόν*, yoke, + *σπορά*, seed, + *ἀγγεῖον*, vessel.] In *bot.*, a sporangium in which zygospores are produced.

zygospore (zī′gō-spōr), *n.* [NL., < Gr. *ζυγόν*, yoke, + *σπορά*, seed.] In *bot.*, a spore formed in the process of reproduction in some algæ and fungi by the union or conjugation of two similar gametes or protoplasmic masses: called *isospore* by Rostafinski. Also *zygosperm*, *zygote*. See *spore*[2], *conjugation*, 4 (with cut).

Zygosporeæ (zī-gō-spō′rē-ē), *n. pl.* [NL., < Gr. *ζυγόν*, yoke, + *σπορά*, seed, + *-εæ*.] In Sachs's system of classification, a group of plants characterized by the production of zygospores. It is no longer maintained.

zygosporophore (zī-gō-spor′ō-fōr), *n.* [NL., < Gr. *ζυγόν*, yoke, + *σπορά*, seed, + *φέρειν* = E. *bear*[1].] In *bot.*, a club-shaped or conical section of a hypha adjoining a gamete-cell after its ★delimitation. *De Bary*.

zygote (zī′gōt), *n.* [< Gr. *ζυγωτός*, yoked, < *ζυγοῦν*, yoke: see *zygoma*.] 1. Same as *zygospore*.—2. See the supplement.

Zygotrocha (zī-got′rō-kä), *n. pl.* [NL., < Gr. *ζυγόν*, yoke, + *τροχός*, wheel.] In Ehrenberg's classification, a division of rotifers.

zygotrochous (zī-got′rō-kus), *a.* Of or pertaining to the *Zygotrocha*.

zygozoöspore (zī-gō-zō′ō-spōr), *n.* [NL., < Gr. *ζυγόν*, yoke, + *ζῷον*, animal, + *σπορά*, seed.] In *bot.*, a motile zygospore.

zylo-. For words so beginning, see *xylo-*.

zylonite, *n.* Same as *xylonite*.

zymase (zī′mās), *n.* [< Gr. *ζύμη*, leaven, + *-ase* (after *diastase*).] The enzyme of yeast which causes the decomposition of sugars into alcohol and carbon dioxid. *Buchner*.

zyme (zīm), *n.* [< Gr. *ζύμη*, leaven, < *ζέειν*, boil: see *yeast*.] 1. A ferment.

A yeast and a ferment signify the same thing, and, as a *zyme* also means a ferment, the term zymotic has arisen to express a certain class of diseases.
Nineteenth Century, XXIV. 843.

2. The living germ or other poison, of whatever nature, which is believed to be the specific cause ★of a zymotic disease.

zymic (zim′ik), *a.* [Also improperly *zumic*; < *zyme* + *-ic*.] Pertaining to or of the nature of leaven: applied by Pasteur to the microbes which act as ferments only when the air is excluded, as distinguished from those which require the presence of air.

zymogen (zī′mō-jen), *n.* [< Gr. *ζύμη*, leaven, + *-γενής*, producing.] A substance from which an enzym may be formed by internal change. Also *zymogene*.

A ferment is found to exist as a *zymogen* in the resting seed, which is readily developed by warmth and weak ★acids into an active condition. *Nature*, XLI. 380.

zymogenic (zī-mō-jen′ik), *a.* [As *zymogen* + *-ic*.] Exciting fermentation: as, *zymogenic* organisms.

zymogenous (zī-moj′e-nus), *a.* [As *zymogen* + *-ous*.] Same as *zymogenic*.

zymoid (zī′moid), *a.* [< Gr. *ζυμοειδής, ζυμώδης*, like leaven, < *ζύμη*, leaven, + *εἶδος*, form.] Resembling a zyme or ferment.

zymologic (zī-mō-loj′ik), *a.* [< *zymolog-y* + *-ic*.] Of or pertaining to zymology. Also *zumologic*.

zymological (zī-mō-loj′i-kal), *a.* [< *zymologic* + *-al*.] Same as *zymologic*.

zymologist (zī-mol′ō-jist), *n.* [< *zymolog-y* + *-ist*.] One who is skilled in zymology. Also *zumologist*.

zymology (zī-mol′ō-ji), *n.* [Also *zumology*; < Gr. *ζύμη*, leaven, + *-λογία*, < *λέγειν*, speak: see *-ology*.] The science of or knowledge concern★ing fermentation.

zymolysis (zī-mol′i-sis), *n.* [< Gr. *ζύμη*, leaven, + *λύσις*, dissolving.] Same as *zymosis*, 1.

zymolytic (zī-mō-lit′ik), *a.* [< *zymolysis* (*-lyt-*) + *-ic*.] Same as *zymotic*.

Prof. Salkowski . . . concluded from his researches that fermentative (*zymolytic*) processes are continually taking place in living tissues. *Nature*, XLI. 599.

zymome (zī′mōm), *n.* [< Gr. *ζύμωμα*, a fermented mixture, < *ζυμοῦν*, leaven, ferment, < *ζύμη*, leaven: see *zyme*.] An old name for the gluten of wheat that is insoluble in alcohol. Also *zimome*.

zymometer (zī-mom′e-tėr), *n.* [< Gr. *ζύμη*, leaven, + *μέτρον*, measure.] An instrument for ascertaining the degree of fermentation of a fermenting liquor. Also *zymosimeter*.

zymophyte (zī′mō-fīt), *n.* [< Gr. *ζύμη*, leaven, + *φυτόν*, plant.] A bacterioid ferment that liberates fatty acids from neutral fats. *Billings*.

zymoscope (zī′mō-skōp), *n.* [< Gr. *ζύμη*, leaven, + *σκοπεῖν*, view.] An instrument, contrived by Zenneck, for testing the fermenting power of yeast, by bringing it in contact with sugar-water and observing the quantity of carbonic anhydrid evolved. *Watts*.

zymosimeter (zī-mō-sim′e-tėr), *n.* [< Gr. *ζύμωσις*, fermentation, + *μέτρον*, measure.] Same as *zymometer*.

zymosis (zī-mō′sis), *n.* [NL., < Gr. *ζύμωσις*, fermentation, < *ζυμοῦν*, ferment: see *zymome*.] 1. Fermentation of any kind. Also *zymolysis*.—2. An infectious or contagious disease.

zymotechnic (zī-mō-tek′nik), *a.* [< Gr. *ζύμη*, leaven, + *τέχνη*, art.] Relating to the art of inducing and managing such fermentations as are useful in the arts; pertaining to zymotechnics.

zymotechnical (zī-mō-tek′ni-kal), *a.* [< *zymotechnic* + *-al*.] Same as *zymotechnic*.

zymotechnics (zī-mō-tek′niks), *n.* [Pl. of *zymotechnic* (see *-ics*).] The art of managing fermentation. Compare *zymurgy*.

zymotic (zī-mot′ik), *a.* and *n.* [< Gr. *ζυμωτικός*, < *ζύμωσις*, fermentation: see *zymosis*.] **I.** *a.* Pertaining to fermentation; of the nature of fermentation. Also *zymolytic*.—**Zymotic disease,** any disease, such as malaria, typhoid fever, or smallpox, the origin and progress of which are due to the multiplication within the body of a living germ introduced from without.—**Zymotic papilloma,** frambœsia.

II. *n.* Same as *zymotic disease*. See I.

zymotically (zī-mot′i-kal-i), *adv.* [< *zymotic* + *-al* + *-ly*[2].] In a zymotic manner; according to the manner or nature of zymotic diseases.

zymurgy (zī′mėr-ji), *n.* [< Gr. *ζύμη*, leaven, + *ἔργον*, work (cf. *metallurgy*, etc.).] That department of technological chemistry which treats of the scientific principles of wine-making, brewing, and distilling, and the preparation of yeast and vinegar, in which processes fermentation plays the principal part. *Watts*.

Zyrichthys, *n.* See *Xyrichthys*. *Swainson*, 1839.

zythepsary† (zī-thep′sa-ri), *n.* [Irreg. < Gr. *ζῦθος*, beer, + *ἑψειν*, boil (related to *πέσσειν*, boil, cook: see *peptic*), + *-ary*.] A brewery or brew-house. [Rare.]

zythum (zī′thum), *n.* [< L. *zythum*, < Gr. *ζῦθος*, beer, applied to the beer of Egypt and also to that of the northern nations (*κοῦρμι*).] A kind of beer made by the ancient Egyptians.

Zyxomma (zik-som′ä), *n.* [NL. (Rambur, 1842), prop. *Zeuxomma*, < Gr. *ζεῦξις*, a joining (< *ζευγνύναι*, join), + *ὄμμα*, eye: see *ommatidium*.] A genus of Indian dragon-flies, of the family *Libellulidæ*, having the head large, the face narrow, the eyes of great size, and the first three abdominal segments vesicular.

SUP.

SUPPLEMENT

simuliid (si-mū'li-id), *n.* and *a.* **I.** *n.* A member of the dipterous family *Simuliidæ*.

II. *a.* Having the characters of or belonging to the family *Simuliidæ*.

simulism (sim'ū-lizm), *n.* [*simul(ate)* + *-ism.*] A term proposed to replace *mimicry*, in referring to the resemblances of animals, as implying a less conspicuous resemblance and the absence of the idea of a conscious or designed resemblance.

The word "mimicry" is also adversely criticised, as implying conscious resemblance, which is not known to exist, and "*simulism*," "simulation," "simulating," are substituted "as being at once expressive, explanatory and euphonious, and free from the inference of designed and cognitive resemblance." *Nature*, March 30, 1905, p. 521.

Simultaneous variation. See ★*variation*.

sina (sē'nä), *n.* [From some form (ML. *Sina*, Tagalog *Sina?*) of *China.*] A Chinese silkworm, larva of *Bombyx sinensis*.

sinabatan (sē-nä-bä-tän'), *n.* [Also *sinabotan*; Tagalog *sinabatan.*] A mat made by the natives of the Philippine Islands from the leaf-fibers of the screw-pine, *Pandanus spiralis*.

Sinæan (si-nē'an), *n.* Of or pertaining to the Sinæ, an ancient people supposed to be the Chinese.

> To Paquin of *Sinæan* kings; and thence
> To Agra and Lahor of Great Mogul,
> Down to the Golden Chersonese.
> *Milton*, Paradise Lost, xi. 390.

sinalbin (si-nal'bin), *n.* [L. *sin(api)*, mustard, + *alb(us)*, white, + *-in*[2].] A colorless compound, $HO.C_6H_4.CH_2N:C(SC_6H_{11}O_5).O.SO_3.C_{16}H_{24}O_5N.5H_2O$, contained in the seed of white mustard. It crystallizes in glassy lustrous needles and is colored intensely yellow by a very minute trace of alkali.

sinamay (sē-nä-mä'ē or -mī'), *n.* [Bisaya *sinamáy.*] A fabric made by the natives of the Philippine Islands from the fibers of the leaf-stalks of the abaca (*Musa textilis*), usually mixed with fibers of silk, cotton, piña, etc.

sinapic (si-nap'ik), *a.* Pertaining to sinapin or sinapic acid.—**Sinapic acid,** a pale-yellow compound, $HO.C_6H_2(^4OCH_3)_2(^5)CH:CH.COOH$, prepared by the action of barium-hydroxid solution on sinapin. It crystallizes in needles or small prisms and melts at 186.5–192° C. Also called *3,5-dimethoxy-4-hydroxycinnamic acid.*

sinapize (sin'a-pīz), *v. t.*; pret. and pp. *sinapized*, ppr. *sinapizing.* [LL. *sinapizare*, poultice with mustard, < *sinapi*, mustard.] To impregnate with mustard: said of a poultice or a plaster so treated.

sinapoline (si-nap'ō-lin), *n.* [L. *sinapi*, mustard, + *-ol* + *-ine*[2].] A colorless compound, $CH_2:CH.CH_2NHCONHCH_2CH:CH_2$, prepared by the action of lead hydroxid on allyl mustard-oil. It crystallizes in plates, melts at 100° C., and is volatile with steam. Also called ab- or symmetrical diallyl carbamide.

sincaline (sin'ka-lin), *n.* [Also *sinkalin*, *sinkaline*, < L. *sin(api)*, mustard, + *-cal* or *-kal?* + *-ine*[2].] Same as *choline* or ★*bilineurine*.

Sinceny pottery. See ★*pottery*.

sinder[1], *n.* 2. An amended spelling of *cinder*.

Sindhi (sin'dē or sind'hē), *a.* and *n.* [Also *Sindi*; Sindhi *Sindhi*, < *Sindh*, Sindh, < Skt. *Sindhu*, the Indus, the region of the Indus, Sindh: see *Indian.*] **I.** *a.* Of or pertaining to Sindh or its people or their language.

II. *n.* 1. A native of Sindh, or one whose native tongue is Sindhi.—2. An Aryan language spoken principally in Sindh, India.

Sindi, *n.* See ★*Sindhi*.

sine[2], *n.*—**Hyperbolic sine,** hysin $x \equiv \sinh x = \frac{1}{2}(e^x - e^{-x})$. See ★*shin*[3].—**Sine law.** See ★*law*[1].

sine-compass (sīn'kum-pas), *n.* A sine galvanometer (which see, under *galvanometer*).

sine-curve (sīn'kėrv), *n.* Same as *curve of sines.* See *curve* and *sinusoid.*

Sinesian (si-nē'zhian), *a.* [L. *Sinæ.* See *Sinic.*] Of or pertaining to China; Sinic: as, the *Sinesian* countries of Eastern Asia.

The *Sinesian* countries of Eastern Asia—those which owed their emergence from barbarism and many centuries of fairly regular government and social order to the civilizing influences, unaided by the sword, of the great Middle Kingdom.

Athenæum, Feb. 13, 1904, p. 200.

sine-wave (sīn'wāv), *n.* A wave in which the vibrations of the particles of the transmitting medium are simple harmonic motions. *H. Hertz* (trans.), Electric Waves, p. 17.—**Sine-wave current,** in *elect.*, an alternating current in which the wave-form is sinusoidal.—**Sine-wave telegraphy,** a system of telegraphy in which a single-phase alternating current, the wave-form of which is approximately sinusoidal, is used for signaling.—**Sine-wave transmitter,** in *teleg.*, an instrument for sending the signaling impulses used in sine-wave systems of telegraphy. The characteristic feature is an automatic device by which the circuit is opened and closed only when the current intensities pass through zero.

sing, *v. i.*—**To sing out.** (*b*) To sing with the full strength of the voice.

> "*Sing out*"—shouted one gentleman in a white great-coat. "Don't be afraid to put the steam on, old gal," exclaimed another. . . . "Sing louder," said Mrs. Jennings Rodolph.
> *Dickens*, The Mistaken Milliner, in Sketches by Boz, I. [337.

Singing glass. See ★*glass*.

Singapore cedar. Same as *Moulmein* ★*cedar*.

singeing-plate (sin'jing-plāt), *n.* A heated metallic plate or cylinder over which cotton cloth intended for calico-printing is rapidly drawn, so as to singe or burn off the nap of short projecting fibers without scorching the cloth itself. A row of small gas-flames is now generally used for this purpose.

singer[1], *n.*—**Singer's nodes.** See ★*node*.

singing-tube (sing'ing-tūb), *n.* The glass tube used in the production of a singing-flame. See *singing-flame*. *J. M. Baldwin*, Dict. of Philos. and Psychol., I. 610.

single[1]. **I.** *a.*—**Single court.** See ★*court*.

II. *n.* 1. (*f*) In *whist*, the score made by the winners when the game is 5 points up and rubbers are played, if the losers of any game are 3 or 4 up: as, '*single*, double, and the rub.' (*g*) In the extraction of antimony from its native sulphid, the manufacturers' name for the first crude product from melting the ore with scrap-iron. It generally contains about 91.5 per cent. antimony, 7 per cent. iron, and 1 per cent. sulphur. (*h*) In *golf*, two players playing against each other. (*i*) In furniture, silverware, and the like, a separate piece not belonging to a set.

> Fine specimens, even if '*singles*,' have been added wherever possible.
> *R. S. Clouston*, in Burlington Mag., V. 381.

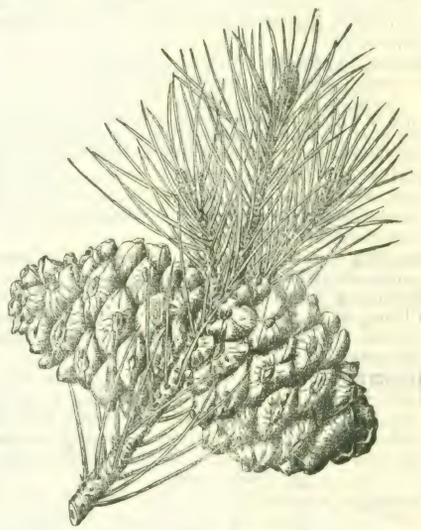
5. One strand of sliver, roving, thread, or yarn.—6. *pl.* A commercial name in England for thin sheet-steel or -iron used as a foundation for tin-plate, having a thickness ranging from 0.238 to 0.35 of an inch, or from No. 4 to No. 20 B. W. G.

single-beat (sing'gl-bēt), *a.* Having only one beat: noting valves which have a single bearing-surface or seat, as ordinary lifting-valves: distinguished from *double-beat* valves, which have two seats, so that they may be in equilibrium of pressures above one face and below the other. Cornish valves and most puppet-valves for large engines are double-beat. Check-valves of small area are single-beat.

Both valves are of the *single-beat* poppet, or mushroom type, and seat vertically along the same axis but in opposite directions, the admission valve opening downward and the exhaust upward.

Elect. World and Engin., Sept. 24, 1904, p. 517.

single-break (sing'gl-brāk), *a.* In *elect.*, opening the circuit at one point only: said of certain types of switch. *Jour. Brit. Inst. Elect. Engin.*, 1901–02, p. 1210.



single-gear (sing'gl-gēr), *n.* A transmission, usually by toothed wheels, in which only one pair of wheels or one pair of transmission elements is involved: usually one wheel and one pinion, for the gain of power and loss of speed or for a gain in velocity with corresponding reduction of power.

single-geared (sing'gl-gērd), *a.* Directly driven by belt or other transmission without the interposition of a reducing-gear shaft: used of speed-lathes or drill-presses having no back-gear on the head-stock, and of motor-car transmissions where the motor turns slowly enough to render a counter-shaft and gear-train unnecessary.

single-hung (sing'gl-hung), *a.* Having a cord and pulley on one side only, the single weight being a sufficient counterpoise: said of a window-sash. Such fitting is used for narrow sashes only, or else rollers are put on the other side to prevent the sash from binding on the window-frame.

single-leaf (sing'gl-lēf), *n.* The one-leaved piñon or nut-pine, *Pinus monophylla*: so called because there is only one leaf in a bundle. See cut in next column.

single-phase (sing'gl-fāz), *a.* In *elect.*, noting a system of electric distribution by alternating currents produced by a single alternating electromotive force, in which therefore all the currents are in phase with each other, that is, reverse simultaneously in direction, or differ in phase only so far as is due to the different character of the circuits in which they flow.—**Single-phase alternater,** a generator supplying alternating current to a single-phase circuit, as distinguished from the machines for producing simultaneously two or more currents differing in phase such as are used in polyphase systems.—**Single-phase circuit,** an ordinary two-wire circuit for the transmission of an alternating current, as distinguished from the circuits in a polyphase system.—**Single-phase current,** an ordinary alternating current the wave-form of which is sinusoidal, sometimes with superimposed harmonics, as distinguished from the two or more currents, differing in phase, that are employed in polyphase systems.—**Single-phase generator.** See ★*generator* and ★*single-phase alternater*.

Single-leaf (*Pinus monophylla*).

single-phaser (sing'gl-fā″zėr), *n.* In *elect.*, a single-phase alternating-current generator. *Jour. Brit. Inst. Elect. Engin.*, 1899–1900, p. 246.

single-riveted (sing'gl-riv″et-ed), *a.* Having only one row of rivets parallel to the joint or seam: distinguished from *double-* or *chain-riveted*, where two rows of rivets are used.

single-seeded (sing'gl-sē″ded), *a.* Same as *monospermous*.

single-stage (sing'gl-stāj), *a.* Having only one stage; completed in one operation; not continued through two or more similar stages: used of air-compressors and steam-turbines. A *single-stage* compressor is one in which the compression is completed in the first cylinder; a *single-stage* turbine, one in which the steam passes through an expansion-nozle only once.

single-sticker (sing'gl-stik″ėr), *n.* A sloop or cutter; a vessel having but one mast. [Colloq.]

single-taxer (sing'gl-tak″sėr), *n.* One who advocates the levying of all, or practically all, taxation upon a single object, as land, capital, or consumption; specifically, one who accepts the doctrine of Henry George that all taxes should be levied upon the value of land, exclusive of all improvements due to industry. The measure, if fully carried out, would divert to the government the rent of the land itself.

Single-taxers maintain that the reason the wages of labor do not increase as material progress advances is because rent, or the price paid for the use of land, is continually increasing. *Science*, Dec. 13, 1901, p. 915.

single-valued (sing'gl-val″ūd), *a.* Taking under specified conditions only a single value.—**Single-valued function,** in *math.*, one which by all continuations within a certain region always takes the same value at any point: said to be *single-valued* in that region.

singling (sing'gling), *n.* A manufacturers' name for the first step in the reduction of antimony from its ore, namely, fusion with scrap-iron in crucibles. See ★*single*, 1 (*g*).

sing-sing[2] (sing'sing), *n.* Same as *singsong*, *n.*, 3. [Colloq.]

> The number of native songs is enormous, and musical evenings or "*sing-sings*" are a regular institution.
> *Geog. Jour.* (R. G. S.), XIII. 664.

singular, *a.*—**Non-essential singular point.** See ★*point*[1].—**Singular point of a function.** See ★*point*[1].

singularity, *n.*—**Accidental singularity,** in *math.*, a singularity at a non-essential singular point.—**Compound singularity** in *geom.*, one involving two or more ordinary singularities—these being called 'ordi-

nary,' because, without limiting the generality of a curve of given order or class by any special hypothesis, they may all present themselves.—**Logarithmic singularity**, in *math.*, a point about which a function acts like a logarithm.—**Non-essential singularity**, in *math.*, a value of the variable of a function for which the function has a determinate infinite value. The term was proposed by Cathcart.—**Ordinary singularity**. See *singularity*, 3, and *compound* ★*singularity*.—**Singularity of the first class**, in *math.*, accidental singularity.—**Singularity of the second class**, in *math.*, an essential singularity of the simplest kind.—**Singularity of the third class**, in *math.*, a singularity resulting from the union of an infinity of those of the second class.

sinh (pron. shin). An abbreviation for 'hyperbolic sine,' a function having a relation to a rectangular hyperbola similar to that of the ordinary trigonometric sine to a circle.

Sinicize (sin'i-sīz), *v. t.*; pret. and pp. *Sinicized*, ppr. *Sinicizing*. [*Sinic* + *-ize.*] To make similar in habits and thought to the Chinese. *Encyc. Dict.*

Sinico-Japanese (sin'i-kō-jap-a-nēs″), *n.* Belonging both to China and to Japan.

The science of old Japan was equally modelled upon that of China. Nothing original of any importance has yet been found in the *Sinico-Japanese* literature of the last millenium. *Athenæum*, April 1, 1905, p. 396.

Sinify (sin'i-fī), *v. t.*; pret. and pp. *Sinified*, ppr. *Sinifying*. [ML. *Sina*, China, + *-fy.*] To make Chinese or similar to the Chinese in habits and thought. *Encyc. Dict.*

sinigrin (sin'i-grin), *n.* Same as *potassium myronate* (which see, under *myronate*).

Siniperca (sin-i-pėr'kä), *n.* [NL., < ML. *Sina*, China, + L. *perca*, perch.] A genus of serranoid fishes found in the rivers of China, Manchuria, and Japan.

sinistraural (sin-is-trâ'ral), *a.* [L. *sinister*, left, + *auris*, ear, + *-al*[1].] Noting a condition in which one naturally turns the left ear rather than the right when listening to some faint or distant sound. *G. M. Gould*, in Pop. Sci. Mo., Aug., 1904, p. 361.

sinistrin (sin'is-trin), *n.* [L. *sinister*, left, + *-in*[2].] 1. Same as *inulin*.—2. A colorless, pulverulent, levorotatory compound, $C_6H_{10}O_5$, contained in the white or red sea-onion or squill, *Urginea Scilla*. It is probably identical with achroödextrine.

sinistrocular (sin-is-trok'ū-lär), *a.* [L. *sinister*, left, + *oculus*, eye, + *-ar*[3].] Noting a condition in which one naturally uses the left eye in monocular work, as sighting a gun, looking through a microscope or telescope, etc. *G. M. Gould*, in Pop. Sci. Mo., Aug., 1904, p. 361.

sinistrodextral (sin″is-trō-deks'tral), *a.* [L. *sinister*, left, + *dexter*, right, + *-al*[1].] From left to right.

sinistromanual (sin″is-trō-man'ū-al), *a.* [L. *sinister*, left, + *manus*, hand, + *-al*[1].] Left-handed.

The bow and arrow, the spear, boomerang, club, etc., could be used as well with the left hand by the *sinistromanual*. *G. M. Gould*, in Pop. Sci. Mo., Aug., 1904, p. 363.

sinistromanuality (sin″is-trō-man-ū-al'i-ti), *n.* [*sinistromanual* + *-ity.*] Left-handedness.

No pupil with *sinistromanuality* established can learn piano-playing easily. *G. M. Gould*, in Pop. Sci. Mo., Aug., 1904, p. 363.

sinistropedal (sin″is-trō-ped'al), *a.* [L. *sinister*, left, + *pes* (*ped-*), foot, + *-al*[1].] Left-footed. *G. M. Gould*, in Pop. Sci. Mo., Aug., 1904, p. 361.

sinistrorsally (sin-is-trôr'sal-i), *adv.* Left-handedly; with turnings to the left.

Sinitic (si-nit'ik), *a.* Same as *Sinic*.

sink, *v. i.* **16.** (*a*) To drive a mine or exploration shaft downward through the earth's surface.

Nor do we, as in the past, throw away vast sums of money in *sinking* for coal in Cambrian or Silurian rocks. *Science*, Oct. 9, 1903, p. 462.

(*b*) To run a shaft or drift in any direction into the earth in search of mineral or ore.

sink, *n.* **8.** In *mining:* (*b*) The amount by which the shaft-level is lowered by a blast in sinking operations. (*c*) The distance inward, or depth, to which the excavation for a shaft or drift is to be carried. (*d*) The lowest point in the shaft, toward which the drainage flows.—**10.** In *geom.*, a place of transition from space of n into space $n-1$ dimensions. —**11.** In *elect.*, in the theory of the flow of current in plane sheets, a point at which the current leaves the sheet.

We may investigate, first, the simple case of one source and one *sink* in an infinite plane sheet of thickness δ, and conductivity k. *Encyc. Brit.*, XXVIII. 18.

sink-boat (singk'bōt), *n.* An oblong box submerged to the rim in the water, used as a boat and for concealment by persons engaged in shooting wild-fowl; a sink-box; a battery.

sink-box (singk'boks), *n.* Same as ★*sink-boat*.

sinker, *n.* **4.** Same as ★*dead-head*, 4.—**5.** A heavy dumpling or doughnut; a dough-sinker; a dough-boy. [Slang.]

The New York Dairy Lunch, with its mirrored and marbled bathroom decoration, its elevating Bible texts, and depressing "*sinkers*" . . . would never make a success with Parisians. *F. B. Smith*, How Paris Amuses Itself, p. 48.

6. A (silver) dollar. [Slang.]

I waited for him [a city tramp] nearly an hour, when he returned with a "poke-out" (food given at the door) and "a *sinker*" (a dollar). I of course was a little surprised, and asked for details. *Josiah Flynt*, in The Century, March, 1894, p. 713.

7. See the extract.

The parasite is attached to the host by "*sinkers*" which consist of specially modified, but true, rootlets, although in function they simulate the haustoria of other parasites. The *sinkers* penetrate the bark of the host and obtain nourishment for the parasite from the growing tissues beneath it, much as food-sap is obtained from the soil by normal plants. The parasitism is complete. Examples: The mistletoes. *Amer. Nat.*, Jan., 1908, p. 22.

sinker-boat (sing'kėr-bōt), *n.* Same as ★*catamaran*, 4.

sink-head (singk'hed), *n.* A riser; a column of metal which is cast as a part of a large casting for the purpose of increasing the soundness of the casting. It exerts a pressure to fill all cavities while the metal in the mold is fluid and is shrinking during the cooling process, and all bubbles of gas tend to rise into it and remain there.

sinking, *n.* **5.** In *piquet*, the manœuver of calling only a part of a combination, so as to conceal the strength of the hand for playing: usually resorted to only when the player knows his adversary has no better call.

sinking-fire (sing'king-fīr), *n.* A forge in which wrought-iron scrap or refined pig-iron is partly melted or welded together by means of a charcoal fire and a blast.

sinking-lift (sing'king-lift), *n.* In *mining:* (*a*) An elevating apparatus especially designed for use in sinking shafts. (*b*) A sinking-pump for use at the bottom of a shaft while it is being sunk.

sink-pipe (singk'pīp), *n.* **1.** The outflow-pipe from a sink.—**2.** The pipe which enters a sink in a mine to remove the water which drains into the sink from higher points.

Sino-Australian (sīn″ō-âs-trā'li-an), *a.* [L. *Sinæ*, the Chinese, + E. *Australian*.] Noting a hypothetical continent, restored by M. Neumayr by interpretation of the strata and believed to have existed in the Jurassic and Cretaceous periods, and perhaps in the Tertiary. Including Australia on the south, it embraced the East Indies, the Malay peninsula, and portions of China. *Amer. Nat.*, Sept., 1904, p. 646.

Sino-Japanese (sin'ō-jap-a-nēs″), *a.* [L. *Sinæ*, the Chinese, + E. *Japanese*.] Relating to both China and Japan; Sinico-Japanese: as, *Sino-Japanese* art, literature, or religion.

We must place to the front the fact that *Sino-Japanese* design is almost exclusively an art of contours, of values of movement, and, in its own way, not ours, of space-composition. *B. Berenson*, in Burlington Mag., III., 13.

Sinophile (sin'ō-fil), *n.* [Gr. Σῖναι, Chinese, + φιλεῖν, love.] One who loves or admires the Chinese; an admirer of the Chinese nation or of Chinese civilization.

That the author [E. R. Scidmore] is no *sinophile* will be gathered from the following: No one knows, or ever will really know, the Chinese—the heart and soul and springs of thought of the most incomprehensible, unfathomable, inscrutable, contradictory, logical and illogical people on the earth. *Outlook*, July 21, 1900, p. 693.

Sinoxylon, *n.*—**Red-shouldered sinoxylon**, an American bostrychid beetle, *Sinoxylon basilare*, the larva of which bores into the stems of the grape and into the twigs of the apple and peach. See cut at *Sinoxylon*.

sinse, *adv.*, *prep.*, and *conj.* An amended (restored) spelling of *since*.

sinter[1], *n.*—**Ceraunien sinter**, the glassy material of fulgurite.

sinter (sin'tėr), *v. t.* and *i.* To compact or become compacted together by partial fusion, so as to resemble sinter. See ★*sintering*.

A fine crystalline precipitate of methylmercaptothymine came down, which weighed 9.2 grams, or 20 per cent of the calculated. It crystallized in strings of small plates from water, in which it is difficultly soluble when hot and nearly insoluble when cold. On heating, it *sintered* at about 225° and melted at 233°. *Amer. Chem. Jour.*, May, 1903, p. 487.

sintering (sin'tėr-ing), *n.* The incomplete union into a solid mass of the particles of a powder heated so that softening but not perfect fusion occurs.

Sintering, therefore, may be defined as diffusion at a temperature below the melting point of the components or of the resulting solid solution. *Sci. Amer. Sup.*, Dec. 17, 1904, p. 24207.

sinuitis (sin-ū-ī'tis), *n.* [NL., < L. *sinus* (*sinu-*), sinus, + *-itis.*] Same as ★*sinusitis*.

sinus, *n.*—**Accessory sinus.** Same as *air-sinus* (which see, under *sinus*).—**Axial sinus.** See ★*axial*.—**Cerebral sinuses**, sinuses of the dura mater.—**Circumintestinal sinus**, in certain chætopod worms, a blood-sinus lying between the epithelial and the muscular walls of the intestine.—**Intestinal sinus**, in some arthropods, as *Apus*, a large median cavity, a subdivision of the body-cavity, in which lies the enteric canal. Compare *lateral* ★*sinus*.—**Lateral sinus**, in some arthropods, as *Apus*, one of the cavities in which the muscles are contained. Compare *intestinal* ★*sinus*.—**Mastoid sinus**, a vacuity, or air-space in the mastoid bone: correlated with *frontal sinus*, *maxillary sinus*, etc.—**Median sinus**, in many of the *Brachiopoda* (*Spirifer*, *Athyris*, *Rhynchonella*), a median depression of the shell, usually on the ventral valve, accompanied by a median fold on the opposite or dorsal valve.—**Pericardial sinus**, in arthropods, a cavity lying in the median dorsal region and containing the heart.—**Pyriform sinus**, a small fossa on the side of the larynx external to the aryepiglottic fold.—**Sinus caroticus**, a prolongation of the cavernous sinus into the carotid canal.—**Sinus præcervicalis**, a sac-like structure in the embryo formed by the folding in of the posterior branchial arches. *W. Bateson*, Study of Variation, p. 176.—**Sinus terminalis**, a blood-channel which surrounds the vascular area in the embryo.—**Vertebral sinuses**, two large venous sinuses which extend the entire length of the spinal canal along the bodies of the vertebræ.

sinusitis (sī-nu-sī'tis), *n.* [*sinus* + *-itis.*] Inflammation of any sinus, whether an air-sinus or a sinus of the dura mater. *Med. Record*, Aug. 17, 1907, p. 256.

Sinusoidal circulation. See ★*circulation*.—**Sinusoidal current**, in *elect.*, an alternating current the wave-form of which is a curve of sines.—**Sinusoidal variation**, in *elect.*, a fluctuation of current or electromotive force such that the variations of intensity are graphically indicated by a curve of sines.

sion, *n.* A simplified (and former) spelling of *scion*.

Siouan, *a.* **II.** *n.* The linguistic stock which embraces the Siouan languages and includes the languages of the Sioux or Dakota, Hidatsa, Crow, Mandan, Omaha, Ponca, Osage, Winnebago, Kansa, Quapaw, Iowa, Oto, Missouri, Biloxi, Tutelo, and Catawba.

sipapu (sē-pä-pö'), *n.* [Hopi.] An opening somewhere in the Grand Cañon of the Colorado, according to the legends of the Hopi, through which they reached the surface of the earth; also, its symbolic representation on altars, kivas, and other objects.

The Snake chief at Cipaulovi has no tiponi, and consequently no altar. The only objects at the end of the kiva, where the altar would have been had he possessed a tiponi, was a row of twenty snake whips leaning against the ledge of the rear wall, behind the *sipapu*. *J. W. Fewkes*, in An. Rep. Bur. Amer. Ethnol., 1894–95, [p. 279.

sipho (sī'fō), *n.*; pl. *siphones* (si-fō'nēz). [NL.: see *siphon*.] In the shell-bearing cephalopods, the fleshy or muscular tube extending from the posterior end through the internal chambers. Also *siphon*.

siphon, *n.* **2.** (*d*) (2) A tubular anal organ of the aquatic bugs of the family *Nepidæ*, probably respiratory in function. (*h*) In siphonophorans, a feeding zoöid or hydranth.—**Electric siphon**, a siphon provided with an electrically operated device for automatically removing the accumulation of gases in the neck of the tube.—**Exhalant siphon**, the more dorsal of the two siphons at the posterior end of many lamellibranch mollusks, being the tube through which the water passes away from the gills after having been admitted to them through the ventral or inhalant siphon.—**Inhalant siphon**, in bivalve mollusks, the siphon through which water enters the mantle-cavity.—**Inverted siphon**, an offset in a continuous line of pipe by which the pipe is carried under and thus avoids an intervening obstacle to its straight alinement: usually limited to pipes or open channels which in their straight portions are not under pressure, as in a sewer passing under a stream.—**Mitscherlich's siphon** a simple form of siphon filled by suction and provided with a bulb safety-device to prevent corrosive liquids from entering the mouth.—**Siemens's siphon**, a contrivance by which the gases from the producer are pressed down to the level of the furnace. It consists of a horizontal cooling-tube connecting the uptake-tube with the downcomer. The gases passing through the cooling-tube gain from 50 to 60 per cent. in weight and pass into the descending tube by overbalancing the ascending column, although both tubes are of equal length. In the modern producers air and steam are supplied under pressure, so that the siphon tubes are no longer needed.

siphonaceous, *a.* **2.** Of or pertaining to the *Siphonales*, an order of the grass-green algæ.

Siphonal cæcum, lobe. See ★*cæcum*, ★*lobe*.—**Siphonal process**, in some gastropods, as *Triton*, a spout-like prolongation of the peristome of the shell.

Siphonales (sī-fō-nā′lēz), *n. pl.* [NL., ⟨ L. *sipho(n-)*, a pipe, tube, + *-ales.*] Same as *Siphoneæ*, of which it is the modern form.

Siphonanthæ (sī-fō-nan′thē), *n. pl.* [NL., ⟨ Gr. *σίφων*, a tube, + *ἄνθος*, flower.] A group or suborder of *Siphonophora*, having the stem formed by the manubrium of the original bilateral medusa, the buds arising in the ventral line of this manubrium, and the larva bilateral.

siphonanthous (sī-fō-nan′thus), *a.* [NL. *Siphonanth(æ)* + *-ous.*] Having the characters of, or belonging to, the *Siphonanthæ*.

siphonapter (sī′fō-nap-tėr), *n.* A member of the order *Siphonaptera;* a flea.

siphonate, *a.* **II.** *n.* That part of a mass of liquid which has been drawn off by means of a siphon.

Such organisms, however, can be secured by filtering the *siphonate*, and washing the filter with a small quantity of filtered or distilled water.
B. L. Seawell, in Trans. Amer. Micros. Soc., Nov., 1903, [p. 18.

siphoneous (sī-fō′nē-us), *a.* Same as ★*siphonaceous*.

The gigantic Nematophycus, to be described below, has been regarded as having *Siphoneous* affinities.
Encyc. Brit., XXXI. 409.

Siphonia[2] (si-fō′ni-ä), *n.* [NL., ⟨ L. *sipho(n-)*, ⟨ Gr. *σίφων*, a pipe, tube, siphon.] A genus of pear-shaped, silicious, lithistid sponges with a long or short peduncle, the interior having a deep cloaca and numerous arched canals. It abounds in the Cretaceous rocks.

siphonogam (sī-fon′ō-gam), *a.* [*Siphonogam(a).*] In *bot.*, same as ★*spermatophyte*.

Siphonogama (sī-fō-nog′a-mä), *n. pl.* [NL., ⟨ Gr. *σίφων*, pipe, tube, + *γάμος*, marriage.] Same as ★*Spermatophyta*. See also ★*Embryophyta*. Also *Siphonogamæ*.

siphonogamous (sī-fō-nog′a-mus), *a.* [*siphonogam* + *-ous.*] Same as ★*spermatophytic*.

siphonoglyph (sī-fon′ō-glif), *n.* [Gr. *σίφων*, a pipe, + *γλυφή*, a carving.] In sea-anemones, one of the ciliated grooves at each end of the mouth leading down into the gullet. In alcyonarians, the groove is single. Also *gonidial groove*, and *sulcus*.

When the mouth is closed the central parts are in apposition, but the grooves, called *Siphonoglyphs*, remain always open, and through them a current of water may be kept circulating in and out of the animal even when in its most contracted condition.
A. E. Shipley, Zool. of the Invertebrates, p. 65.

siphonophoral (sī-fō-nof′ō-ral), *a.* Same as *siphonophorous*.

siphonopore (sī′fō-nō-pōr), *n.* [Gr. *σίφων*, a pipe, + *πόρος*, pore.] In *Octocoralla* of the family *Helioporidæ*, one of the smaller tubes or coralites which, with the larger tubes or autopores, constitute the corallum. Both are tabulate, but the siphonopores are not septate.

siphonosome (sī′fō-nō-sōm), *n.* [Gr. *σίφων*, a pipe, + *σῶμα*, body.] The portion of a siphonophore colony that bears siphons.

siphonostele (sī′fō-nō-stēl), *n.* [Gr. *σίφων*, a pipe, tube, + *στήλη*, pillar.] In *bot.*, a tubular stele. See ★*stele*[3], 2.

siphonostelic (sī″fō-nō-stel′ik), *a.* [*siphonostel(e)* + *-ic.*] Pertaining to or possessing a siphonostele.

Siphonotreta (sī″fō-nō-trē′tä), *n.* [NL., ⟨ Gr. *σίφων*, pipe, tube, + *τρητός*, perforated.] A genus of neotrematous brachiopods with elongate conchiolinous shells, the pedicle-passage long and tubular, the epidermal shell-layer covered with spines, and the inner layers punctured by radiating tubules. It occurs in Silurian rocks.

siphonozoöid (sī″fō-nō-zō′oid), *n.* [Gr. *σίφων*, pipe, tube, + E. *zoöid.*] In alcyonarians, one of the modified zoöids whose function it is to drive currents of fluids through the canal system of the colony.

The name zooid is applicable to any asexually-produced individual entering into the composition of a colony, and therefore Kölliker was in error when he restricted it to those arrested and modified individuals whose function it is to drive currents of water through Alcyonarian colonies. These should be called *siphonozooids*.
G. C. Bourne, in Trans. Linnean Soc., Zool., March, [1900, p. 521.

siphon-tap (sī′fon-tap), *n.* A contrivance for tapping metal out of a furnace. The molten metal rises through an oblique channel to the bottom of a reservoir outside of the furnace, in which it rises to a higher level than it occupies in the furnace on account of the blast pressure and the weight of material in the furnace, and from which it can be ladled without disturbing the furnace. It is used commonly in lead-furnaces under the name of *Arendt's siphon-tap*. *Phillips and Bauerman*, Elements of Metallurgy, p. 75.

siphon-trap (sī′fon-trap), *n.* A piece of pipe which has the shape of an inverted U or siphon and which acts, when filled with water, as a seal.

siphonula (sī-fon′ū-lä), *n.* [NL., ⟨ L. *sipho* (*siphon-*), a siphon, + dim. suffix, *-ula.*] An early bilateral embryonic form in the development of certain cœlenterates such as the *Siphonanthæ*.

Siphostoma (sī-fos′tō-mä), *n.* [NL., ⟨ Gr. *σίφων*, a pipe, + *στόμα*, mouth.] A genus of pipe-fishes (*Syngnathidæ*) which embraces numerous species found in all warm seas.

siphuncle, *n.* (*c*) In the cephalopods, the calcareous tubular wall of the siphon. (*d*) The protrusible portion of the mouth-parts of a true louse, supposed to be modifications of the epipharynx and hypopharynx.

Siphunculata (sī-fung-kū-lā′tä), *n. pl.* [NL., ⟨ L. *siphuncul(us)*, dim. of *sipho*, tube, + *-ata.*] An order of insects erected by Meinert to include the true lice, whose mouth-parts, he believes, are radically different morphologically from those of the *Hemiptera*.

sipid (sip′id), *a.* [*(in)sipid.* See *sapid* and *insipid.*] Same as *sapid*. [Rare.]

sipidity (si-pid′i-ti), *n.* [*(in)sipidity.* Same as *sapidity.* [Rare.]

The *sipidity* of honey, sugar, and juices of fruits.
Ann. Rep. Bur. Amer. Ethnol., 1897-98, p. lx.

sipiri (sē-pē′rē), *n.* [Guarani.] Native name in British Guiana for the greenheart, *Ocotea Rodiæi*. See *greenheart*, 1.

sipp (sip), *n.* The form of sling or hurling implement used by the natives of New Guinea. *Smithsonian Rep.*, 1904, p. 637.

sippio (sip′i-ō), *n.* [A made name?] A game played with balls on a table, extending across the foot of which is a row of pockets or pens, each of sufficient width to receive the ball. There are fifteen of these pens, numbered, from left to right (as one faces the foot of the table), 17, 4, 11, 9, 16, 8, 2, 20, 1, 13, 7, 12, 15, 3, 18. The game is played with nine balls, eight of one color, usually red, and one of another color, usually white. The object is to drive each of the eight red balls into some one of the pens by means of the white ball struck with an ordinary cue. For each ball penned, the player scores the number of points painted over the pen which the ball entered. The balls drop down through the pens after entering, and are returned to the head of the table by runways under the table; and the exit of each runway under the head of the table has painted over it the same number as over the pen itself, so that there may be no question as to which pen was entered. The player making the larger score by penning the balls wins.

The mayor and aldermen of a city, except Boston, and, in Boston, the board of police, and the selectmen of a town, may grant a license to a person to keep a billiard, pool or *sippio* table, etc.
Revised Laws of Mass., cii. § 168.

sir[1], *n.*—**Sir Garnet,** a special bid in the game of napoleon.

Sir Garnet consists of an excess hand of five cards, dealt in the usual way, and left on the table. Until this extra hand is appropriated, each player, when it is his turn to call, has the privilege of taking it up and combining it with his own hand. From the ten cards thus in his possession, he must reject five, which he throws away face downwards, and on the remaining five he is bound to declare Napoleon. The stakes are the same as on an ordinary Nap call.
Amer. Hoyle, p. 298.

sir[2] (sēr), *n.* [Pers. **sīr*, ⟨ Hind. *sēr*, *sīr:* see *seer*[4].] A Persian measure of weight, equal to 16 miskals or 2⅔ ounces troy.

sirajo (sē-rä′hō), *n.* [Cuban.] A gobioid fish, *Sicydium plumieri*, found in fresh waters of the West Indies.

Siratic group. See ★*meteorite*.

sirdar-melon (sėr-där′mel″on), *n.* [Afghan *sirda* (*palíz*), muskmelon, + E. *melon.*] In Afghanistan, the muskmelon, *Cucumis Melo*.

The pomegranates of Kandahar, with its "*sirdar*" melons and grapes, being unequalled in quality by any in the East.
Encyc. Brit., XIII. 836.

siree (sē-rē′), *n.* [*sir* + *-ee.*] An emphatic form of *sir:* especially in the phrase 'yes (no) *siree!*' *Dialect Notes*, III. iii. [Colloq.]

siren, *n.* **11.** A monster without lower extremities.—**12.** Same as *sympus*.

siren-limb (sī′ren-lim), *n.* In *teratol.*, a fusion of the lower extremities with incomplete separation of the feet.

sirenomelus (sī-re-nom′e-lus), *n.*; pl. *sirenomeli* (-lī). [NL., ⟨ Gr. *σειρήν*, siren, + *μέλος*, limb.] A monster whose lower extremities are fused and taper to a point without feet.

Sirian, *a.* **2.** A term introduced by Lockyer to denote stars having a spectrum resembling that of Sirius.

siricid (sir′i-sid), *n.* and *a.* **I.** *n.* A member of the hymenopterous family *Siricidæ*.

II. *a.* Having the characters of or belonging to the family *Siricidæ*.

sirium (sir′i-um), *n.* [NL., ⟨ *Sirius.*] The name of a supposed new chemical element announced in 1818 as present in a nickel ore. It was later shown to consist of nickel, iron, sulphur, and arsenic. Also called *vestium*.

Sirmian (sėr′mi-an), *a.* [NL. **Sirmianus*, ⟨ LL. *Sirmium*, ⟨ Gr. *Σίρμιον*, a city in ancient Pannonia Inferior whose ruins are at Mitrowitz.] Of or pertaining to Sirmium; specifically, pertaining to the three councils of Sirmium (351, 357, 358 A.D.). Their purpose was to form some basis of union between the strict Arians and the semi-Arians or Eusebians.

Sirmuellera (sėr-mül′e-rä), *n.* [NL. (Kuntze, 1891), named for *Sir* Ferdinand von *Müller* (1825–1896), the Australian botanist.] A genus of proteaceous plants including about 46 species.

sirocco, *n.* **2.** A name for a special drying apparatus using a heated blast of air derived from a fan, and blowing over the material to be dried, as fruit, or tea-leaves.—**3.** A trade-name for a form of fan-blower.

sirocco-dust (si-rok′ō-dust″), *n.* See ★*sea-dust*.

siserskite, *n.* Same as *sisserskite*.

sissified (sis′i-fīd), *a.* [*sissy* + *-fy* + *-ed*[2].] Effeminate; girlish. [Colloq.]

To be seen with girls was not so "*sissified*" in his mind as it used to be. *J. C. Lincoln*, Partners of the Tide, iv.

sissoo (sis′ö), *n.* [Hindi *sisu.*] A large, deciduous tree of the bean family, *Dalbergia Sissoo*, common in India and Afghanistan. It is much planted throughout India as an avenue tree and yields a very durable, dark brown wood used extensively for boat- and carriage-building and for furniture.

sissors, *n.* An amended spelling of *scissors*.

sister, *n.*—**Little Sisters of the Poor.** See ★*poor*.—**Three sisters,** the three rattans once carried by the master-at-arms and boatswain's mates on British men of war, which were 'laid on' the backs of slow-moving sailors. These rattans were bound together at the handle, but were allowed to separate at the other end.

sistole, *n.* Same as *citole*.

sistroid (sis′troid), *a.* [*sistr(um)* + *-oid.*] Included between the convex sides of two intersecting curves: as, a *sistroid* angle.

Sistrurus (sis-trö′rus), *n.* [NL., ⟨ Gr. *σεῖστρον*, a sistrum, + *οὐρά*, tail.] A genus of rattlesnakes distinguished by having the top of the head covered with plates (as in harmless snakes and the *Proteroglypha*) instead of scales. There are but three species, two of which occur in the United States. The best known is the *massasauga*.

sit, *v. i.*—**To make (one) sit up,** to surprise; astonish; shock. [Slang.]

"When the time comes," said the little sailor grimly, "we shall be ready for them, and if they interfere with me, I shall *make* the Congo Free State people *sit up*. But in the meanwhile they are not here."
Cutcliffe Hyne, A Master of Fortune, iv.

If the poet had emulated the frankness of Byron, and owned that his purpose in these things was to *make* the British matron "*sit up*," he would have disarmed much of the criticism that has befallen him.
N. Y. Times Sat. Rev., Aug. 12, 1905, p. 527.

To sit tight, to keep one's seat firmly, as on a horse; hold oneself steady; hold on quietly; devote one's attention closely. [Colloq.]

He promised himself the pleasure of probing with his usual exquisite dexterity, into the problem so abruptly presented to him. He therefore *sat tight* and began to look very observant.
R. Hichens, The Londoners, iv.

sitar (si-tär′), *n.* [Hind. *sitār*, ⟨ Pers. *sitār*, ⟨ *sih*, three, + *tār*, string.] A Hindu guitar with a pear-shaped body, a long neck, and three or more strings. It is sometimes played with a bow, like a viol.

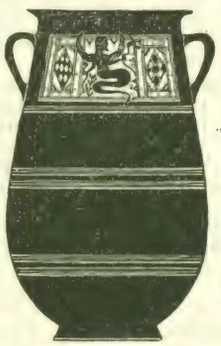
site[2] (sīt), *v. t.*; pret. and pp. *sited*, ppr. *siting.* [*site*[2], *n.*] To select a site for; place; locate.

The *siting* of the trenches will depend on the ground. The position generally should be on high ground, both for the sake of a clear view of the enemy's advance, and for concealment of the dispositions of the defence.
Encyc. Brit., XXVIII. 449.

sitfast, *n.* 2. The creeping buttercup, *Ranunculus repens*, so called from the difficulty in eradicating it.—3. The rest-harrow, *Ononis repens*. See *rest-harrow*, 1.—4. A fixed object, as an obstacle encountered by a plow.

More subject to snap when the share is strained by any *sit-fast*, root, &c.
T. Williamson, Agricultural Mechanism, p. 172.

sithe[1], *n.* An amended (restored) spelling of *scythe*.



sitotoxicon (sī-tō-tok'si-kon), *n.* [Gr. σῖτος, food, + τοξικόν, poison.] A substance responsible for the symptom complex produced by vegetable poisoning.

sitotoxin (sī-tō-tok'sin), *n.* [Gr. σῖτος, food, + E. *toxin*.] A substance which produces vegetable poisoning.

sitotoxism (sī-tō-tok'sizm), *n.* [*sitotox(in)* + *-ism*.] Poisoning by vegetable food. *Vaughan and Novy*, Cellular Toxins, p. 188.

sitter, *n.* 2. In *cricket:* (*a*) An easy catch missed by a fielder. (*b*) A fielder who misses such a catch. *Hutchinson*, Cricket, p. 117. [Slang.]

situla, *n.* 3. A deep bucket-shaped vase with a wide mouth and two handles near the top. In Greek pottery this form is found mainly in the earlier styles.

Situla (Greco-Egyptian).

In the center was a silver *situla* standing upon three feet, which contained the ashes of the deceased.
C. D. Edmonds, in Jour. Hellenic Studies, XX. 23.

situs, *n.*—**Analysis situs,** a general and fundamental kind of geometry, which neither considers sects or arcs or surfaces or solids in their character of being measurable by a unit, nor distinguishes straight from curved or crooked lines, nor plane from curved or bent surfaces, but studies only the manner in which the parts of places are continuously connected.

situtunga (sit-ö-tön'gä), *n.* [African.] A large antelope, *Tragelaphus spekei*, of the swamps of central and east Africa. It is related to the harnessed antelope, but is distinguished by its uniform grayish-brown color and very long hoofs.

Sivaism (sē'vạ-izm), *n.* [*Siva* + *-ism*.] The worship of Siva. Also *Sivism*.

Sivism (sē'vizm), *n.* Same as ★*Sivaism*.

siwash (si-wäsh'), *a.* and *n.* [Chinook jargon, < F. *sauvage*, savage.] **I.** *a.* Of or relating to an Indian, more particularly to an Indian of the North Pacific coast.

II. *n.* An Indian of the North Pacific coast: often used as though *siwash* were the name of a particular tribe.

Six hundred and six, the name under which salvarsan, or dioxydiamido-arsenobenzol, was first proposed as a remedy for the treatment of syphilis and other spirochetal diseases. The substance was so called by Ehrlich because it was the 606th compound which he had tried in his search for a specific remedy for this disease.

sixain, *n.* 3. The half of the douzain. See ★*douzain*, 2.

six-coupled (siks'kup″ld), *a.* Having six driving-wheels connected together by coupling- or connecting-rods: used of a locomotive with three driving-wheels on a side, as in the mogul or ten-wheeler types.

sixer, *n.* 2. In *cricket*, a hit which scores six runs. [Colloq.]

six-faced (siks'fāst), *a.* Having six faces.—**Six-faced octahedron,** in *crystal.*, a hexoctahedron.

sixfold, *a.*—**Sixfold symmetry.** See ★*symmetry*, 6.

sixpence, *n.*—**Pudsey sixpence,** a silver coin of Elizabeth of England: said to be so called from a place in Yorkshire.

six-phase (siks'fāz), *a.* In *elect.*, pertaining to a system of electric distribution by six alternating currents displaced in phase from each other by one sixth of one period. Six-phase converters are frequently built, the six-phase currents being derived by transformation from three-phase currents.

sixteen, *n.*—**In sixteens,** said of an imposed form of composed type or plates containing 16 pages; also of a book that has 16 printed pages to each section.

sixty, *n.*—**Like sixty,** very fast; very hard; like fury. [Colloq.]

They came down the hill *like sixty*, the old mare going for all she was worth, the reins flying.
The Good Fortune of Silas Mearns, p. 27.

size[1], *n.*—**Victoria size,** a photograph 2 × 4¼ inches, the size of the mount being 3⅓ × 5 inches.

size[1], *v. t.* 7. To cut or trim to the size required.—**To size down,** to arrange according to size with the smallest at the top, as shingles or slates.

As here and in all the traditional old houses of the country-side, they are '*sized down*,' the smaller ones to the top and the bigger ones toward the eaves.
A. Vallance, William Morris, p. 115.

sizer, *n.* 3. A wood-turning chisel which has an adjustable gage for regulating the size of the work.

sizing-chisel (sī'zing-chiz″el), *n.* A form of chisel, used in wood-turning, fitted with a gage by which the diameter of the work is determined.

sizing-machine[1] (sī'zing-ma-shēn″), *n.* [*size*[1], *v.*, + *machine*.] In *candy-making*, a pair of engraved or fluted rolls used in forming and sizing caramels, chocolates, and other candies.

sizing-machine[2] (sī'zing-ma-shēn″), *n.* [*size*[2], *v.*, + *machine*.] A machine for sizing warp-yarns for weaving. Sometimes called a *dressing-machine* or *slasher*.

sizing-ring (sī'zing-ring), *n.* A ring carrying cutters on its side or inner face, so that it will reduce to a determined size rods of wood presented to it: used for making dowel-pins or the pins on blind-slats and the like.

sizzard (siz'ärd), *n.* [*sizz(le)* + (*blizz*)*ard*.] A very uncomfortably hot, moist atmosphere in which one 'sizzles.' [Colloq.]

sjambok (shäm'bok), *n.* [D. *sjambok*, formerly also *siamback*, prob. taken up from Malayan servants at the Cape, < Jav. *sambok*, also *chambok*, nasalized forms of the Malay *chābuk*, < Hind. *chābuk*, whence E. *chabouk*, q. v.] A heavy whip of leather or hide. [South Africa.]

When the mules ceased pulling in every direction except the right one from sheer exhaustion, a few judicious cracks of the *sjambok*, together with a few different languages, mostly bad, and up we eventually did go.
H. P. Battersby, in War's Brighter Side, ix.

sjambok (shäm'bok), *v. t.* [*sjambok*, *n.*] To strike with a sjambok.

One refugee states that several Free State burghers who displayed cowardice at Belmont were afterwards publicly *sjamboked* as an example to the others.
Pall Mall Gazette, Jan. 15, 1900, p. 7. *N. E. D.*

Skaneateles shale. See ★*shale*[2].

skat[2] (skät), *n.* [G. *skat*, a game so named, < It. *scarto*, a discarded card, a discard, useless paper, refuse, < *scartare*, take from the paper or cards, discard, = Sp. Pg. *descartar* = E. *discard*, *v.*] The German national card-game for three players. The pack contains 32 cards, ranking A, 10, K, Q, 9, 8, 7, the four jacks being always the four best trumps, and preserving the same rank as the suits, clubs being the best, then spades, hearts, and diamonds. All trumps in unbroken sequence with the club jack held by the same side are called *matadors*. Ten cards are given to each player, three, four, three at a time, two being laid off for the skat, between the first and second rounds. The players bid against one another for the privilege of playing some one of the four varieties of the game. 'Mittelhand' bids to 'Vorhand,' and when 'Vorhand' refuses or 'Mittelhand' stops bidding, 'Hinterhand' bids to the survivor. Each bids well within what he thinks he can make, naming the value in figures, without stating what game he purposes playing. If he fails to make good his bid in his play, the adversaries score what he should have made as the matadors lie. The successful bidder is known as the 'player.' The four games are: *tournee*, in which the player turns over one of the skat cards for the trump, afterward taking both skat cards into his hand and discarding others in their place; if the turned card is a jack, he may change his game from tournee to grando; *solo*, in which the trump suit is named and the skat cards are not touched until the end of the play, when they are counted for the player's side; *grando*, in which the four jacks are the only trumps, so that there are four plain suits; *nullo*, in which there are no trumps and the cards rank A, K, Q, J, 10, 9, 8, 7, the object of the player being not to take a single trick. Each of these games has a standard value according to the trump suit. The tournees are: diamonds 5, hearts 6, spades 7, clubs 8. The solos are: diamonds 9, hearts 10, spades 11, clubs 12. There are four varieties of grando (or grand). The *turned grand* is worth 12. *Gucki grand*, in which the player announces in advance that jacks shall be the only trumps, but takes both the skat cards and then discards two in their place, is worth 16. *Solo grand*, played without touching the skat cards, is worth 20. *Open grand*, in which the player lays his cards face up on the table and guarantees to win every trick, is worth 24. Nullos also have four varieties. *Gucki nullo*, in which the player takes both the skat cards and then discards, having previously announced to play nullo, is worth 15. If the player announces an *open gucki nullo*, he must lay his cards face up on the table after discarding; it is worth 30. *Solo nullo*, if played without touching the skat cards, is worth 20; if played open, 40. If the first card turned in a tournee does not suit the hand, the player can announce *passt mir nicht*, and turn the other. All guckis and passt mir nichts lose double if lost. The unit values of all games except nullos are multiplied by the number of matadors, and it does not matter which side holds the sequence of matadors, its multiplying power is the same. If the single player has the jacks of clubs, spades, and hearts, he is 'with three.' If he has nothing higher than the king of trumps, he is playing 'against six.' There are also five game values, which are used as multipliers. Counting each ace as 11, tens 10, kings 4, queens 3, and jacks 2, there are 120 points in the pack. If the player gets 61 of these he wins his game; if his two adversaries combined get 60 they beat him. If the player gets 91 he makes them 'schneider'; if they get 90 they make him 'schneider.' If he gets every trick he makes them 'schwarz'; if they get all the tricks they make him 'schwarz.' The multipliers are: game 1; schneider 2; if the schneider is announced in advance, or if schwarz is made without announcing anything, 3; if schwarz is made after announcing schneider, 4; schwarz announced, 5. No announcement of schneider or schwarz can be made in any game in which the skat cards have been used, such as tournees and guckis. Suppose the player announces a club solo, unit value 12, and is with two matadors, getting 74 points out of the 120. He reckons, one for game, with two, three times twelve, or thirty-six points won. Varieties of skat, such as *point ramsch*, *schieber ramsch*, *contra* and *recontra*, *uno* and *duo*, are sometimes played; but they are not recognized by the Skat League. When four play at the same table, the dealer takes no cards; but he shares the fortunes of those opposed to the single player as to winning or losing on the hand. Vorhand, on the dealer's left, always leads for the first trick, no matter who is the successful bidder. Players must follow suit if they can; but if they cannot follow suit, they can trump or discard at pleasure. In nullos, the moment the single player takes a trick, his game is lost. The penalty for a revoke is the loss of the game.

skate[1], *n.* In New Zealand, the skate is *Raja nasuta*.

skate-leech (skāt'lēch), *n.* See ★*leech*[2].

Skatol carbonic acid. See ★*carbonic*.

skatologic, skatology, etc. See ★*scatologic, scatology*, etc.

skatosin (skat'ō-sin), *n.* [*skat(ol)* + *-ose* + *-in*[2].] A derivative of skatol, $C_{10}H_{16}N_2O_2$.

skatoxyl, *n.* Same as ★*scatoxyl*.

skedge (skej), *n.* [Cornish.] The privet, *Ligustrum vulgare*. Also *skedgwith*. [Prov. Eng.]

skeep (skēp), *n.* [Cf. *skep*.] A scoop, especially one used for baling small boats. *Eng. Dial. Dict.* [Prov. Eng.]

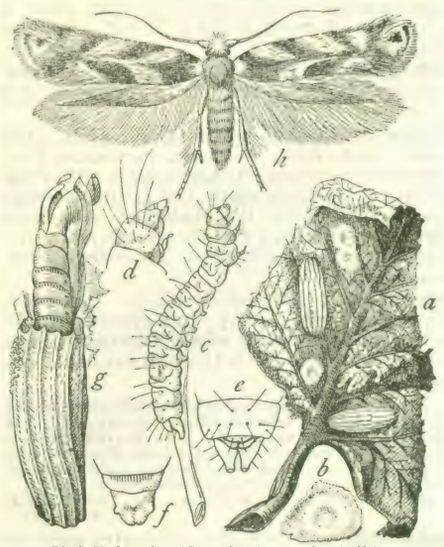
skeep (skēp), *v. t.* [Cf. *skeep*, *n.*] To hew or shave off a thin piece of anything; also, to skin a small place by a glancing blow; skin (an animal). *Dialect Notes*, III. iii. [Local, U. S.]

skein[1], *n.* 5. In *cytol.*, same as ★*spireme*.

No sign of chromatin thread (linin or *skein*) is apparent. *Science*, March 4, 1904, p. 393.

skein[1] (skān), *v. t.* [*skein*[1], *n.*] To wind (yarn) into hanks of definite lengths other than the normal. *Nasmith*, Cotton Spinning, p. 360.

skein-dyeing (skān'dī″ing), *n.* Same as ★*hank-dyeing*.



skeletin (skel'e-tin), *n.* [*skelet(on)* + *-in*[2].] One of certain complex organic substances which supposedly belong to the albuminoids. They are the principal components of the internal supporting structures of many invertebrates. The group comprises the fibroin found in silk, the spongin found in sponges, the conchiolin of molluscan shells, etc.

Skeletogenous layer. See ★*layer*.

skeleton, *n.*—**Intermediate skeleton.** Same as *supplemental* ★*skeleton*.—**Supplemental skeleton,** in the *Foraminifera*, calcareous deposits on the periphery of the test and in its cavities, giving rise to excrescences and in some cases pierced with tubules.

skeleton-crystal (skel'e-ton-kris″tal), *n.* See ★*crystal*.

skeletonizer, *n.*—**Birch skeletonizer,** an American tineid moth, *Bucculatrix canadensisella*, whose larva

Birch Skeletonizer (*Bucculatrix canadensisella*).
a, skeletonized leaf; *b*, pseudo cocoon; *c*, larva; *d*, head of same; *e*, anal segments of same; *f*, anal segments of pupa; *g*, cocoon with extruded larval skin; *h*, adult: all enlarged.

mines the leaves of birch-trees in Canada and the northeastern United States.

skeleton-weed (skel′e-ton-wēd), *n.* The gum succory, *Chondrilla juncea*. Also called *naked-weed*.

Skelgil beds. See ★*bed*[1].

skene-arch (skēn′ärch), *n.* Same as *scheme-arch*.

Skene's ducts. See ★*duct*.

sker, *n.* A dialectal form of *scar*[2].

sketch-map, *n.* 2. In *surv.*, a map prepared without accurate measurement.

The accompanying *sketch-maps* are based on the maps given in the Mitteilungen of the Royal Hungarian Geographical Society. *Geog. Jour.* (R. G. S.), XVI. 219.

sketch-paper (skech′pā″pėr), *n.* Paper in sheets of any convenient size ruled vertically and horizontally with lines which are distant any desired aliquot parts of an inch. It is used in making sketches rapidly and in scaling without the use of measuring-instruments.

sketch-plan (skech′plan), *n.* The first plan of a building or architectural scheme, suggesting matter to be developed in later detailed drawings.

sketch-plate (skech′plāt), *n.* In *iron shipbuilding*, a plate of any polygonal shape not a rectangle. Such plates are ordered to avoid waste in cutting to the shape required on the vessel. The name is derived from the fact that they are ordered from the rolling-mills by an outline dimensioned sketch.

skete (skēt), *n.* [NGr. *σκῆτος*, a monastery (cf. *ἀσκητήριον*, a hermit's cell), ⟨ *ἀσκητής*, a hermit, an ascetic: see *ascetic*.] A monastery or monastic settlement of the Greek Church, characterized by a strict discipline.

Dependent on the several monasteries are twelve *sketes* (*σκήτια, ἀσκητήρια*), or monastic settlements, some of considerable size, in which a still more ascetic mode of life prevails. . . . The large *skete* of St. Andrew and some others belong to the Russians; there are also Rumanian and Georgian *sketes*. *Encyc. Brit.*, XXX. 399.

skeuobiomorph (skū-ō-bī′ō-môrf), *n.* [Gr. *σκεῦος*, vessel, utensil, + *βίος*, life, + *μορφή*, form.] An ornamental form or pattern due to the combination or amalgamation of a skeuomorph and a biomorph. *Haddon*, Evolution in Art, p. 192.

skeuomorph (skū′ō-môrf), *n.* [Gr. *σκεῦος*, vessel, utensil, + *μορφή*, form.] A form of ornament or ornamental design which can be shown to be due originally to the nature of the material and the method of working it, or to technique. The forms and patterns originating in a certain technique may then be further modified or copied in other material. *Haddon*, Evolution in Art, p. 75.

skeuomorphic (skū-ō-môr′fik), *a.* [*skeuomorph* + *-ic*.] Relating to or having the character of a skeuomorph; illustrating or exhibiting skeuomorphs in its form or decoration: as, *skeuomorphic* pottery. *Haddon*, Evolution in Art, p. 6.

skew[1], *a.*— **Skew variation.** See ★*variation*.

skew[1], *n.* 6. In *math.*, a regulus.

A Ruled Surface, Regulus, or *Skew*, is a configuration of lines which satisfy three conditions, and therefore depend on only one parameter. *Encyc. Brit.*, XXVIII. 660.

skewback (skū′bak), *n.* In masonry arch construction, one of the series of consecutive stones extending along the top of the abutment of a segmental arch having its upper face inclined so as to receive the lower stone of the arch. As the number of skewback stones is dependent on the length of the arch measured parallel with its axis, a segmental arch in a wall may require but one or two skewback stones at each end of the arch. The name is sometimes specifically confined to the sloped surface of the top course of stones forming the abutment, rather than to the stone itself. In full-center arches the tangents to the arch curve at the ends are vertical and the upper surface of the top course of the abutment is therefore horizontal instead of sloped, and hence the name 'skewback' is not properly employed in connection with full-center arches. See *skew back*, under *skew*[1], *a.*

The main span, which is of trussed steel arch construction, measures 376½ feet between *skewbacks*. Of the seven smaller spans, five measure 113 feet between *skewbacks*, and the other two 51 feet.
Sci. Amer. Sup., May 23, 1903, p. 22894.

skewer, *v. t.* Specifically— 2. See the extract.

Various schemes are used to hasten the growth of mold. The cheese may be *skewered* (punched with holes with an instrument resembling a skewer) or it may be "ironed" and the plug left out some time to admit fungus spores. Such a cheese becomes dry and hard without acquiring the proper flavor.
U. S. Dept. Agr., Bur. Animal Industry, Rep., 1905, p. 97.

skewing, *n.* 2. In *printing*, an improper method of fastening type in a chase, by which the lines are put askew or made to hang or bow.

skewness (skū′nes), *n.* [*skew*[1], *a.*, + *-ness*.] The character or state of being skew. Specifically: (*a*) In *biometry:* (1) The property of exhibiting skew variation. See ★*variation*.

There is positive *skewness* in body length, and negative in the mandibles. *Science*, March 8, 1901, p. 375.

(2) The numerical expression of skew variation; asymmetry, measured by the ratio $a=D/\sigma$, where D is the distance (mean, mode) and σ is the index of variability.

The following Table gives the means, modes, standard deviations, and *skewnesses* of the various age groups.
A. O. Powys, in Biometrika, Oct., 1901, p. 43.

(*b*) In *math.*, the degree of disturbance of symmetry in a curve.

The left-hand polygon has a *skewness* of +0.48; the right-hand polygon of −0.03.
C. B. Davenport, in Pop. Sci. Mo., Sept., 1901, p. 455.

Negative skewness, in *biol.*, a skewness where the mean is less than the mode.— **Positive skewness,** in *biol.*, a condition of skewness where the mean is greater than the mode.

skew-sight (skū′sīt), *n.* Oblique vision, the object being seen distinctly only when to one side of the direct line of vision.

skiagram (skī′a-gram), *n.* Same as ★*sciagram*.

skiagrammatic (skī″a-gra-mat′ik), *a.* Same as ★*sciagrammatic*.

skiagrammatically (skī″a-gra-mat′i-kal-i), *adv.* Same as ★*sciagrammatically*.

skiagraph (skī′a-gráf), *n.* Same as ★*sciagraph*.

skiagraph (skī′a-gráf), *v. t.* Same as ★*sciagraph*.

skiagraphic (skī-a-graf′ik), *a.* Same as ★*sciagraphic*.

skiagraphy, *n.* 2. Same as ★*sciagraphy*.

skiametry (skī-am′e-tri), *n.* Same as ★*sciametry*.

skiascope (skī′a-skōp), *n.* Same as ★*sciascope*.

skiascopic (skī-a-skop′ik), *a.* Same as ★*sciascopic*.

skid[1], *n.* 8. In *lumbering*, a log or pole, commonly used in pairs, upon which logs are handled or piled; also the log or pole laid transversely in a skid-road.— 9. A peeling-iron; an instrument for peeling bark from trees or logs. [Colloq., U. S.]— **Spiked skid,** in *lumbering*, a skid in which spikes are inserted in order to keep logs from sliding back when being loaded or piled.

skid[1], *v. t.* 4. In *lumbering:* (*a*) To draw (logs) from the stump to the skidway, landing, or mill. (*b*) As applied to a road, to reinforce (it) by placing logs or poles across it. — 5. To check with a brake, as wheels, so that they will continue to slide but not to rotate, as the wheels of a moving train. (See *skid*[1], *v. i.*, 1.)

When the wheels are *skidded* the retardation of the train is always reduced. *Encyc. Brit.*, XXVI. 343.

To skid up. (*a*) Same as ★*skid*[1], 4 (*b*). (*b*) To collect (logs) and pile upon a skidway.

skid-beam (skid′bēm), *n.* One of a set of beams placed athwartship above the open deck of a large vessel, upon which the small boats are carried when not in use. Also called *boat-beam*.

skidder, *n.* 2. A steam-engine, usually operating from a railroad-track, which skids logs by means of a cable.— 3. The foreman of a crew which constructs skid-roads.

skidding-chain (skid′ing-chān), *n.* A heavy chain used in skidding logs.

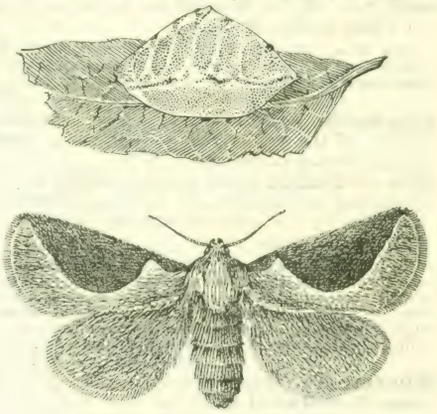
skidding-hooks (skid′ing-hůks), *n. pl.* Same as ★*skidding-tongs*.

skidding-sled (skid′ing-sled), *n.* Same as ★*dray*[1], 3.

skidding-tongs (skid′ing-tôngz), *n. pl.* A pair of hooks, attached by links to a ring, used for skidding logs. Also called *skidding-hooks*, *grips*, *grapples*, *grabs*, and *dogs*.

skid-grease (skid′grēs), *n.* A heavy oil applied to skids to lessen the friction of logs dragged over them.

skid-road (skid′rōd), *n.* See ★*road*.



skidway (skid′wā), *n.* In *lumbering:* (*a*) Two skids laid parallel at right angles to a road, generally raised above the ground at the end nearest the road. Logs are usually piled upon a skidway as they are brought from the stump for loading upon sleds, wagons, or cars. (*b*) A prepared path down which logs, etc., can slide as down a skid. See *skid*[1], *n.*, 2.

Once in a while open lanes run from the water's edge up to the hilltop. Down these "*skidways*" slid the great logs, cleaving the blue waters with a splash that sent the spray flying high into the air. *Outing*, Feb., 1906, p. 539.

To break a skidway, to roll piled logs off a skidway.

skif, *n.*, *v. t.*, and *a.* A simplified spelling of *skiff*.

skiff-caterpillar (skif′kat″ėr-pil-ăr), *n.* The larva of a cochlidiid moth, *Prolimacodes scapha:*

Skiff-caterpillar (*Prolimacodes scapha*).
Larva above, moth below, enlarged.
(Hubbard, U. S. D. A.)

so named on account of its fancied resemblance to a minute boat.

skil, *v.* and *n*[1]. A simplified spelling of *skill*.

skil[2] (skil), *n.* A fish, *Anoplopoma fimbria*, found from California to Alaska.

skild, *a.* A simplified spelling of *skilled*.

skil-fish (skil′fish), *n.* Any fish of the family *Anoplopomatidæ*, found in the North Pacific.

skilling[3], *n.*— **Skilling banco,** a subsidiary coin of Sweden until 1857, equal to one forty-eighth of a rix-dollar, or 1.12 United States cents.

skim, *v. t.* 9. In *plastering*, to put the finishing coat or skim-coat on.

skim, *n.* 3. A cultivator blade for surface work, analogous to a sweep. See ★*scalp*[1], 7, and ★*sweep*, 12 (*b*).

This *skim* is cast in two parts, which renders it movable to suit any width of ridge.
J. Scott, Field Implements and Machines, p. 119.

skim-cheese (skim′chēz), *n.* See ★*cheese*[1].

skim-coat (skim′kōt), *n.* In *plastering*, the finishing coat in three-coat work, which is generally very thin. Compare *hard-finish*.

skimfish (skim′fish), *n.* *Carpiodes velifer*, one of the suckers (*Catostomidæ*) found in the Mississippi.

skimmene (skim′ēn), *n.* [*Skimm(ia)* (see def.) + *-ene*.] A colorless dextrorotatory liquid, $C_{10}H_{16}$, contained in the oil from *Skimmia Japonica*. It boils at 170–175° C.

skimmer[1], *n.* 1. (*e*) An attachment to a plow placed like a skim-colter, but turning a slice of sod 10 inches broad and 2 inches thick. [Kentucky.]

Two methods of breaking are practiced: one with a plow having a "*skimmer*" attached just in front of the subsoiler. *Killebrew and Myrick*, Tobacco Leaf, p. 343.

skimmer-pipe (skim′ėr-pīp), *n.* In *soap-making*, a pipe working on a swivel joint and capable of adjustment to any height within a soap-boiling pan, so that the soap in solution may be drawn off from any desired level.

skimmetin (skim′e-tin), *n.* [*skimm(in)* + *-et* + *-in*[2].] A colorless crystalline compound, $C_9H_6O_3$, prepared by the action of dilute acids on skimmin. It melts at 223° C.

skimmin (skim′in), *n.* [*Skimm(ia)* (see def.) + *-in*[2].] A colorless glucoside, $C_{15}H_{16}O_8$, contained in *Skimmia Japonica*. It crystallizes in needles and melts at 210° C.

skimming-back (skim′ing-bak), *n.* In *brewing*, a large wooden vat, provided with funnels, into which the surplus yeast is skimmed from the surface of the beer after the first or principal fermentation is at an end. The beer thus 'cleansed' is run off into a 'settling-back' or into casks.

skimming-ladle (skim′ing-lā″dl), *n.* A ladle for use in pouring molten metal in foundries and elsewhere, especially adapted by shape and construction to deliver the pure metal from below the surface, and retain the scum of oxids and impurities which are light and float at the top. There may be a guard at the lip, or, in larger types, the discharge may be from the bottom instead of over the upper edge.

skin, *n.* 9. In *elect.*, the outer layers of a conductor, which serve in the conduction of currents of high frequency.— **Glossy skin,** a condition sometimes following an injury to the trophic nerve-

supply, consisting of intense burning pain with atrophy and abnormal smoothness of the skin.—**Inner skin,** the interior covering or inner-bottom plating of a vessel.—**Outer skin,** the outer covering or outside plating of a vessel.

skin, *v. t.* **6.** To take off the top layer of, as of a race-track. [Colloq.]

The time, 2:05 flat, was not considered fast, for the track stood in prime condition and has been "*skinned*" and generally rendered faster than it was a year ago.
N. Y. Eve. Amer., Aug. 2, 1904.

skin-beetle (skin'bē″tl), *n.* Any scarabæid beetle of the genus *Trox* (which see). *Comstock*, Manual of Insects, p. 559.

skin-conduction (skin'kŏn-duk″shŏn), *n.* In *elect.*, the conduction, as of high frequency currents, by the outer layers only of the conducting material.

Increasing the frequency of alternation removes the current from the interior towards the boundary, shortening the wave-length. The tendency is towards *skin conduction*. The attenuation is so rapid in going inwards that only one wave-length in the wire itself need be considered. This may be confined within a mere skin.
Encyc. Brit., XXXIII. 216.

skin-current (skin'kur″ĕnt), *n.* An electric current conducted, as is the case with alternating currents of high frequency, by the outer layers only (skin) of the conducting material.

skin-effect (skin'e-fekt″), *n.* In *elect.*, see ★*effect*.

skin-field (skin'fēld), *n.* The area of skin to which a given nerve is distributed on the ultimate ramification of its fibers.

skin-grafting, *n.*—**Thiersch's method of skin-grafting,** the application of broad pieces of skin, as distinguished from the ordinary method of applying very small bits.

skin-hunter (skin'hun″tẽr), *n.* One who hunts animals for their skins.

The Boers trekked to the districts now known as the Orange River Colony and the Transvaal, and, once there, the fierce pursuit of the game, which, as we have seen, had taken place in Cape Colony, was repeated, but at a more rapid rate, owing to improvements in fire-arms, and the operations of the "*skin-hunters*," who shot down the animals by tens of thousands, prompted by the commercial uses to which their hides could be put. Between the years 1840 and 1875 the destruction of animals in the old republics, it is safe to say, might be reckoned by millions. *Knowledge*, July, 1905, p. 190.

skin-moth (skin'môth), *n.* Any one of the tineid moths whose larvæ live on furs and skins.

skin-muscle (skin'mus″l), *n.* The thin muscle, *panniculus carnosus*, lying just beneath the skin, whose contractions give rise to the twitching of the skin so evident in horses. It is by a modification of this muscle that the hedgehog is able to curl into a ball. *Nature*, Oct. 30, 1902, p. 661.

skinning-knife (skin'ing-nīf), *n.* A knife adapted for doing the cutting when removing a hide from a carcass.

skin-plating (skin'plā″ting), *n.* In *iron-ship-building*, the exterior plating which covers the bottom and sides of a vessel. *White*, Manual of Naval Arch., p. 338.

skin-resistance (skin'rē-zis″tans), *n.* **1.** Same as *skin-friction*.—**2.** See ★*resistance*.

skin-vision (skin'vizh″ŏn), *n.* The perception of light by the skin by a reflex functional action and without special organs of vision, as in earthworms.

skip[1], *n.* **7.** In *poker*, a straight in which the cards are alternate, such as 2, 4, 6, 8, 10: when played, it beats two pairs.

"*Skips*," consisting of alternate cards in sequence, for instance, Three, Five, Seven, Nine, Jack are sometimes played to beat two pairs, where "blazes" are unknown, but are equally destitute of merit.
American Hoyle, p. 163.

skipful (skip'fûl), *n.* Same as *skepful*.

skipjack, *n.* **4.** (*j*) *Pomolobus chrysochloris*, of the family *Clupeidæ*, a herring found land-locked in the Ohio and Mississippi rivers.

skipper[1], *n.* **7.** Same as ★*climbing-fish*, 2.—**Arctic skipper,** an American hesperiid butterfly, *Pamphila palæmon*, of northern distribution. In the larval state it feeds on grasses.—**Brazilian skipper,** an American hesperiid butterfly, *Calpodes ethlius*, brown in color, with whitish translucent spots on the wings. It occurs in the southern United States and extends southward to Argentina. Its larva feeds on canna-leaves.—**Broad-winged skipper,** an American hesperiid butterfly, *Phycanassa viator*, having blackish-brown wings marked with dull tawny. It occurs from New England to the Gulf of Mexico.—**Canadian skipper,** an American hesperiid butterfly, *Erynnis comma*, occurring throughout Canada from the Atlantic to the Pacific and in the mountains of the northwestern United States.—**Cobweb skipper,** an American hesperiid butterfly, *Erynnis metea*, found in the northeastern United States, where its larva feeds on grasses.—**Cofaqui skipper,** an American butterfly, *Megathymus cofaqui*, found in Florida and Colorado.—**Cross-line skipper,** an American hesperiid butterfly, *Limochroes manataaqua*, occurring from New England west to Nebraska, and in the larval stage feeding on grasses.—**Dun skipper,** an American hesperiid butterfly, *Euphyes vestris*, widely distributed in the Mississippi valley and in the northern United States.—**Giant skippers,** the butterflies of the family *Megathymidæ*.

Giant Skipper (*Megathymus yuccæ*)
(Redrawn from Riley, U. S. D. A.)

There are two species in the United States, *Megathymus cofaqui* and *M. yuccæ*. The larvæ of the latter bore in the stems and roots of plants of the genus *Yucca*.—**Golden-banded skipper,** an American hesperiid butterfly, *Rhabdoides cellus*, brown in color, with a golden band across each fore-wing. It ranges from West Virginia south to the Gulf of Mexico.—**Grizzled skipper,** a hesperiid butterfly, *Hesperia centaureæ*, common to boreal North America, Norway, and Lapland, having dark-brown wings checkered with white.—**Hobomok skipper.** Same as ★*Mormon*[1] (*c*).—**Indian skipper,** an American hesperiid butterfly, *Erynnis sassacus*, having yellowish wings bordered with brown. It occurs in the Atlantic United States and ranges westward to Colorado. Its larvæ feed on grasses.—**Least skipper,** an American hesperiid butterfly, *Ancyloxipha numitor*, which occurs throughout the eastern United States. Its larvæ feed on grasses.—**Leonard's skipper,** an American hesperiid butterfly, *Anthomaster leonardus*, occurring from New England to Florida and westward to Kansas. Its larvæ feed on grasses.—**Long-tailed skipper,** an American hesperiid butterfly, *Eudamus proteus*, ranging from New York southward into Mexico. In the south its larva, known as the *roller-worm*, is a pest in vegetable-gardens, eating the leaves of beans, turnips, and cabbages.—**Otho skipper,** an American hesperiid butterfly, *Thymelicus otho*, which occurs in the eastern United States. Its larvæ feed on grasses.—**Pepper-and-salt skipper,** an American hesperiid butterfly, *Amblyscirtes samoset*, occurring in the northern and middle United States west to Iowa.—**Powesheik skipper,** an American hesperiid butterfly, *Oarisma powesheik*, occurring in the western United States.—**Roadside skipper,** an American hesperiid butterfly, *Amblyscirtes vialis*, of wide distribution within the United States. Its larvæ feed on grasses.—**Silver-spotted skipper,** a common American hesperiid butterfly, *Epargyreus tityrus*, occurring throughout the United States. Its larvæ feed on locust-leaves and other allied trees and plants.—**Swarthy skipper,** an American hesperiid butterfly, *Euphyes fusca*, which is found in the Gulf States and extends as far north as Pennsylvania.—**Vitellius skipper,** *Phycanassa vitellius*, a species of butterfly which occurs in the West Indies and the United States.—**Zabulon skipper,** *Atrytone zabulon*, which occurs in the eastern United States. Its larvæ feed on grasses.

Long-tailed Skipper (*Eudamus proteus*).

skipper[3], *n.* **2.** In *cricket*, the captain of a cricket eleven. [Colloq.] *Encyc. Brit.*, XXVII. 280.—**3.** Also the commander of any other body of men, as of a company of soldiers; a leader. [Colloq.]

He returned to sit at the feet of Revere, his '*skipper*'—that is to say, the captain of his company, and to be instructed in the dark art and mystery of managing men.
R. Kipling, Only a Subaltern, in Soldiers Three, p. 115.

skipper[3] (skip'ẽr), *v. t.* [*skipper*[3], *n.*] To command a ship; command and drill (as sailors); serve as skipper to. [Colloq.]

If a saint was to come down and *skipper* the brutes we have to ship as sailor-men nowadays, he'd wear out his halo flinging it at them.
Cutcliffe Hyne, A Master of Fortune, xi.

skippery (skip'ẽr-i), *a.* [*skipper*[1] + *-y*[1].] Containing skippers or cheese-hoppers. See *skipper*[1], 4 (*b*).

skipple (skip'l), *n.* [D. *schepel*, a bushel.] A measure equal to three pecks. The old Amsterdam schepel, or bushel, was about one fourth less than the bushel used in the United States. See *bushel*[1], 1. *N. and Q.*, 9th ser., VIII. 183. [New England.]

skip-road (skip'rōd), *n.* **1.** The ways or guides for a bucket or skip in a mine-shaft or drift.—**2.** The path left free for the passage of the bucket or skip, over which it traverses.

Skip-shaft draft. See ★*draft*[1].

skirt[1], *n.*—**Parasol skirt,** a short spreading skirt worn by ballet-dancers in the latter part of the nineteenth century.

skirt-dance (skẽrt'dȧns), *n.* See *skirt-dancing*.

skirt-dancer (skẽrt'dȧn″sẽr), *n.* One who dances skirt-dances.

skirted (skẽr'ted), *a.* [*skirt*[1] + *-ed*[2].] **1.** Having a skirt: usually in composition.—**2.** Having the skirt or skirting removed.

skirt-steak (skẽrt'stāk), *n.* A steak of beef cut from the inside of the plate.

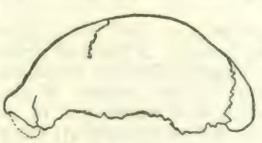
skitter (skit'ẽr), *n.* [*skitter*, *v.*] The act of skittering, or gliding or skimming over with a light touch.

The grind of the slides and the tearing swash of blades abruptly ceased as the slim shell trailed with dying headway to the *skitter* of the resting oars.
Scribner's Mag., July, 1905, p. 1.

skiving-machine, *n.*—**Amazon skiving-machine,** a special form of skiver.

skoke, *n.* Same as *scoke*.

skowitz (skō'wits), *n.* An Amerindian name of the silver salmon, *Oncorhynchus kisutch*, found on both sides of the North Pacific.



skreel (skrēl), *n.* [Appar. a dial. form of *reel*, by confusion with *creel*. Confusions of *cr-* and *scr-* are common in modern dial. usage.] A form of small spool or bobbin for holding yarn or thread.

skul, *n.* A simplified spelling of *skull*.

Skuld (skûld), *n.* [ONorse *Skuld*, in origin identical with *skuld* (= Dan. *skyld* = AS. *scyld* = G. *schuld*), debt, due, from root of *skulu*, shall: see *shall*.] In *Norse myth.*, one of the three Fates; the Norn of the future.

skulduggery, *n.* See *skulduddery*.

skull[1], *n.* **7.** The trade-name for the anterior plate of the carapace of the hawk's-bill turtle, which yields the tortoise-shell of commerce.—**Calaveras skull,** a skull found in Calaveras county, California (in 1886), believed by some to be of great antiquity. It is, however, more probable that it belonged to one of the present race of Indians.—**Cannstatt skull,** a skull found at Cannstatt, near Stuttgart, about two hundred years ago, and long believed by some authors to belong to the paleolithic race, but probably of much more recent origin. *Keane*, Ethnology, p. 33.—**Neanderthal skull,** a part of a skull, of a low type and high geological age, found, with other portions of a skeleton, in the Neanderthal near Düsseldorf, in 1856, under a diluvial deposit about two meters thick.

Neanderthal Skull: view from left side.

skull-banker (skul'bang″kẽr), *n.* In Australia, a loafer; a tramp. Also *scow-banker*. [Slang.]

A *skull-banker* is a species of the genus loafer—half highwayman, half beggar.
A. Michie, Retrospects . . . of the Colony, p. 9, quoted [in E. E. Morris, Austral English.

skull-cracker (skul'krak″ẽr), *n.* A falling weight, with the necessary framing and hoisting apparatus, used in breaking up the skulls or solidified metal from ladles and runners in steel-works.

The track leading to the drop from the casting level of the open-hearth building rises six feet to the drop, and the track from the charging level descends six feet, tracks on the two levels, which are twelve feet apart, thus having a loop connection in the rear of the *skull-cracker*. The latter consists of a tripod, and the drop is operated by a winding drum driven by a 25-horse-power motor. *Sci. Amer. Sup.*, July 23, 1904, p. 23870.

skulled, *a.* **2.** In *metal.*, covered with skull. See *skull*[1], *n.*, 6.

skunk, *n.* Including the little striped skunks, at least twelve species have been recognized. After being changed back and forth by various revisers the name *Mephitis* is retained for the larger species and *Spilogale* for the smaller.—**Little spotted skunk,** any one of the small skunks of the genus *Spilogale*, which are marked with rows of spots.—**Striped skunk,** a general name for the smaller skunks of the genus *Spilogale* found in the southern and western United States.

skunk, *v. t.* **3.** In an election, to defeat (an opponent) completely, so that the latter gets no votes at all.

II. *intrans.* To leave without paying one's bills. *Jour. Amer. Folk-lore*, Oct.-Dec., 1902, p. 258.

skunk-bear (skungk'bâr), *n.* A name sometimes given to the wolverene, *Gulo luscus*, whose appearance and markings are somewhat suggestive of a large skunk.

skunk-bush (skungk'bûsh), *n.* **1.** The ill-scented or Canadian sumac, *Rhus trilobata*.—**2.** The bear-brush, *Garrya Fremontii*. See ★*bear-brush* and ★*quinine-bush*.

skunk-grass (skungk′grȧs), *n.* Same as ★*stink-grass*.

skunkweed, *n.* 2. A low annual herb, *Navarretia squarrosa*, troublesome as a weed in grain and grass lands from Washington to California. Its ill odor (which suggests the common name) is damaging to the quality of the crop.

Skunnemunk conglomerate. See ★*conglomerate*.

sky[1], *n.* 6. An abbreviation of *sky-blue*. *T. W. Fox*, Mechanism of Weaving, p. 382. —**Clear sky.** See ★*clear day*.—**Green sky,** a sky of a pale-green or pea-green color seen at sunset and rarely on other occasions: possibly due to a combination of the colors from the red sky and the blue sky.—**Lamb's-wool sky,** small white fleecy patches of cloud against a blue sky.—**Livid sky,** clouds of a dark leaden color.—**Sky aspect.** See ★*aspect*.

sky[1], *v. t.* 2. In *golf*, to so strike (a ball) as to cause (it) to go unusually high in the air.

sky-blue, *n.*—**Diamine sky-blue,** a coal-tar color of the diazo type, related to dianisidine. It dyes unmordanted cotton a very pure blue in an alkaline salt bath.

skyer (skī′ėr), *n.* In *cricket*, a ball hit high in the air.

sky-glow (skī′glō), *n.* See the extract.

"*Sky glows*," . . . These phenomena were first observed about July 1 at Copenhagen, Konisberg, Berlin, Vienna, and other places. Mr. W. F. Denning, the English astronomer, says: "Certain features of the glows struck me as being essentially different from exhibitions of normal auroræ boreales. No streamers whatever were seen. Clouds observed were of peculiar character, and some of them showed traces of spiral formation. Though thin, they were strongly illuminative, and stars shone through them with surprising distinctness."

Sci. Amer., Aug. 29, 1908.

skylight, *n.* 2. The light of the sky; specifically, the blue or pale white color of the aërial vault. The light of the sky is, in general, reflected sunlight. Its color is due to the size of the reflecting particles, blue light coming from the finest gaseous particles and red light from larger vaporous ones. Blue light may also come from the molecules of the gases mixed together in the atmosphere. The white light with which the blue is adulterated comes from larger particles or globules of water that reflect all the colors of the sunlight. The blue light is polarized in a plane perpendicular to the sun's rays, the white light in the plane of the sun's rays; the resultant light is polarized according to the law combining these two elementary conditions.

3. Illumination by means of the light of the sky: as, a studio with a good *skylight*.

skylight-quadrant (skī′līt-kwod-rant), *n.* In *marine hardware*, a brass bar in the form of a quadrant, or quarter-circle, hinged to a plate at one end and having a slot in the middle. The plate is screwed to the side of a ship's skylight and the sash carries a set-screw that slides in the slot. It is used to hold the sash open at any desired angle.

sky-line, *n.* 2. In *arch.*, the profile of a building or mass of buildings as seen against the sky; in *painting* and other arts of representation, the profile of mountains, trees, or other natural masses seen in the same way.

sky-pilot (skī′pī″lot), *n.* A clergyman; a priest; one who pilots or shows the way to heaven. [Slang.]

We insist that the gravediggers, pallbearers, "*sky-pilot*," choristers, surviving members of the family, hired mourners, charioteers, brass band and the like shall wear flowers at the obsequies.

Kansas City Daily Star, May 4, 1903.

skysail-mast (skī′sāl-mȧst), *n.* The spar on which the skysail-yard is carried, and on which the skysail is set. Strictly speaking, this should be called the *skysail-pole*, which is that part of the royal-mast above the shoulder, and which terminates at the truck.

skysail-pole (skī′sāl-pōl), *n.* The upper part of a royal-mast (from the shoulder to the truck) to which the skysail-yard is confined by a parrel.

skysail-yard (skī′sāl-yȧrd), *n.* The spar to which the head of the skysail is bent.

sky-scraper, *n.* 4. A very tall office-building such as those first erected in various cities of the United States in the latter part of the nineteenth century. Originally from ten to fifteen stories in height, they are now occasionally built with forty stories and more. [Colloq.]

We are told . . . that "*sky-scrapers*" are preventers of conflagrations, and that a law should be passed requiring the erection of a double row of them, the length of Broadway. . . . There are happily not many of these "modern" structures in any city, and this is one reason why we have not yet heard of a serious fire originating in one of them. Another is, that being few in number, they are as yet used exclusively for office purposes and the contents are not especially combustible.

Sci. Amer., Jan. 21, 1899, p. 39.

sky-sign (skī′sīn), *n.* See the extract.

Advertisements coming within the definition of *sky-signs* in the London Building Act of 1894. These specifications are as follows:—"*Sky sign*" means any word, letter, model, sign, device, or representation in the nature of an advertisement, announcement, or direction supported on or attached to any post, pole, standard, framework, or other support, wholly or in part upon, over, or above any building or structure, which, or any part of which, *sky sign* shall be visible against the sky from any point in any street or public way, and includes all and every part of any such post, pole, standard, framework, or other support. The expression "*sky sign*" shall also include any balloon, parachute, or similar device employed wholly or in part for the purposes of any advertisements or announcement on, over, or above, any building, structure, or erection of any kind, or on or over any street or public way. *Encyc. Brit.*, XXV. 97.

sky-worship (skī′wėr″ship), *n.* That form of primitive religion in which the sky, the heavenly bodies, and meteorological phenomena are worshiped. *Jour. Amer. Folk-lore*, Jan.–March, 1902, p. 31.

S. L. An abbreviation (*b*) of *sergeant at law*; (*c*) of *solicitor at law*.

slab[1], *n.* 1. (*b*) In Australia, a piece of timber, two or three inches thick, ax hewn, not sawed: used for the walls of rough houses. Also used attributively. *E. E. Morris*, Austral English.

The house in which this modern Robinson Crusoe dwelt was what is called a *Slab* Hut, formed of rough boards and thatched with grass.

J. L. Stokes, Discoveries in Australia, I. 266.

The hut was built of logs and *slabs*.

R. M. Praed, Australian Life, p. 8, quoted in E. E. [Morris, Austral English.

6. A flat mass of metallic tin cast in a chilling mold of stone or metal.—7. *pl.* A commercial name of crude rubber in pieces an inch or two thick formed by pressing several sheets together. See ★*rubber*[1], 3.—**Fibrous slab.** See ★*fibrous*.

slab[1], *v. t.* 2. To keep (the sides of any excavation, as a mining-shaft or a well) from crumbling and falling by facing (them) with slabs, either of timber or of stone.

The *slabbed* margin of a well.

Keats, Endymion, I.

slabbing (slab′ing), *n.* In *soap-making*, the process of cutting the blocks of soap, which have solidified in frames, into slabs which are afterward cut transversely into bars. A loop of wire is used and drawn through the block by hand, or a special slabbing-machine is applied.

slabby, *a.* 3. Consisting of slabs, or resembling a slab or series of slabs.

slab-dross (slab′dros), *n.* A by-product of the manufacture of galvanized iron consisting of impure zinc which in the molten state has alloyed with and dissolved a large proportion of iron.

slab-saw (slab′sâ), *n.* A saw which cuts the bark and outer slab from a round log, to make it square in section or flat-sided with irregular corners.

slab-wave (slab′wāv), *n.* A wave consisting of the motion of an element or 'slab' of the ether bounded by parallel planes and subjected to uniform electric and magnetic forces at right angles to each other and parallel to the bounding planes: a term used by Heaviside in the discussion of electric waves.

slack[1]. **I.** *a.*—**Slack water.** (*c*) See ★*water*.

II. *n.* 5. The interval of slack water, when the tide is at rest, either at high or low tide; sluggishness of the current, at that time. See *slack*[1], *a.*, 2.

There is little or no *slack* in the stream at high water, and the ebb runs out with strength to low water.

Geog. Jour. (R. G. S.), XVIII. 179.

6. *pl.* A sailor's loose trousers.

Bill blushed and became interested in the foretop until nudged by Smith, when he suddenly hitched up his *slacks*, saluted, and said, hurriedly, "Aye, aye, sir."

Wide World Mag., April, 1903, p. 596.

7. Feeble, foolish talk. [Slang.]

"If I were not crippled you would not give me that *slack* before strangers."

"Well, use common sense, then, and you won't get any *slack* from me," his son told him.

Forest and Stream, Feb. 21, 1903, p. 142.

slackage (slak′āj), *n.* [*slack, a.*, + *-age*.] The amount allowed for the droop or for any unstressed part of a rope or cable; slack.

The Anglia laid exactly 1,315 knots of cable from Midway to this point, and with the additional eighteen miles of shore end the actual amount of cable laid is 1,333 knots. There was about eight per cent. of *slackage*.

Elect. World and Engin., July 25, 1903, p. 145.

slack-dross (slak′dros), *n.* Refuse coal or coke in powder or very small fragments.

slacken (slak′n), *n.* The slags or cinder from previous fusions, used in smelting operations to mix with natural ores and to retard fusion of the ores until reduction shall have proceeded to the desired point.

slackener (slak′nėr), *n.* One who or that which slackens; specifically, a rod in a loom for weaving leno or gauze, designed to ease the tension on the warp-threads. Also called *easer* and *slackner*.

slackness, *n.* 2. A tendency of a vessel under sail to fall off or away from the direction of the wind when the helm is amidships: opposed to *ardency*.

The contrary condition, where the resultant resistance acts abaft the resultant wind pressure, and makes the head of the ship fall off from the wind, is termed "*slackness*," and can only be counteracted by keeping the helm a-lee. *White*, Manual of Naval Arch., p. 508.

slag[1], *n.*—**Basic slag,** slag from the manufacture of steel by either the Bessemer or the Siemens-Martin process with the Thomas-Gilchrist modification of basic (lime and magnesia) lining of the converter or hearth. The object of such lining is the removal from the metallic product of sulphur and phosphorus; the presence of the latter element in the slag, in the state of phosphates, gives it value as a fertilizer, for which purpose it is used on a very large scale.—**Gray slag,** lumps of a mixture of lead, lead sulphid, oxid, sulphate, silicate, gangue, cinders, and lime, obtained in smelting lead ore in an ore-furnace. It is treated generally in a blast-furnace, but sometimes in a slag-hearth to extract the lead.—**Ore-furnace slag,** in the Swansea process of copper-smelting, the slag, consisting principally of ferrous silicate and practically free from copper, which is produced in the first melting-furnace and serves to get rid of the iron of the ore treated.—**Phosphatic slag,** basic slag; odorless phosphate.—**Refinery slag.** (*a*) In the Swansea process of copper-smelting, the slag which separates when crude blister copper is re-fused and exposed to the action of atmospheric oxygen on the hearth of a roasting-furnace. It contains a number of impurities removed from the residual copper, such as arsenic, antimony, iron, etc., along with a large amount of cuprous oxid and some silicate of copper, silica having been taken up from the furnace-lining. (*b*) In the puddling process for making wrought-iron, the slag which forms when, as a preliminary step not always taken, air is blown down upon the surface of a charge of melted cast-iron in a specially constructed hearth. Silicon is the principal substance removed from the iron, and the slag consists mainly of ferrous silicate.—**Sharp slag,** the slag obtained in the third stage of the Welsh process for copper smelting.—**Thomas slag.** Same as *basic* ★*slag*, the basic process of steel-making having been introduced by Messrs. Thomas and Gilchrist. *Sci. Amer. Sup.*, Nov. 15, 1902, p. 22463.

slag[1], *v.* **II.** *trans.* In *metal.*: (*a*) To convert into slag: as, an excess of limestone used as a flux may to a greater or less extent *slag* the lining of a furnace. (*b*) To cake together as the result of chemical action at a heat lower than that of fusion.

slag-buggy (slag′bug″i), *n.* A car for carrying a slag-ladle.

slag-dump (slag′dump), *n.* A place of deposit for the slag or cinder which results from a metallurgical operation on an ore. The cinder is conveyed in cars and dumped, or it is allowed to flow in fluid form through runners or channels.

slag-eye (slag′ī), *n.* An eye or hole through which slag can be drawn off, as in certain blast-furnaces used for lead.

Slag-hearth browse. See ★*browse*[2].

slag-hole (slag′hōl), *n.* The opening through which slag or cinder is discharged from a blast-furnace or cupola. The slag is lighter than the fused metal and floats upon its surface. It can therefore be discharged through an opening at the proper level as it accumulates during the process.

slag-lead (slag′led), *n.* See ★*lead*[2].

slaglessness (slag′les-nes) *n.* The fact of having no slag or cinder. Those forms of wrought-iron and steel which have not been fused in their production are liable to suffer from the presence of such foreign ingredients. From material which has been fused all slag is removed by the difference in specific gravity of the slag and the metal.

But the former [certain varieties, such as blister steel] lack the essential quality—*slaglessness*—which makes the latter [low-carbon] steel. *Encyc. Brit.*, XXIX. 571.

slag-lip (slag′lip), *n.* The edge, or lip, of a ladle or other receptacle over which the slag is poured. *Phillips and Bauerman*, Elements of Metallurgy, p. 671.

slag-machine (slag′ma-shēn″), *n.* A machine for granulating the slag from a blast-furnace and reducing it to the form of fine gravel suitable for various industrial purposes.

slag-pot (slag′pot), *n.* A vessel or pot designed to receive the discharge of cinder, scorias, or slag from a furnace in continuous operation, such as a shaft-furnace. The slag is allowed to cool in these pots, and is then removed and dumped.

slam[1], *n.*—**Grand slam,** in *bridge,* the winning of all thirteen tricks by the same partners, which counts 40 in the honor column; in other games, the winning of all the tricks.—**Little slam,** in *bridge,* the winning of 12 out of the 13 tricks by the same partners, which counts 20 in the honor column. See *bridge.*

slam-bang (slam-bang′), *v. i.* [*slam-bang, adv.*] To move with violence or noise. [Colloq.]

My engines, after ninety days o' race an' rack an' strain
Through all the seas of all Thy world, *slam-bangin'* home again.
R. Kipling, McAndrew's Hymn, l. 10.

slander, *n.*—**Slander of title,** defamatory and false statements injuring one's property, real or personal, or one's title thereto.

slank[2] (slangk), *n.* **1.** A slope; a declivity; a depression in the ground. *Eng. Dial. Dict.* [Prov. Eng. and U. S.]—**2.** Wrinkled skin: especially used of animals. *Eng. Dial. Dict.*

slant. I. *a.*—**Slant culture.** See ★*culture.*

slant-eyed (slant′īd), *a.* Having eyes the inner part of which is covered by a heavy fold of the upper eyelid and therefore appearing to be set obliquely, as the Chinese and other Mongoloid races.

The prophets of the elder day,
The *slant-eyed* sages of Cathay,
Read not the riddle all amiss
Of higher life evolved from this.
Whittier, Miriam, st. 3.

slapiness (slā′pi-nes), *n.* [**slapy* + *-ness.*] Slipperiness; deficiency in clinging quality. Also *slapeiness.*

In the staple bulk, again, they do not lie so close together as do those of cotton fibres. This *slapeiness* may be put down to the want of spiral character in the fibres. What resistance there is in the staple of ramie comes from the length of the fibres as they are drawn out from their entanglements, and the nearly glabrous surface of the fibres. *Hannan,* Textile Fibres of Commerce, p. 56.

slapping, *a.* **II.** *n.* Specifically, in *ceram.,* the process of preparing clay for the wheel. See *wedging,* 2.

slash[1], *n.* **7.** (*b*) A wet or marshy linear depression between nearly parallel ridges of dunes on a sand-reef. See the extract.

There are many successive ridges of shingle running in varying directions, and often with narrow strips of marsh enclosed between successive ridges. Such bands of marsh have been given the very appropriate name of "*slashes*" in New Jersey. *Geog. Jour.* (R. G. S.), IX. 538.

slashed (slasht), *a.* Specifically, in *bot.,* deeply cut-lobed or laciniate.

slasher, *n.* **1.** (*b*) (3) In a *sawmill,* a saw-table fitted with one or two saws and used to slash or cut up short slabs and other stuff into short lengths; a slab-slasher. (4) In *paper-manuf.,* a sawing-machine for cutting logs and short lengths of wood into blocks suitable for grinding into wood-pulp. The single-saw slasher has an appliance for delivering the wood to the saw and holding it until cut.

slashing, *n.* **4.** The sizing, drying, and beaming of cotton warp for weaving on a machine called a slasher. *R. Marsden,* Cotton Weaving, p. 514.

slat[3], *n.* **5.** A green sheepskin, with the wool removed, which has been dried in the sun. *Modern Amer. Tanning,* p. 43.

slate[2], *n.*—**Dolgelly slates,** a division of the Upper Cambrian or Lingula flags of Wales.—**Ilfracombe slates,** the middle division of the Devonian series in North Devon, equivalent to the Torquay and Plymouth limestones of South Devon.—**La Couyère slates,** a subdivision of the Lower Silurian system in the northwest of France. The slates are underlain by the shales of Guichen and overlain by the Grès de May. They are correlated with the Llandeilo formation of Great Britain.—**Lithographic slates.** See *lithographic stone,* under *lithographic.* Specifically, a very fine and even-grained limestone in thin layers occurring in the Jurassic beds at Solnhofen in Bavaria, where it is about 80 feet thick and noted for its wonderfully perfect preservation of fossil crustaceans, spiders, insects, impressions of birds' feathers and wings of pterodactyls. A division of the Subcarboniferous Kinderhook group in Missouri is also known as the 'Lithographic limestone.'—**Moel Ferna slates,** a division of the Upper Silurian in North Wales lying above the Pen-y-glog grits and equivalent to the Lower Ludlow rock.—**Momable slates,** a subdivision of supposed Precambrian rocks in Newfoundland regarded by Walcott as containing evidences of organic remains.—**Morte slates,** the lowest division of the Upper Devonian in North Devon, lying above the Ilfracombe slates and below the Pickwell Down group.—**Spirit slates,** the slates employed by a medium in ★slate-writing (which see). *A. A. Hopkins,* Magic, p. 123.—**Transparent slate,** a sheet or pane of glass slightly ground on one side. A picture or design placed against the unground surface can be traced on the ground surface with a lead-pencil. Also called *tracing-slate.*—**Vireux slates,** a division of the Coblenzian group of the Lower Devonian in Belgium and northern France.

Slaters' hammer. Same as *sax*[1], 2.

slate-writer (slāt′rī″tėr), *n.* One who practises slate-writing, or is supposed to have the mediumistic gift of slate-writing.

The death of Henry Slade, the *slate-writer,* removes the last of the mediums who a generation and more ago made spiritualism *a* fashionable cult.
N. Y. Evening Post, Sept. 12, 1905.

slate-writing (slāt′rī″ting), *n.* A sleight-of-hand trick, regarded by the credulous, in spite of repetition and of exposure, as due to a mediumistic gift whereby communication may be had with the spirits of the dead. There are many ways of performing the trick. In general, two wooden-framed slates, with a piece of slate-pencil between them, are tied together with string and the knots sealed. The slates are held beneath the table by the medium; the scratching of the pencil is heard; knots and seals are found intact; and the slates, when taken apart, prove to have writing upon their inner faces. The result may be most easily produced by means of a false slate (piece of slate-colored cardboard): the writing is done beforehand, and the sound is produced by the finger-nail. *A. A. Hopkins,* Magic, p. 124.

President G. Stanley Hall of Clark University said he knew seven different tricks of legerdemain by which he could explain all the cases of *slate-writing* of which he had ever heard. *N. Y. Evening Post,* Sept. 12, 1905.

There has probably been nothing that has made more converts to spiritualism than the much talked of "*Slate Writing* Test," and if we are to believe some of the stories told of the writings mysteriously obtained on slates, under what is known as "severe test conditions" that preclude, beyond any possible doubt, any form of deception or trickery, one would think that the day of miracles had certainly returned; but we must not believe half we hear nor all that we see, for the chances are that just as you are about to attribute some unaccountable spirit phenomena to an unseen power, something turns up to show that you have been tricked by a clever device which is absurd in its simplicity. *Sci. Amer.,* Oct. 8, 1898, p. 229.

slath (slath), *n.* [A dial. form of *sloe.*] In *basket-making,* the parallel rods and the largest osiers which are intertwined.

The *slath,* which is the foundation of the basket.
Encyc. Brit., III. 423.

slating-machine (slā′ting-ma-shēn″), *n.* A machine for setting out a hide on the grain side to give it an even surface and to remove fine hairs. *Flemming,* Practical Tanning, p. 12.

slating-table (slā′ting-tā′bl), *n.* A table for setting out a hide on the grain side to give it an even surface and to remove fine hairs. *C. T. Davis,* Manuf. of Leather, p. 113.

slaughter-tree (slâ′tėr-trē), *n.* Same as ★*strangler-tree.*

slauter, *n.* and *v.* A simplified spelling of *slaughter.*

Slav. An abbreviation of *Slavic, Slavonian,* or *Slavonic.*

slave-ant (slāv′ânt), *n.* An ant held in slavery by another species of ant. Thus *Formica subsericea* is frequently a slave in the colonies of *Formica difficilis. Comstock,* Manual of Insects, p. 641.

slave-maker (slāv′mā″kėr), *n.* One who or that which (as an ant) makes slaves. See *slave-making.*

In its pure form it is known to occur only in two of the several thousand described species, namely, in the sanguinary or blood-red *slave-maker* (Formica sanguinea) and the amazon (Polyergus rufescens).
W. M. Wheeler, in Pop. Sci. Mo., Dec., 1907, p. 550.

slaving (slā′ving), *n.* Slave-dealing; the buying and selling of slaves.

Formerly, numerous caravans of Arabs and Swahilis came up to trade for ivory, combined with a little quiet *slaving,* but the days of *slaving* and dealing in contraband are now past. *Geog. Jour.* (R. G. S.), XII. 372.

slavocratic (slā-vō-krat′ik), *a.* [*slavocrat* + *-ic.*] Characteristic of, or pertaining to, a slavocrat or slavocracy.

Slavo-Lithuanic (slāv″ō-lith-ū-an′ik), *a.* and *n.* Slavic and Lithuanic considered as a separate division of the Indo-European languages. *Keane,* Ethnology, p. 411, note.

Slavo-Teuton (slāv-ō-tū′ton), *n.* One of a people of mixed Slavic and Teutonic descent. *Keane,* Ethnology, p. 200.

Slavo-Teutonic (slāv″ō-tū-ton′ik), *a.* Of or pertaining to the Slavo-Teutons; of mixed Slavonic and Teutonic descent.

slay[2] (slā), *v. t.* [*slay*[2], *n.*] To arrange (the warp-threads) in the loom-reed for weaving.

slay-block (slā′blok), *n.* The beam of the slay, or lathe, of a loom. *R. Marsden,* Cotton Weaving, p. 166.

slay-cap (slā′kap), *n.* A strip of wood, grooved on its under side, for holding the reed in position in the slay, or lathe, of the loom. *R. Marsden,* Cotton Weaving, p. 166.

slay-sword (slā′sōrd), *n.* One of the supports upon which the slay, or lathe, of a loom oscillates during the process of weaving. *R. Marsden,* Cotton Weaving, p. 166.

sled[1], *n.* **4.** A small tool, resembling a sled in form and having sharp blades for runners, used for cutting gold-leaf into rectangular sheets.

In it the gold is beaten for about one and a half hours with a 10-pound hammer, until each leaf is about four inches square. The leaves are then again quartered, this time by means of a small instrument called a "*sled*" or a "wagon." *Sci. Amer. Sup.,* June 25, 1904, p. 23816.

5. The device for making sliding contact between the underground conductors of an electric road and those of a moving railway-car upon the road.—**Automobile sled,** an automobile vehicle constructed with runners, like a sled, and propelled by a motor which actuates levers which grip the surface of the ice.—**Donkey sled,** the heavy frame upon which a donkey-engine is fastened.

sledge[2], *n.* **6.** The thick wooden outer case of a mummy. *The Century,* Nov., 1905, p. 66.—**Plow sledge,** a vehicle with low wheels or with none, designed for the conveyance of a plow on the farm. *J. Scott,* Textbook of Farm Engineering. [Eng.]

sled-tender (sled′ten″dėr), *n.* In *lumbering:* (*a*) One who assists in loading and unloading logs, or skidding with a dray. Also called *chain-tender.* (*b*) A member of the hauling crew who accompanies the turn of logs to the landing, unhooks the grabs, and sees that they are returned to the yarding-engine.

sleeker, *n.* **4.** See ★*boss-tool.*—**Brass sleeker,** a tool with a brass blade set in a wooden handle, used for scraping or smoothing out wet skins on a table or bench. See *sleeker,* 1.

sleep, *n.*—**Diurnal sleep,** in *bot.* See *paraheliotropism* and *sleep,* 5.—**Sleep drunkenness.** See ★*drunkenness.*

sleeper[1], *n.* **9.** In *faro,* a bet left upon a card which the case-keeper shows is dead. Such a bet is public property and the first one to see it can take it.—**10.** A calf that has been earmarked, but not branded. *S. E. White,* in McClure's Mag., April, 1906, p. 651.

Sleeping rent. See ★*rent*[2].

sleeping-beauty (slē″ping-bū′ti), *n.* The wood-sorrel, *Oxalis Acetosella.*

sleeping-car, *n.*—**Tourist sleeping-car.** See ★*tourist.*

sleeping-sickness, *n.* **2.** A disease of silkworms. *Jour. Roy. Micros. Soc.,* April, 1904, p. 179.

Sleepy staggers. See ★*stagger.*

sleepy-dick (slē′pi-dik″), *n.* The star-of-Bethlehem, *Ornithogalum umbellatum,* so called from the early closing of its flowers.

sleepy-grass (slē′pi-grâs), *n.* A stout bunch-grass, *Stipa Vaseyi,* growing in the Rocky Mountains at altitudes of from 5,000 to 6,000 feet. The leaves have a narcotic effect upon horses which feed upon them, causing a drowsiness which lasts several days. After once eating, the victim thenceforth avoids it. The hay does not appear to have any ill effect.

sleepy-yellow (slē′pi-yel″ō), *n.* A pierid butterfly found throughout the United States. Its larvæ feed on cassia, senna, and clover.

sleet-cutter (slēt′kut″ėr), *n.* In electric railroading, a trolley-wheel which has a corrugated tread used to break the ice that may form on an overhead trolley-wire during sleet-storms.

sleev, *n.* and *v.* A simplified spelling of *sleeve.*

sleevd, *a.* A simplified spelling of *sleeved.*

sleeve[1], *n.* **2.** Specifically: (*a*) A hollow tube or cylinder inserted into some structural detail, so that some other element may pass freely through, such as a sleeve in a wall to allow a shaft to pass through, or a pipe or conduit. (*b*) A hollow tube or cylinder fitting loosely upon a revolving shaft, so that no accident may result from the catching of clothing on projections upon the shaft. Such a sleeve is often in sections. (*c*) A hollow tube or pipe into the ends of which two other lengths of pipe may be screwed to join them together. Also called a *muff,* but more usually, in this sense, a *coupling-sleeve.* (*d*) A hollow tube or cylinder fitting with a running fit upon a revolving shaft and carrying a pulley or clutch. The shaft may turn without the pulley on the sleeve, or the pulley turn without the shaft, or both may turn together when a clutch is engaged. The sleeve may be moved lengthwise on the shaft. Used in jack-shaft designs, and in reversing and quick-return motions, and in compensating gears in motor-cars and in traveling cranes. (*e*) A hollow tube or cylinder running in independent bearings, the inside diameter being so large that a shaft may traverse the sleeve, without touching it, allowing a flexibility and lateral adjustment if the shaft and sleeve do not aline perfectly. Used in some designs of motor-driven electric locomotives.

3. A square of cloth or other flexible material through the center of which a catheter is passed and tied. It is then inserted into a canal to be tamponed, and the space between the catheter and its cloth covering is packed with pledgets of cotton, worsted yarn, or other material.

A *sleeve* for a packing which has to be left in the nose for any length of time. *Med. Record,* March 7, 1903, p. 387

Insulating-sleeve, a tube or cover of insulating material used to protect a joint or splice in an electric circuit.

sleeve[1], *v. t.* **3.** In *mech.*, to fasten or adjust in the manner of a sleeve.

On the Baltimore and Ohio locomotives the motors are *sleeved* on the axles, there being a slight play between the sleeve and the axle, which allows a flexible support. *Encyc. Brit.*, XXVIII. 97.

4. To attach or operate by a sleeve. See ★*sleeve*[1], *n.*, 2.

sleeve-bearing (slēv'bār″ing), *n.* **1.** A form of bearing in which a hollow cylinder or quill fits the shaft-journal on its inside and the box or bearing proper on its outside surface. The sleeve may turn in the box or the shaft turn in the sleeve. — **2.** A form of long bearing for a shaft to be inserted in a wall and permit the revolving shaft to pass through it to the other side.

sleeve-joint (slēv'joint), *n.* A connecting device for electric wires in which the conductors are passed, from opposite ends, through a sleeve or tube of metal and then twisted together, brazed, or soldered.

sleigh[1], *n.*—**Booby sleigh,** a sleigh having a body resembling that of a brougham swung by straps from a sleigh-frame.

Booby Sleigh.

sleuth[2], *n.* **2.** A newspaper name for a detective. [Recent.]

The *sleuths* were unable to discover how the [thief] had gotten into the house, and concluded, therefore, that he must have used a skeleton key. *N. Y. Times*, Dec. 24, 1905.

slewing-bracket (slö'ing-brak″et), *n.* A bracket or arm projecting from the mast of a pivoted crane and carrying the gear-wheel used in rotating the crane or slewing it. The gear is driven and meshes into a stationary or fixed gear or rack.

slice, *n.* **3.** (*k*) Same as *paddle*[1], 6 (*b*).

5. A mill or machine for slitting or dividing gems. — **6.** In *golf*, the side spin imparted to a ball which causes it to curve to the right in the case of a right-handed player, or the reverse in the case of a left-handed player. *W. Park, Jr.*, Game of Golf, p. 111.

slice, *v.* **I.** *trans.* **4.** In *golf*, to draw the face of the club across (the ball) from right to left in the act of hitting it, the result being that it will travel with a curve toward the right; or the reverse for a left-handed player. *W. Park, Jr.*, Game of Golf, glossary. — **5.** To break with a bar. Bituminous coal, when burned, fuses and forms a solid mass which must be broken up in this manner. *Trans. Amer. Soc. Mech. Engin.*, 1903, p. 320.

II. *intrans.* In *golf*, to cause the ball, when struck with the club, to curve from left to right in the case of a right-handed player, or the reverse in the case of a left-handed player.

slicer, *n.* (*c*) The name of various machines and appliances used in cutting bread, smoked beef, potatoes, etc., into thin slices. The simplest form is a horizontal knife set in a wooden frame; in another the knife is pivoted; still others employ revolving cutters.

slice-shot (slīs'shot), *n.* In *croquet* and similar games, a shot in which the object-ball is but little displaced, the mallet-ball receiving most of the force of the blow.

slickens (slik'nz), *n. pl.* [*slicken, a.*] **1.** The fine dust or powdered rock from an ore stamp-mill or rock-crusher. — **2.** The lighter earth carried away in the sluices of a hydraulic mining operation.

slicker, *n.* **2.** Same as *silver-fish*, 6. [Local, U. S.] *L. O. Howard*, Insect Book, p. 380.

slick-stone (slik'stōn), *n.* Same as ★*setting-stone*. *C. T. Davis*, Manuf. of Leather, p. 545.

slide, *v. i.* — **Sliding-bow contact,** in *elect.*, a sliding-contact used as a substitute for the trolley on many electric railways, especially in Europe. It consists of a horizontal transverse metallic rod bent downward upon itself at the ends and mounted above the roof of the car. It is held in contact with the under side of the trolley-wire by the action of springs.

slide, *n.* **14.** An inclined plane up which hay is drawn by horse-power on to a rick by means of a net and a cable running over the top of the rick. The net, when emptied, is drawn back by a horse with a long rope. This method is practised on very large ranches. *U. S. Dept. Agr.*, Bur. Plant Industry, 1902, Bulletin 15, p. 36.—**Label-card slide.** See ★*label-card.*

slide-bar, *n.* **3.** One of the bars or elements which guide and control a reciprocating piece in any machine or engine. Usually called *guide*. *Uhland*, Corliss-Engines, p. 27.

slide-car (slīd'kär), *n.* A conveyance without wheels, consisting of a pair of shafts attached to short runners.

slide-feed (slīd'fēd), *n.* A gravity feed-motion in which sheet-metal is fed, by sliding into the press, to a blanking-die, the cut blank then sliding down to a stamping-die; a gravity feed-motion in which the shells, cans, or other objects slide down an incline in any manner to any machine.

slide-frame (slīd'frām), *n.* A frame which embraces or forms guides for a slide. *D. K. Clark*, Steam Engine, III. 27.

slider, *n.* **1.** (*h*) The sliding contact device used in some forms of the Wheatstones bridge or the potentiometer. See ★*slide-wire*. *Elect. World and Engin.*, Feb. 6, 1904, p. 283.

slide-rail, *n.* **3.** A rail or track on the bed of a machine upon which some element, such as the tool-carriage, slides and is guided to its work.

slide-resistance (slīd'rē-zis″tans), *n.* See ★*resistance*.

slide-rock (slīd'rok), *n.* Same as *talus*, 7.

In the mountains we often find the hillside slopes covered with broken stone of various sizes. This we call *slide rock*. This *slide rock* may be very coarse and the surface extremely ragged, when it is called "heavy slide." It may be fine and bound together by soil, in which case it can be plowed. It may be fine and dry and run just like dry sand when one attempts to walk on it or otherwise disturb it; this is called "fine *slide rock*." *Yearbook U. S. Dept. Agr.*, 1900, p. 195.

slide-tender (slīd'ten″dėr), *n.* In *lumbering*, one who keeps a slide in repair.

slide-tongs (slīd'tôngz), *n. pl.* Blacksmiths' tongs, in which the handles are pressed together to grip the work by means of a ring which envelops them and slides along their length until it is held by friction on their inclined sides.

slide-wheel (slīd'hwēl), *n.* A part of an oscillating tappet-motion of a loom for rotating the pattern chain in such a manner as to place the weft in the fabric progressively. *T. W. Fox*, Mechanism of Weaving, p. 58.

slide-wire (slīd'wīr), *n.* In *elect.*, a resistance wire with sliding contact or contacts: a simple form of rheostat consisting of a stretched wire. By means of a fixed contact at one end and an adjustable sliding contact, which can be moved at will the entire length of the wire, any desired portion of the resistance of the wire can be introduced into an electric circuit.

The electrical method required the use of a standard solution of potassium chloride the resistance of which was balanced against that of the sample by means of a *slide-wire* Wheatstone's bridge, a telephone being used instead of a galvanometer. *Nature*, Dec. 4, 1902, p. 98.

slide-zone (slīd'zōn), *n.* The lower part of the pitcher of a pitcher-plant (*Nepenthes, Sarracenia*, etc.), which is slippery, so that the insects slide down it into the water at the bottom of the pitcher.

Sliding-gear transmission. See ★*transmission*.

sliding-plane (slī'ding-plān), *n.* Same as *gliding-plane*. See also ★*solution-plane*.

Various experiments showed that the ice was plastic both under pressure and under tension, at temperatures far below the freezing-point — the glacier-grains or ice-crystals apparently slipping over each other. Even the crystals themselves exhibited plasticity, due to *sliding-planes*, the rate of distortion increasing with the temperature. *J. Geikie*, The Great Ice Age, p. 32.

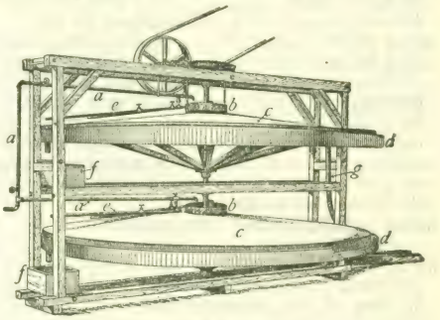
sliding-pole (slī'ding-pōl), *n.* A smooth, vertical pole which reaches from the floor of the engine-room in a fire-engine house, through an opening in the floor above to the ceiling of the room above. The hole in the floor is large enough to permit a man to slide down the pole, thus enabling him to reach the floor below more quickly than by going down the stairs. *Sci. Amer.*, Feb. 28, 1903, p. 159.

sliding-ways (slī'ding-wāz), *n. pl.* In *shipbuilding*, the lower part of the cradle on which a vessel slides down the launching-ways (which see). Also called *bilge-ways*.

slight[2], *n.* A simplified and former spelling of *sleight*.

slim[3] (slim), *a.* [D. *slim*, cunning. See *slim*[1], *a.*] Cunning; crafty; tricky.

For "*slim's*" the word now most in vogue
(That 's "sly," if read aright);
From head to heel be dull and dim,
Your brain alone be bright.
E. T., in War's Brighter Side, x.



The Boer word "*slim*" has not yet been introduced in America, but some of the English papers are using it,

and, as it expresses a quality which is not exactly defined by any English word, it is likely to become incorporated in the English language. *N. Y. Times*, July 6, 1902.

slime, *n.*—**Electrolytic slime.** See ★*electrolytic*.

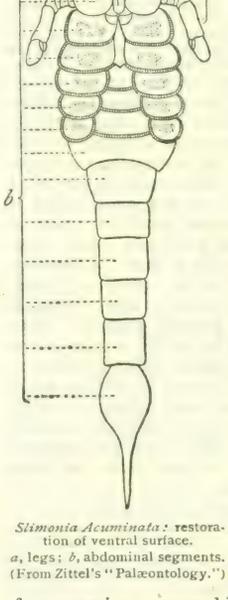
slimer (slī'mėr), *n.* [*slime* + *-er*[1].] Same as *toad-fish*, 1.

slime-table (slīm'tā″bl), *n.* In *ore-dressing*, a revolving table whose surface is that of a flat cone and has about 1½ inches of inclination for each foot of radial distance, the inclination varying, however, with the material to be treated. On this revolving cone the slime is delivered, and the gentle motion and the incline separate the elements in the flowing water. Also called *buddle* and *vanner*.

Double-deck Slime-table.

a, a, a, feed-water piping; *b, b*, feed-boxes; *c, c*, slime-tables; *d, d*, launders; *e, e*, wash-water pipes; *f, f*, receptacles for concentrator; *g*, drain-pipe for gangue.

Slime-tables are circular revolving tables . . . with flattened conical surfaces, and a slope of 1⅛ inch more or less per foot from centre to circumference. . . . These tables treat material [grains (quartz)] of $\frac{1}{150}$ inch and less in diameter coming from box classifiers. . . . The capacity of such a table is 12 tons or more of pulp, dry weight, in twenty-four hours. *Encyc. Brit.*, XXXI. 372.



slime-washer (slīm'wosh″ėr), *n.* A machine for washing, separating, and concentrating slimes; a buddle or vanner.

slime-water (slīm'wâ″tėr), *n.* Water containing ore and gangue in suspension, to be treated in slime-tables for the concentration and separation of the ore and rejection of the tailings or valueless rock.

slimness[2] (slim'nes), *n.* [*slim*[3] + *-ness.*] The character of being 'slim' or sly; craftiness. See ★*slim*[3].

The British officer may be criticized for lack of '*slimness*,' but when it comes to leading straight into an ugly breach he can give them all cards and spades. *The Citizen* (Ottawa), quoted in N. and Q., 9th ser., XI. [508.

Slimonia (slī-mō'ni-ą), *n.* [NL., from a personal name.] A genus of extinct merostomatous crustaceans of the family *Eurypteridæ*, of large size, with subquadrate cephalothorax, the preoral appendages small and chelicerate, five pairs of postoral appendages of which the first is antenniform, the first six of the twelve abdominal segments represented on the ventral side by parts of the genital plate, and four discontinuous plates bearing branchial lamellæ. The genus is found in the Old Red Sandstone of Scotland.

Slimonia Acuminata: restoration of ventral surface.
a, legs; *b*, abdominal segments.
(From Zittel's "Palæontology.")

sling[1], *n.* **10.** A harness consisting of a wide girth with breast-strap and breeching, suspended from a ceiling, for supporting invalid horses in a standing position. *U. S. Dept. Agr.*, Rep. on Diseases of the Horse, 1903, plate XXVIII.—**11.** A suspending chain or rope for carrying a movable platform for the use of repairers or painters.

There are four substantial brackets at the base which rest upon the steel work of the building, and the top is

stiffened by a ring made of two 6-inch by 6-inch by ½-inch angles, and below this a ring made of Z bar for carrying *slings* for painting. A ladder extends from the roof to the top of the stack.

Elect. World and Engin., Sept. 24, 1904, p. 512.

sling-bow (sling′bō), *n.* A bow with a double bowstring provided in the middle with a small rope for a bullet: used in Brazil and other parts of South America, and also in China. *Ratzel* (trans.), Hist. of Mankind, II. 62.

sling-fruit (sling′frōt), *n.* Same as ★*bolochore*.

sling-hoop (sling′höp), *n.* 1. A hoop or ring of round or flat iron, with a board seat at the bottom, by which a workman may be raised by a block and fall to inspect or repair elevated structures such as chimneys, steeples, and the like.— 2. The hoop or ring on the end of a hoisting-rope to which rope- or chain-slings may be made fast.

sling-psychrometer (sling′sī-krom″e-tėr), *n.* See ★*psychrometer*.

sling-rod (sling′rod), *n.* 1. A rod used for fastening a locomotive boiler to the frame.— 2. One of the suspension-rods by which a boiler is hung from beams which rest on the top of the side walls of the brick setting.

sling-shot (sling′shot), *n.* Same as *catapult*, 2.

sling-stay (sling′stā), *n.* One of the rods or braces in a steam-boiler by which the girder or crown-bar stays are tied to a part of the shell which resists strain in an opposite direction. In a locomotive-boiler, for example, the crown-sheet of which is stiffened from collapse by crown-bars, the bars are tied to the sides of the dome overhead by sling-stays, which hold the dome down and resist flexure of the bars.

slink[2], *n.* 5. The skin of a still-born calf. Also *slunk*. *Modern Amer. Tanning*, p. 157.

slinker (sling′kėr), *n.* A name of the pickerel, *Esox lucius*, in Maine and Canada. This fish is found from Alaska to the Ohio river in America, and in northern parts of Asia and Europe. See cut at *pike*.

slinkweed (slingk′wēd), *n.* The swamp loosestrife, *Decodon verticillatus*.—**Red** or **Cardinal slinkweed**, the cardinal-flower, *Rapuntium cardinale*.

slip[1], *v. i.*—**To slip up.** (*b*) To fail in a scheme; be disappointed in any expectation. *Dialect Notes*, III. iii. [Colloq., U. S.]

slip[1], *n.* 5. The slip of a screw-propeller or of a paddle-wheel is the difference between the speed of the propeller or paddle-wheel and the actual speed with which it advances through the water. The speed of the propeller is the speed at which it would move forward if it were working in a solid nut, which is the same as the product of the pitch of the propeller by the revolutions per minute; and the speed of the paddle-wheel is the circumferential velocity of the outer edges of the paddle-floats. The slip is usually expressed as a percentage of the speed of the propeller. The water immediately in front of the screw-propeller at the stern of a vessel in motion has a forward motion with reference to the surrounding water. The *true slip* is that with reference to the difference of the speed of the propeller and the actual speed through this water. The *apparent slip* is the difference between the speed of the propeller and that of the vessel propelled by it, and is therefore less than the true slip. *Negative slip* is apparent slip in which the speed of the ship is greater than the speed of the propeller. In most such cases, however, the assumed pitch of the propeller is less than the maximum real pitch which should be taken. 32. In *elect.*, in alternating-current induction-motors, the difference in speed from synchronism, that is, from rotation in step with the alternations of the impressed voltage, usually given as fraction or in percentage of synchronous speed.—33. The moving on each other of two surfaces which are intended to be immovable with respect to each other, as the slip of the plates in a riveted joint under stress.—34. In pumps, the difference between the actual volume of water or other liquid delivered by a pump during one complete stroke, revolution, or period, and the theoretical volume during the same stroke, revolution, or period as determined by calculation of the displacement. It is due both to leaks past pistons, plungers, and valves, and to the back-flow through valves during the time the valves are closing. It is usually expressed as a percentage of the displacement volume.—35. See the extract.

A "*slip*" is neither cockerel nor capon, but is between the two, possessing the mischievous disposition and the appearance of an ordinary cockerel, but, as a rule, being unable to reproduce. This condition is due to the fact that a small piece of the testicle is left in the body. This piece often grows to a considerable size. As the "*slips*" possess the same restless disposition as the cockerels, they grow and fatten little if any better, while they do not bring as good a price in the market as the capons.

U. S. Dept. Agr., Bur. Animal Industry, Rep., 1905, [p. 273.

Albany slip, a clay dug from the shore of the Hudson river at Albany, New York, used extensively as a dark-colored glaze for earthenware by American potters, and as a test of the heat of the kiln in the early stages of the firing.—**Coefficient of slip.** See ★*coefficient*.—**Shear slip**, in *geol.*, small crushes and movements along a thrust fault or zone of compression.

Horizontal differential movements had occurred, and local thrusts and *shear slips* took place again, fragmenting the previous thrust-masses and igneous intrusions.

Nature, Feb. 12, 1903, p. 359.

Slip of an induction motor, the ratio of the difference between the speed of the rotating field and that of the rotor to the speed of the rotating field. If n_s be the speed of the rotating field, n_r that of the rotor, $n_s - n_r / n_s$ is the *slip*.

slip-angle (slip′ang″gl), *n.* The angle between the helix which would be generated by a point on the face of screw-propeller, if working at a given speed of rotation in a solid nut, and the helix actually developed by the same point when the propeller works at the same speed in the water and drives the ship; the angle between the actual and theoretical helixes generated by the same point on the screw.

slip-band (slip′band), *n.* One of the lines which appear in a material which is under stress, and which consists of an aggregation of minute elements which must move upon each other if they are not all of the same elastic character. These lines appear in testing a material, such as a weld-iron of ductile character, after the common elastic limit is passed and the elements are being pulled lengthwise in a testing-machine. They seem to be due to variation in adherence of the elements to each other sidewise. They are called *slip-lines* if filamentous, and *slip-bands* if more massive. They are clearly revealed on polishing and etching the smooth surface.

The metal chosen for experiment was Swedish iron, of high and very uniform quality. It had the further advantage for our purpose of possessing a clearly defined and fairly large crystalline structure, well adapted when polished and etched to exhibit the characteristic lines known as "slip-lines" or "*slip-bands*," which appear in ordinary testing when any portion of the material has passed its limit of elasticity under strain.

Philos. Trans. Roy. Soc. (London), 1903, ser. A, p. 242.

slip-catch (slip′kach), *n.* A device which slides or slips on two parts of a mechanism for their relative adjustment.

slip-cup (slip′kup), *n.* In *ceram.*, a baked earthenware utensil in which the potters' slip, or diluted clay, is placed; a quill-box. It is provided with one or more quills at one side, through which the slip is poured in decorating pottery. A slip-cup differs from a pipette in being open at the top, while the latter is closed, having only an air-hole or vent by means of which the potter regulates the flow of slip by the pressure of his thumb. The latter term is used by European potters.

slip-cut (slip′kut), *n.* A certain cut of the pile in velveteen and similar fabrics.

slip-decorated (slip′dek″ō-rā-ted), *a.* In *ceram.*, ornamented with designs traced with diluted clay, or slip, poured through a quill.

slip-dish (slip′dish), *n.* An earthenware utensil ornamented with liquid clay, or slip, poured through a quill; a slip-decorated dish.

An interesting *slip-dish* in the Pennsylvania Museum, Philadelphia, remarkable for its unusual size, light weight, and perfect condition, is embellished with a conventional design of tulips in white and green outlined with lavender, on an orange-colored ground. This superb specimen measures seventeen and a half inches in diameter and possesses a double band of inscriptions in low German, and the date 1769. . . . This was made at one of the old potteries in Eastern Pennsylvania.

E. A. Barber, Pottery and Porcelain of the U. S., p. 71.

slipe-cart (slīp′kärt), *n.* Same as *slipe* (*a*).

slip-fault (slip′fâlt), *n.* In *geol.*, a normal, tension, or gravity fault.

The Triassic masses in this region consist largely of Dolomites; and these are said by the Author [M. M. O. Gordon] to be isolated by faults. Folded by many successive creeping movements of the Earth's crust, intersected by *slip-faults* and thrust-faults.

Annals and Mag. Nat. Hist., Jan., 1904, p. 78.

slip-fiber (slip′fī″bėr), *n.* See the extract under ★*cross-fiber*.

This has caused the slickensiding phenomena on the fracture planes and a consequent stretching of the fibrous content; hence the term "*slip-fiber*."

Amer. Geol., March, 1905, p. 194.

slip-gear (slip′gēr), *n.* A slip-motion; a device to make a slide-valve, or other sliding piece, change its position sidewise and hence prevent wear on one part of the sliding surface more than on another.

slip-glaze (slip′glāz), *n.* In *ceram.*, a glaze of clay mixed with ground minerals, applied in a liquid state and then burned.

slip-glazed (slip′glāzd), *a.* In *ceram.*, glazed with a liquid preparation composed of ground minerals mixed with clay.

slip-grab (slip′grab), *n.* A pear-shaped link attached by a swivel to a skidding evener or whiffletree through which the skidding-chain is passed. The chain runs freely when the slip-grab is held sidewise, but catches when the grab is straight. Also called *grab-link*.

slip-hitch (slip′hich), *n.* *Naut.*, a hitch so formed that it will not jam, but will untie if the hanging end is pulled.

slip-jaws (slip′jâz), *n. pl.* Movable jaws slipped on the active surfaces of a holding apparatus, such as vise-jaws and clutches. They are usually set in dovetails on the massive parts of the jaw, and are intended to be easily removable when worn, or to permit of the use of different styles of contact-surface with the work.

slip-joint (slip′joint), *n.* A form of expansion-joint for use in a long pipe which is subject to changes of length by temperature. On one end at the joint is a stuffing-box construction; entering this is a smoothly finished piece of tube, often of bronze, which may slide or slip without leakage through the packing material in the stuffing-box. Care must be taken to prevent the smooth tube from drawing out of the box lengthwise under pressure, since the joint is effective to resist leakage only, and not to prevent the two lengths from separating in the direction of the slip-motion. *F. R. Hutton*, Power Plants, p. 354.

slip-line (slip′līn), *n.* See ★*slip-band*.

slip-motion (slip′mō-shọn), *n.* In *mach.*: (*a*) An intentional looseness of fit, which allows one part to move without driving the other during a part of the phase of such first part: used in direct-acting pumps where the valve of one is driven by the piston of the other. (*b*) A motion of one part on another where only the components in one direction are to be used, as of a pin driving a rocking arm by contact with the sides of the slot in such an arm, or the driving of a Corliss valve-arm by a detent which slips by on the return stroke.

slip-noose (slip′nös), *n.* Same as *slip-knot*, 2.

slip-pan (slip′pan), *n.* See ★*pan*[1].

slipper[3], *n.* 3. In *mech.*: (*a*) A part which is adjustable by sliding, usually in the direction of its length, as a nozle or tube. *Elect. World and Engin.*, Nov. 21, 1903, p. 845. (*b*) A steam-engine cross-head having somewhat the shape of a slipper. The piston-rod is attached to the part which is where the heel or counter would be, and the guides are under the sole. The connecting-rod vibrates over the toe part.—4. In *cricket*, one who fields in the slips, that is, in the part of the field behind the wicket and somewhat to the 'off' side. *Hutchinson*, Cricket, p. 102. [Slang.] —5. Same as ★*rosser*.

slipper-bowl (slip′ėr-bōl), *n.* An earthen bowl somewhat resembling a slipper in form: found in the archæological remains of Central America and some of the adjoining countries.

slipper-brake (slip′ėr-brāk), *n.* A form of brake for railway-trains on steep gradients in which a block or shoe is pressed downward by a lever upon the surface of the rail to retard the motion. Since the block acts on the fixed surface of rails secured to the ground, and the abutment to its pressure is furnished by the weight of the car itself, these brakes can be very effective. Used on mountain roads as an emergency brake. *Science Abstracts*, VI. sec. B, p. 56.

slipper-weed (slip′ėr-wēd), *n.* The pale touch-me-not or jewel-weed, *Impatiens aurea*; also the spotted touch-me-not, *I. biflora*. These plants are also sometimes called *wild lady's-slipper*, or simply *slippers*, the names all referring to the shape of the flowers.

slippery-dick (slip′ėr-i-dik), *n.* In the Bahamas and Florida Keys, the brilliantly colored fish *Halichœres bivittatus*, of the family *Labridæ*.

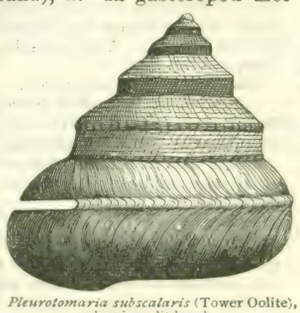
slipping (slip′ing), *n.* Specifically, in *ceram.*, the process of mixing clay with water to form slip; also, the act of decorating ware with slip.

slip-ratio (slip′rā″shiō), *n.* The ratio between the slip of a propeller and the speed of the propeller. It differs from slip percentage only in being represented as a fraction of unity instead of parts in a hundred. See ★*slip*, 5.

slip-ring (slip′ring), *n.* A metal ring, usually of copper or cast-iron, used on electric apparatus to lead the current into a revolving structure.

Since the generator side of the motor generator set may always be brought up to speed before being loaded, it is unnecessary to use a motor with wound secondary, or *slip rings*. *Jour. Franklin Inst.*, Nov., 1903, p. 356.

slip-shuck (slip′shuk), *v. t.* To pick from the husk or shuck leaving the latter attached to the stalk: said of the ears of maize. Compare ★*snap*, *v. t.*, 9. [Southern U. S.]



In handling, the ear left in the field pendent, in situ, from the stalk . . . is frequently "*slip-shucked*" and carted to barn or crib. *The Book of Corn*, p. 169.

slip-ware (slip′wãr), *n.* Earthenware which is coated with slip, or thinly diluted clay. See *slip*[1], 11.

Slip ware, though naturally superseded by the finer earthenwares of the eighteenth century, is not yet extinct. *R. L. Hobson*, in Burlington Mag., II. 69.

slit[1], *n.* 6. In *optics*, the narrow opening through which a beam of light is admitted into the tube of a spectroscope or other optical instrument.—**Cephalic slits.** See ★*cephalic*.—**Double slit**, the two slits of the spectroheliograph, one, as usual, at the end of the collimator, the other in front of and very close to the photographic plate. As the collimator slit traverses, or is traversed by, the image of the object (ordinarily the sun) formed by the object-glass of the telescope to which the spectroscopic apparatus is attached, an exactly corresponding motion is given by some mechanism to the slit before the plate. Thus a photograph is obtained due to the light of some single wave-length, say that of the calcium K or of hydrogen F. See ★*spectroheliograph*.—**Vierordt slit**, a double slit the halves of which are opened and closed by means of separate micrometer-screws: a form of slit used in spectrophotometry.

slit-band (slit′band), *n.* In gasteropod mollusks of the families *Pleurotomariidæ*, *Bellerophontidæ*, and some others, a band on the periphery of the whorl produced by the progressive closing of a slit at the aperture which is due to the exsertion of the anal tube.

Pleurotomaria subscalaris (Tower Oolite), showing slit-band. (From Zittel's "Palæontology.")

slit-bar (slit′-bär), *n.* A bar or lever within which is formed a slit or slot. In this slot a pin or stud is fitted on a suitable slide, the latter usually on a screw parallel to the slot and serving to adjust and clamp the stud in a desired position; or the block may be moved by hand to its desired position and clamped there by a nut. The length of stroke of rods attached to the stud and driven by it may be varied according to the effective radius of the traverse of the pin. The device is used in feed-motions and in a wide variety of mechanical movements. A disk, called a *slit-disk*, is also used for the same purposes as the lever.

slit-disk (slit′disk), *n.* See ★*slit-bar*.

slither, *n.* 2. In *archery*, a minute longitudinal split in a bow.

slither, *v. i.* 2. To suffer a minute longitudinal split: said of a bow.

slitheroo (sliᵺ-ę-rö′), *v. i.* [*slither*, *v.*] To slide with a slow gliding motion; slidder. [Slang.]

Don't *slitheroo* thet way [in rowing]. . . . Short 's the trick, because no sea 's ever dead still.
R. Kipling, Captains Courageous, iii.

slit-jaw (slit′jâ), *n.* One of the two pieces which form the sides of a spectroscope slit and can be moved so as to widen or narrow it.

Huggins's reflecting *slit-jaws* . . . permit the star image to be seen on the slit, and are preferred by many observers to other guiding devices.
Encyc. Brit., XXXII. 783.

slitting-gage, *n.* 2. A form of marking-gage.

sliver-can (sliv′ėr-kan), *n.* In *cotton-manuf.*, a can for holding the sliver in the carding or drawing process.

slob[2] (slob), *n.* [See *slobberer*.] One who is untidy in his habits and dress; a slovenly fellow. [Slang.]

You don't know how the swell
Can put it on the plain unfinished *slob*
Who lacks the . . . warpaint of the snob,
And can't make good inside a giddy shell.
Wallace Irwin, Love Sonnets of a Hoodlum, vii.

slog[2], *v. i.* 2. In *cricket*, to hit at the ball wildly and without judgment.

slogger[1], *n.* 2. In *cricket*, one who strikes at the ball wildly and without judgment. *R. H. Lyttelton*, Cricket and Golf, p. 219.

Sloid bench, a woodworker's bench designed for use in manual-training schools. It is fitted with a vise, stops, etc., and is adapted for both instruction and practice.

slone-bloom (slōn′blöm), *n.* The sloe or blackthorn, *Prunus spinosa*. [Prov.]

sloop[2], *n.*—**Loose-tongued sloop.** See ★*swing-dingle*.

sloop[2], *v. t.*—**To dry-sloop**, to sloop logs on bare ground, a method employed when the slope is so steep that it would be dangerous to sloop on snow.

slop[1], *n.* 6. The product from finely ground Indian corn freed from the germs and bolted, the bran which remains on the bolting-cloth sieves being pressed, mixed with about 50 per cent. of water, and sold for immediate use as cattle-food. Also called *glucose food*, *sugar-food*, *corn-food*, etc. *Census Bulletin* 190, June 16, 1902, p. 23.—**Slop padding-mangle.** See ★*padding-mangle*.

slope, *n.* 4. The gradient of a surface, as of land. In the description of forests, the following terms are used to define the slope, each of which has its equivalent in percentages of the horizontal distance and in degrees.

	Per cent.	Degrees.
Level	0– 5	0. – 3.0
Gentle	5– 15	3.0– 8.5
Moderate	15– 30	8.5–16.5
Steep	30– 50	16.5–26.5
Very steep	50–100	26.5–45.0
Precipitous	Over 100	Over 45.0

5. In *printing*, a face of type that inclines forward or backward.

FORWARD SLOPE

BACKWARD SLOPE

6. In *bacteriol.*, same as *slant* ★*culture*.—**Constructional slope**, in *geol.*, a slope formed by a process of accumulation or deposition.

The Soufrière rises on all sides, with even, *constructional slopes* of rather low angle, to an altitude of a little over 4,000 feet.
E. Howe, in Amer. Jour. Sci., Oct., 1903, p. 317.

Continental slope, the submarine declivity which descends from a continent or continental shelf to the deep ocean-floor.

It is well known that mud travels persistently from the shore seawards, and that it forms the bottom over vast tracts beneath deep-sea water, e. g. at the foot of the *continental slope*. *Geog. Jour.* (R. G. S.), XI. 533.

Potential slope. Same as ★*potential gradient*.—**Temperature slope**, in *phys.*, the line or curve indicating, by its inclination to the base-line of a diagram, the rate of change of temperature within a substance; temperature gradient.

The difference of *temperature-slope* at different parts of the two bars was measured by means of thermoelectric couples. *Physical Rev.*, March, 1905, p. 174.

slope-wall (slōp′wâl), *n.* A rubble-masonry layer on a slope of a canal, river, or reservoir, designed to preserve it from wash or abrasion, but usually too thin to act as a retaining-wall and resist pressure from behind.

slot[2], *n.*—**Mechanical slot**, a trade-term applied to a railroad-signaling interlocking device employed where one signal is controlled from two separate cabins. Its essential features are a sliding-box controlling by its movements the signal, two rods each controlled from separate cabins, and a roller resting in the box on the sloping ends of the two rods. When the first signalman, through his lever and its connections, causes the first rod to move, it slides upward, slipping past the roller and causing it to rest on top of the other rod, and, thus far, not affecting the signal. When the second rod is moved, by the second signalman, it encounters the roller and, being unable to push it to one side, carries it upward, taking the box with it and changing the signal. The signal is now locked and the second signalman cannot then move it until the first signalman causes the first rod to move downward past the roller, taking the box with it and clearing the signal. The device makes it impossible for one signalman to change a signal without the coöperation of the other signalman.

slot-drill (slot′dril), *n.* A flat-ended, double-cutting drill ground with two radial cutting-edges opposed to each other and without a center point: used to cut slots. It is traversed laterally or lengthwise as it operates, and really acts like an end-mill. Also called *traversing drill*. *Lockwood*, Dict. Mech. Engin. Terms.

slot-insulator (slot′in″sụ-lā-tọr), *n.* See ★*insulator*.

slot-link (slot′lingk), *n.* The member or element in a Stephenson or other link-motion, for engine valve-gears, in which the position of the pin which actuates the valve is made to vary as desired. This is done by forming a slot in this link or bar, *g* (see cut at *Stephenson* ★*link-motion*), and fitting a slider carrying the pin which drives the valve. The forward eccentric is attached to the upper end of this link, in the Stephenson gear, and the backward eccentric to the lower, usually; thus, when the sliding block is opposite the forward eccentric the valve is constrained to move as required for the forward motion of the engine; and the reverse for the backward running. In intermediate positions of the slider in the slot the travel of the valve on its seat is diminished, and as a consequence admission ceases or cut-off takes place earlier in the stroke. In other link-motions, as in the Walschaert, the link, *g*, may be fixed in position and have a rocking motion only, and the position of the slider is made to vary, or to pass the center of its motion.

slot-machine (slot′ma-shēn″), *n.* A machine for vending small articles of merchandise, exhibiting pictures, weighing, playing musical instruments, etc., which is either unlocked or set in motion by dropping a coin into a slot. See ★*vending-machine*.

slot-rail (slot′rāl), *n.* See ★*rail*[1].

slotting-drill (slot′ing-dril), *n.* See ★*drill*[1].

slotting-machine, *n.*—**Frame-slotting machine**, a slotting-machine for finishing locomotive-frames which has several heads on one base and can take several cuts at once across the axis of the frame.

slot-winding (slot′wīn″ding), *n.* An armature-winding the wires of which are laid in deep grooves or slots cut in the core. *Jour. Brit. Inst. Elect. Engin.*, 1899–1900, p. 802.

slot-wound (slot′wound), *p. a.* Said of an electric generator or motor the core of the armature of which is provided with deep grooves or channels within which the wires are laid. *Science Abstracts*, VI., sec. B, p. 120.

slough-bass (slö′bàs), *n.* The large-mouthed black-bass, *Micropterus salmoides*. *Jordan and Evermann*, Amer. Food and Game Fishes, p. 358.

slough-grass (slö′gràs), *n.* A stout subaquatic perennial grass, *Beckmannia erucæformis*, found in Europe and Asia, and in North America from Ontario to the Pacific, reaching north to Alaska. It grows in sloughs and along streams, and in some places in the northwest makes an important part of the forage of lowlands. It bears narrow one-sided spikes suggesting the rattle of a rattlesnake, whence sometimes called *rattlesnake-grass*. Also called *nit-grass* and *wild timothy*.

slow-ardent (slō′ärⁿdent), *a.* In *psychol.*, a mixed type of character, based upon a classification in terms of rapidity and energy of bodily movement. See ★*lively-ardent*. *Ribot* (trans.), Psychol. of Emotions, p. 384.

slub[2], *n.* 2. A lump or thick piece of cotton which becomes attached to or twisted into the yarn during the process of spinning. *Nasmith*, Cotton Spinning, p. 175.

slubbing-frame (slub′ing-frām), *n.* In *cotton-manuf.*, the first fly-frame machine which takes the sliver from the drawing-frame. *Nasmith*, Cotton Spinning, p. 184.

slubbing-jenny (slub′ing-jen″i), *n.* A slubbing-machine, an adaptation of Hargreave's jenny, for preparing slubbing for the spinning-mule. Also called *billy*. *C. Vickerman*, Woollen Spinning, p. 217.

slubbing-wheel (slub′ing-hwēl), *n.* A wheel or gear on a spinning-mule for indicating the length in inches of the roving delivered from the rollers, which are regulated without change-wheels.

sludge, *n.* 5. The more or less viscid mud thrown down from dilute waste soap-liquors of wool-scouring, cotton-bleaching, and dyeing industries when such liquors are treated with crude aluminium sulphate and milk of lime. The remaining effluent is thus in a large measure purified, but the sludge thrown down has usually little value, even as a manure.—6. The precipitated solid matter in sewage, usually collected in settling-basins in sewage-disposal works after chemical treatment and filtration. Often pressed into cakes.—7. The sediment, in the form of a mud, which collects in a steam-boiler.—8. Incorrectly, by abbreviation, an opening in a steam-boiler for the removal of sludge or mud; also, the lid which covers such an opening.—9. A sand-pump or mud-pumping device for removing sludge from a sink or a bore-hole.—10. The silt-like deposit in the bottom of an electrolytic cell. *Jour. Brit. Inst. Elect. Engin.*, 1899–1900, p. 274.

The rationale of electrolytic refining is to transfer this copper, by the selective action of the current, from the anode to the cathode and to leave the impurities behind as a *sludge*. *B. Blount*, Pract. Electro-Chemistry, p. 35.

sludge-cock (sluj′kok), *n.* The valve at the bottom of a boiler or a mud-drum through which the mud or sediment precipitated from the water may be removed by blowing off the water under pressure, or by washing. In the United States it is called the *blow-off valve*.

sludgy, *a.* 2. Figuratively, slushy; mushy; sickening; as if made of sludge or refuse.

I shall get a *sludgy* paragraph in the papers for the Grosser Carl, headed 'Gallant rescue,' with all the facts put upside down.
Cutcliffe Hyne, A Master of Fortune, xii.

sluf, sluft. Amended spellings of *slough*[2], *sloughed.*

slug[4], *n.* 1. (*h*) The solid line produced by the linotype machine. See ★*linotype.*

Types have no existence in the product of the linotype machine; the unit is the line, which is known as a "*slug.*" *Census Bulletin* 216, June 28, 1902, p. 51.

(*i*) A lead of extra thickness used to widen the space between lines of type.

3. In *mech.*, a name proposed by Worthington for the mass to which a gravitational unit of force must be applied to produce a foot-pound unit of acceleration; 32.2 (or *g*) times the mass of a standard pound.

The author [A. M. Worthington] introduces the name "*slug*" to denote the mass to which a foot-pound unit of acceleration is produced by a gravitation unit of force.
Nature, Feb. 12, 1903, p. 352.

slug-caterpillar, *n.*—**Willow slug-caterpillar,** the larva of an American cochlidiid moth, *Euclea delphinii.* It is spiny and slug-like in shape, and feeds on the foliage of willow, oak, and certain fruit-trees.

slugger, *n.* 2. A form of steam- or air-driven rock-drill which delivers powerful strokes of the drill-bar with the least cushioning effect of steam or air in the actuating cylinder.

slugger-plate (slug′ėr-plāt), *n.* A corrugated plate fastened to the mandrel of a rock-crusher roll. It protrudes slightly more than the other plates on the mandrel, thus striking a harder blow as the roll revolves, whence its name.

On one row, two of the plates are supplanted by "*slugger plates,*" the corrugations of which extend slightly beyond the rest to act more or less as a sledge-hammer in breaking up the rock.
Sci. Amer. Sup., Jan. 30, 1904, p. 23470.

slug-shot (slug′shot), *n.* A trade-name for an insecticide preparation used to protect plants from grubs, etc., containing as its active constituent a small proportion of copper arsenite.

sluice, *n.* 2. (*b*) Same as ★*flume,* 4.

sluice, *v. t.* 6. In *lumbering:* (*a*) Same as ★*flume,* 2. (*b*) To float (logs) through the sluiceway of a splash-dam. Same as ★*splash,* 5. (*c*) To injure (as a team of horses or their driver) by the down-rush of a load of logs due to the breaking of the hawser used to control its descent over a steep slope. [Maine.]

Tommy Eye knew without looking—knew without understanding. He knew—that most terrible knowledge of all woods terrors—that he was "*sluiced.*"
Holman Day, King Spruce, p. 318.

sluice-box (slös′boks), *n.* A rectangular vessel which receives the flow from a pipe or stream, from which through a flume or sluice the water is led to the desired point of discharge.

sluice-gate, *n.* 2. The gate which closes a sluiceway in a splash-dam.

sluice-valve, *n.* 3. A straightway valve having a free through opening; a gate-valve.

sluiceway, *n.* 2. The opening in a splash-dam through which logs pass.

sluice-weir (slös′wēr), *n.* A notch in a sluice or channel below the level of which the water comes to rest to allow solid matters held in suspension to settle out; also used to enable the quantity of water flowing in the channel to be measured by the use of accepted weir formulæ. *Jour. Brit. Inst. Elect. Engin.,* 1899–1900, p. 190.

sluing-gear (slö′ing-gēr), *n.* The horizontal rack and pinion, or the swinging wheel and rope and connections, used at the base of a derrick to slue or swing the boom in a circular path. Also called *swinging-wheel.*

sluit (slēit), *n.* [D., related to *slot,* track, etc.: see *slot*[3].] A watercourse or gulch. [South Africa.]

River-beds as dry as a bone in a furnace are very plentiful, and so are other smaller gutters, called "*sluits,*" where water flows in the rainy season.
J. Ralph, An American with Lord Roberts, p. 30.

slumber-cell (slum′bėr-sel), *n.* In *histol.,* one of the cells supposed to exist in connective tissues and to be undifferentiable by any known histological methods.

slumgum (slum′gum), *n.* The propolis or bee-glue and other impurities which remain when a honeycomb has been drained of honey and the wax clarified by melting in hot water.

slumming[2] (slum′ing), *n.* [An arbitrary use of *slumming*[1], with a vague suggestion of dirty work. Compare *puddling* as associated with *puddle, n.*] The washing of earthy matter, pulverized rock, etc., to separate a desired element, as fossil remains or grains of ore.

Whatever method is employed for bleaching, this process has to be done very carefully, so as to prevent the fossils from being destroyed by the acids. The next step is the "*slumming,*" or washing of the macerated mass. For this purpose there are different devices for slumming vessels. These are all constructed on the plan of creating a rising current of water through the mass, which is poured over a sieve of brass netting with meshes not smaller than 1.5 mm. in diameter.
Amer. Nat., Nov., 1903, p. 794.

slunk-weed (slungk′wēd), *n.* The joepye-weed, *Eupatorium purpureum.*

slur[1], *v. t.*—**Slurred third,** in *music.* See ★*tierce coulée.*

slur-cock (slėr′kok), *n.* A cam for operating the jacks and jack-sinkers in a knitting-machine.

slurry, *n.* 1. (*b*) In the manufacture of Portland cement, the mixture of silicious and calcareous ingredients in due proportion, brought to the consistence of a fluid mud by the addition of a sufficient amount of water, so as to insure intimate and uniform admixture before drying and burning the solid material.—3. In *ceram.,* inequalities in the interior of a pottery vessel which are smoothed by the rib or profile held in the left hand of the workman as the wheel revolves, while a damp sponge, held in the right hand, smooths the exterior.

slusher (slush′ėr), *n.* On an Australian station at shearing-time, an assistant to the cook. Also *slushy. E. E. Morris,* Austral English.

'Sundays are the most trying days of all,' say the cuisiniers, 'for then they have nothing to do but to growl.' This man's assistant is called 'the *slusher.*'
The Argus, Sept. 20, 1890, p. 13, quoted in E. E. Morris, [Austral English.

The tarboy, the cook, and the *slushy,* the sweeper that swept the board,
The picker-up, and the penner, with the rest of the shearing horde.
A. B. Paterson, Those Names, in Man from Snowy [River, l. 5.

slushing-machine (slush′ing-ma-shēn″), *n.* In *paper-manuf.,* a machine for extracting the water in which wood-pulp or other pulp is suspended and causing the pulp to thicken preparatory to using it in the paper-machine.

slush-lamp (slush′lamp), *n.* A lamp made from an old tin can and with a rag as a wick, and filled with slush or refuse fat: used in the Australian bush, and by explorers in the Arctic regions, etc.

The *slush-lamp* shone with a smoky light.
J. Keighley, Who are You? p. 45, quoted in E. E. [Morris, Austral English.

slush-wheel (slush′hwēl), *n.* A wheel or drum for washing hides or skins. *Modern Amer. Tanning,* p. 118.

slushy (slush′i), *n.* Same as ★*slusher.*

Sm. The chemical symbol of *samarium.*

S. M. An abbreviation (*b*) of the French *Sa Majesté,* His (or Her) Majesty; (*c*) of *Senior Magistrate;* (*d*) of *sergeant-major;* (*e*) [*l. c.*] of *sewing-machine;* (*f*) of *Sons of Malta;* (*g*) of *State Militia;* (*h*) of the Latin *Scientiæ Magister,* Master of Science.

small. I. *a.*—**Small circle.** See ★*circle.*

II. *n.*—**Pyrites smalls,** a manufacturers' name for the smaller fragments and dust of iron pyrites, as distinguished from the lumps, the two needing to be separately roasted. All that will pass through a riddle of half-inch or sometimes quarter-inch mesh is usually classed as 'smalls.'

small-fruit (smâl′früt), *n.* See ★*bush-fruit.*

smallpox, *n.*—**Modified smallpox.** Same as *varioloid.*

smallpox-plant (smâl′poks-plant), *n.* The pitcher-plant or side-saddle flower, *Sarracenia purpurea;* also the southern species, *S. minor,* which was called *S. variolaris* by Michaux, from its supposed value in cases of smallpox.

smalto (smäl′tō), *n.* [It. See *smalt.*] Small squares of colored glass used in mosaic work.

smaragd-green (smar′agd-grēn″), *n.* A green of the color of smaragd. *A. S. Packard,* Textbook of Entom., p. 202.

smart[1], *a.*—**The smart set.** See ★*set*[1].

smartweed, *n.*—**Dotted smartweed.** Same as *water-smartweed* (*a*) (which see, under *smartweed*).—**Water-smartweed.** (*b*) *Polygonum emersum,* which grows in swamps and low grounds in the eastern United States and is somewhat injurious to pastures, meadows, and muckland crops.

smartweed-dodder (smärt′wēd-dod″ėr), *n.* See ★*dodder*[1].

smash, *v. t.* 5. To press or make (the folded and sewed sections of a proposed book) of a uniform thickness.

During the next ten years the principal advance in bookbinding doubtless will be in those branches of the industry which are concerned with casting-in, gathering, *smashing,* folding and sewing.
Census Bulletin 216, June 28, 1902, p. 65.

smash, *n.* 5. In *lawn-tennis,* an overhand volley played hard and fast to prevent, by the speed of the stroke, a return by the opponent.

smashing-point (smash′ing-point), *n.* That point in the life of an incandescent lamp at which, owing to its decreased efficiency, it should be broken and replaced by a new lamp as a matter of economy. *Amer. Inventor,* Nov. 1, 1903, p. 214.

Sm. C., sm. caps. Abbreviations of *small capitals.*

S. M. E. An abbreviation (*a*) of the Latin *Sancta Mater Ecclesia,* Holy Mother Church; (*b*) of *School of Military Engineering.*

smear, *n.* 5. The soft, semi-fluid mud of calcium sulphate left in the generators when whiting and sulphuric acid were used to produce carbon-dioxid gas in the manufacture of aërated waters.—6. In *bacteriol.,* a preparation of bacteria for microscopical examination made by smearing the organisms upon a slide or cover-glass. Also called *spread.* See ★*culture.*

Gonococci were demonstrated . . . by *smears* only.
Med. Record, Feb. 7, 1903, p. 209.

smear, *v. t.* 5. To give a gloss to (pottery or stoneware) without glazing, as by putting a volatile flux or glazing preparation in the kiln or in the saggar with the ware. See ★*smear-glaze* and ★*smearing.*

smear-culture (smēr′kul-tūr), *n.* A culture of a micro-organism obtained by smearing some of the material under examination over the surface of one of the usual solid culture media.

smear-glaze (smēr′glāz), *n.* In *ceram.,* a slight gloss produced by smearing the inside of the saggar or case in which unglazed pottery is fired with glaze which in the kiln vaporizes and forms a slight deposit on the surface of the ware.

smearing (smēr′ing), *n.* Specifically, in *ceram.,* the process of glazing by evaporation. See ★*smear-glaze.*

In the earthenware kilns, where common glazes are employed upon the ware, if the saggars be closed, and the heat be sufficient, other biscuit-ware placed in the saggars may be slightly covered with a coating of glaze, or be 'smeared,' by the evaporation from the glazes. Certain compositions may also be placed in the bottom of the closed saggars and by their evaporation the ware in them may be smeared or semi-glazed.
Handbook Brit. Pottery and Porcelain, Mus. Pract. [Geol., p. 58.

smeeching (smē′ching), *n.* See the extract.

While the kiln is in operation, the escape of the arsenic fumes can be detected here and there in the form of little jets, which the workmen describe as "*smeeching.*"
Sci. Amer. Sup., Oct. 5, 1907, p. 210.

Smegma bacillus. See ★*bacillus.*

smel, *v.* and *n.* A simplified spelling of *smell.*

smell-hollow (smel′hol″ō), *n.* An olfactory pit on the antenna of a honey-bee.

smelling-stick (smel′ing-stik), *n.* The sassafras.

smelt[2], *n.* 1. (*h*) In Melbourne, the fish *Havengula vittata,* of the family *Clupeidæ.* (*i*) In New Zealand and Tasmania, *Retropinna retropinna,* of the family *Salmonidæ.* Its young are called *whitebait.*—**Cobbosseecontee smelt,** *Osmerus mordax abbotti* of Cobbosseecontee Lake, Maine.—**Derwent smelt,** a fish, *Haplochiton scali,* of the family *Haplochitonidæ,* found in Tasmania.—**Kodiak smelt** *Osmerus albatrossis,* found in Alaska.—**Pond smelt,** *Hypomesus olidus* of Alaska and Kamchatka.—**Smelt of the New York lakes,** *Argyrosomus osmeriformis,* one of the ciscos, found in lakes of central New York.—**Wilton smelt,** *Osmerus mordax spectrum,* of Wilton Pond, Maine.

smer (smėr), *n.* [Sw. *smör,* butter: said to be due to the fact that much of the butter made by the Swedish homesteaders was unfit for use.] Rank, rancid, or soiled butter. [Western U. S.]

S. M. I. An abbreviation of the French *Sa Majesté Impériale,* His (or Her) Imperial Majesty.

smick-smock (smik′smok), *n.* The meadow bitter-cress or cuckoo-flower, *Cardamine pratensis.* Also called *lady's-smock* and *smell-smock.*

smiddy-leaves (smid′i-lēvz), *n.* The good-King-Henry, *Chenopodium Bonus-Henricus.*

smilacaceous (smī-lā-kā′shius), *n.* Belonging to the plant family *Smilacaceæ.*

smilaceous (smī-lā′shius), *a.* Pertaining to or resembling smilax: sometimes used for ★*smilacaceous*.

smilacin (smī′lā-sin), *n.* [*Smilax* (*smilac-*) + *-in*2.] Same as ★*smilasaponin*.

smilasaponin (smī-lā-sap′ō-nin), *n.* [*smilax*(*x*) + *saponin*.] A yellowish white, horn-like, levorotatory glucoside contained in the root of sarsaparilla, *Smilax medica*, *S. officinalis*, etc. It resembles saponin and was formerly called *sarsaparillasaponin* or *smilacin*.

sminthurid (smin′thū-rid), *n.* and *a.* **I.** *n.* One of the collembolous family *Sminthuridæ*.

II. *a.* Having the characters of or belonging to the family *Sminthuridæ*.

Smithianism (smith′i-an-izm), *n.* The economic doctrines of Adam Smith. The term is often used to characterize a belief in the beneficence of unrestricted competition. *Gumplowicz* (trans.), Outlines of Sociol., p. 155.

Smithism (smith′izm), *n.* Same as ★*Smithianism*.

smithite (smith′īt), *n.* A rare mineral species from the dolomite of the Binnenthal, Switzerland. It occurs in light-red monoclinic crystals with adamantine luster, and contains sulphur, arsenic, and silver. Its formula is probably $AgAsS_2$.

Smithsonian wind-scale. See *wind-*★*scale*.

smithy (smith′i), *v. t.*; pret. and pp. *smithied*, ppr. *smithying*. To forge in a blacksmith's fire or shop.

S. M. M. An abbreviation of the Latin *Sancta Mater Maria*, Holy Mother Mary.

smoke, *v. i.* 9. To get away; skip; skedaddle. [Slang, Australia.]

He said to the larrikins, "You have done for him now; you have killed him." "What!" said one of them, "do not say we were here. Let us *smoke*." "*Smoke*," it may be explained, is the slang for the "push" to get away as fast as possible.

Sydney Morning Herald, June 26, 1893, p. 8, quoted in [E. E. Morris, Austral English.

smoke, *n.*—**Cape smoke.** Same as ★*dop*3.

Crude spirits such as *Cape "Smoke"* and the cheap Portuguese liquors. *Encyc. Brit.*, XXXII. 808.

smoke-breeching (smōk′brich″ing), *n.* A flue for conducting the hot gases from a boiler, or a battery of boilers, to the chimney; an uptake. *Trans. Amer. Soc. Mech. Engin.*, 1903, p. 936.

smoke-burner (smōk′bėr″nėr), *n.* A name improperly given to furnaces or fires in which the formation of smoke is prevented. A true smoke, which consists of a current of gas carrying particles of carbon, is not combustible; and if the tarry gases or fumes are combustible, a furnace which consumes them is a 'smoke-preventer' and not a smoke-burner. Smoke-prevention is secured by supplying enough oxygen at a sufficiently high temperature to unite with the combustible gases and giving room enough for such mixture and union to take place.

smoke-cap (smōk′kap), *n.* A device, such as a cowl or hood, on the top of a smoke-stack or chimney, designed to prevent gusts of wind from striking the unprotected opening from above and blowing the products of combustion downward or backward into the flue, carrying the smoke with them. Such caps may be simple deflectors, or they may be movable so as to turn the smoke outlet in the direction toward which the wind blows.

smoke-eater (smōk′ē″tėr), *n.* A fireman: a name given to the men of the fire patrol. [Slang.]

smoke-preventer (smōk′prē-ven″tėr), *n.* A device designed to prevent the incomplete combustion of carbon which causes the formation of smoke. Such devices, to be successful, must furnish an adequate supply of oxygen, and keep both air and gas at a temperature high enough for chemical combination to be complete. This combination also must have room enough and time enough to be complete before the temperature falls below the temperature of combustion and ignition. See ★*smoke-burner* and *smoke-consumer*.

smoke-proof (smōk′prōf), *n.* In *type-founding*, the trial proof taken by the punch-cutter or engraver. The steel punch is held over a smoking flame until covered with carbon, and is then impressed by hand on slightly dampened paper.

Pleasing as a new ornament in this style might appear in the *smoke-proof*, it was sure to be a blotch in the print and at variance with the type.

De Vinne, Title-pages, p. 79.

smoker, *n.* 1. (*d*) In *bee-keeping*, an apparatus for creating a smoke to quiet the bees.

5. An informal gathering of men where smoking is freely indulged in: music, a vaudeville show, cards, etc., are sometimes part of the evening's entertainment. [Colloq.]

The *smoker* on Saturday, February 21, was well attended by members and their friends. The programme was exceptionally good, several of the numbers received enthusiastic encores. *N. Y. Athl. Club Jour.*, March, 1903, p. 19.

smoke-room (smōk′röm), *n.* A room or cabin set apart for the use of smokers: usually referring to such a room on a ship.

Kettle turned on his companion with a sudden viciousness. "By James!" he snapped, "you better take care of your words, or there 'll be a man in this *smoke-room* with a broken jaw.

Cutcliffe Hyne, A Master of Fortune, xi.

smokery (smō′kėr-i), *n.* 1. A smoking-room; a place in which to smoke.

Brenton was in his *smokery*, a happy-go-lucky room on the first floor. *Story of a Great Scoop*, p. 31.

2. A place in which opium is smoked; an opium-joint.

The law is cumbrous on the subject; but the immorality of the '*smokeries*' will probably suffice to close them as disorderly. *Daily Chronicle*, May 29, 1901.

smoke-stack, *n.*—**Telescopic** or **telescoping smoke-stack**, a smoke-stack consisting of two or more sections which telescope or slide one into another: used on small boats to enable them to pass under bridges.

smoke-tree, *n.*—**American** or **wild smoke-tree**, the chittam-wood, *Cotinus cotinoides*.

smoking-bean (smō′king-bēn), *n.* The catalpa or Indian bean, *Catalpa Catalpa:* so called from the custom of boys of smoking the pods.

smoking-chair (smō′king-chār), *n.* A chair, of the Chippendale period of English furniture, which faces diagonally, that is, which is so made that one corner is directly in front, and the opposite corner directly behind. Also called *corner-chair*.

smoking-lamp, *n.* 2. In *physiol.*, a lamp employed for the smoking of the glazed paper fastened to the drum of the kymograph. Various forms of smoking-lamps are in use, the most common, perhaps, being gas-burners with broad fish-tail flames, petroleum-lamps with very broad wicks, and lamps fitted with an air-bulb to spray the soot upon the paper. *E. B. Titchener*, Exper. Psychol., I. ii. 173.

smoking-stand (smō′king-stand), *n.* In *physiol.*, a stand of wood or metal in which the drum of the kymograph is held and slowly rotated during the smoking of the glazed paper. *E. B. Titchener*, Exper. Psychol., I. ii. 173.

Smoky stones. See ★*stone*.

smooth, *a.* 15. In *old music*, same as ★*plain*1, 16.

smooth, *v. t.*—**To smooth a series of observed quantities** or **a curve**, to diminish or smooth away the accidental irregularities so as to bring out the general systematic variations. The principal methods of smoothing are the following: (*a*) The *graphical method*, in which the original observations are plotted to scale and a smooth curve is drawn by hand so as to leave about the same area on either side of it: the coördinates of the curve are then used instead of those plotted from the original observations. (*b*) *Numerical methods*, in which the means are taken of successive pairs of observations and again the means of successive means. This process may be repeated indefinitely, and is known as *Bloxaming* or *Bloxam's method*. An analogous method, but one more nearly in accord with the precepts of the laws of chance, is embodied in the following rule, devised by Dr. Galle of Breslau, for combining together seven consecutive daily means $a \ldots\ldots g$ into one value for the median date (*d*):

$$\frac{t}{n} = \frac{1}{16}(a + 4b + 9c + 12d + 9e + 4f + g).$$

This formula can be rearranged so as to reduce the whole process of computation to a simple system of summing and halving.

Smoothed rainfall *curves* for the British Isles, Brussels, Madras, Bombay, Cape Town and the Upper Ohio valley show a long-period variation at all the stations.

Science, July 17, 1903, p. 91.

smooting (smō′ting), *n.* Same as ★*grassing*, 2. *Webb*, Indust. Democracy, I. 439. [Trade Union cant.]

smother, *v. t.*—**Smothering crop.** See ★*crop*.—**To smother the ball.** See ★*ball*1.

Smouse, *n.* 2. In South Africa, a peddler; a kind of commercial traveler for storekeepers in large towns, who goes through the thinly inhabited parts selling goods; an itinerant merchant. Also *Smous*.

Even the wandering "*Smouse*" had not penetrated so far. *Mrs. Lionel Phillips*, South African Recollections, ii.

s. m. p. An abbreviation of the Latin *sine mascula prole*, without male issue.

smudge1, *n.* 3. In the game of set-back all-fours, the player who bids 4 and makes it, winning the game on the hand if he is not in the hole on the score at the time.

smut, *n.*—**Barley-smut**, a disease of barley caused by smut-fungi. There are two kinds: *covered barley-smut*, due to *Ustilago Hordei*, in which the spores of the fungus

are often retained by a thin envelop until harvest; and *naked barley-smut*, due to *Ustilago nuda*, in which the spores soon become free and are blown away.—**Corn-smut.** See *maize-smut* and *corn-*★*ergot*.—**Hard smut**, the stinking smut. See *smut*, 3 (*b*).—**Hidden smut**, a smut disease of oats caused by *Ustilago avenæ levis*. It is so called because the spore-mass of the fungus is concealed within the chaff of the grain.—**Loose smut**, a destructive fungous disease of grain which attacks and destroys the kernels, producing a black powdery mass of spores. The loose smut of wheat is caused by *Ustilago Tritici*, and that of oats by *Ustilago Avenæ*.—**Onion-smut**, a fungous disease of the onion due to *Urocystis Cepulæ*, which attacks the young leaves and bulbs.—**Rice-smut**, a smut disease of rice due to the smut-fungus *Tilletia corona*.—**Rye-smut**, the smut disease of rye due to *Urocystis occulta*, which attacks the leaves and culms of rye. Also called *rye-stem smut*.—**Sorghum-smut**, the disease of sorghum-grain caused by the smut-fungus *Cintractia Sorghi-vulgaris*.—**Stone-smut**, the stinking smut. See *smut*, 3 (*b*).—**White smut**, a disease of spinach due to *Entyloma Ellisii*.

smut, *v. t.* 5. In *leather-manuf.*, to go over (the blacked side of a hide or skin) with a woolen cloth to remove dirt and improve the appearance of the blacking. *C. T. Davis*, Manuf. of Leather, p. 433.

smut-grass (smut′gràs), *n.* A rush-grass, *Sporobolus Indicus*, widely distributed through the warmer regions of the world, and common in many parts of the southern United States. It grows in scattered tufts and patches in dry open fields. The slender leafy stems soon become woody and tough, unfitting the plant for forage. The long and slender spike is usually blackened by a smut (*Helminthosporium Ravenelii*), whence this name and that of *black-seed grass*. Sometimes called *carpet-grass*.

snaffle-bit, *n.* Specifically, a light bit for the riding-bridle, with long-horned and solid ring-cheeks, which are loose in the heads of the mouthpiece. The name was originally applied to a single-cheek riding-bridle; on the introduction of the double-cheek bridle it was retained for the bit.—**Dexter snaffle-bit**, a trotting-bit which has a mouthpiece with unusually large ends and a small center.—**Half-cheek snaffle-bit**, a light driving-bit characterized by ring cheek-pieces with half-cheeks attached that fall below the mouth.—**Half-horned snaffle-bit**, a bit with half-horns and rings at the outer ends of the mouthpiece.—**Rarey snaffle-bit**, a bit in which the mouthpiece is a wooden roller turning upon an iron pin: introduced by Rarey, a noted horse-trainer. It is also called a *wooden gag-bit*.—**Ringed snaffle-bit**, a light ring-bit with loose rings on the mouthpiece for a nose-band.

snaffles (snaf′lz), *n.* The wood-betony or lousewort, *Pedicularis Canadensis*.

snag1, *n.* 9. In *mech.*, a lug, or projection from a surface, through which there is a hole to receive a bolt or pin.

snagrel (snag′rel), *n.* Same as ★*sangrel*.

snag-scow (snag′skou), *n.* A scow used in pulling snags out of a river.

The white *snag-scow* that likes to hang round St. Louis considerable did keep the snags pulled out of the mouth of the Missouri anyway.

C. D. Stewart, Partners of Providence, xiii.

snail-cam (snāl′kam), *n.* A cam shaped somewhat like a snail; a rocker-cam. *W. J. Dibdin*, Public Lighting, p. 77.

snail-eater (snāl′ē-tėr), *n.* A book name for *Anastomus lamelligerus*, one of the African storks.

snail-shell, *n.*—**Snow snail-shell**, a modified form of snow-roller produced by a small object rolling down a steep slope of moist snow, collecting the adhesive surface layer and surrounding itself with a spiral strip of snow wound like the whorl of a snail-shell. *Plant World*, March, 1904, p. 65.

snake, *n.*—**Horned snake**, the horned viper, *Cerastes*, a very poisonous African snake.—**Horsehair-snake.** Same as ★*hair-snake*.—**Ringneck snake.** See ★*ring-neck*.—**Snake-skin green.** See ★*green*1.

snake-arrow (snāk′ar″ō), *n.* An arrow carved and ornamented so as to represent a snake. *Haddon*, Evolution in Art, p. 25.

snake-berry (snāk′ber″i), *n.* 1. The red baneberry, *Actæa rubra*.—2. The common bryony, *Bryonia dioica*.—3. The partridge-berry, *Mitchella repens*.—4. The bittersweet, *Solanum Dulcamara*.

snake-bite (snāk′bīt), *n.* 1. The nodding wake-robin, *Trillium cernuum*.—2. The bloodroot, *Sanguinaria Canadensis*.—3. The wild lettuce, *Lactuca Canadensis*.

snake-blenny (snāk′blen″i), *n.* A blennioid fish of the genus *Lumpenus*. *L. serpentinus* is found in the North Atlantic.

snake-dance (snāk′dàns), *n.* A ceremony or dance in which snakes or images of snakes are used; particularly, a ceremony of the Hopi in which live rattlesnakes are caught and carried by the priests in their mouths. The ceremony is related to observances intended to procure rain.

The description of the snake and flute ceremonies, still performed according to the ancient ritual, unmodi-

fied by Christianity, for the purpose of bringing abundant rains and successful crops, is founded on studies conducted in 1896 and 1897, and is illustrated by coloured pictures of the *snake dance* and the antelope altar at Mishongnovi, and by other plates. The ceremony is attended by some repulsive features—as the rush to catch the snakes, their being carried by the priests in their mouths, and the general distribution of an emetic prior to the great feast which closes the proceedings.

Athenæum, Sept. 19, 1903, p. 385.

The psychic element of religion in the *Snake dance* is totemic ancestor worship, which is fundamental in the whole Hopi ritual. The reptile is a society totem, the lineal survivor of a clan totem, and the totem ancestor, called the Snake maid, is, generally, like totemic ideas, an anthropo-zoömorphic conception.

An. Rep. Bur. Amer. Ethnol., 1897–98, p. 1009.

snake-fern, *n.* 2. See ★*fern*[1].

snake-fish, *n.* 4. A fish, *Polypterus senegalus*, which lives in rivers of Africa and has many peculiar characters: well represented in former times, but only two genera belonging to one family remain. The fossil forms are now arranged in five families. *Proc. Zool. Soc. London*, 1899, p. 985.

snake-flower (snāk′flou″ėr), *n.* 1. The viper's-bugloss, *Echium vulgare*.—2. The greater stitchwort, *Alsine Holostea*.—3. The white dead-nettle, *Lamium album*.—4. The white campion, *Lychnis alba*.—5. The star-flower or American chickweed-wintergreen, *Trientalis Americana*.

snake-goddess (snāk′god″es), *n.* The name given to the subject of certain figurines found in recent excavations in Cnosus in Crete. The most important of these is 34.2 centimeters high and is dressed in a high tiara and an extremely modern-looking bodice and skirt. The breasts are bare and full. The image dates from the Mycenæan and Minoan periods, probably before 1500 B.C.

Minoan Snake-goddess. (From "Annual of the British School at Athens," 1903.)

snake-grass (snāk′gràs), *n.* 1. The forget-me-not, *Myosotis palustris*.—2. Same as ★*snake-flower*, 2.

snake-lily (snāk′lil″i), *n.* See ★*lily*.

snake-milk (snāk′milk), *n.* The flowering spurge, *Euphorbia corollata*.

snake-necked (snāk′nekt), *a.* Having a long, snake-like neck.—**Snake-necked turtles**, a group of fresh-water turtles, usually considered as a suborder, in which the neck can not be drawn into the shell, but is bent sideways; the *Pleurodira*.

snakeroot, *n.*—**Evergreen snakeroot**, the fringed milkwort, *Polygala paucifolia*.—**Oil of Canada snakeroot**. See ★*oil*.—**Poison snakeroot**, the poison hemlock, *Conium maculatum*.—**Samson's snakeroot**. (*b*) See *soapwort-gentian*, under ★*gentian*.

snake-salamander (snāk′sal″a-man-dėr), *n.* A limbless, burrowing amphibian of the order *Gymnophiona;* a cœcilian.

Burrowing amphibians generally known as cœcilians, but which may be better designated in popular zoology as *snake-salamanders*. *Knowledge*, Dec., 1904, p. 293.

snake's-eyes (snāks′īz), *n. pl.* A term popularly applied in England to certain fossil fish teeth, generally those of the pavement-toothed selachians.

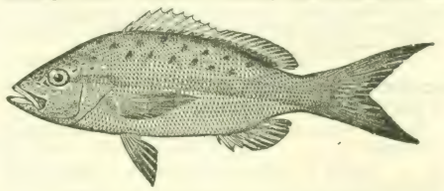
snake-worship (snāk′wėr″ship), *n.* See *ophiolatry*.

snap, *v. t.* 8. In *cricket:* (*a*) To snatch at instead of waiting for (the ball). (*b*) To catch (a batsman) out: said of the wicket-keeper. [Colloq.]—9. To pick without releasing from the husk: said of the ears of maize: as, a crib of *snapped* corn. Compare ★*slip-shuck*. [Western U. S.]

snap, *n.* 21. A temporary banking game: as, to deal a *snap* at faro.—22. Same as *snap-*★*bean*.

snap-bean (snap′bēn), *n.* See ★*bean*[1].

snap-berry (snap′ber″i), *n.* The coral-berry, *Symphoricarpos Symphoricarpos*.



snap-cracker, *n.* 2. A fire-cracker. *Dialect Notes*, III. iii. [U. S.]

snap-finger (snap′fing″gėr), *n.* Same as *trigger-finger*. *Buck*, Med. Handbook, IV. 526.

snapper, *n.* (*j*) In *glass-manuf.*, a workman who operates a snap or case. See *snap*, 16.

Eighteen "*snappers*" of the Kansas window glass factory returned to work today after a two days' strike for higher wages. *Kansas City Daily Star*, Dec. 12, 1903.

(*k*) An automatic attachment to a sounding-lead for taking samples of the bottom. It consists of jaws which close when the lead strikes the sea-bottom.—**Black-fin snapper**, a small snapper, *Lutjanus buccanella*, found in the West Indies.—**Dog-snapper, lane-snapper**. See ★*dog-snapper*, ★*lane-snapper*.—**Mahogany snapper**, *Lutjanus mahogoni*, a small brown West Indian snapper of the family *Lutianidæ*.—**Mexican snapper**. Same as *red snapper*. See *snapper*.—**Red-tailed snapper**, a common name of *Lutjanus synagris*, an abundant food-fish of the West Indian fauna, found from Florida to Brazil.—**Silk-snapper**, a common name given to two related lutianoid fishes, *Neomænis hastingsi* and *Neomænis vivanus*, both of them of the

Yellow-tailed Snapper (*Ocyurus chrysurus*). (From Jordan's "Guide to the Study of Fishes.")

West Indian fauna. Also called *pargo de lo alto*.—**Yellow-tailed snapper**, *Ocyurus chrysurus*, a food-fish of the West Indian fauna.

snapper-flower (snap′ėr-flou″ėr), *n.* See *snap-jack*.

snap-ring (snap′ring), *n.* 1. A form of ring, used by jewelers and others, in which a segment of the circumference of the ring can be slid round upon the adjacent portion, so as to open the ring to receive a closed link or ring. The movable segment snaps back into place by a spring, and locks in place by fitting into or over the segment against which the spring presses it.—2. A ring which is snapped into place; a cast-iron ring cut at only one point, used for packing an engine-piston. It is expanded to pass the end of the piston and snaps into place.

In so far as the rings are concerned, the best practice now makes them as light as possible, in many cases dispensing with springs entirely. This type of piston is used on the heaviest kind of work, with very high pressures, in locomotive and torpedo-boat engines, and is wholly reliable against leakage. The advantages are that being relieved from abnormal and unnecessary pressure on its walls, the cylinder wears true and is not scored or cut by the packing rings. These last are called "*snap rings*," from the fact that they are sprung into the piston, having elasticity enough to go over its flanges and resume their form when they get into the grooves provided in the piston for them. *Sci. Amer.*, Feb. 14, 1903, p. 110.

snap-shot (snap′shot), *n.* and *a.* **I.** *n.* A sudden or quick shot, literally or figuratively; in *photog.*, the instantaneous taking of a picture as with a detective camera, or with one of the many portable cameras.

Snapshots by night may soon be a matter of course to every possessor of a camera.

Photo-miniature, Sept., 1901, p. 289.

II. *a.* 1. Pertaining to or taken by a snap-shot, as a photograph; adapted to the taking of instantaneous photographs: as, a *snap-shot* camera.

A large number of "*snapshot*" photographs.

Geog. Jour. (R. G. S.), XVI. 124.

2. Hence, executed rapidly or sketchily. [Colloq.]

Each line of the above, it should be added, is illustrated by *snap-shot* sketches of Franz at his toilette.

R. C. Brooks, in Bookman, Sept., 1905, p. 16.

snapshot (snap′shot), *v.*; pret. and pp. *snapshotted*, ppr. *snapshotting*. **I.** *trans.* To take a photographic snap-shot of.

II. *intrans.* To take photographs with a snap-shot camera.

snap-welding (snap′wel-ding), *n.* A method of joining the rails of an electric road in which the ends of the rails are heated to softness and then snapped or squeezed together.

snap-willow (snap′wil″ō), *n.* Same as *crack-willow* (which see, under *willow*[1]).

snap-wood (snap′wůd), *n.* The spice-bush, *Benzoin Benzoin*.

snare, *v. t.* 3. In *surg.*, to cut off by means of a snare. *Buck*, Med. Handbook, I. 146.

snark (snärk), *n.* [*sn*(*ake*) + (*sh*)*ark*.] A name given in "Alice's Adventures in Wonderland" to an imaginary animal. See ★*blend-word*.

snatch-block, *n.*—**Eye snatch-block**, an iron snatch-block having an eye at the top and open at the side for convenience in adjusting the rope to the block.—**Link snatch-block**, a snatch-block in which the open side is connected by a link with the hook of the block.—**Plate snatch-block**, an iron snatch-block which has a plate at the bottom for convenience in securing it to the deck; a deck snatch-block. Another form of deck-block is secured by a bolt.

snatch-hook (snach′hůk), *n.* 1. The hook of a snatch or snatch-block.—2. The hook of a chain or wire rope which may be caught in one of the links or over the standing part of the chain or rope.—3. The hook of a chain-sling for catching barrels under the chime to hoist them.

sneak, *n.* 3. In *cricket*, a ball bowled along the ground; a grub. *Hutchinson*, Cricket, p. 34.—4. In *whist*, a singleton lead.

sneak-current (snēk′kur″ent), *n.* In *elect.*, stray current, due to leakage or deficient insulation, which, while not of sufficient intensity to melt fuses or open circuit breakers, is detrimental to the circuit in which it flows if of long duration; specifically, such a current in telegraphic and telephonic circuits. *Elect. World and Engin.*, Oct. 8, 1904, p. 630.—**Sneak-current coil**, a protective device against sneak-currents, consisting of a coil of high resistance the gradual heating of which by such currents results in the melting of a fuse and the breaking of the circuit in which it is placed.

sneaker, *n.* 3. Same as ★*grub*, 4.—4. *pl.* Low heelless canvas shoes with rubber soles. [Colloq.]

sneez, *v.* and *n.* A simplified spelling of *sneeze*.

sneezeweed, *n.* 2. In Australia, a dwarf, erect, odorous herb of the aster family, *Centipeda Cunninghamii*, considered a valuable specific for certain diseases of the eye.

snib[2] (snib), *v. i.*; pret. and pp. *snibbed*, ppr. *snibbing*. In *lumbering*, to allow one's self to be carried away (ostensibly by accident) on the first portion of a jam that moves; ride away from work under the guise of being accidentally carried off in river-driving. [U. S.]

snibel (snī′bel), *n.* In New England, the pin that fastens the tongue to the body of a cart. See the extract.

This is obviously the Dutch *snavel*, German *Schnabel*, beak, point, hook. . . . The word, of course, came through the Dutch. *F. M.*, in N. and Q., 9th ser., VIII. 183.

snide, *n.* 2. A spurious object; a humbug; a fake; something designed to cheat. [Slang.]

His diamond ring 's a cut-glass *snide*.

Wallace Irwin, Love Sonnets of a Hoodlum, vi.

snif, *v.* and *n.* A simplified spelling of *sniff*.

snip, *n.* 5. A small, insignificant person or thing: as, a mere *snip* of a girl.

snipe[1], *n.* 4. The Lake Tahoe trout, *Salmo clarkii henshawi*, found in western Nevada and neighboring parts of California.

snipe[1], *v. i.* 2. To shoot at the enemy, or at isolated soldiers or outposts, in a casual way, as opportunity offers. See ★*sniping*.

II. *trans.* To shoot (one of the enemy) from ambush or in a casual way, and not in a regular battle.

snipe[3] (snīp), *v. t.*; pret. and pp. *sniped*, ppr. *sniping*. Same as ★*nose*[1], 5.

sniper[1] (snī′pėr), *n.* [*snipe*[1], *v.*, + *-er*.] 1. One who shoots snipe.—2. An irregular fighter; a sharp-shooter. See ★*snipe*[1], *v. i.*, 2.

We were going to ride over open, rolling country, dotted with kopjes and believed to hold a good number of the genus '*sniper*.' The escort fell in behind us in file, and walked solemnly after us like a string of ducks.

Army and Navy Jour., March 30, 1901, p. 749.

3. A prospector.

Some unsystematic work [searching for gold] was done during the fall of 1901 by *snipers*, usually working with rockers. *U. S. Geol. Surv.*, Prof. Paper 10, p. 51.

sniper[2] (snī′pėr), *n.* [*snipe*[3], *v.*, + *-er*.] One who noses logs before they are skidded. See ★*nose*[1], 5.

sniping (snī′ping), *n.* and *a.* **I.** *n.* Desultory firing by an enemy into a camp or force on the march; sharp-shooting: so called from the methods of snipe shooters.

The soldiers in the trenches put their hats on the parapet to draw the enemy's marksmen and "humorously called it *sniping*."

Gen. Evening Post, June 15, 1773, quoted in N. and Q., [9th ser., XI. 434.

II. *a.* Characteristic of the firing of a sharp-shooter; desultory; irregular; unexpected: said of shooting.

But even this advantage was greatly reduced by their being exposed to a *sniping* fire from neighbouring walls.

V. Blacker, Mahratta War, p. 179.

Lieut. . . . of the Ninth United States Infantry received a serious *sniping* wound while patrolling at Hoshiru.

N. Y. Times, Aug. 28, 1900.

snippy, *a.* 3. Inclined to be supercilious or 'uppish'; snobbish. [Colloq.]

snip-snap-snorem (snip′snap-snō″rem), *n.* A card-game in which any number can play, a full pack being dealt out, one at a time, as far as it will go. The eldest hand lays on the table, face up, any card he pleases. Each player to the left in turn matches it, if he can, with one of the same denom-

ination, calling out "snip." The holder of the third card of that denomination calls "snap," and the holder of the fourth calls "snorem" and is entitled to start another round with any card he pleases. The first to get rid of all his cards gets a chip for every card held by others. Also called *Earl of Coventry.*

snolly-goster (snol'i-gos-tėr), *n.* [Origin obscure.] An ambitious, boastful, talkative, unprincipled fellow. [Slang.]

A *snollygoster* is a man who is ambitious for office regardless of party, platform or principles, and if he gets there at all he does so by monumental talk.
The Georgia Cracker, Aug. 17, 1896.

We am de *snollygosters*
An' lubs Jim Ribber oysters.
Dan Emmet, The Black Brigade.

snook[2], *n.* 5. The pike and various other fishes of similar shape.

snooker (snō'kėr), *n.* A game played with balls on a billiard table.

He nodded significantly towards the new-comers, as much as to hint that a third person with them would be distinctly an inconvenient third. Onslow turned to them, cue in hand, and proposed a game of *snooker.*
"That's precisely what we came up for," said Amy Rivers promptly. "Hamilton, get out the balls. Mr. Onslow, will you put the billiard-balls away, so that they don't get mixed?"
They played and talked merrily.
Cutcliffe Hyne, The Little Red Captain, iii.

snooze, *v.* and *n.* A simplified spelling of *snooze.*

snorter[1], *n.* 5. A motor-car driven by an internal-combustion engine, the high-pressure exhaust of which is so incompletely muffled as to emit a snorting noise. [Slang.]—6. Something unusually good. *Dialect Notes,* III. iii. [U. S., slang.]

snot, *n.* 4. The first part of the shedding stage, in the soft crab industry. *Saturday Eve. Post.*

snotgall (snot'gâl), *n.* A common name in Tasmania of *Seriolella brama,* a fish belonging to the family *Carangidæ.*

snotty, *a.* **II.** *n.* In the British navy, a midshipman. [Slang.]

Our Mr. Moorshed. He was the second cutter's *snotty* —my *snotty*—on the Archimandrite—two years.
R. Kipling, Their Lawful Occasions, in Traffics and Discoveries, p. 101. [

Snouba bark. See ★*bark*[2].

snout-beetle, *n.*—**Scarred snout-beetle,** any member of the family *Otiorhynchidæ,* so called on account of a scar at the tip of the rostrum characteristic of this family of beetles.

snout-moth, *n.*—**Cotton snout-moth.** See ★*cotton*[1].

snow[1], *n.*—**Glory of the snow.** See ★*Chionodoxa.*—**Golden snow,** a light-yellow colored snow which occasionally falls in Europe and America. The color is due to the admixture of the pollen of pine-trees.—**Pole of snow.** See ★*pole*[2].—**Treading snow,** a crunchy sound due to slowly repeated puffs of gas igniting in a wood fire, imitating the slow heavy step of an old man in the snow. [Colloq., Virginia.]

snow[1], *v. t.*—**To snow the cards,** to take a card from the top and bottom of the pack simultaneously and throw them on the table, instead of shuffling them. See ★*fuzzing.*

snowball, *n.* 3. (*d*) A delicate pudding steamed in a mold, then rolled in powdered sugar, and served with wine sauce.—**Little snowball,** the button-bush, *Cephalanthus occidentalis.*—**The snowball system,** in England, the name of a popular system of making charitable collections in which one person asks each one of a certain number (say five) to contribute a small sum, every one of the five pledging himself to ask five others to do the same; the twenty-five in turn ask five each; and so on, the amount collected rolling up (like a snowball) to a large sum in a very short time. Also called the *endless chain system.*—**Wild snowball.** (*b*) The redroot or New Jersey tea, *Ceanothus Americanus.*

snowberry, *n.* 3. A Tasmanian name for *Gaultheria hispida.* See *wax-cluster* and ★*chucky-chucky.*

snow-bird, *n.* (*c*) The ivory gull, *Larus eburneus,* an arctic species that in winter is pure white.

snow-blanket (snō'blang″ket), *n.* Snow which covers the ground and protects vegetation from severe cold. As the snow melts slowly by the conduction of heat from below it furnishes water for the plants that are living below it.

snowbreak, *n.* 2. In *forestry,* the breaking of trees by snow.—3. An area on which trees have been broken by snow.—4. See ★*shelterbelt.*

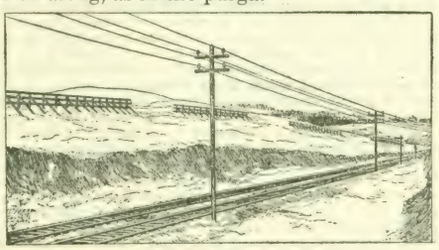
snow-cloud (snō'kloud), *n.* A cloud from which snow is falling or is likely to fall.

snow-craft (snō'kräft), *n.* A knowledge of the behavior of snow and the best methods of combatting it: an important part of successful mountaineering.

In *snow-craft* the choice of route is the result of a full understanding of the behaviour of snow under a multitude of varying conditions; it depends largely upon experience, and much less upon gymnastic skill.
Encyc. Brit., XXXI. 23.

snow-creep (snō'krēp), *n.* The slow movement or settling of snow down a slope.

Small trees are directly broken and abraded by weight of snow or by *snow creep. Science,* Feb. 28, 1908, p. 339.



snow-cripple (snō'krip″l), *n.* A tree crippled by snow. See the extract.

On the other hand, when the struggle of trees for existence is primarily with snow, the forest as altitude increases is resolved into groups of trees. These become more separated, and the upper groups of the trees occupy ridges and local elevations. *Snow-cripples* possess the spire form, with flourishing upper shoots, but the lower branches and foliage are dying or dead, broken by snow and attacked by fungi. *Science,* Feb. 28, 1908, p. 339.

snow-drift, *n.* 2. Same as *snow-on-the-mountain,* 1.—3. The sweet alyssum, *Aduseton maritimum.*

snowdrop, *n.*—**African snowdrop.** Same as *African* ★*bladder-nut.*—**Yellow snowdrop,** the yellow dog-tooth violet, *Erythronium Americanum.*

snow-dust (snō'dust), *n.* The finest snow raised from the ground by the wind and carried along, as in the purga.

Snow-fence.

snow-fence (snō'fens), *n.* A fence built to break the force of the wind in snow-storms and to prevent the drifting of the snow.

Snow-fences are commonly erected in Canada to check the rate of snow-drifting. *Nature,* Sept. 4, 1902, p. 454.

snowflake, *n.* 3. (*b*) The sweet-william, *Dianthus barbatus.*

snow-hut (snō'hut), *n.* A hut built of snow, particularly the dome-shaped hut of the

Snow-hut.

Eskimo built of blocks of snow which are arranged spirally so as to form a vault.

snowing (snō'ing), *n.* 1. The falling of snow.—2. Same as ★*fuzzing.*

snow-plow, *n.* Snow-plows used on electric roads are special cars fitted with high-power motors and some form of snow-scraper. One form, called a *shear-plow,* is fitted with strong wide shear-boards placed in pairs, the lower and outer board being adjustable at an angle of about 45° across the track in front of the car; another, called a *nose-plow,* has a double shear in front of the car. Each style also employs wing scrapers behind the plows to shove the snow away from the car. Small shear-plows, called *track-scrapers,* are also fitted to ordinary cars to remove light falls of snow. For city streets snow-plows are often replaced by a machine called a *track-sweeper.*

snow-ripple (snō'rip″l), *n.* A ripple-mark in snow.

On *Snow-ripples.* Abstract of paper by the author [V. Cornish] read at Section E, British Association, 1900. See Report Bradford Meeting.
Geog. Jour. (R. G. S.), XVIII. 192, note.

snow-roller (snō'rō″lėr), *n.* See the extract.

It seems that the flakes of a light fluffy layer of surface snow are made adhesive by a rise in the temperature of the air above the freezing point, while the under snow remains cold and dry, and the particles of damp surface snow are enabled to adhere to each other, but not to the dry under snow. A strong wind may then push over little projections of the surface snow and start them rolling, when, of course, they will travel and grow until the resistances overcome the propelling power of the wind. These "*snow rollers*" vary in size, some being only a few inches in diameter, while at times others have been seen 2 feet or more in length. *Nature,* March 12, 1908, p. 453.

snow-rose (snō'rōz), *n.* See ★*rose*[1].

snow-slide, *n.* 2. In *lumbering,* a temporary slide on a steep slope, made by dragging a large log through deep snow which is soft or

thawing. When frozen solid, the track may be used to slide logs to a point at which they can be reached by sleds.

snow-spectacles (snō'spek″ta-klz), *n. pl.* A shield, with narrow slits, designed to protect the eyes from the glare of snow.

snow-worm (snō'wėrm), *n.* Same as *snow-flea.*

snubbing-pitch (snub'ing-pich), *n.* In *lumbering,* the slope at which it is necessary to use a snub-line to control the downward movement of a load of logs. [Maine.]

It was the crux of the situation, that *snubbing-pitch.* With its desperate dangers, its uncertainties, its celerity, it was ominous and it was fascinating.
Holman Day, King Spruce, xxvi.

snub-line (snub'līn), *n.* 1. Same as *snubbing-line.*—2. In *lumbering,* a hawser used to control the movement of a load of logs down a steep slope. [Maine.]

It was well into February before they began to haul their logs to the landing-place on Blunder Stream. But even with an estimated five millions to dump upon the ice of Blunder, time was ample, for the *snub-line* down the steep quarter-mile of Enchanted's shoulder made a cut-off that doubled the efficiency of the teams.
Holman Day, King Spruce, xxvi.

snuf, *v.* and *n.* A simplified spelling of *snuff.*

snuff[1], *n.*—**High dried snuff,** a type like Scotch, but more pungent, with only 5 per cent. of moisture.—**Maccoboy snuff.** Same as *maccouba* ★*snuff.*—**Maccouba snuff.** See *maccouba* and *rappee* ★*snuff.*—**Offal snuff,** in the British excise law, waste material formerly converted into snuff, but with the disuse of that article left on the hands of manufacturers. A drawback is allowed by the Customs for this material. See quotation under ★*Queen's Pipe.*—**Rappee snuff.** See *rappee.* The dark color of this snuff is due to longer fermentation. It is highly scented and contains an average of 40 per cent. of moisture. Maccouba snuff is sometimes included as a variety of this.—**Scotch snuff,** a light-colored type, plain or scented, containing about 20 per cent. of moisture.

snuff[2], *v. t.* 2. In *currying,* to smooth or put out with a sleeker. See *to put out* (*c*), under *put*[1], *v. i. C. T. Davis,* Manuf. of Leather, p. 429.

snuff-bean (snuf'bēn), *n.* A name given to the tonka-bean, from its use in scenting snuff.

snuff-box, *n.*—**Musical snuff-box,** a name formerly used for all musical boxes, because early examples were made of small size and were not unlike snuff-boxes in appearance.

snuff-work (snuf'wėrk), *n.* In the British excise law, any tobacco material, whether leaf, stalks (midribs), returns (see under ★*tobacco*), or stalk flour, or these combined, in course of fermentation to be ground into snuff. To *lay down snuff work* was to place such material, after damping, cutting, and mixing, in a cask or bin to ferment. *A. E. Tanner,* Excise Tobacco Laws, p. 121.

snug, *v. t.*—**To snug down,** to take in, as sails; to make all snug.

Before dark, Kettle *snugged* her *down* to single topsails, himself laying out on the foot ropes with the Portuguese. *Cutcliffe Hyne,* A Master of Fortune, vii.

snum (snum), *v. i.* A euphemistic substitute for *swear.* [Dial. or slang, New Eng.] See *swan*[2], *swow*[2].

"Drive where?" asked old Anthony, pausing with one foot on the step of the ancient carryall.
"To Miss Dane's!"
"Well, I *snum!*" said old Anthony.
L. E. Richards, Mrs. Tree, xiii.

snuzzle (snuz'l), *v. i.* [See *nuzzle.*] To thrust the nose against; rub closely with the nose; nuzzle: said of animals. [Dial.]

His [the dog's] general look, and a way he had of going '*snuzzling*' about the calves of strangers, were not pleasant for nervous people.
T. Hughes, Tom Brown at Oxford, iii.

sny (snī), *v. i.* [*sny, n.*] In *ship-building,* to curve away sideways from the normal straight position: said of a plank or plate, as at the bows or stern, where it is necessary to force the strakes so as to get an even distribution of the planking or plating.

so[1], *adv.*—**So fash.,** an abbreviation of *so fashion,* a colloquial phrase meaning, in this or such a fashion or way; hence, in the right fashion, mode, or form. [Slang.]

If you put my coat on that chair, you 'll be more *so fash,* sir.
R. Kipling, The Disturber of Traffic, in Many Inventions, p. 4. [

So. An abbreviation of *south.*

soaa (sō-ä'ä), *n.* [Fijian *soangga,* the vernacular name of the fruit and plant.] See ★*fei.*

soak, *v. t.* 10. To place in a furnace, or soaking pit, with the object of equalizing the temperature rather than causing an increase: especially applied to ingots of steel which, soon after casting, have a solid exterior or

shell and a molten interior, and are therefore unfit for rolling until solid and of a nearly uniform temperature throughout.

The only other furnace treatment, that of "*soaking*," merely equalizes the heat of the ingot.
Encyc. Brit., XXIX. 571.

soak, *n.* **6.** A slough.

The term *soak* in Western Australia, as used on maps and plans, signifies a depression holding moisture after rain. It is also given to damp or swampy spots round the base of granite rocks. Wells sunk on *soaks* yield water for some time after rain. All *soaks* are of a temporary character.
The Australasian, Sept. 7, 1895, p. 461, quoted by E. E. [Morris, Austral English.

7. In *tanning*, a tank or vat of water for soaking hides or skins. *C. T. Davis*, Manuf. of Leather, p. 80.

soakage, *n.* **2.** A slough; a soak.

Some 50 feet from the surface, is a small pool of water, evidently a *soakage* from the surrounding country, and possibly a spring. *Geog. Jour.* (R. G. S.), XI. 261.

3. The residual charge of a cable or condenser. *Houston*, Dict. Elect. [Rare.]

soaking, *n.* **3.** The operation of desilverizing a lead regulus by running it into a bath of molten lead in the fore-hearth of a blast-furnace; also the operation of equalizing the temperature of steel ingots in a soaking-pit.

soap, *n.*—**Acid soap.** (*a*) An acid ammonium ricinoleate which approximates the formula $NH_4C_{18}H_{33}O_3 + C_{18}H_{34}O_3$ and is prepared by partly neutralizing Turkey-red oil with ammonia. (*b*) The fatty matter obtained by adding just enough acid to a soap solution to cause the separation of the fatty acids.—**Bast soap,** a soap bath which has been used in degumming or boiling off silk and which has become so charged with sericin as to be of no further value as a scouring agent. It is often added to the dye-bath in silk-dyeing. Also known as *boiled-off liquor*.—**Black soap,** soft soap used in France as an insecticide: originally made with hemp-seed oil and potash, and sometimes artificially colored by copperas and nutgalls or logwood.—**Borax soap,** soap made with an addition of borax to increase its cleansing effect on clothing, while borax is not to any serious extent injurious to the fabric, at any rate in the case of linen and cotton.—**Calico-printers' soap,** a soap made of tallow, cocoanut-oil, castor-oil, and palm-oil. This soap should contain no free fat and no free caustic. The following composition gives a good calico-printers' soap: water, 23.5 per cent.; alkali as soap, 9 per cent.; alkali, free, 0.2 per cent.; fat, free, 0.2 per cent.; fat as soap, 67.1 per cent.—**Cold-process soap,** soap made from cocoanut-oil saponified with caustic alkali without boiling, leaving the glycerin in the soap.—**Cold-water soap,** a soap which washes well in cold water: usually made of very soft, fatty materials, and containing 20 per cent. of water, that is, two thirds of the usual amount. It is occasionally stiffened by the addition of sodium carbonate or silicate.—**Dyers' soap,** an absolutely neutral soap, either a 'finely fitted' soap, or a curd soap from which the caustic lye has been pumped and which has been finished by boiling in brine.—**Filled soap,** soap which has its weight unduly increased by retention of water, aided by leaving in it the glycerin produced in soap-boiling, or by adding 'soluble glass' (sodium silicate) or other hygroscopic material. Also known as *padded soap* or *hydrated soap*. *Sadtler*, Handbook of Indust. Chem., p. 62.—**Fish-oil soap,** soap made by boiling fish-oil with potash lye and used especially for spraying plants.

Fish-oil Soap.—

Crystal potash lye	1 pound.
Fish-oil	3 pints.
Soft water	3 gallons.

Dissolve the lye in the water, and when boiling, add the oil, and boil for two hours. One pound of the soap may be dissolved in 5 to 10 gallons of water. This is of value as an insecticide.
E. G. Lodeman, The Spraying of Plants, p. 146.

Grained soap. (*b*) Soap separated as curd from solution by the addition of common salt to the product of the boiling together of fat and an aqueous solution of an alkali. Also known as *salted-out soap*. See to ★*salt out*.—**Hydrated soap.** Same as *filled* ★*soap*.—**Magnesia soap,** the magnesium salt of one or more of the acids of ordinary fats. It is insoluble in water. Hence magnesium compounds, as well as those of calcium, in natural water render it 'hard' or capable of curdling the common alkaline soaps.—**Marbled soap,** soap irregularly streaked with various colors by drawing through the melted white stock soap a comb with blunt teeth which has been dipped into melted soap containing dissolved or suspended coloring-matter.—**Marseilles soap,** originally soap made at Marseilles from olive-oil and soda: practically the same as Castile soap. The term is now applied to any good hard soap of substantially similar character, wherever made, although the olive-oil is frequently replaced by other oils which pass under that name.—**Medicated soap,** a kind of soap prepared either for internal use, such as croton or jalap soap, or for use on the skin, on which, on account of certain substances which it contains, it exercises a specific influence. Among the principal varieties which are prepared for external use are those which contain carbolic acid, petroleum, borax, camphor, chlorin, iodine, mercurial salts, sulphur, or tannin.—**Milled soap,** soap which has been cut into thin slices or chips, dried until very little water remains, ground between rollers, mixed with any desired perfume or coloring-material, compressed into a continuous bar, cut into short pieces, and stamped into cakes. Fine toilet-soap is to a large extent manufactured in this way, since delicate perfumes can be used which would be volatilized or destroyed by the application of heat.—**Mottled soap,** soap made by boiling together fat and dissolved alkali, adding salt to separate the 'curd,' drawing off the 'underlye,' and boiling down the curd, generally with further addition of alkali, until the remaining water does not exceed about 20 per cent. of the mass, which is then well stirred and poured into frames to solidify. As a result of the thick consistence due to boiling down, ferrous sulphid and iron soap, present in small quantity, instead of settling to the bottom, remain irregularly distributed through the mass and give it the mottled or marbled bluish-green appearance to which the name refers. Originally the iron was present in consequence of the impure alkali, crude barilla, used; but since such soap acquired a good reputation as not containing a large proportion of water, the practice was adopted of intentionally adding iron, as green vitriol, to produce the mottled appearance.—**Niger soap,** the dark-colored layer containing caustic lye, soap, water, and organic impurities, which settles from the good soap after a boiling of soap is given the finishing change.—**Normandy soap,** soap to which in the melted condition sodium sulphate or thiosulphate has been added to the extent of one fifth or one third of the weight of the soap, the object being to harden the product and prevent it from being too rapidly dissolved and wasted in scrubbing, particularly with hot water.—**Petroleum soap,** a laundry-soap which contains paraffin, naphtha, or some other product of petroleum, the use of which in soap facilitates the removal of greasy matter from linen.—**Remelted soap,** soap prepared by remelting in a steam-jacketed kettle one or more kinds of soap, together with the perfume and other ingredients.—**Salt-water soap,** a soap consisting of 2–3 per cent. of carbonated alkali (Na_2CO_3), not more than 3 per cent. of salt, not more than .50 per cent. of mineral matter, not more than 55 per cent. of water, and the rest of cocoanut-oil with the proper amount of alkali.—**Sand soap,** soap containing about 75 per cent. of powdered quartz or feldspar, 20 per cent. of cocoanut-oil soap, and 5 per cent. of sal-soda or silicate of soda.—**Scouring soap,** a sand soap made usually of about 75 per cent. of powdered quartz and 25 per cent. of cocoanut-oil soap. A small amount of sal-soda and silicate of soda is also usually added. The soap is used in cleaning metal and window-glass.—**Soap leaves,** small sheets of tissue-paper which have been covered with a film of soap by dipping them into a good grade of toilet-soap melted with a little water and perfumed as desired. Each leaf suffices for a single washing of the hands.—**Tobacco soap,** a solution of soap to which an infusion or extract of tobacco-stems has been added, used as an insecticide for application, by spraying, to growing plants.—**Whale-oil soap,** a coarse soap, made from whale-oil, a solution of which is used as an insecticide and as a means of emulsifying kerosene and other substances to be employed for the same purpose on growing plants.—**Whale soap,** the 'foots' or deposit from the refining of crude spermaceti by heating with a small quantity of potash lye. It consists mainly of potassium palmitate.

soap, *v. t.* **3.** In *calico-printing*, to remove, by means of soap, impurities from (cloth) before bleaching; also, after printing, to remove the thickening used in the color.

soapberry, *n.*—**Soapberry family,** the plant family *Sapindaceæ* (which see).

soap-copper (sōp′kop″ėr), *n.* A large open vessel in which soap is made by boiling together the fatty and alkaline materials with water: now generally made of boiler-plate iron or steel, heated by steam-coils, and provided with stirrers. Compare *soap-kettle* and *soap-pan*.

soap-cyst (sōp′sist), *n.* An encysted collection of yellowish fatty material in the breast. Called also *butter-cyst*.

soaper, *n.* **2.** In *calico-printing*, a machine in which the cloth is washed with soap.

soap-lock, *n.* **2.** A man who wears soap-locks; hence, a low fellow; a young rowdy or rough: as, "the *soap-locks* of the Bowery." [U. S.]

soap-lye (sōp′lī), *n.* In *soap-making*, the watery solution which settles out on graining the soap with salt. It contains the glycerin and organic impurities which are the products of the stock saponified.

soap-oil (sōp′oil), *n.* See ★*oil*.

soap-powder (sōp′pou″dėr), *n.* A trade-name of various mixtures of pulverized dry soap with soda crystals, starch, oatmeal, bran, or other materials also in the powdered state.

soap-press (sōp′pres), *n.* A machine for imprinting upon bars or cakes of soap designs and the manufacturer's name.

soaproot, *n.* **3.** The soapwort, *Saponaria officinalis*.—**4.** The soap-plant, *Chlorogalum pomeridianum*.

soap-slabber (sōp′slab″ėr), *n.* A machine containing a number of tightly stretched steel wires, which are pushed against a frame of soap, cutting it into slabs of the desired thickness.

soap-test (sōp′test), *n.* The process of determining the hardness of a natural water by measuring the volume of a solution of soap of known or standard strength which is curdled by a given volume of the water. Adding the soap solution by small portions in succession, and shaking after each addition, a froth or lather lasting several minutes is produced as soon as the quantity required for curdling has been slightly exceeded.

soapwort, *n.*—**Spanish soapwort.** Same as *soaproot*, 1.

sobaco (sō-bä′kō), *n.* [Cuban Sp. *sobaco*, prop. *sabaco*, a native name.] A fish, *Canthidermis sobaco*, of the family *Balistidæ*, found in the West Indies.

sobby (sob′i), *a.* [Var. of *soppy*. Cf. *seep*.] Wet; soppy, as land. [Local.]

Sobralia (sō-brā′li-ä), *n.* [NL. (Ruiz and Pavon, 1794–1798), named in honor of Francisco Martinez *Sobral*, physician and councilor of the king of Spain, and patron of botany.] A genus of plants of the family *Orchidaceæ*. There are about thirty species, inhabiting the region from Mexico southward. They are large-growing, handsome plants with leafy stems and very large but fugacious flowers. Some of the species to be found in the collections of orchid fanciers are *S. macrantha*, *S. Cattleya*, *S. fragrans*, and *S. xantholeuca*.

Sobranje, *n.* **2.** [*l. c.*] A local representative assembly in Russia.

soccer, socker (sok′ėr), *n.* [A corruption of *association*.] The 'Association' game of football. See *foot-ball*, 2.

social, *a.* **5.** In *botany*, in recent (phytogeographical) usage, following that of Drude, the term is confined to species which control the vegetation of large tracts: essentially the original use of the term (see the extract). Compare ★*gregarious*, 2. If all other species are excluded, the species (according to F. E. Clements) is *social-exclusive*; if secondary species are admitted, it is *social-inclusive*.

Those species of plants which I have termed *social* uniformly cover vast extents of land.
Humboldt (trans.), Cosmos, I. 346.

Social aggregate. See ★*aggregate*.—**Social capillarity,** the effort and tendency—statistically demonstrated—of all individuals in democratic society to rise from lower to higher social functions, and to a higher plane of living. *Arsène Dumont*.

In brief M. Dumont's theory is that population increases inversely with '*social capillarity*.'
Pop. Sci. Mo., Aug., 1903, p. 357.

Social chemistry, classes. See ★*chemistry*, ★*class*.—**Social composition,** the combination of small social groups, as families, tribes, or villages, into larger compound societies, as nations. Compare ★*social constitution*.

By *social composition* is to be understood a combination of small groups into larger aggregates, when each of the smaller groups is so far complete as a social organism that, if necessary, it could lead an independent life for a time. Family, clan, tribe, and folk, or family, township, commonwealth and nation, are names that stand both for elements and for stages in social composition.
Giddings, Prin. of Sociol., p. 73.

Social constitution, that organization of society which corresponds to the social division of labor—which does the work and achieves the ends of the community. Compare ★*social composition*. *Giddings*, Prin. of Sociol., p. 73.—**Social Democratic Federation.** See ★*federation*.—**Social economics, heredity, parasitism, pyschology, surplus, telesis, telics, transmission.** See ★*economics*, etc.—**Social settlement.** See *college* ★*settlement*.—**Social synergy,** co-working of social forces.

II. *n.* A sociable; an informal gathering of people, especially a church gathering. [U. S.]

socialism, *n.*—**State socialism.** (*a*) Socialism established and directed by the existing state, in opposition to proletarian socialism, established and directed by working-men. (*b*) Specifically, in Germany, legislation, supported by Prince Bismarck, intended to improve the condition of the working-man. Among the measures included were the insurance of workmen against accident, sickness, and old age, and the establishment of co-operative associations under state protection.

Socialist Labor party. See ★*labor*[1].

socialry (sō′shal-ri), *n.* [*social* + *-ry*.] Social organization. *W. J. McGee*, in 17th An. Rep. Bur. Amer. Ethnol., p. 285.

The career of the Society from 1883 up to the present seems to have been normal, fully in accord with the times, and beyond reproach; its present function as a nucleus for special societies—i. e., subtribes, in the analogy with primitive *socialry*—would also seem to be ideal.
Science, Feb. 14, 1902, p. 249.

sociétaire (sō-si-ā-tãr′), *n.* [F.] A member of one of the two classes of actors at the *Comédie Française*, in Paris, who has an interest in the theater and its government, a share of the profits, and assists in the choice of plays. On retirement he is pensioned. The other class is composed of ★pensionnaires (which see).

societal (sō-sī′e-tal), *a.* [L. *societ(as)*, society, + *-al*[1].] Pertaining to the social order or to natural society.

A very wide range of ethnographical inquiry under the following heads:—(1) maintenance; (2) perpetuation; (3) gratification; (4) religious and superstitious ideas and usages; (5) the *societal* system; (6) contact and modification. *Nature*, Dec. 24, 1903, p. 172.

society, *n.*—**Burial society,** a friendly or mutual benefit society which provides a certain sum for the burial of each of its members.—**Component society,** a social group which could lead an independent life, as a family, tribe, or village, but is in fact one among like groups which make up a larger compound society. Compare ★*constituent society.*

Social groups that could exist as complete and independent societies, but which in fact are only component parts of integral societies to which they are, in certain respects, subordinate, may be called *component societies.* *Giddings,* Elem. of Sociol., p. 7.

Constituent society. See ★*constituent.*—**Ethnic society,** society organized on the basis of real or nominal blood-kinship; tribal society; gentile society. *Giddings,* Elem. of Sociol., p. 186.—**Grand medicine society.** Same as ★*mide* or ★*midewiwin.*—**Integral society,** a complete natural society.

A natural society that is large enough to carry on every known kind of social activity and coöperation, and which, independently of every other society, maintains control over the territory that it occupies, may be called an *Integral Society.* *Giddings,* Inductive Sociol., p. 6.

Natural society, a society which is spontaneously formed and is not a product of conscious planning.—**Society of Jesus.** See *Jesuit.*—**Turnway society.** See the extract.

The most primitive form of sharing work is seen in the "*turnway*" societies of the Thames watermen, for regulating the "turns," or order in which the men plying at any particular "stairs" serve the passengers who present themselves. *Webb,* Indust. Democracy, I. 437.

sociocracy (sō-shi-ok′rā-si), *n.* [L. *socius,* fellow, + Gr. *-κρατια* ⟨ *κρατεῖν,* rule.] The art of applying social science to the betterment of social conditions. *L. F. Ward,* Dynamic Sociol., I. 60.

socio-economic (sō″shi-ō-ē-kō-nom′ik), *a.* Pertaining to phenomena that are both social and economic. *L. F. Ward,* Dynamic Sociol., I. 525.

sociogenetic (sō″shi-ō-jē-net′ik), *a.* [L. *socius,* companion, + E. *genetic.*] Pertaining to the forces and conditions which create and mold society. *L. F. Ward,* Pure Sociol., p. 41.—**Sociogenetic forces,** society-creating or socializing forces. L. F. Ward defines the sociogenetic forces narrowly, to include particularly the spiritual forces, moral, esthetic, and intellectual.

sociol. An abbreviation (*a*) of *sociological;* (*b*) of *sociology.*

sociology, *n.*—**Anthropogenic sociology,** a division of social science concerned with the anthropogenic stage of social evolution. *Giddings,* Prin. of Sociol., p. 74.—**Demogenic sociology.** See ★*demogenic.*—**Ethnogenic sociology** that division of social science which is concerned with tribally organized or gentile society; ethnology; especially the study of that stage of social evolution in which society is organized on the basis of kinship. Compare *zoögenic, anthropogenic,* and ★*demogenic sociology.* *Giddings,* Prin. of Sociol., p. 74.—**Zoögenic sociology,** that division of social science which deals with the stage of social evolution in which the association and mutual aid of animals in swarms, herds, or bands develops social instincts and modifies the processes of selection and survival. *Giddings,* Prin. of Sociol., p. 73.

socionomic (sō″shi-ō-nom′ik), *a.* [*socionom(y)* + *-ic.*] Of or pertaining to socionomy.

His second order of play is *socionomic,* that is, it takes two or more to fight, play chess, torment, haze, court, cooperate in diversion. *O. T. Mason,* in Science, May 31, 1901, p. 862.

sociophagous (sō-shi-of′ą-gus), *a.* [L. *socius,* fellow, + Gr. *φαγεῖν,* eat.] Subsisting upon or at the expense of others. [Rare.]

As, among anthropophagi, the suppression of man-eating is not favourably regarded; so in *sociophagous* nations like ours, not much pleasure is caused by contemplating the cessation of conquests. *H. Spencer,* Prin. of Ethics, I. 472.

Soc. Is. An abbreviation of *Society Islands.*

socius, *n.* 2. The individual, in his social qualities and relations, as the unit of society, in distinction from the individual as an animal or as a mind. *Giddings,* Elem. of Sociol., p. 10.—3. In *social psychol.,* the social self. See the extract.

The development of the child's personality could not go on at all without the constant modification of his sense of himself by suggestions from others. . . . He thinks of the other, the alter, as his *socius:* just as he thinks of himself as the other's *socius:* and the only thing that remains more or less stable, throughout the whole growth, is the fact that there is a growing sense of self which includes both terms, the ego and the alter. In short, the real self is the bipolar self, the social self, the *socius.* *J. M. Baldwin,* Social and Ethical Interpretations, p. 30.

sock[2], *n.*—**Broad-finned, feathered, winged sock.** See ★*plow.*

socker, *n.* See ★*soccer.*

socket, *n.* 7. In *golf,* the neck of a club into which the shaft runs.—8. A chuck or holder on the end of a drill-spindle having a taper-hole to receive the corresponding taper-shank of the drill or of another socket.—**Dental socket,** in the hinged *Mollusca* (*Brachiopoda* and *Pelecypoda*), one of the pits into which the teeth of the opposite valve fit. In the *Brachiopoda* the dental sockets are in the dorsal valve only; in the *Pelecypoda* they may be in either or both of the lateral valves.

socket-club (sok′et-klub), *n.* In *golf,* a wooden club of which the shaft enters a socket at the neck: in contradistinction to a spliced club or wooden club with a thin, tapering neck, to which the shaft is glued and then whipped.

socket-hammer (sok′et-ham″ėr), *n.* A form of carpenters' hammer having the part to which the handle is fitted drawn down into socket form to give a better bearing for the wood and strengthen it for use as a claw for drawing nails.

socket-headed (sok′et-hed″ed), *a.* Having a socket in the head or end, as a wrench or key for turning nuts which are at the bottom of a depression where they cannot be turned with the ordinary spanner or wrench.

socket-pick (sok′et-pik), *n.* 1. A form of pickax for heavy work, in which the part where the handle fits has been forged in socket form.—2. A form of pickax in which the cutting or working ends are removable and fit in sockets in the body to which the handle is attached.

socket-screw (sok′et-skrö), *n.* 1. A screw having a polygonal socket in its head by which it may be turned.—2. A screw which passes through a thimble, and by bottoming on the latter secures it in place.

socket-tool (sok′et-töl), *n.* A tool formed with a socket, either for use as a socket-wrench or as a holder of other tools.

Socratic elenchus. See ★*elenchus.*

soda, *n.* 1. The manufacture on a commercial scale of this important material is understood to include the production both of sodium hydroxid, or caustic soda, and of sodium carbonate. The new electrolytic process, involving the decomposition of common salt in solution by an electric current, is now industrially established, though both the Solvay and Leblanc processes are still the chief means of manufacturing soda, the Solvay process being the more advantageous so far as soda alone is concerned, but having the drawback of yielding chlorin as a by-product in a form in which it cannot readily be utilized.—**Anhydrous soda,** in early chemistry, sodium oxid, Na_2O: still sometimes so used, as in stating the results of the analysis of silicious minerals. But at present the term is, in a scientific sense, applied to dry sodium hydroxid (NaHO), and technologically also to sodium carbonate (Na_2CO_3) in a dry state and without water of crystallization.—**Crystal soda.** Same as *washing-*★*soda.*—**Greenbank caustic soda.** See ★*caustic.*—**Recovered soda,** carbonate of soda, mixed with some silicate of soda, obtained by evaporating to dryness the waste liquor of the soda process for making paper-pulp from wood, esparto, and other similar materials, and then burning off organic matter from the residue. This recovered carbonate can be converted again into caustic soda by boiling with slaked lime, and the product used in the treatment of fresh fibrous material.—**Soda card, process.** See ★*card*[1], ★*process.*—**Summer soda,** carbonate of soda obtained by the natural evaporation in summer of water holding this salt in solution, such solution occurring in pools or small lakes in various parts of the world. The material so obtained is the *trona* of Lower Egypt and the *urao* of South America.—**Washing-soda,** usually a normal sodium carbonate with ten molecules of water of crystallization ($Na_2CO_3.10H_2O$). Also called *washing-soda crystals, washing-crystals,* and *crystal soda.* But the name is sometimes also applied to the normal salt crystallized with one molecule of water ($Na_2CO_3.H_2O$), known as *crystal carbonate,* and occasionally to sodium bicarbonate or acid-carbonate ($NaHCO_3$).

sodamide (sō-dam′id), *n.* [*sod(a)* + *amide.*] A solid substance, white when pure, but generally seen of greenish or brownish color, readily fusible, and at a high temperature decomposed into its elements, obtained by passing dry gaseous ammonia over heated metallic sodium. Its composition is $NaNH_2$. It is used with advantage in the preparation of hydrazoic acid.

sodammonium (sōd-a-mō′ni-um), *n.* [NL., ⟨ *sod(a)* + *ammonium.*] A copper-colored substance which separates from a blue liquid obtained by dissolving metallic sodium in liquefied ammonia in a sealed tube. There is some reason to assume that it is a definite compound of the composition $N_2H_6Na_2$.

soda-orthoclase (sō′dą-ôr″thō-klāz), *n.* A variety of the potash feldspar, orthoclase, peculiar in containing several per cent. of soda.

soda-prairie (sō′dą-prā″ri), *n.* An alkaline playa.

sod-form (sod′fôrm), *n.* In *phytogeog.,* see ★*vegetation-form.*

Sodic chlorid. Same as *sodium chlorid.*

sodioferric (sō-di-ō-fer′ik), *a.* [*sodium* + L. *ferrum,* iron, + *-ic.*] Containing as constituents iron (in the ferric state or with apparent triad valence) and sodium: as, *sodioferric* sulphate.

sodipotassic (sō″di-pō-tas′ik), *a.* [*sodi(um)* + *potass(ium)* + *-ic.*] In *petrog.,* in the quantitative classification of igneous rocks (see ★*rock*[1]), having soda and potash in equal or nearly equal amounts, within the limits $\frac{K_2O'}{Na_2O'} < \frac{5}{3} > \frac{3}{5}$.

sodium, *n.*—**Acid sodium carbonate.** Same as *sodium acid-carbonate* or *sodium bicarbonate,* $NaHCO_3$.—**Becker's sodium process.** See ★*process.*—**Sodium acetate,** a salt prepared by the action of acetic acid on sodium carbonate. It forms large transparent prisms belonging to the monoclinic system and has a chemical constitution expressed by the formula $NaC_2H_3O_2 + 3$ aq. The crystals effloresce slightly in dry air and completely at a moderate heat, and melt below 100° C. They are soluble in three parts of cold and an equal weight of hot water, and are also soluble in alcohol.—**Sodium acid-carbonate.** See *sodium bicarbonate.*—**Sodium aluminate.** As a commercial product in the United States this salt is known by the trade-name *Natrona saponifier,* being manufactured at Natrona, Pennsylvania, for use in soap-making.—**Sodium arseniate,** a substance used in dyeing calico: known as *dung substitute* or ★*dunging-salt* (which see).—**Sodium dioxid.** Same as ★*sodium peroxid.*—**Sodium hyposulphite.** See ★*sodium thiosulphate.*—**Sodium light.** See ★*light*[1].—**Sodium manganate,** a compound now manufactured on a large scale for use as a disinfectant. The alternate formation and decomposition of this salt form the basis of the Tessié du Motay process, as modified by Fontana, for the preparation of oxygen in large quantity.—**Sodium methylate.** See ★*methylate.*—**Sodium permanganate,** a salt now used to some extent, though not as largely as the manganate, for disinfecting purposes.—**Sodium peroxid,** a yellowish-white solid substance prepared by heating metallic sodium in an excess of oxygen or of air to about 300° C. It has the composition Na_2O_2. When heated with combustible substances it acts as a most energetic oxidizing agent, the combustion by means of it of aluminium in a finely divided state being used as a source of extremely high temperature. (See ★*aluminothermics* and ★*thermit.*) Dissolved in water, sodium peroxid becomes a source of hydrogen dioxid, and thus, advantageously with addition of magnesium sulphate to correct the injurious effect of caustic soda formed at the same time, this material is coming into use as a valuable bleaching agent. Also called *sodium dioxid.*—**Sodium phosphate,** crystallized disodium orthophosphate, $Na_2HPO_4.12H_2O$. It is used as a saline purgative in medicine, and to some extent finds applications in calico-printing and photography.—**Sodium silicate.** This compound, as manufactured for industrial use, varies in composition, but commonly approximates to $Na_2Si_4O_9$. It is made either by fusion of silicious sand with carbonate or sulphate of sodium, or more usually by heating quartz, flints, or silicious sand with a solution of caustic soda under pressure. It is known as *soluble glass* or *water-glass,* and is largely used in making artificial stone for building and paving and for grindstones, in cementing stone, in fixing fresco-painting, in making "silicated" soap, and in connection with dyeing and calico-printing.—**Sodium stannate,** a salt (Na_2SnO_3) prepared by fusing together the dioxid of tin and caustic soda: extensively manufactured for use in calico-printing. When so used it is known as *preparing salts.*—**Sodium sulphate,** a substance known in the dry state as *salt-cake* (which see), being obtained by the action of sulphuric acid on common salt. *Niter-cake* (which see) is the same substance produced by the action of sulphuric acid on Chile saltpeter. It is used on a very large scale in the manufacture of glass and for conversion into sodium carbonate by the Leblanc process. Crystallized from solution it has the composition $NaSO_4.10H_2O$, and in this state is known as *Glauber's salt* and is used in medicine as a common saline purgative.—**Sodium sulphid,** a substance frequently used, along with a creamy mixture of slaked lime and water, by tanners to effect the loosening of hair and epidermis from hides, so that these may be removed from the hides preparatory to tanning.—**Sodium sulphite.** The normal sulphite (Na_2SO_3) is used as an antichlor to remove any traces of residual chlorin after bleaching by means of it, and also occasionally as an antiseptic. The *acid-sulphite* ($NaHSO_3$) is employed by brewers to sterilize the interior of casks to be filled with beer.—**Sodium thiosulphate,** a salt (in the crystallized state $Na_2S_2O_3.5H_2O$) largely used in the metallurgy of silver, as a fixing agent by photographers, and as an antichlor in connection with the bleaching of paper-pulp, occasionally also in medicine. Formerly, and often still in commercial language, called *sodium hyposulphite,* or by photographers *hypo.* By scientific writers the term *sodium hyposulphite* is applied to a different substance, $Na_2S_2O_4$.—**Sodium tungstate.** See *tungstate.*

sodium-bead (sō′di-um-bēd), *n.* A globule of sodium carbonate, or some other salt of sodium, fused in a loop formed at the end of a slender platinum wire. When heated in a clear flame it tinges the flame with the characteristic monochromatic (yellow) light of sodium in the state of vapor.

sod-oil, *n.* It is sometimes confounded with degras or moellon. Properly speaking, skins which have been prepared for oil-tanning are thoroughly saturated (by heating) with fish-oils, hung up for some time in a warm atmosphere, and submitted to pressure to squeeze out the surplus, partially oxidized, oil. This oil or soft grease is known as *degras* or *moellon.* The skins are then washed in an alkaline bath, which dissolves out more oil, and sulphuric acid being afterward added to the liquid after the skins have been removed from it, a further portion of oil or grease is separated, to which the name sod-oil is applied. Both degras and sod-oil are used in currying leather.

sof (sōf), *n.* [Turk. Ar. *sūf, sōf,* wool, goats' hair, a fabric thereof.] A kind of cloth made of mohair.

soffioni (sō-fē-ō′nē), *n. pl.* [It., pl. of *soffione*, a blowing-pipe (of a bellows), < *soffio*, blowing, < *soffiare*, < L. *sufflare*, blow up from below: see *sufflate*.] Vents from which steam, sulphurous fumes, and other exhalations issue in the dying stages of vulcanism.

With the reduction in volume of steam and the lighter gases the heavier and nonexplosive gases become more evident, and then occur the later phenomena known as fumaroles, solfataras, *soffioni* and mofettes. It may be that in the volcanic reservoirs the several vapors are arranged, as in the atmosphere, according to their specific gravity. *Amer. Geol.*, Feb., 1904, p. 103.

sofism², sofist, sofisticate, sofistry. Amended spellings of *sophism*, etc.

soft. **I.** *a.* **19.** In *archery*, smooth and even in flexure and recoil: said of a bow.—**Soft drink**, any drink that is non-alcoholic, as lemonade, ginger-ale, tea, etc.—**Soft ground**, in *etching*, the ordinary varnish or ground rendered soft by melting it with an equal quantity of tallow. A piece of paper is placed upon this ground and the drawing is made upon the paper. Where the point of the pencil presses, the ground will adhere and the plate be exposed. The plate may then be bitten with the usual mordants. This method was invented two hundred and fifty years ago by a Swiss etcher, Dietrich Meyer. It has recently been revived. See *etching*.

II. *n.* **3.** *pl.* Rags of loosely woven or knitted goods, such as flannel, hosiery, etc.

soft-board (sôft′bōrd), *v. i.* In *currying*, to roll on itself, as a skin in graining. *C. T. Davis*, Manuf. of Leather, p. 417.

soften, *v. t.* **2.** To remove from (natural water) the hardness due to the presence of salts of calcium or magnesium in solution. In the case of temporary hardness, boiling the water or adding to it a carefully determined proportion of calcium hydroxid is used to produce softening; in the case of permanent hardness, sodium carbonate, not in too large excess, may be added. See ★*hardness*, 2.

softening, *n.* **4.** The removal of antimony and other impurities from lead. See ★*improving*, 2. *Phillips and Bauerman*, Elements of Metallurgy, p. 686.

softwood, *n.* **2.** A needle-leaved, coniferous tree.

II. *a.* **1.** As applied to trees and logs, needle-leaved; coniferous.—**2.** In *hort.*, designating the 'wood' or twig that is not yet hardened or ripened; green wood: used with reference to the making of cuttings. Compare ★*hardwood*.

soggarth (sog′ärth), *n.* [Also *sogarth*, < Ir., *sagart*, a priest.] Same as ★*saggart*. *Eng. Dial. Dict.*

sohaga (sō-hä′gä), *n.* [Hind. *suhaga*, *sohaga*, borax.] A name in use in the bazaars of India for borax brought from Tibet: same as *tincal*.

Soia (soi′ä), *n.* [NL. (Moench, 1794), from *suju*, the Japanese name of a sauce prepared from the beans.] A genus of plants of the family *Fabaceæ*. It contains about 20 species, chiefly twining herbs of the Old World tropics. The genus is of general interest because it includes the soy-bean, *Soia Soja*, an erect, hairy, bean-like plant from China and Japan that is now grown in the United States for soiling and green-manuring. The genus is closely allied to *Phaseolus*, *Vigna*, and *Dolichos*, from which it is distinguished by very technical characters.

Soia Soja.
a, leaf, and spray with pods; *b*, beans.

soie (swo), *n.* [F., silk. See *say*³ and *satin*.] In *fencing*, the tongue of the foil, which traverses the handle and is riveted down on the pommel.

soie laine (swo lān′). [F., 'silk wool.'] A soft, silky flannel for women's dresses.

soil¹, *n.* **3.** In *forestry*, the depth of soil is defined by the following terms, each of which has its equivalent in inches: *very shallow*, less than six inches; *shallow*, 6 to 12 inches; *moderate*, 12 to 24 inches; *deep*, 24 to 36 inches; *very deep*, over 36 inches. The moisture of the soil is defined by the following terms: *wet*, when water drips from a piece held in the hand without pressing; *moist*, when water drips from a piece pressed in the hand; *fresh*, when no water drips from a piece pressed in the hand, though it is unmistakably present; *dry*, when there is little or no trace of water; *very dry*, when the soil is parched. Very dry soils are usually caked and very hard, sand being an exception.—**Acid soil**, virtually a swamp, peat, or muck soil, since this only (on account of its large humus content) contains much acid. Excessive soil acidity is corrected by draining and by liming.—**Buckshot soil**, a black or grayish black soil found in the bottom lands of Louisiana, which crumbles into fine grains when dry. It is very deep and extremely rich and is said to be the best cotton soil of the United States.—**Bureau of Soils.** See ★*bureau*.—**Canebrake soil.** See ★*cane-brake*.—**Cold soil**, practically one that is relatively retentive of water, especially in the spring.—**Gumbo soil.** See ★*gumbo*¹, 4.—**Heavy soil**, a compact, tenacious soil difficult to work; hence, a clay soil, though such a soil is much lighter in weight when dry than a sandy soil.—**Light soil**, a soil of little cohesion, easily worked; hence, a sandy soil, though actually heavier than a clay soil.—**Soil analysis**, the determination of the contents of a soil. This may be either chemical or mechanical. In the latter case it consists in the separation of the particles according to size and the determination of percentages by weight according to an assumed standard of classification. The three principal grades from coarser to finer are sand, silt, and clay. The separation is effected by taking advantage in some way of the different rates of subsidence of different-sized particles in water. See ★*soil elutriator*.—**Soil atmosphere**, air contained in the interstices of the soil mingled with gases and usually saturated with vapor.—**Soil climatology.** See ★*climatology*.—**Soil elutriator**, an apparatus employed in the mechanical analysis of soils (see ★*soil analysis*). In Hilgard's elutriator a current of water passes upward through a tube containing the sample, taking with it particles increasing in size with the velocity of the current. In Goder's elutriator and other late apparatus the principle of centrifugality is depended upon. See ★*elutriator*.—**Soil hygrometer**, an instrument for determining soil moistures by measuring the resistance offered by the moisture between two carbon plates buried in the ground to the passage of an electric current from one to the other. *Yearbook U. S. Dept. Agr.*, 1900, pl. XLVIII.—**Soil moisture**, the water contained in soils, which, in its mechanical relations, is of three kinds: *gravitation* or *ground* water — that which stands in the soil by gravitation (see *ground water* under *water* and ★*water-table*, 4); *capillary* water — that which is retained in the interstices by capillarity; and *hygroscopic* water — that which adheres to the surface of the particles regardless of gravitation and capillarity.—**Sour soil.** Same as *acid* ★*soil*.—**Stiff soil**, a tenacious or heavy soil.—**Strong soil**, a soil rich in available plant food.—**Sweet soil**, a non-acid soil.—**Wash soil**, an alluvial soil. Cf. *wash*, *n.*, **7.**

soil¹ (soil), *v. t.* [*soil¹*, *n.*, 4.] In *plumbing*, to paint (the ends of pipes about to be joined) by wiping (them) with soil. See *soil¹*, *n.*, 4.

soil-aspirator (soil′as″pi-rā-tor), *n.* An apparatus for studying the permeability of the soil to air. It consists of a tube reaching down to the desired depth, connected with a manometer and aspirator that establishes a definite suction-pressure and measures the rate at which the air can be drawn through the soil under this pressure.

soil-binder (soil′bīn″dėr), *n.* A plant which serves to protect a clayey or loamy soil from washing. Soil-binding grasses form a compact turf. Some of them are *mud-binders*, fixing the soil of bogs and muddy shores.

soil-creep (soil′krēp), *n.* The slow movement or settling of soil down a slope, caused by removal of support and by circulating water, air currents, and frost.

Hill-drifts [of flints] which have suffered from the movement of *soil-creep* and foundering, and it is concluded that this is the cause of the chipped edges [of pressure-chipped flints]. *Athenæum*, Dec. 30, 1905, p. 902.

soil-disease (soil′di-zēz″), *n.* See ★*disease*.

soiling, *n.* **1.** The objects of soiling (the summer feeding of cattle, chiefly dairy stock, in confinement with green feed) are to economize land, to permit the better regulation of the feed of animals and save their strength in seeking it, and to conserve the whole yield of manure. Three to five times as much forage can be produced on the same area by cropping as by pasturing, while the yield of milk is maintained or increased and the manure, otherwise largely wasted, keeps up the fertility of the soil. Soiling is either *complete* or *partial*, in the latter case consisting of the supplementary use of green feed at the time when the pasturage is low. The latter practice is thought to be of great utility in America where the cost of labor and the comparative abundance of land make complete soiling less advantageous. Also *green feeding* and, pleonastically, *green soiling*.—**Soiling crop.** See ★*crop*.

soil-inoculation (soil′in-ok-ū-lā″shon), *n.* The transplanting of micro-organisms to the soil, especially the nitrogen-gathering bacteria which assist in supplying nitrogen to cultivated crops.

soil-map (soil′map), *n.* A map which shows the distribution of different kinds of soils.

Hilgard published an agricultural map of Mississippi in 1860 showing the distribution of the soils of the State. This was based principally upon the distribution of the native vegetation, especially upon the forest trees. Following out this idea, *soil maps* of all the cotton-producing States were published in connection with the Tenth Census. Much of this work has subsequently been republished in modified form by the several States and enlarged maps have been issued. Many general reconnoissances have been made by State geological surveys and by the transcontinental surveys for railroads. In 1892 the first *soil map*, based upon the texture and physical properties of soils, was issued by the World's Fair Commission of Maryland, in connection with the Handbook of the State prepared at the Johns Hopkins University. *Yearbook U. S. Dept. Agr.*, 1899, p. 344.

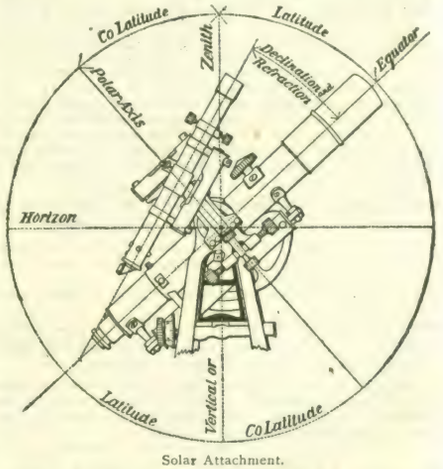
soil-mulsh (soil′mulsh), *n.* See ★*mulsh*.

soil-survey (soil′sėr-vā), *n.* A field and laboratory study of soils with regard to their relation to crops, involving their classification and local delimitation, the results being expressed finally in a soil-map. The classification is based mainly on physical features determined from samples, but chemical character and vegetation are also observed. Such surveys are undertaken by the United States government in conjunction with State institutions. *Yearbook U. S. Dept. Agr.*, 1899, p. 26.

soil-thermometer (soil′thėr-mom″e-tėr), *n.* A thermometer adapted to taking the temperature of the soil at a considerable depth.

sojurn, sojurner. Simplified spellings of *sojourn*, *sojourner*.

sol. An abbreviation (*b*) [*cap.*] of *Solicitor*.



sola³ (sō′lä), *a.* Feminine of *solo* or *solus*. See *solus*.

solanicine (sō-lan′i-sin), *n.* [*solan(ine)* + *-ic* + *-ine²*.] A bright-yellow, amorphous, strongly basic compound, $C_{26}H_{39}ON$ (?), prepared by the action of concentrated hydrochloric acid on solanine. It melts and decomposes above 250° C.

solanidine (sō-lan′i-din), *n.* [*solan(ine)* + *-id* + *-ine²*.] A colorless, basic compound, $C_{40}H_{61}NO_2$, prepared by the action of dilute hydrochloric acid on solanine. It crystallizes in long needles and melts at 88° C.

solanoma (sol-a-nō′mä), *n.*; pl. *solanomata* (-ma-tä). [NL., < L. *solanum* (*tuberosum*), potato, + *-oma*.] A cancer of a type intermediate between scirrhus and encephaloid.

solar¹, *a.*—**Apparent solar day.** See ★*day¹*.—**Carrington's law of solar rotation.** See ★*law¹*.—**Solar attachment**, a later and improved form of Burt's solar compass, consisting of a small telescope with adjust-

ments, attached to an engineer's transit or theodolite. It determines the true meridian directly within a minute or two of arc, by a simple pointing upon the sun. Compare *solar* ★*compass*.—**Solar cautery, climate, compass.** See ★*cautery*, etc.—**Solar constant.** It is the amount of heat received from the sun in a unit of time by a unit of area at the earth's mean distance perpendicularly exposed to the sun's rays and unshielded by atmosphere, that is, the amount of heat actually measured by the actinometer and corrected by adding the heat absorbed by the air. On account of the difficulty in determining this latter correction, the deduced values of the solar constant vary widely, ranging from about two to four gram-calories per square centimeter per minute. At present it is generally assumed to lie between 2.0 and 2.5. It is possible that it may vary with the condition of the sun's surface.—**Solar cyclone, flocculus, granule.** See ★*cyclone*, etc.—**Solar magnetic period.** See ★*period*.—**Solar motor, parallax, tide.** See ★*motor*, etc.—**Solar phosphori**, substances that are photoluminescent, emitting light as the result of exposure to sunlight. See ★*luminescence*.—**Solar star.** See ★*star¹*.

solar² (sō′lär), *n.* [L. *solarium*. See *sollar*.] In Roman and early medieval houses, a terrace, or balcony, or a room much exposed to the sun; a sollar.

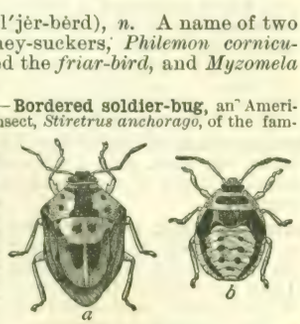
Rooms at the side of the great hall were added, called *solars* (solaria), the sunny or light rooms.
Pollen, Furniture at South Kensington, lxvii.

Solarian (sō-lā′ri-an), *n.* [L. *solari(s)*, of the sun, + *-an.*] An inhabitant of the Utopian "City of the Sun." *C. Lombroso* (trans.), Man of Genius, p. 287.

solarization, *n.*—**Reversal by solarization,** in *photog.*, the conversion of what should be a negative image into a positive by over-exposure.—**Solarization of the earth,** in *meteor.*, the heat, light, or other influence received by radiation from the sun; insolation; incident solar radiation.

solarometer (sō-la-rom′e-tėr), *n.* [L. *solar(ium)*, sun-dial (?), + Gr. *μέτρον*, measure.] An instrument built upon the theory of the astronomical triangle, mounted upon a pedestal whose base is in the plane of the horizon: designed by Commodore W. H. Beehler, *U. S. N.* It affords a mechanical solution of the astronomical triangle, and obviates logarithmic and other mathematical calculations; it also combines in itself a polorus, thereby furnishing a solution of the entire problem for ascertaining a ship's place in latitude and longitude, and the error of the compass. Another feature of the solarometer is that it provides means of observing astronomical angles independently of the sea horizon, as all calculations are made from the zenith.

soldado, *n.* 2. The West Indian squirrel-fish, *Holocentrus ascensionis.*



solder, *n.*—**Brass solder,** a class of copper-zinc alloys used for joining various parts of articles by fusion. The proportions vary from 34 parts of copper and 66 parts of zinc to 58 parts of copper and 42 parts of zinc. When brass solder is used for soldering iron and copper, tin is added to the copper and zinc, and the alloy changes in color from yellow to gray or white. In some brass solders a small proportion of lead is also added; but these are now used very rarely. The preparation of brass solders is usually effected by adding strongly heated zinc to melted brass, and pouring the mixture through a wet broom into cold water, thereby producing granulation.—**Pale solder.** See *pewterers'* ★*solder.*—**Pewterers' solder,** an alloy of the color of lead or pewter, made up of tin and lead, with or without bismuth. When the alloy is tin (66⅔) parts and lead (33⅓), it is called *hard pale solder;* when bismuth is added it is called *middling pale solder.*—**Soft solder.** (*a*) The more fusible solder in general use for articles which need not withstand temperatures much above that of boiling water. It consists of an alloy of tin and lead in various proportions: *fine solder,* 2 parts tin to 1 part lead; *tinmen's solder,* 1 tin to 1 lead; *common* or *plumbers' solder,* 1 tin to 2 lead; *coarse solder,* 1 tin to 3 lead; *pewterers' solder,* 2 tin, 1 lead, and 1 bismuth.

soldier, *n.* 6. (*g*) A scorpænoid fish, *Gymnapistes marmoratus,* of Tasmania. (*h*) A labroid fish, *Pseudolabrus miles,* of New Zealand. (*i*) A percoid fish, *Etheostoma cœruleum,* of the United States.—9. An artificial fly used in bass-fishing. *Jordan and Evermann,* Amer. Food and Game Fishes, p. xlviii.—**Soldier's spots,** whitish spots sometimes seen post-mortem on the serous surfaces of the pericardium, the peritoneal covering of the liver, etc. *Buck,* Med. Handbook, IV. 772.

soldier-ant, *n.* 2. The bulldog ant of Australia.

soldier-bird (sōl′jėr-bėrd), *n.* A name of two Australian honey-suckers, *Philemon corniculatus,* also called the *friar-bird,* and *Myzomela sanguineolenta.*

soldier-bug, *n.*—**Bordered soldier-bug,** an American hemipterous insect, *Stiretrus anchorago,* of the family *Pentatomidæ,* red and black in color and predatory in habit, feeding upon the larva of the asparagus-beetle (*Crioceris asparagi*) and other injurious insects.—**Glassy winged soldier-bug,** a American capsid bug, *Hyalioides vitripennis,* which is predatory in its habits and destroys leaf-hoppers and other small soft-bodied insects. It is a noted enemy of the grape-vine leaf-hopper.—**Green soldier-bug,** an American pentatomid bug, *Nezara hilaris,* which preys on soft-bodied insects and also sucks the sap of tender plant growth.—**Placid soldier-bug,** an American pentatomid bug, *Podisus placidus,* which destroys the imported currant-worm and other insect larvæ.

Bordered Soldier-bug (*Stiretrus anchorago*).
a, adult bug; *b*, nymph: enlarged a little more than two times.
(Chittenden, U. S. D. A.)

soldier-fish, *n.* 2. A common name of a scorpænoid fish, *Sebastes kuhlii,* of Madeira.

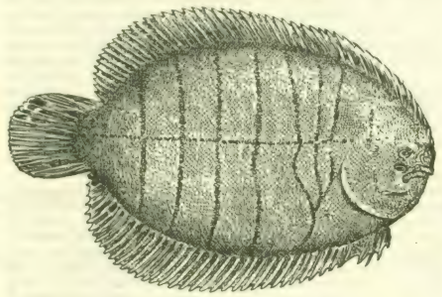
soldier's-buttons (sōl′jėrz-but″nz), *n.* The marsh-marigold, *Caltha palustris.*

soldier's-cap (sōl′jėrz-kap″), *n.* The plant Dutchman's-breeches, *Bikukulla Cucullaria.*

soldier's-plume (sōl′jėrz-plōm″), *n.* The flaming or smaller purple fringed orchis, *Blephariglottis psychodes.*

soldino (sōl-dē′nō), *n.* [It., dim. of *soldo.* See *soldo.*] A small silver coin introduced in Venice in the fourteenth century, and subsequently current in other parts of Italy.

soldone (sōl-dō′nā), *n.* [It., aug. of *soldo.* See *soldo.*] 1. A copper coin of Mantua in the eighteenth century.—2. A billon coin of Venice, equal to 12 soldi.



sole[1], *n.* 4. (*o*) The closely interwoven mass of roots which forms the base of a turf.

Crested dog's tail grass . . . contributes materially to the production of a good "*sole*" in the turf of pastures. *W. Fream,* Complete Grazier, p. 898.

(*p*) In *golf,* the flat, bottom part of a club which rests on the ground. (*q*) The inner cylindrical surface of a water-wheel which forms the bottoms of the buckets on the periphery. See *sole-plate,* 2.

sole[1], *v. t.* 2. In *golf,* to place the sole of (a club) on the ground immediately behind the ball in preparing for a shot.

sole[2], *n.* 2. A name given to various Australian fishes: in Sydney to *Synaptura nigra;* in Melbourne to *Rhombosolea bassensis;* in New Zealand to *Rhombosolea monopus* (called the *flounder* in Tasmania) and *Peltorhamphus novæ-zelandiæ;* and in Tasmania to *Ammotretis rostratus,* of the family *Pleuronectidæ. E. E. Morris,* Austral English.—**American sole,** *Achirus fasciatus,* of the Atlantic coast of the United States.—**English sole,** a name given in California to the flounder, *Eopsetta Jordani.*—**Long-finned sole,** *Glyptocephalus zachirus,* found in deep waters of the northern Pacific.—**Mexican sole,** *Achirus mazatlanus,* a sole found on the west coast of Mexico.—**San Diego sole,** *Symphurus atricaudus,* known from San Diego to Cape San Lucas.—**Slippery sole,** *Microstomus pacificus,* found in rather deep water off the Pacific coast of North America, from Monterey to Unalaska.—**Tasmanian sole,** *Ammotretis rostratus,* a flatfish of the family *Soleidæ.*

American Sole (*Achirus fasciatus*).
(From Bulletin 47, U. S. Nat. Museum.)

sole-bar (sōl′bär), *n.* An outside sill in a railway car. [Eng.]

solem, *a.* A simplified spelling of *solemn.*

soleniform (sō-len′i-fôrm), *a.* [NL. *Solen* + L. *forma,* form.] Having the form of the pelecypod genus *Solen.*

solenium (sō-lē′ni-um), *n.*; pl. *solenia* (-ä). [NL., < Gr. *σωλήνιον*, a small pipe or conduit.] In some alcyonarians, one of the canals lined by endoderm, which are given off as diverticula from the cœlentera of the zoöids comprising a colony and from which buds develop. *G. C. Bourne,* in Trans. Linn. Soc., Zool., March, 1900, p. 522.

solennemente (so-len-ē-mān′tē), *adv.* [It., < *solenne,* solemn.] In *music,* with solemnity or dignity.

Solenopsidæ (sol-ē-nop′si-dē), *n. pl.* [NL., < *Solen* + Gr. *ὄψις*, form, + *-idæ.*] A primitive family of prionodesmaceous pelecypods having thin elongate valves with edentulous hinge and external ligament. Its representatives are found in rocks from the Silurian to the Triassic.

solenostelic (sō″lē-nō-stē′lik), *a.* [Gr. *σωλήν*, a tube, + *στήλη*, a column.] In *bot.,* having a tubular stele with both external and internal phloem, as in certain ferns, etc. *Nature,* Nov. 19, 1903.

solentine (sol′en-tīn), *n.* [Variant of *celandine.*] The spotted touch-me-not, *Impatiens biflora.* Also called *ceroline* and *brook-celandine.*

sole-plate, *n.* 3. Any bed-plate or base-plate on which a machine rests. It is ordinarily less massive than a bed-plate, and parts are bolted to it rather than cast in one piece with it.—4. The bed of a horizontal or reverberatory heating-furnace.—5. The casting underneath a large bearing for a shaft.

solfataric, *a.* 2. Noting that stage in the expiring or quiescent phase of a volcano during which steam and vapors, more or less sulphurous, are alone emitted. *Geikie,* Text-book of Geol., p. 278.

sol-flower (sol′flou″ėr), *n.* The rock-rose, *Helianthemum Helianthemum.*

Sol.-Gen. An abbreviation of *Solicitor-General.*

solid, *a.* 15. Of uniform color; self-colored: a pigeon-fanciers' term.—**Solid box,** a cylindrical bushing or bearing which has no joint; a deadeye.

solidity, *n.*—**Geometrical solidity,** tridimensional extension. *Sir W. Hamilton.*—**Physical solidity,** that property of matter which prevents two different bodies from occupying the same portion of space at the same time. *Sir W. Hamilton.*

solidus curve. [L. *solidus,* solid.] A curve which shows the temperatures of complete solidification or beginning liquefaction of a series of alloys containing every proportion of the two constituents. See *liquidus* ★*curve.*

The authors give data for the liquidus and for the *solidus curve* for aluminum and tin.
Jour. Phys. Chem., May, 1904, p. 363.

Solinian (sō-lin′i-an), *a.* [LL. *Solin(us)* (see def.) + *-ian.*] Of or pertaining to Solinus, a Roman grammarian and geographer of the third century A.D.

The chief additional references [in mediæval maps] to what may be called the fact and fiction of the central Mediæval period do not lie in the monsters [geographical mythology] of South Africa (as some have supposed), for these are almost purely *Solinian.*
Geog. Jour. (R. G. S.), XV. 141.

solitary, *a.* 12. In *astron.,* noting certain stars which have no conspicuous neighbors (*a* Hydræ, for instance), or stars which are not members of a binary system, visual or spectroscopic. Called by W. Herschel *intersystematical.*

solitidal (sol-i-tī′dal), *a.* [L. *sol,* sun, + E. *tide* + *-al*[1].] Pertaining to the tide produced by the sun. See *solar* ★*tide.*

solo, *n.* 3. In *card-playing,* a bid to play without a partner or without discarding from the hand, as in solo whist and skat.—**Heart solo,** solo for three players, the pack being reduced to 24 cards by throwing out the 8 of hearts and all the diamonds but the 7. Diamonds are always color, and the only bid is solo. *Amer. Hoyle,* p. 292.

soloid (sol′oid), *n.* [*sol(id)* + *-oid.*] A compressed preparation of a drug.

The contents are as follows: . . . pipette, vaseline, brush, &c.; cover-glasses when spread with blood, &c., ready for staining; "*soloids*" of various staining powders; tissue paper for blood spreads, etc.
Lancet, July 4, 1903, p. 36.

Solomonian (sol-ō-mō′ni-an), *a.* Of, pertaining to, or characteristic of, King Solomon: as, "*Solomonian* wisdom." *Ratzel* (trans.), Hist. of Mankind, I. 134.

Solomon's-seal, *n.* 1. (*b*) In Tasmania, the turquoise-berry, *Drymophila cyanocarpa.* See ★*turquoise-berry.*—**Clustered, dwarf, small, zigzag Solomon's-seal,** the false Solomon's-seal, *Vagnera racemosa.*—**Two-leaved Solomon's-seal,** *Valentinia Canadensis.* Also called *false lily-of-the-valley* and *one-blade.* See *Maianthemum.*

soloric (sō-lor′ik), *a.* [*Solor(ina)* + *-ic.*] Of or derived from *Solorina.*—**Soloric acid,** a ruby-red compound, $C_{15}H_{14}O_5$, contained in the lichen *Solorina crocea.* It crystallizes in lustrous monoclinic prisms or needles and melts at 199–201° C.

solotnik, *n.* See ★*zolotnik.*

solpugid (sol-pū′jid), *n.* and *a.* I. *n.* A member of the family *Solpugidæ.*

II. *a.* Having the characters of or belonging to the family *Solpugidæ.*

Solr. An abbreviation of *Solicitor.*

solubility, *n.*—**Coefficient of solubility,** in *chem.* or *phys.,* a numerical constant denoting the degree of solubility of a substance in a given solvent.—**Solubility product.** See ★*product.*

solut. An abbreviation of *solution.*

solute, *a.* II. *n.* The substance dissolved in a given solution: as, a solution is composed of solvent and *solute.*

As the molecular weight of the *solute* is inversely proportional to the difference in the vapor pressure of solvent and solution, it follows that the observed vapor pressure of the solution was much too small to conform to theory. *Jour. Phys. Chem.,* May, 1904, p. 317.

solution, *n.*—**Almén's solution,** a solution prepared by dissolving 4 grams of potassium-sodium tartrate, 2 grams of bismuth subnitrate, and 10 grams of sodium hydrate in 90 cubic centimeters of water, heating to the boiling-point, and filtering on cooling. It is used in testing for glucose.—**Battley's solution.** Same as *laudanum.* Also known as *liquor opii sedativus.*—**Belt of solution,** in *geol.,* a phase used by Van Hise to indicate a characteristic process of the 'belt of weathering,' a belt from which matter is removed by the solvent action of water. *Van Hise,* in U. S. Geol. Surv., Monographs, XLVII. 487.—**Concentrated solution,** a strong solution; one containing a large proportion of the dissolved substance, either as approaching the maximum amount capable of solution, or as compared with the amount of most other substances soluble in the same liquid.—**Critical composition of solution,** the composition of the solution which belongs to the critical temperature.—**Critical solution,** a solution having the critical composition.—**Critical temperature of solution,** a temperature below which two liquids which are without chemical action on each other do not dissolve in each other in all proportions, while above this temperature they do thus dissolve.—**Decinormal solution.** See ★*decinormal,* 2.—**Dilute solution,** a weak solution; a solution containing a small proportion of the dissolved substance, either as compared with the maximum amount capable of solution, or as compared with the amount of most other substances soluble in the same liquid.—**Dunham's solution,** a

bacteriological culture-medium which is composed of 10 grams of peptone and 3 grams of salt to the liter of water. It differs from ordinary nutrient bouillon in the absence of the constituents of beef extract. It is used to study the production of indol.—**Ehrlich-Biondi solution,** a staining mixture prepared by mixing solutions of acid-fuchsin, orange G, and methyl green, saturated at ordinary temperatures, in the proportion of 4 : 7 : 8 respectively. The resulting solution may then be diluted with water to the desired degree 1 : 50-100. It is essential that the dyes in question should be chemically pure. They are best obtained from the Berliner Actiengesellschaft für Anilinfabrikation. The solution is used in the study of the blood.—**Equimolecular solutions.** See ★*equimolecular.*—**Geometrical solution,** a solution by means of ruler and compasses only, that is, by straight lines and circles only.—**Gravity-solution** or **heavy solution.** Of the numerous solutions proposed, the following are the most important: *Thoulet's* or *Sonstadt's solution* and *Klein's solution.* See *gravity-solution. Braun's solution,* methylene iodide, CH_2I_2, having a density of 3.33. *Penfield's solution,* silver-thallium nitrate, liquid at 75° C, density 4.5. *Retger's solution,* mercury-thallium nitrate, liquid at 76° C, density 5.3. *Rohrbach's solution,* barium-mercury iodide, density 3.588.—**Heat of solution.** See ★*heat.*—**Heavy solution.** See *gravity-*★*solution.*—**Isotonic saline solution,** a solution in which the salts are in the same proportion as in the blood-plasma, so that when injected into the veins it causes no alteration in the blood-corpuscles.—**Isotonic solution.** See *isotonic saline* ★*solution.*—**Mandl's solution,** a solution of 10 grains of iodine, 4 grains of phenol, and 20 grains of potassium iodide, in one ounce of glycerin.—**Mayer's solution,** a solution of potassium-mercuric iodide used in chemical analysis for the detection and quantitative determination of alkaloids.—**Monsel's solution,** a deep red-brown, syrupy, aqueous solution of basic ferric sulphate of variable composition, which contains not less than 13.57 per cent. of metallic iron. It is a powerful styptic.—**Morton's solution,** a solution of 5 grains of iodine, and 30 grains of potassium iodide, in one ounce of glycerin.—**Nessler's solution.** (*b*) The solution of Nessler's reagent for the detection and determination of ammonia. It is made by precipitating a solution of mercuric chlorid by one of potassium iodide, adding the latter in excess until the precipitate is barely redissolved, and making the liquid so obtained strongly alkaline with potassium or sodium hydroxid.—**Normal salt solution,** in *med.*, a term often incorrectly used to denote the so-called *physiological salt solution,* or one containing approximately the same proportion of chlorid of sodium as the blood; the latter is more nearly a decinormal solution, or one one tenth the strength of a normal solution. Also *normal saline solution.* See *physiological salt* ★*solution.*—**Normal solution,** a solution which contains in one liter a sufficient quantity of a chemical reagent to replace, unite with, or directly or indirectly bring into action one gram of hydrogen. A liter of a normal solution of a chemical reagent therefore always contains a number of grams of the reagent equal to its molecular weight divided by the number of active hydrogen atoms it contains, or by the number of hydrogen atoms the active element or group it contains can replace. The following table illustrates the principle:

Reagent.	Formula.	Molecular Weight.	Normal Solution, grams per liter.
Hydrochloric acid	HCl	36.4	36.4
Sodium hydroxid	NaOH	40	40
Sulphuric acid	H_2SO_4	98	49
Phosphoric acid	H_3PO_4	108	36
Sodium chlorid	NaCl	58.4	58.4

Normal solutions are of great value in volumetric chemical analysis. When solutions of less strength than the normal are desired, they are diluted one half, one fifth, one tenth, and one one-hundredth, giving seminormal, quintinormal, decinormal, and centinormal solutions. These are usually abbreviated as $\frac{N}{2}$, $\frac{N}{5}$, $\frac{N}{10}$, and $\frac{N}{100}$.—**Orth's solution,** a mixture of 10 parts of Müller's fluid and 1 part of formol: used as a fixative agent in histological work.—**Pacini's solution,** a solution of sodium chlorid and corrosive sublimate, used to dilute the blood in counting the red corpuscles in a drop under the microscope.—**Perfusion solution.** See ★*perfusion.*—**Physiological salt solution,** a solution of sodium chlorid of the same strength as that found in the blood-serum of a given animal; when used for injections in man a 0.7 to 0.8 per cent. solution should be employed. Such a solution is said to be isotonic, and will not cause the dissolution of hemoglobin from the red blood-corpuscles. Physiological salt solution, injected subcutaneously or intravenously, is extensively utilized to combat heart-failure. Compare *normal salt* ★*solution.*—**Physiological solution.** Same as *physiological salt* ★*solution.*—**Ringer's solution,** a solution which is extensively used in physiological experiments as a substitute for blood-serum in maintaining the life of tissues. It is composed of 100 cubic centimeters of a 0.75 per cent. solution of sodium chlorid, 5 cubic centimeters of a 0.25 per cent. solution of calcium chlorid, 2.5 cubic centimeters of a 0.5 per cent. solution of bicarbonate of sodium, and the same amount of a 0.75 per cent. solution of potassium chlorid.—**Saline solution,** in *physiol.* and *pathol.*, when not otherwise qualified, a physiological solution of salt (sodium chlorid). See *physiological salt* ★*solution.*—**Salt solution.** Same as *saline* ★*solution.*—**Seiler's solution.** Same as *Seiler's* ★*spray.*—**Solid solution,** a solid homogeneous mixture of two or more constituents which remains homogeneous although their ratio is varied. One important property of a solution is that a dissolved substance diffuses from places where it is abundant to places where it is less abundant. The fact that diffusion may take place in solids suggested the conception of solid solutions. If clean gold and lead are left in close contact for ten years, gold is found to have diffused into the lead more than three or four hundredths of an inch from the surface. So carbon, absorbed by hot wrought-iron, diffuses to the center of the mass, as in making steel by cementation. The application of the principles governing solid solutions, not only to matters of purely theoretic interest, but also to important metallurgical processes, has been fruitful.

No one had done more than Sir Benjamin Baker to insist on the importance of phenomena which engineers used to consider "mysterious" in connection with the behaviour of steel, and his warnings and example were at last being regarded and followed. The lecturer pointed out that when metallurgists gave engineers mild steel, they provided a cinder-free *solid solution* of iron and carbon. All subsequent advance has been due to the recognition of this fact, and to the gradual studies of the properties of metallic *solid solutions.*

Nature, May 1, 1902, p. 19.

Solution tension. See ★*tension.*—**Solution theory,** the theory that steel and various alloys consist of solid solutions, subject to the laws of solid solutions, and to be studied by the same methods.—**Standard solution,** in *analyt. chem.*, a solution made of such strength that one cubic centimeter of it corresponds to some convenient definite quantity of a substance whose amount is to be determined by measuring the volume of the standard solution required to complete some suitable reaction with it. Since Gay-Lussac the assay of silver is made by dissolving in nitric acid an amount of the alloy which contains a little more than one gram of silver, precipitating the silver by a standard solution of sodium chlorid of such strength that 100 cubic centimeters of it precipitate one gram of silver, and measuring the volume of the standard solution required. See *standardized solution.*—**Supersaturated solution,** in *phys. chem.*, a solution which contains more dissolved substance than produces saturation at the actual temperature if the solution is in contact with undissolved solid. The addition of a minute fragment of the solid will cause the excess of the dissolved salt to crystallize, and the temperature of the solution to rise; even a mechanical disturbance will end the supersaturation, if it be considerable.—**Thiersch's solution,** a solution of salicylic acid 2 parts, boric acid 12 parts, in distilled water 1,000 parts, used as an antiseptic lotion.—**Toison's solution,** a solution used as a diluent in counting the blood-corpuscles with the hematocytometer: it also prevents the blood from clotting. It has the following composition: sodium chlorid 1 gram, sodium sulphate 8 grams, neutral glycerin 30 grams, distilled water 160 grams, methyl violet 5B 0.025 grams.—**Vapor pressure of a solution.** See ★*pressure.*—**Wackenroder's solution,** a liquid obtained by passing sulphureted hydrogen gas into an aqueous solution of sulphur dioxid. It is a complex mixture, containing pentathionic acid; and probably also hexathionic, tetrathionic, trithionic, and sulphuric acids.—**Ziehl's solution,** a carbol-fuchsin of the following composition: 1 part of fuchsin, 100 parts of a 5 per cent. aqueous solution of carbolic acid, and 10 parts of absolute alcohol.

solutional (sō-lū′shọn-ạl), *a.* [*solution* + *-al*[1].] Of the nature of a solution; of or pertaining to solution. *Nature,* Dec. 3, 1903, p. 103.

solution-plane (sō̤-lū′shọn-plān), *n.* See ★*plane*[1].

solutol (sol′ū-tol), *n.* [L. *solutus,* pp. of *solvere,* dissolve, + *-ol.*] A trade-name of a mixture of cresol and its sodium salt. It is soluble in water and is used as a disinfectant.

Solutrian (sō̤-lū′tri-ạn), *a.* [F. *Solutré,* a cave in the Mâcon district, Saône-et-Loire.] Of or pertaining to the Solutré cave; specifically, noting the third of De Mortillet's paleolithic periods, characterized by flint implements of higher perfection than the preceding Chellian and Moustierian periods. Also *Solutrean. Keane,* Ethnology, p. 87.

M. Armand Viré describes the *Solutrean* cavern of Lacave (Lot), which yielded many objects of reindeer horn, some bearing carvings (once a spirited head of antelope), and well-worked flint implements.

Athenæum, Jan. 20, 1906, p. 82.

solv, *v.* A simplified spelling of *solve.*

solvate (sol′vāt), *n.* [*solv*(*ent*) + *-ate*[1].] In *phys. chem.*, a term suggested to denote supposed compounds of one or more molecules of a solvent either with the ions or with the undissociated molecules of a dissolved substance: if the solvent is water, these compounds are called *hydrates. Jour. Phys. Chem.,* Jan., 1905, p. 80.

Solvent naphtha. See *naphtha,* 2.

solveol (sol′vē-ol), *n.* [L. *solvere,* dissolve, + *-ol.*] 1. A trade-name of a mixture of cresol and sodium cresotinate. It is used in medicine internally like creosote.—2. A trade-name of solutions of mixtures of the cresols and salicylates.

solvin (sol′vin), *n.* [L. *solvere,* dissolve, + *-in*[2].] A trade-name of sodium sulphoricinate. See ★*sulphoricinate.*

sölvsbergite (sėlvs′berg-īt), *n.* [*Sölvesberg,* Norway, + *-ite*[2].] In *petrog.*, a dense aphanitic to fine-grained igneous rock composed of alkali feldspars (albite and microcline) with ægirite, and sometimes hornblende (katoforite), with or without quartz or nephelite; a grorudite poor in quartz. *Brögger,* 1894.

soma[1], *n.* (*c*) The body of a multicellular organism as contrasted with its germ-cells.

In the Metazoa, according to my opinion, the germ-cells are immortal like the Protozoa . . . ; only the *soma* dies. *Eimer* (trans.), Organic Evolution, p. 68.

somæsthetic, *a.* See ★*somesthetic.*

somal (sō′mạl), *a.* [*soma*[1] + *-al*[1].] Of or pertaining to the body. *Proc. Zool. Soc. London,* 1900, p. 133.

soma-plasm (sō′mạ-plazm), *n.* [Gr. *σῶμα,* body, + *πλάσμα,* anything formed.] The plasm or protoplasm of the body-cells of an organism, in contradistinction to the reproductive plasma of the germ-cells.

With Weismann, we suppose the germ-plasm to be different in kind from the general *soma-plasm.*

Encyc. Brit., XXIX. 259.

Somaschian, *n.* **II.** *a.* Pertaining to the religious society of Somaschians.

somatalgia (sō-mạ-tal′ji-ạ), *n.* [NL., < Gr. *σῶμα*(*τ-*), body, + *ἄλγος,* pain.] Bodily pain. *G. S. Hall,* Adolescence, I. 480.

Somatic cell. (*b*) A cell that takes part in the formation of the soma or body, as distinguished from a germ-cell. See ★*soma*[1] (*c*).

But, from another point of view, it may be said with equal accuracy that the fertilized ovum gives rise in development to two sets of elements—to the *somatic cells* which become differentiated into the various tissues of the body, and to a lineage of non-specialized germ-cells, some of which will eventually be separated off to begin a new generation. *Encyc. Brit.,* XXXII. 209.

Somatic mesoblast. See ★*mesoblast,* 2.

somatically (sō̤-mat′i-kạl-i), *adv.* Corporeally; as regards the body or soma.

But while the Seri Indians are so well developed *somatically,* are runners in a land of running peoples (their very name signifies 'spry'), . . . 'they have been no less notorious among the Caucasian settlers of two generations for unparalleled laziness.'

A. F. Chamberlain, in Pop. Sci. Mo., March, 1902, p. 421.

somaticos (sō̤-mat′i-kos), *n.*; pl. *somaticoi* (-koi). [Gr. *σωματικός,* adj.: see *somatic.*] The human body; man viewed from an anatomical point of view without regard to his psychic activities. [Rare.]

Accordingly, the *somatikos* is gradually reshaped by the demotic activities; and, since the course of development of the activities is convergent, the somatic modification is also convergent, and hence bodies of unrelated peoples tend toward a common type.

J. W. Powell, in An. Rep. Bur. Amer. Ethnol., 1895-96, [xxxviii.

somatoblast (sō′mạ-tō̤-blast), *n.* [Gr. *σῶμα*(*τ-*), body, + *βλαστός,* germ.] A blastomere which is to give rise to the ventral plate and nervous system of an annelid.

somatochrome (sō′mạ-tō̤-krōm), *n.* [Gr. *σῶμα*(*τ-*), body, + *χρῶμα,* color.] A nerve-cell which possesses a well-marked cell-body surrounding the nucleus on all sides and staining deeply in basic aniline dyes. *Nissl.*

Cells which react both as to their nuclei and as to their cell bodies to the Nissl stain. To these cells Nissl has given the name "*somatochromes.*"

F. R. Bailey, in Jour. Exper. Med., Oct. 1, 1901, p. 552.

somatoderm (sō′mạ-tō̤-dėrm), *n.* [Gr. *σῶμα*(*τ-*), body, + *δέρμα,* skin.] The somatopleura or somatic layer of mesoderm in the vertebrate embryo.

somatogenetic (sō″mạ-tō̤-jē̤-net′ik), *a.* [Gr. *σῶμα*(*τ-*), body, + *γένεσις* (*γενετ-*), origin, + *-ic.*] In *biol.*, arising in the somatic elements of the body and not in the germ-cells: opposed to ★*blastogenetic:* said of the acquired as opposed to the congenital characters of an organism.

But although the modifications thus induced may be and generally are adaptive,—such as the increased muscularity caused by the use of muscles, "practice making perfect" in the case of nervous adjustments, and so on,—in no case can these so-called acquired or "*somatogenetic*" characters exercise any influence upon the germ-cells, such that they should re-appear in their products (progeny) as congenital or "blasto-genetic" characters.

G. J. Romanes, in Smithsonian Rep., 1890, p. 441.

somatogenic, *a.* 2. Pertaining to or concerning origin from the larval or later stages of development. [Rare.]—**Somatogenic variation.** See ★*variation.*

somatography (sō-mạ-tog″rạ-fi), *n.* [Gr. *σῶμα*(*τ-*), body, + *-γραφια,* < *γράφειν,* write.] The description of the physical characteristics of the races of man.

somatologist (sō-mạ-tol′ō̤-jist), *n.* [*somatolog*(*y*) + *-ist.*] One who devotes himself to, or is versed in, the study of somatology.

This plan of partial deportation and colonization was familiar to the Carthaginians, Romans, and other enterprising nations of the Mediterranean Basin, and explains to a large extent the constant blending of extreme physical types which the *somatologist* discovers in the remains from the oldest cemeteries around that great interior sea.

D. G. Brinton, in Smithsonian Rep., 1893, p. 594.

somatophyte (sō′ma-tō-fīt), *n.* [Gr. *σῶμα(τ-)*, body, + *φυτόν*, plant.] A plant some part of which ceases from growth, thus forming a body. All the higher plants are somatophytes, and qualifiedly even those unicellular ones (*Vaucheria*, *Mucor*) in which growth is at length only apical. Opposed to *asomatophyte*. *Pfeffer* (trans.), Physiol. of Plants, II. 3.

somatophytic (sō″ma-tō-fit′ik), *a.* [*somatophyt(e)* + *-ic.*] Of the nature of a somatophyte: opposed to *asomatophytic*. *Pfeffer* (trans.), Physiol. of Plants, II. 6.

somatoplasma (sō″ma-tō-plaz′mä), *n.* [NL.] Same as *somatoplasm*.

somatopsychic (sō″ma-tō-sī′kik), *a.* [Gr. *σῶμα(τ-)*, body, + E. *psychic.*] Consisting of mind and body; pertaining to mind and body, or to their relation.

Consciousness is a function of the associative mechanism and may be considered in its threefold relationship to the outer world, the body and self — allopsychic, *somatopsychic*, and autopsychic. *Buck*, Med. Handbook, V. 27.

somatopsychical (sō″ma-tō-sī′ki-kal), *a.* [Gr. *σῶμα(τ-)*, body, + *ψυχικός*, of the mind, + *-al*[1].] Relating to both body and mind: as, "*somatopsychical* ideas of anxiety." *Alien. and Neurol.*, Feb., 1903, p. 56.

somatose (sō′ma-tōs), *n.* [Gr. *σῶμα(τ-)*, body, + *-ose.*] A commercial peptone (albumose) preparation. *Buck*, Med. Handbook, I. 186.

somatosplanchnic (sō″ma-tō-splangk′nik), *a.* [Gr. *σῶμα(τ-)*, body, + *σπλάγχνα*, viscera, bowels, + *-ic.*] Of or pertaining to both the somatic and splanchnic layers of mesoderm. *Philos. Trans. Roy. Soc.* (London), 1890, ser. B, p. 165.

somesthesis (sō-mes-thē′sis), *n.* [Gr. *σῶμα*, body, + NL. *æsthesis.*] A supposed subconscious alertness or diffused 'touchiness' due to varying tonicity of the sensory centers of the cortex.

I shall use the term 'kinesthesis' for that diffused sensation-feeling due to variations in muscular tonicity; 'cœnesthesis' for the sea of undifferentiated organic 'tone'; and, finally, '*somesthesis*' for the melange of sensibility due to the fusion of currents coming from low-tension ('tonal') functioning of the specific-sensation centers.

T. P. Bailey, in Jour. Philos., Psychol., and Sci. [Methods, Dec. 20, 1906, p. 710.

somesthetic (sō-mes-thet′ik), *a.* [Gr. *σῶμα*, body, + E. *esthetic.*] Relating to organic or common sensation: noting an area in the cortex of the brain which is believed to be the center for such sensation.

At a rough estimate it may be said that the association areas constitute two-thirds of the human cerebral cortex, while only the remaining third, taking the *somæsthetic* and sense-areas together, is provided with projection fibers chiefly.

Amer. Anthropologist, Oct.–Dec., 1903, p. 609.

somite, *n.*—**Mesoblastic somite,** one of the segmental or metameric pieces of mesoblast found in embryos of annelids, arthropods, and vertebrates: same as *protovertebra* in vertebrate embryology. The mesoblastic somites are of considerable theoretical importance as indicating the number of segments in the body or particular regions of the body, like the head, trunk, etc.

somnal (som′nal), *n.* [L. *somnus*, sleep, + *-al*[3].] A trade-name of a solution of chloral hydrate and urethane in alcohol. It is used in medicine as a hypnotic. *Jour. Soc. Chem. Industry*, IX. 101.

somnambulancy (som-nam′bū-lan-si), *n.* Somnambulism; somnambulance.

The enthusiast passes through life in a sort of happy *somnambulency* — smiling and dreaming as he goes, unconscious of whatever is real, and busy with whatever is fantastic. *Isaac Taylor*, Nat. Hist. Enthusiasm, i.

somnambulize (som-nam′bū-līz), *v.*; pret. and pp. *somnambulized*, ppr. *somnambulizing.* [*somnambul(ism)* + *-ize.*] **I.** *trans.* To put into a sleep-walking state, mesmerize or hypnotize into such a state.

II. *intrans.* To fall into a state of somnambulism or of sleep-walking; act in such a state.

somnifuge (som′ni-fūj), *n.* [L. *somnus*, sleep, + *fugere*, flee.] Something that drives away or prevents sleep. [Rare.]

I am not sure we would have [the nightingale] if we could, for, in spite of the poets, . . . he has a bad character . . . as a *somnifuge*. *Lowell*, Letters, II. 411.

Somniosus (som-ni-ō′sus), *n.* [NL., < LL. *somniosus*, sleepy, < *somnus*, sleep.] A genus of scymnoid sharks known from northern seas.

somnipathy (som-nip′a-thi), *n.* [L. *somnus*, sleep, + Gr. *πάθος*, passive state.] Hypnotic sleep. [Rare.]

somnium (som′ni-um), *n.*; pl. *somnia* (-ä). [L., < *somnus*, sleep.] A dream; the dreaming state; the semiconscious state between sleeping and waking.

somnoform (som′nō-fôrm), *n.* [L. *somnus*, sleep, + *-form.* Compare *chloroform.*] An anesthetic mixture of ethyl and methyl chlorid with a small quantity of ethyl bromide.

Son of Heaven. See ★*heaven.*

Sonata di camera, a chamber sonata.—**Sonata di chiesa,** a church sonata.

sonder (zon′der), *a.* [Abbr. of G. *sonderklasse*, < *sonder*, special, particular, + *klasse*, class.] Noting a class of small yachts which originated in Germany, and which are restricted in relation to points in construction and sail area. In the aggregate of water-line length, extreme beam, and extreme draft they must not exceed thirty-two feet: as, for example, a water-line of 22 feet, beam of 6 feet, and draft of 4 feet. They must not cost to build more than $1,440 in Germany or more than $2,400 in America, including two suits of sails. Another feature of this sonder class is that their displacement must not be less than 4,035 pounds, and it is required also that their draft of water and their water-line length must be measured with stores on board but without a crew, which latter must consist of three men, all amateurs, and citizens of the country in which the yacht is built. Hollow spars cannot be used, and the sail area is restricted to 550 square feet. Races are sailed under the rules of the International Yacht Racing Union.

Sonder yachtsmen, both victors and vanquished.

N. Y. Evening Post, Sept. 9, 1909.

songsmith (sông′smith), *n.* A song maker; a poet. *Athenæum*, March 18, 1905, p. 329. [Rare.]

song-speech (sông′spēch), *n.* A method of speaking that approximates song,—is characterized, that is, by fuller resonance, longer quantities, more continuity of tone, and more definite modulations of pitch than are usual in ordinary speech.

sonomaite (sō-nō′ma-īt), *n.* [*Sonoma* (see def.) + *-ite*[2].] A hydrated sulphate of aluminium and magnesium, which occurs in silky crystalline forms at the geysers in Sonoma county, California.

sonora (sō-nō′rä), *n.* [From *Sonora*, one of the states of Mexico.] A local storm originating east of San Diego, in the mountains of California or adjacent Arizona, and descending from the east, but preceded by westerly winds. Storms of a similar character occur also in the northern part of the Great Basin of California.

Sonoran (sō-nō′ran), *a.* and *n.* **I.** *a.* **1.** Of or pertaining to Sonora, Mexico.

The division of the northern part of Arctogæa into a palæarctic and a nearctic region is, however, retained; and it is somewhat regrettable to find that the author is unable to convince himself of the necessity of a *Sonoran* region. *Nature*, Aug. 14, 1902, p. 374.

2. Of or pertaining to a long-headed Indian type which is found in the state of Sonora and scattered over the southwestern parts of the United States.—**Sonoran region, Sonoran zone,** a zoogeographical region instituted by Cope, in 1875, including northern Mexico and adjoining desert portions of New Mexico, Arizona, Nevada, and eastern California. As defined by Merriam, in 1890, the Sonoran zone included also the peninsula of Lower California and part of western Texas as well as much of central Mexico. The term was loosely used by Cope, whose map and description do not agree with one another.

II. *n.* A division of the supposed Uto-Aztecan linguistic family: equivalent to *Piman.*

Sonorous texture, the texture of the sonorous stone which gives forth a musical sound when struck lightly with a mallet. See *sonorous stone*, under *sonorous.*

Large Canton Punch Bowl. *Sonorous texture.*

Marquand Catalogue, 1903.

Sonsonate balsam. See ★*balsam.*

sool[2] (söl), *v. t.* **1.** To excite (a dog) or set him on; 'sic' (a dog). *E. E. Morris*, Austral English.

She went quickly towards her camp, calling softly, 'Birree gougou,' which meant '*Sool* 'em, *sool* 'em,' and was the signal for the dogs to come out. Quickly they came and surrounded the black fellows.

Mrs. K. L. Parker, Australian Legendary Tales, p. 90.

2. To worry, as a dog worries a rat.

soomga (söm′gä), *n.* [Russ. *semga*, *sëmga*, pron. syōm′gä, a salmon.] A large sea-trout, *Salmo gairdneri*, common on the Pacific coast; the steelhead.

sooner (sö′nèr), *n.* [*soon*, *a.*, + *-er*[3].] In the western States, any one who settles on government territory before it is legally opened to settlers and thus gains the choice of land and location; hence, any one who gains an unfair advantage by getting ahead of others. [Slang, U. S.]

As the Department holds that every person who now goes upon the strip is a "*sooner*" and loses his rights to take land there, the negatives will become valuable evidence against those going in now to hunt out good claims.

Weekly Post, N. Y., Aug. 2, 1893.

soor (sör), *n.* Aphthæ; thrush.

The streptococcus in pure culture was found in the pus of the cerebro-spinal meninges, but the *soor* fungus appeared in the cultures made from both kidneys.

Jour. Exper. Med., Feb. 4, 1905, p. 396.

soothless (söth′les), *a.* Truthless; treacherous; false.

Lochiel.— Down *soothless* insulter! I trust not the tale:
Though my perishing ranks should be strewed in their gore.

Campbell, Lochiel's Warning.

soot-proof (sùt′pröf), *a.* Not affected by soot or deposited carbon, as apparatus and devices for igniting or for other purposes within the combustion chambers of internal-combustion engines, which are likely to become coated with lampblack from incomplete combustion.

soot-sucker (sùt′suk″èr), *n.* A device for removing deposits of carbon, in the form of soot, lampblack, or cinders, by the aspirating effect of a current of steam which induces a flow of air and carries out the deposited carbon. Water may also be used to induce the motion. Also called *cinder-ejector.*

sooty-wing (sùt′i-wing), *n.* An American hesperiid butterfly, *Pholisora catullus*, widespread in the United States. Its larvæ live on *Chenopodium.*

sop. An abbreviation of *soprano.*

sophic, *a.* **2.** Relating to the philosophic opinions of man, including the beliefs of primitive tribes.

The *sophic* activities so highly developed among the tribes of the arid pueblo region.

J. W. Powell, in An. Rep. Bur. Amer. Ethnol., 1897–[98, p. xlv.

sophiology (sof-i-ol′ō-ji), *n.* [Gr. *σοφία*, wisdom, + *-λογια*, < *λέγειν*, speak.] The scientific study of the philosophies developed by the various races of man, from the most primitive tribes to the present civilized nations.

The sciences of esthetology, technology, sociology, philology, and *sophiology.*

J. W. Powell, in An. Rep. Bur. Amer. Ethnol., 1897–[98, p. xii.

sophoretin (sof-ō-rē′tin), *n.* [*Sophora* + *-et-* + *-in*[2].] A yellow compound, $C_{15}H_{10}O_7$, prepared by the action of dilute sulphuric acid on sophorine. It crystallizes in yellow needles and closely resembles quercitin in general properties.

sophorine (sof′ō-rin), *n.* [*Sophora* (see def.) + *-ine*[2].] A colorless crystalline alkaloid, $C_{11}H_{14}ON_2$, contained in the seeds of *Sophora tomentosa*, *S. secundiflora*, *Anagyris fœtida*, and *Euchresta Horsfieldii*: same as ★*baptitoxine*, *cytisin*, and *ulexine.*

sophronist (sō′frō-nist), *n.* [Gr. *σώφρων*, of sound mind, prudent, + *-ist.*] A cautious, meticulous person; one who is afraid to go too far; one who is given to qualifying his statements. [Rare.]

The latter's [youth's] instincts are far wiser than they know, for iconoclasm is never better directed than against the literalist, formalist, and *sophronist.*

G. S. Hall, Adolescence, II. 412.

sopilka (sō-pil′kä), *n.* See *sopelka.*

sopra bianco (sō′prä bē-än′kō). [It. *sopra*, above, over, + *bianco*, white.] In *ceram.*, a

Sopra Bianco.—Delf plate, Bristol, 18th century. (In the Pennsylvania Museum, Philadelphia.)

style of decoration in which the design is painted in white enamel on a ground of a slightly different tint. See *damassé*, 2. Also called *bianco sopra bianco.*

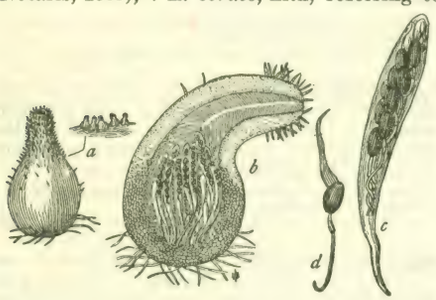
sora, *n.*—**King sora,** a name sometimes given to the Florida gallinule, *Gallinula galeata.*

sorbinose (sôr′bin-ōs), *n.* [*sorbin* + *-ose.*] Same as *sorbin*, which term it has now superseded.

sorbite, *n.* **2.** A constituent of steel; practically pearlite which has not had time to become perfectly formed. The solid solution of carbon in iron (austenite) will decompose into pearlite, together with either excess ferrite or excess cementite, according as the percentage of carbon is less or more than 0.90 per cent. The complete decomposition of the austenite requires time, and there is therefore very frequently only a partial resolution into pearlite. The transition-forms between the austenite and pearlite are called respectively *martensite*, *troostite*, and *sorbite*. Present knowledge does not disclose fully the nature of these transition-forms.

Austenite, troostite, *sorbite*, and other constituents [of iron] have also been described. *Encyc. Brit.*, XXIX. 572.

sorbitic (sôr-bit′ik), *a.* [*sorbite* + *-ic.*] Pertaining to or of the nature of sorbite: as, *sorbitic* steel.



Stead and Richards in a paper on *sorbitic* steel rails give a simple method for the production of sorbite in steel. *Electrochem. Industry*, Feb., 1904, p. 51.

sorbitol (sôr′bi-tol), *n.* [*sorbite* + *-ol.*] Same as *sorbite*, 1, which term it has now superseded.

sorbose (sôr′bōs), *n.* [*sorb*[1] + *-ose.*] Same as ★*sorbinose*.

sorcerer, *n.* **2.** A fish of the family *Nettastomidæ*, found in the deep sea, having a fragile body and a thin skin charged with black pigment.

Sordaria (sôr-dā′ri-ạ), *n.* [NL. (Cesati and De Notaris, 1863), ⟨ L. *sordes*, filth, referring to

the habitat of many of the species.] A genus of pyrenomycetous fungi having separate perithecia and unicellular dark-colored spores frequently provided with hyaline appendages. The species are numerous and widely distributed. Many are found on dung. *S. fimiseda* occurs on horse and cow dung in Europe and North America.

Sordariaceæ (sôr-dā-ri-ā′sē-ē), *n. pl.* [NL., ⟨ *Sordaria* + *-aceæ.*] A family of pyrenomycetous fungi named from *Sordaria*, one of its principal genera. Most of the genera and species are found on dung.

sordidin (sôr′di-din), *n.* [NL. *sordida* (see def.) + *-in*[2].] A colorless neutral compound, $CH_3OC_{12}H_7O_7$, contained in the lichens *Lecanora sordida* and *L. sulphurea*. It crystallizes in needles, melts at 210° C., and is volatile without decomposition.

sore[1], *n.*—**Veldt sore,** a painful ulcer, of the hands or feet chiefly, occurring in South Africa. Also called *Natal boil.*

sorehead, *n.* **3.** Same as ★*bird-pox*.

Sorel's cement. See ★*cement*.

sore-shin (sōr′shin), *n.* Same as *sore-shin* ★*disease*.

Soret phenomenon or **principle.** See ★*phenomenon*.

sorghum-blight (sôr′gum-blīt), *n.* A disease of sorghum producing red spots on the culms and leaves, believed to be due to *Bacillus Sorghi*.

sorghum-evaporator (sôr′gum-ē-vap″ō-rā-tọr), *n.* A device for removing moisture or excess of liquid from sorghum molasses.

sorghum-knife (sôr′gum-nīf), *n.* A heavy knife used for cutting sorghum.

sorghum-midge (sôr′gum-mij), *n.* A cecidomyiid fly, *Diplosis sorghicola*, which deposits its eggs in sorghum heads in the southern United States, and whose larvæ absorb the juices from the young ovaries, causing a sterility of the seeds. *Science*, Jan. 17, 1908, p. 114.

sorghum-smut (sôr′gum-smut), *n.* See ★*smut*.

soroban (sō-rō-bän′), *n.* [Jap.] The Japanese abacus.

sororiation (sō-rō-ri-ā′shọn), *n.* [L. *sororiare*, grow up or swell together: said of the female breasts.] The enlarging of the female breasts at puberty.

sorority (sō-rō′ri-ti), *n.* [NL. *sororitas*, sisterhood, ⟨ L. *soror*, sister.] A sisterhood, corresponding to *fraternity:* often applied to women's Greek letter societies.

One saw many of those neat little *sorority* pins the American girl proudly brings home from boarding-school or college.
E. Insley, in Harper's Mag., Sept., 1900, p. 490.

sorosis, *n.* **2.** A woman's club; specifically, the first woman's club in America, organized in 1868.

Sorosporium (sō-rō-spō′ri-um), *n.* [NL. (Rudolphi, 1829), ⟨ Gr. σωρός, heap, + σπόρος, seed, referring to the masses of spores.] A genus of smut-fungi of the order *Ustilaginales*, having the spores loosely united in small spherical masses which are surrounded by a gelatinous envelop when young. *S. Ellisii* occurs frequently and destroys the inflorescence of species of *Andropogon*.

sorrel[1], *n.*—**Engelmann's sorrel.** Same as *drop-seed* ★*dock*.—**Guinea sorrel.** Same as *Indian sorrel* (which see, under *sorrel*[1]).—**Ladies' sorrel,** *Oxalis stricta*, a delicate species with yellow flowers, ranging throughout most of temperate North America east of the Rocky Mountains and introduced into Europe. Also called *upright yellow-wood sorrel.*—**Queensland sorrel,** the green kurrajong, *Hibiscus heterophyllus*, the young shoots, leaves, and roots of which are eaten by the aborigines.—**Upright yellow-wood sorrel.** See *ladies'* ★*sorrel*.

sorrel-dock (sor′el-dok), *n.* See ★*dock*[1].

sorrel-tree, *n.* **2.** The stagger-bush, *Pieris Mariana*.

Sorrento work. See ★*work*.

sortation, *n.* **II.** *a.* Of or pertaining to sorting.

On a Correct Colour Code or *Sortation* Code in Colours.
Geog. Jour. (R. G. S.), XVIII. 342.

sortes, *n. pl.*—**Sortes viales,** in *Rom. antiq.*, divination by a lot drawn by the first person encountered on the street.

sortilegic (sôr-ti-lej′ik), *a.* [*sortilege* + *-ic.*] Divinatory; of or pertaining to sortilege.

Seri warfares, like the hunting customs of the tribe, is 'largely *sortilegic*,' and the warfare of the tribe (devoid of military tactics in the strict sense of the term) is 'merely an intensified counterpart of their chase.'
Science, May 17, 1901, p. 782.

sorting-boom (sôr′ting-bōm), *n.* In *lumbering*, a strong boom used to guide logs into the sorting-jack, to both sides of which it usually is attached.

sorting-hammer (sôr′ting-ham″ėr), *n.* A hammer of about two pounds weight, shaped like a narrow, blunt ax, used to break ores for sorting.

sorting-jack (sôr′ting-jak), *n.* In *lumbering*, a raft, secured in a stream, through an opening in which logs pass to be sorted by their marks and diverted into pocket booms or the down-stream channel. Also called *sorting-gap*.

S. O. S. The distress signal adopted by the International Radiotelegraphic Convention.

sospirando (sōs-pi-rän′dō), *a.* [It., ppr. of *sospirare*, sigh.] Sighing: used, in *music*, to denote passages that are to be rendered in a doleful manner.

sospiro (sōs-pē′rō), *n.* [It., a sigh, ⟨ *sospirare*, sigh. See ★*sospirando*.] In *music*, an old name for a crotchet or quarter-note rest; also, earlier, for a minim or half-note rest.

sospiroso (sōs-pi-rō′sō), *a.* [It., ⟨ *sospiro*, a sigh.] Doleful: used, in *music*, like ★*sospirando*.

soterial (sō-tē′ri-ạl), *a.* [Gr. σωτήρ, savior, + *-i-al*[1].] Of or pertaining to the Saviour or to salvation; soteriological.

The *soterial* pith of the Gospel is simple and soon exhibited. *Howard Crosby*, Christian Preacher, ii.

sotol (sō-tōl′), *n.* [Nahuatl *zotoli*, the ancient Mexican name.] In the southern United States and Mexico a name given to several species of yucca-like plants belonging to the genus *Dasylirion*, sometimes called bear-grass. The fleshy crown at the apex of the stem of *Dasylirion Texanum* and *D. Wheeleri* are roasted and eaten by the Mexicans and Indians, and yield an inferior brandy called *mezcal de sotol*, which is distilled in the same manner as the common mescal from the agave. The ancient Mexicans wove sandals (*zotolcactli*) and mats (*zotolpetlatl*) from the leaves. The fresh ladle-like leaf-bases of *Dasylirion acrotrichum* are now used in some of the markets as receptacles for carrying home lard, olives, oil, etc.

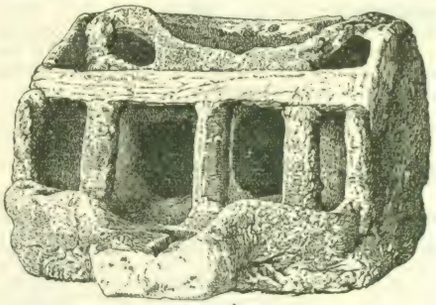
sou. An abbreviation of *southern*.

Soubise sauce. See ★*sauce*.

souchong, *n.* Souchong tea is prepared from the souchong leaves, namely the fourth and fifth from the tip of the shoot, or is of a quality regarded as corresponding to these. The leaf is longer and thinner than in the congous, in the prepared state folded rather than curled or twisted. In drinking-quality the souchongs are similar to the congous; the flavor is technically described as 'tarry.' Six trade subclasses are enumerated. Cf. *congou* ★*tea*, ★*pekoe*.—**Pekoe souchong,** a grade of tea somewhat coarser than pekoe.

Soudan III. See ★*Sudan III.*—**Soudan formation.** See ★*formation*.—**Soudan G.** See ★*Sudan G*.

sousite (sö′e-sīt), *n.* [Named after F. *Soues*, who sent the specimen for examination.] A native nickel-iron alloy from the auriferous gravels of the Fraser river in British Columbia: closely allied to awaruite, but containing somewhat more nickel.



souffle, *n.*—**Funic souffle,** a soft blowing sound heard on auscultation of the abdomen of a pregnant woman, believed to be caused by the movement of blood in the umbilical cord. *Buck*, Med. Handbook, IV. 342.

soufrière (sö-fri-yãr′), *n.* [F. *soufrière*, ⟨ *soufre*, sulphur. See *sulphur*.] The French equivalent of *solfatara*, somewhat current in English since the volcanic outbreaks in Martinique and St. Vincent in 1902. The word is a common geographical name in the Windward Islands where the French influence either is or has been predominant. It is applied to any expiring volcanic vent. When there is but one on an island it is called La Soufrière.

The steam puffs grew in magnitude, and before the end of April there were several explosions, accompanied by rumblings and tremblings of the earth, in which jets of mud were shot into the air and swept far a-sea by the trade-winds; while the warm springs and solfataras (ɑ*souffrieres*) on Martinique and other islands displayed unwonted activity.
W. J. McGee, in Pop. Sci. Mo., July, 1902, p. 273.

soul[1], *n.*—**Animal soul,** the conscious principle of an individual animal in contradistinction to the vegetative soul, or mere life.—**Heart and soul.** See ★*heart*.

soul-house (sōl′hous), *n.* A small clay model of a house or residence placed, by the ancient

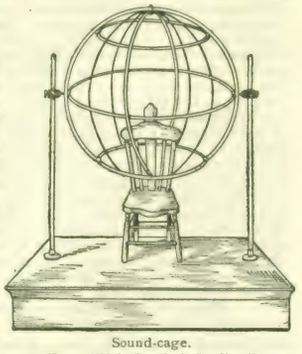
Egyptians (VIth–XIIth dynasty), in a tomb for the accommodation of the soul of the departed.

Prof. Petrie also gave a paper to the section describing the excavations carried out by the British School of Archæology, under his direction, at Gizeh and Rifeh. In this communication he described the interesting series of pottery *soul-houses*, found on the latter site, which are of great importance apart from their religious significance as showing the design and evolution of the ordinary Egyptian house, about which little had previously been known. *Nature*, Aug. 29, 1907, p. 462.

souling, *n.* See ★*suling*.

soul-worship (sōl′wėr″ship), *n.* The worship of ghosts or spirits; belief in the survival of a conscious spirit after the death of the body, and acts of propitiation to appease it: one of the most wide-spread and persistent of primitive cults. *Gumplowicz* (trans.), Outlines of Sociol., p. 55.



sound[5], *n.*—**Colored sounds,** sounds having imaginary colors strongly associated with them in the minds of some persons.—**Sounds of subdivision,** in *acoustics*, the upper partials of a compound tone or clang; overtones.

soundboard, *n.* **3.** In *organ-building*, same as *wind-chest*.

sound-box (sound′boks), *n.* In *phonet.*, the round metal box which carries the reproducing or the recording stylus of the gramophone.

The reproducing *sound-box* differs only in detail from the recording *sound-box*.
Scripture, Exper. Phonetics, p. 55.

sound-cage (sound′kāj), *n.* In *exper. psychol.*, an instrument, constructed after the analogy of the perimeter, for the study of localization of sound. In fixed form, the sound-cage consists of a hollow spherical cage. The imaginary surface of the sphere is divided, perhaps, into eight equal parts by four vertical great circles: and again, horizontally, by the equator and by two small circles parallel to the equator at a distance of 45° from the poles. The cage, made of stout wire, is left open below to admit the back of a chair and the observer's body. The observer is so seated that the center of the line joining the external openings of his two ears is the center of the sphere. Sounds are given by a telephone-sounder, which travels from point to point over the surface, the observer, who is blindfolded, being required to indicate the direction from which the sound appears to come. As this apparatus is bulky, sound-cages have been devised in which two semicircles, or two quadrants, are made to revolve in such a way as to cover the whole surface of the sphere. Also *sound-perimeter*. *E. B. Titchener*, Exper. Psychol., I. i. 179.

Sound-cage.
(From "Yale Psychol. Studies.")

sound-centroid (sound′sen″troid), *n.* In *exper. phonet.*, an imaginary point in the flow of sound in speech or song, at which (for purposes of scientific treatment) we may regard the entire energy of the sound to be concentrated. See the extract.

Just as in the case of any irregular body, we can find different grades of centroids by limiting the consideration to larger or smaller portions. There are thus phrase-centroids, syllable-centroids, *sound-centroids*, etc.
Scripture, Exper. Phonetics, p. 451.

sound-chest (sound′chest), *n.* Same as *resonance-box*, or as *soundboard* or *wind-chest*. In some old keyboard-instruments, resonance was sought by using not a mere soundboard, but a fully inclosed *sound-chest*, after the analogy of other stringed instruments.

soundflat (sound′flat), *n.* In *pianoforte-making*, same as *soundboard*.

sound-hammer (sound′ham″ėr), *n.* In *physiol.* and *psychophys.*, a metal hammer which strikes upon a metal block, and therefore (if shaft and block are included in an electrical circuit) makes electrical contact at the moment that the sound of the stroke occurs. The hammer is much used as a sound-stimulator in reaction experiments in which the Hipp (or other electrical) chronoscope is employed. *E. B. Titchener*, Exper. Psychol., II. i. 154.

sound-helmet (sound′hel″met), *n.* In *exper. psychol.*, a sound-cage made in the form of a cap of light wire, which is fitted to the head of the observer, and from which free wires, straight or bent, radiate out in the various directions of space: the stimuli are sounded at the extremities of these wires. *E. B. Titchener*, Exper. Psychol., I. ii. 359.

sound-hole, *n.* **2.** See the extract.

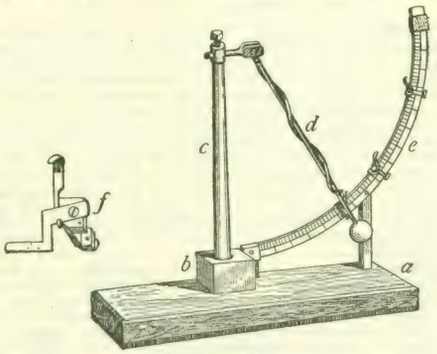
These *sound-holes*, which are a special feature of the finer Norfolk towers, are square, unglazed openings filled with tracery in the stage below the bell-chamber windows. *Athenæum*, April 9, 1904, p. 473.

sounding[1], *n.* **4.** In *astron.*, the investigation of the probable distance of the boundaries of the stellar universe by enumerating the number of stars visible in different regions in the field of a given telescope or on a photographic plate.

The second point for photographic investigation refers to the limits of the system towards the galactic poles. There is reason to believe them comparatively restricted. M. Celoria, of the Milan observatory, using a refractor capable at the utmost of showing stars of eleventh magnitude, obtained for a "mean *sounding*," at the north pole of the milky way, almost identically the same number given by Herschel's great reflector.
A. M. Clerke, in Smithsonian Rep., 1891, p. 106.

Pneumatic sounding-apparatus, an apparatus devised by Paulsen, Prytr, and Rung in 1885, in which a volume of air is compressed and the depth is calculated from the pressure that effected this compression. It is applicable to much greater depths than the analogous Thomson sounding-tube.

sounding-balloon (soun′ding-ba-lön″), *n.* A small balloon bearing meteorological apparatus, but without an aëronaut, sent rapidly up to the highest possible elevation in order to ascertain the atmospheric conditions. The balloon is carried off by the wind and comes to the ground at a long distance, and the record is found and brought back. Two forms of sounding-balloons are in use. One, the older, usually of silk or paper, falls when sufficient hydrogen gas escapes through the open appendix; the other, of rubber, sealed, expands as it rises and eventually bursts, the apparatus falling slowly, supported by a parachute. Originally and frequently called *ballon-sonde*.



sounding-machine, *n.*—**Sigsbee sounding-machine,** a machine for taking soundings in very deep water by means of a lead weight attached by a cord to the end of a fine wire on which are marks to show the amount of wire paid out at the time the lead touches bottom: the invention of Rear-Admiral C. D. Sigsbee, U. S. N.

sounding-tube (soun′ding-tūb), *n.* **1.** A watertight tube or pipe extending vertically up from the bottom of a vessel, or from any compartment, so that the depth of water in the interior can be conveniently measured from the deck by dropping a sounding-rod attached to a line through the tube to the bottom.—**2.** A glass tube, in a protecting case, lowered with sounding-lead to the bottom of the shoaler parts of the ocean, the lower end of the tube being open and the upper end closed. The air within is compressed in proportion to the depth of the ocean. The water penetrates and dissolves a red paint from the inside of the tube, so that the colored remainder indicates the amount of compression of the air and hence the depth of the water. It was invented by Sir William Thomson (Lord Kelvin) about 1860.

sound-memory (sound′mem″ō-ri), *n.* In *psychol.*, auditory memory; memory aroused by auditory cues and couched in auditory terms.

The meaningless sound æn . . . called up the *sound-memory* of 'clams.' *Scripture*, Exper. Phonetics, p. 118.

sound-pendulum (sound′pen″dū-lum), *n.* In *psychophys.*, a pendulum suspended from a steel pillar, the hard-rubber bob of which strikes, as the pendulum falls, upon a block of ebony cemented to the base of the instrument. Since the intensity of the sound produced by the blow is directly proportional to the height of fall of the bob, that is, to the square of the sine of half the arc through which the pendulum swings, the relative intensities of successive sounds may readily be calculated by reference to a graduated arc of metal, also attached to the base of the instrument. The sound-pendulum is sometimes made with two pendulums, hung to right and left of the pillar and striking on the two faces of the block: but it is difficult to insure the qualitative similarity of the two sounds thus produced. The sound-pendulum was first constructed by Volkmann, and since Fechner's time it has been a standard piece of psychophysical apparatus.

Sound-pendulum.
a, wooden base on layer of felt; *b*, ebony striking-block; *c*, steel pillar; *d*, pendulum, wrapped with rubber tubing to prevent vibration; *e*, arc, doubly supported on base, and capped with sponge-rubber (it carries three releases); *f*, pendulum catch and release, shown separately on larger scale.

A good way of turning this principle to account for the investigation of sound-intensities which do not differ very greatly from one another is indicated in the [accompanying] schematic representation of the *sound-pendulum*.
W. Wundt (trans.), Human and Animal Psychol., p. 30.

sound-perimeter (sound′pē-rim″e-tėr), *n.* In *exper. psychol.*, same as ★*sound-cage*. *Psychol. Rev.*, Jan., 1903, p. 64.

sound-sensation (sound′sen-sā″shọn), *n.* In *psychol.*, auditory sensation; especially, a sensation of noise. *W. Wundt* (trans.), Human and Animal Psychol., p. 32.

sound-shifting (sound′shif″ting), *n.* [Tr. G. *lautverschiebung*.] The 'shifting of (consonant) sounds' in a regular series or rotation: applied to this phenomenon in the history of Teutonic languages. See ★*lautverschiebung* and *Grimm's law*, under *law*[1]. *Keane*, Ethnology, p. 413.

soung (söng), *n.* [Burmese?] A Burmese harp with a boat-shaped body and a gracefully curved back or frame, but no post. Also *soum*.

Soung.
(In the Stearns Collection, University of Michigan.)

soup[2], *n.*—**In the soup,** in a predicament; helpless to act; in a mortifying situation. [Slang.]

soup-bone (söp′bōn), *n.* A bone (with some meat on it) used for making soup-stock: usually the shank of beef.

soupir (sö-pēr′), *n.* [F., a sigh. See ★*sospiro*.] In *music*, an old name for a crotchet or quarter-note rest.

soupon, *n.* See *supawn*.

soup-spoon (söp′spön), *n.* A spoon of a size and form adapted for use in eating soup.—**Soup-spoon man,** a certain member of a gang of burglars. See ★*yeggman*. [Thieves' slang.]

When the prisoners were taken to Police Headquarters Assistant Superintendent Dougherty of the Pinkerton Detective Bureau identified the man who said he was William Smith as Gus De Ford, alias "Ky Yellow," alias "Buggsey," an expert with high explosives, known as the "King of the *Soup Spoon Men*." *N. Y. Times*, Jan. 2, 1905.

soup-stock (söp′stok), *n.* See *stock*[1], 24.

sour, *n.* **5.** In drenching or puering skins, the old liquor which has become sour or turned. *Modern Amer. Tanning*, p. 47.—**White sour,** the bath of very dilute sulphuric acid in which cotton cloth is immersed after it has been exposed to the action of a weak solution of bleaching-powder, as a part of the usual process of chlorin-bleaching. *Sadtler*, Handbook of Indust. Chem., p. 475.

sour-ball (sour′bâl), *n.* A round sugar-plum, very strongly flavored with lemon.

sour-berry (sour′ber″i), *n.* The European cranberry, *Oxycoccus Oxycoccus*.

source, *n.* **4.** In *geom.*, a place of transition from space of $n+1$ into space of n dimensions. —**5.** In *elect.*: (*a*) That point or region in an electric circuit at which abrupt difference of potential exists so that current flows from it on one side through the circuit and toward it through the circuit from the other side. Thus a dynamo generator, a voltaic cell, or a charged condenser is a source of current in the circuit in which they are placed. (*b*) In the case of current flow in plane sheets, a point at which the current enters the sheet.

In the case of current flow in plane sheets, we have to consider certain points called *sources* at which the current flows into the sheet, and certain points called sinks at which it leaves. *Encyc. Brit.*, XXVIII. 18.

sourdine, *n.* **II.** *a.* Softly played; muted; pathetic. [Rare.]

Yet there is here and there a stroke of dramatic force, and there is the art of making a commonplace event striking by telling it in hints, as in the *sourdine* little tragedy of "A Modern Melodrama," where a prostitute guesses her death-sentence from the doctor's visit.
N. Y. Times, July 2, 1898.

sour-dock (sour′dock), *n.* **1.** See *sour*.—**2.** See ★*dock*[1].

sourdough (sour′dō), *n.* See the extract. [Local slang.]

Strange as it may seem, the closing in of winter [in Alaska] opens up the country to the "*sourdough*," for dogs can pull where horses fail, and the prospector with his team and "grubstake" roams at will.
National Geog. Mag., March, 1905, p. 107.

sour-grass, *n.* **2.** In the West Indies, *Andropogon pertusus*, a native of India, but naturalized in Australia and the West Indies, where it is considered one of the most valuable fodder-grasses.—**3.** Either the common Old World sorrel, *Rumex Acetosa*, or the sheep-sorrel, *R. Acetosella*.—**Ladies' sour-grass.** Same as *ladies'* ★*sorrel*.

sour-gum, *n.* **2.** See ★*gum*[2].

souring-machine (sour′ing-ma-shēn″), *n.* In *bleaching*, a machine for washing cotton or linen cloth in an acidulated bath. *G. Duerr*, Bleaching and Calico-printing, p. 11.

sour-sop, *n.*— **Sour-sop bird,** a small, bright-colored tanager, *Calliste versicolor*, so called from its frequenting the sour-sop tree.

sourweed (sour′wēd), *n.* The sheep-sorrel, *Rumex Acetosella*.

Southern canary-grass. See ★*canary-grass.*— **Southern cattle-fever.** Same as *Texas fever.*— **Southern cattle-tick.** See ★*cattle-tick.*— **Southern root-rot.** Same as *Ozonium* ★*root-rot.*— **Southern timothy.** See ★*canary-grass.*

southing, *n.* 4. In *surveying* and in *navigation*, the linear distance measured in a north and south direction from the northerly end of a line to the true east and west line or the parallel of latitude passing through the southerly end of the line. Geometrically the southing or the northing of a line is equal to its east and west projection on to a meridian. The southing of a line thus is equal to its northing, and the former or the latter will be used solely in accordance with the direction of real or imaginary motion along the line.

The position of each point is calculated trigonometrically with reference to its distance east or west, north or south, of the starting-point of the survey. The distance from point to point, measured along or parallel to the meridian, is called the difference of latitude of these two points, or northing or *southing*. *Encyc. Brit.*, XXXIII. 88.

South Sea arrowroot. See *Tacca* and ★*gaogao.*

sovereign, *n.* 2. (*b*) An Austrian gold coin of the value of three ducats. The sovereign of Ferdinand I. was worth $6.76.— 3. Any one of several nymphalid butterflies of the genus *Basilarchia*, as the banded purple, the hybrid purple, the red-spotted purple, the viceroy and the viceregine.— **Adelaide sovereign,** a pound gold token struck by the assay-office of Port Adelaide in 1852.— **Brabant sovereign,** a gold coin of Austria. That of Joseph II. (1766) weighed 171.468 grains, 916.667 fine, and was worth $6.76.— **Silver sovereign,** a nickname of the Spanish dollar.

soveren, soverenty. Simplified spellings of *sovereign, sovereignty.*

sovik (sō′vik), *n.* [Samoyed?] A large, loose fur tunic worn by the Samoyeds over the malitza, with the hair outside, and provided with a large hood. See extract under ★*louplhu.*

sovrano (sō-vrä′nō), *n.* [It. See *sovereign.*] A coin of Francis I. of Austria, in 1831, for the dukedom of Milan and for Austrian Lombardy.

sow[2], *n.* 3. In *metal.*: (*b*) Same as *bear*[2], 7.

sowberry (sou′ber″i), *n.* Same as ★*sour-berry.*

sow-foot (sou′fůt), *n.* The coltsfoot, *Tussilago Farfara.*

sow-grass (sou′gràs), *n.* The swine-cress, *Coronopus Coronopus.*

sowne[2]†, *a.* [Corrup. of F. *souvenu*, remembered.] In *old Eng. law*, such as is leviable: said of a sheriff's return.

sow-plum (sou′plum), *n.* See ★*plum*[1].

sow-tit (sou′tit), *n.* The wood strawberry, *Fragaria vesca.*

Soxhlet extractor. See *Soxhlet's extraction* ★*apparatus.*

Soyka's bacteria flask. See ★*flask.*

sozal (sō′zal), *n.* [Irreg. < Gr. σώζειν, save, + *-al*[3].] A trade-name of aluminium paraphenolsulphonate, $(HOC_6H_4SO_3)_3Al$. It is a crystalline astringent compound and is used in surgery as an antiseptic.

sozin (sō′zin), *n.* [Irreg. < Gr. σώζειν, save, + *-in*[2].] Any defensive albuminous substance. *Buck*, Med. Handbook, III. 844.

sozoiodol (sō-zō-ī′ō-dol), *n.* [Gr. σώζειν, save, + E. *iod(ine)* + *-ol.*] A crystalline powder (diiodophenol-sulphuric acid), employed in surgery and gynecology as a substitute for iodoform. *Jour. Soc. Chem. Industry*, VII. 227.

sozoiodolate (sō″zō-ī-ō′dō-lāt), *n.* [*sozoiodol* + *-ate*[1].] A trade-name of a salt of diiodoparaphenol-sulphonic acid. The potassium, sodium, zinc, and mercury salts are used medicinally as antiseptic and antipyretic remedies, applied both internally and externally.

sozol (sō′zol), *n.* [Irreg. < Gr. σώζειν, save, + *-ol.*] A trade-name of aluminium paraphenolsulphonate, $Al(HOC_6H_4SO_3)_3$. It is a brownish granular compound and is used in surgery as an antiseptic. *Buck*, Med. Handbook, VII. 262.

sozolic (sō-zol′ik), *a.* [*sozol* + *-ic.*] Noting an acid, the same as ★*aseptol:* a trade-name.

Sp. An abbreviation (*b*) of Spain.

space, *n.*— **Bolyai space.** Same as *Lobachevskian* ★*space.*— **Cathodic dark space.** See ★*cathodic* and *Crookes's* ★*space.*— **Clifford-Klein spaces,** space-forms obtained when the geometric axioms are only assumed for an every-way bounded piece of space.— **Clifford's space,** the space formally analogous to Clifford's surface of zero curvature and finite extent. In it most of the usual Euclidean properties hold as regards figures not exceeding a certain size. The angle-sum of a triangle is two right angles, and there are motions in which all points travel along straight lines. The straight line is closed and the whole space is finite.— **Crookes's space, Crookes's dark space,** in the electric discharge through vacuum-tubes, a dark layer immediately surrounding the cathode and separating it from the negative glow. As the pressure diminishes the dark layer increases in thickness, gradually displacing the negative glow.— **Curvature of space,** a metric property which an imaginary space can have and which real or physical space may have in an almost inconceivably small degree, which is expressible by such a differential equation as to require mathematical analysts to admit that it is of the nature of a curvature. A curvature like that of the surface of a sphere will cause the sum of the three angles of a triangle to be greater than two right angles; and that curvature if constant implies that space is finite and unbounded. A curvature like that of a saddle will cause the sum of the three angles of a triangle to be less than two right angles; and that curvature if constant implies that space is infinite in its measurement and that measurable space is bounded. It is only the flat space in which the sum of the angles of a triangle is exactly 180° that is at once limitless and infinite — characters generally opposed to one another. For in proceeding along a line, and measuring as one goes, either the line comes to an end while the measurement is still finite, in which case the line is finite and limited, or the line returns into itself, completing the measurement while the measurement is still finite, in which case the line is finite and unlimited, or the measurement becomes infinite before the line comes to an end or returns into itself when the line is infinite and the measurable part of it is limited, whether the whole line is limited or not; and it is only when the line returns into itself simultaneously with the measurement becoming infinite that the whole line is measurable yet infinite and is unlimited. There is always some law of progress along a line such that the progress is brought to an end by a character of the line itself, namely, either its coming to an end or its return into itself.— **Dark space,** a region, within a vacuum-tube traversed by the electric discharge, which is

Dark Space in a Vacuum-tube.
a, Faraday's dark space; *b*, Crookes's dark space.

devoid of luminescence. When an electric current passes through a tube containing a gas, such as air, at low pressures the glow does not extend uniformly throughout the tube. Near the cathode is a non-luminous region the length of which increases as the pressure diminishes. This is the first dark space or Crookes's space. Beyond this is the negative glow, followed by the second dark space or Faraday's space.— **Dead space.** (*b*) In *chem.*, a name given by Liebreich to certain parts of a solution in which he thought no reaction occurred between substances dissolved in it. (*c*) The clearance-space in a steam-engine cylinder between the head of the cylinder and the end of the piston when the crank is on its dead center. (*d*) The difference between the readings of the mercurial thermometer when the temperature is rising and when it is falling, due in part to the change in the curvature of the meniscus and in part to the expansion of the bulb from the change in pressure of the vertical capillary column. The general effect is analogous to that of the dead motion of the micrometer-screw.— **Double elliptic space,** a space in which the straight line is finite and every two meet twice.— **Faraday's dark space,** in the electric discharge through vacuum-tubes at pressures less than about $\frac{1}{4}$ a centimeter, the dark space between the positive column and the glow around the negative electrode. Faraday's dark space increases in width as the pressure decreases until it finally displaces the positive column altogether.— **Five-to-em space,** in *printing*, a blank type, one fifth the width of the square of the body of the text-type.— **Four-to-em space,** in *printing*, the low or blank type that is one fourth the width of the square of the body of the text-type.— **Fourth dimension of space.** See ★*dimension.*— **Hair-space.** See *hair-space.*— **Ideal space,** that part of the complete spatial manifold without (outside) the absolute.— **Interseptal space,** in sea-anemones and corals, the space between two mesenteries of adjacent pairs. Compare ★*intramesenterial space.*— **Larrey's spaces,** open spaces along the line of attachment of the diaphragm to the chest-walls.— **Linear space.** (*a*) See *linear.* (*b*) Euclidean space.— **Lobachevskian space,** the space characterized by the Bolyai-Lobachevski non-Euclidean geometry.— **Monodromy of space.** See ★*monodromy.*— **Non-Euclidean space,** a space in which a non-Euclidean geometry is true (is actual).— **Poiseuille's space,** that part of the blood-stream in contact with the walls of the capillaries, where the white corpuscles move along sluggishly, the red corpuscles moving more rapidly in the center. Also called *still layer.*— **Postperforated space.** Same as *posterior perforated space.* See *perforated space* (*b*), under *perforated.*— **Prussak's space,** a small space in the tympanum bounded by the malleus, its external ligament, the outer wall of the attic, and Shrapnell's membrane. Also called *Prussak's pouch* or *chamber.*— **Retzius's space,** a small space or cavity in the tissues anterior to the bladder.— **Riemannian space,** a space in which a Riemannian geometry is actual. See ★*geometry.*— **Robin's spaces,** minute spaces in the outer coat of an artery, which connect with the lymphatics.— **Simple (or single) elliptic space,** one in which the straight line is finite and no two have more than one point in common.— **Six-to-em space,** in *printing*, a blank type, one sixth the width of the square of the body of the text-type: same as *hair-space* on small bodies.— **Space error.** See ★*error.*— **Space of Broca,** the central portion of the anterior olfactory lobe of the brain.— **Space of discission.** See ★*discission.*— **Space of dissolution.** See ★*dissolution.*— **Space of straights,** in *geom.*, space with the straight as element.— **Space of Tenon,** the space between Tenon's capsule and the sclerotica.— **Space of Vestberg,** the periaortic space between the pericardium and the beginning of the aorta.— **Spaces of Fontana,** intervals left between the prolongations of the suspensory ligament of the iris.— **Tactile space,** space considered as a synthesis from tactile sensations and perceptions.— **Temperature of space,** the temperature of an interplanetary or interstellar region not exposed to the radiation from the sun or from other hot bodies. According to the estimates of Langley, confirmed by subsequent investigations by others, the temperature or space is approximately the absolute zero or −273° C.— **Thick space,** in *printing*, the space usually known as three-em or three-to-em.— **Thin space,** in *printing*, a space of indeterminate width, thicker than the hair-space and thinner than the commoner three-to-em space. Usually applied to the four- or five-to-em space.— **Three-to-em space,** in *printing*, a low type, one third the width of the body of the text-type, used to make a blank between words.— **Traube's space,** an area on the left side of the chest over the stomach, where a tympanitic percussion-sound is heard, contrasting with the dullness of the precordial area.— **Visual space,** space considered as a synthesis from visual sensations and perceptions.

space-bar (spās′bär), *n.* Same as *spacer*, 2.

space-consciousness (spās′kon″shus-nes), *n.* In *psychol.*, a general term for the various modes (visual, auditory, tactual, etc.), of perception or apprehension of space.

An analogous difficulty is at present felt by the disciples of Kant. These cannot imagine how it is possible that our *space-consciousness* can have arisen out of that which was not originally a *space-consciousness.*
H. Spencer, in Mind, O. S., XV. 310.

space-constant (spās′kon″stant), *n.* The reciprocal of the square root of Riemann's measure of curvature.

It has, consequently, become customary to speak of the reciprocal of the square root of Riemann's measure of curvature as the *space-constant*, in order to avoid all appearance of implying a curvature of non-Euclidean spaces.
Encyc. Brit., XXVIII. 666.

space-contrast (spās′kon″trast), *n.* The reciprocal influence of adjacent spatial extents or areas, of widely different dimensions: supposed by some psychologists to explain certain phenomena of optical illusion.

space-experience (spās′eks-pē″ri-ens), *n.* In *psychol.*, experience of spatial magnitudes or relations; experience couched in terms of spatial perceptions or ideas: usually opposed to ★*time-experience.*

An hour is just as much an hour of *space-experience* as an hour of time-experience.
W. Wundt (trans.), Human and Animal Psychol., p. 19.

space-hunger (spās′hung″gėr), *n.* In *psychol.*, the instinct of truancy or vagrancy; instinctive aversion to the confinement of every-day life. [Rare.]

Ennui, malaria, *space-hunger*, horror of familiar environments and habitual duties, and spring fever are comparatively infrequent as long as children are sexually neuter. *G. S. Hall*, Adolescence, II. 376.

space-key (spās′kē), *n.* In a type-writer or type-setting machine, a key which controls the spacing. See ★*type-writer.*

space-lattice (spās′lat″is), *n.* A net-like structure assumed in discussing the molecular relations of different types of crystalline forms. In it the particles are regarded as situated at the solid angles of equal, parallel parallelepipeds. Also *space-net.*

space-net (spās′net), *n.* Same as ★*space-lattice.*

spacer, *n.* 3. In a type-setting machine, a device for spacing words.

After being once brought into use, a matrix bar or *spacer* is not employed again until all others of the same kind stored in the magazine have been used in turn.
Census Bulletin 216, June 28, 1902, p. 58.

4. Anything by which a space or interval is made.

Large horizontal and radial ventilating spaces are provided. These ventilating spaces are obtained by means of metal *spacers.* *Elect. Rev.*, Sept. 10, 1904, p. 404.

space-sense (spās′sens), *n.* In *psychol.*: (*a*) A sense which mediates perceptions of space.

This conclusion, that sight is a *space-sense*, is supported by the results of Franz's experiments.
G. M. Stratton, Exper. Psychol. and its Bearing upon [Culture, p. 134.

(*b*) A term formed on the analogy of 'light-sense,' 'pressure-sense,' etc., to denote the capacity of space-perception. It is doubly misleading, since it implies that our simplest spatial experiences are sensations as specific as those of color or pressure, and also suggests that we are endowed with a sense-organ of space, as we are with an organ of vision, etc.

E. H. Weber tested the 'cutaneous *space sense*' by applying the two points of a pair of compasses to the skin. *O. Külpe* (trans.), Outlines of Psychol., p. 37.

space-telegraph (spās′tel″ē-grâf), *n.* Same as *wireless* ★*telegraph.*

space-telegraphy (spās'tel″ē-graf-i or -te-leg″-ra-fi), *n.* Telegraphy without wires.

space-threshold (spās'thresh″ōld), *n.* In *psychophys.*, the limen of dual impression for the skin or retina, as determined by the esthesiometric compasses or by the just noticeable separation of black dots on a white background.

The smallest, just noticeable distance between two impressions is called the *space-threshold* for touch.
W. Wundt (trans.), Outlines of Psychol., p. 105.

space-variation (spās'vā-ri-ā″shon), *n.* In *math.*, the change in value of any function from point to point throughout a space.

space-washer (spās'wosh″ėr), *n.* A distance-piece, usually annular; a disk with a central hole, placed upon a spindle or axis to keep two other objects on the same axis at a desired fixed distance apart.

space-writer (spās'rī″tėr), *n.* In newspaper and other literary work, one who is paid by space, usually by the column, line, or word.

In one way or another . . . by learned professors or by clever *space-writers* . . . all but a very few of the leading actors in our earlier scenes have been . . . sufficiently bewritten and belauded.
W. G. Brown, Life of Oliver Ellsworth, i.

spacing-rod (spā'sing-rod), *n.* In *elect.*, a rod or strip, usually of insulating material, which separates the successive layers of a coil. Spacing-rods are used particularly where a circulation of air for ventilating through the coil is desired.

spadaite (spā'dă-īt), *n.* [Named in honor of L. di Medici-*Spada.*] A hydrated magnesium silicate which occurs in reddish amorphous masses: found near Rome, Italy.

spade[1], *n.* 5. In *artillery*, a thick metal projection at the end of the trail of a field-gun carriage, which is forced into the ground by the recoil and tends to keep the carriage in the same position for subsequent rounds.

The [gun] carriage was fitted with hydraulic recoil cylinders, and with a "*spade.*"
Hazell's Annual, 1902, p. 41.

Spade pattern, a reciprocal trefoil pattern to be seen in some Oriental rugs, especially in the borders.

spade[2], *n.*—**Spade casino.** See ★*casino.*

spade-fish, *n.* Same as *paddle-fish.*

spade-foot, *n.* 2. An enlargement of the thin end of a leg of a chair or other piece of furniture having a contour similar to that of a spade. Also used adjectively.

By using the "*spade foot,*" as the square excrescence at the thin end of the leg is called.
K. W. Clouston, Chippendale Period in Eng. Furniture, [p. 154.

spade-money (spād'mun″i), *n.* An early Chinese bronze coinage made in imitation of spades and shovels.

spade-press (spād'pres), *n.* A wool-press of rude construction, used in Australia, in which a spade is employed for ramming down the wool. *E. E. Morris*, Austral English.

spader, *n.*—**Rotary spader,** a machine consisting of a drum turning on a horizontal axis and carrying on its rim a series of projecting blades which turn up the earth as the machine is drawn along.

Spagnuoli (spän-yō-ō'lē), *n. pl.* The Sephardim Jews of Turkey and the Balkan states.

spain, *v. t.* Same as *spane.*

span[1], *v. t.* 7. To harness (a horse, etc.) to a vehicle; inspan; furnish (a vehicle) with animals to draw (it). [South African Dutch.]

Montsioa's reply was short: "No one ever *spanned* in an ass with an ox in one yoke." *Encyc. Brit.*, XXVI. 187.

span[1], *n.* 9. In *math.*, the span of a region in any direction is the width of a strip which is bounded by lines perpendicular to that direction, contains every internal point of the region, and has on each of its bounding lines at least one boundary point of the region; and the upper limit of these spans of the region in every direction is called the span.

If R_1, R_2, . . . be a countably infinite series of closed regions, each being entirely within the preceding, and if the *span* of the regions do not decrease indefinitely, the common points form a perfect connected set.
W. H. Young, in Proc. Math. Soc. (London), ser. 2, [III. 371.

span-dogs, *n. pl.* 2. *sing.* In the bending of barrel-staves, a bar of iron used as a holder to retain the curved shape of the staves until they have cooled, when they will not bend back.

Before the stave is released, a bar of iron bent at each end is forced over it to hold it in position until it has cooled, when it will retain the curve made by the bender. This bar is called the "*span-dog,*" and as a rule it is required to be nearly half the thickness of the wood it holds, such is the force which it is utilized to counteract.
Sci. Amer. Sup., Sept. 10, 1904, p. 23982.

spangle, *n.* 4. One of many small, somewhat triangular spots on the wing of a pigeon or fowl.

spangled, *a.* 2. Having numerous small pointed markings on the wing or body. In spangled pigeons the markings are on the 'shoulder,' or bend of the wing; in fowls, such as the spangled Hamburgs, they occur on the body as well. Spangles differ from checkers in being smaller and more numerous.

Spaniard, *n.* 2. [*l. c.*] Same as *jack-spaniard.* —3. In New Zealand, same as *spear-grass*, 3.

spanipelagic (span″i-pē-laj'ik), *a.* [More prop. "*spanopelagic*, < Gr. σπάνις, rarity (σπάνιος, rare), + πέλαγος, sea.] Floating or swimming in the depths of the sea, and coming to the surface only rarely or exceptionally. See ★*pelagic*, ★*autopelagic*, and ★*bathypelagic.*

The final cause of this remarkable *spanipelagic* mode of life must lie chiefly in the conditions of reproduction and ontogeny.
Haeckel (trans.), Planktonic Studies, p. 583, in Rep. [U. S. Fish Com., 1889–91.

Spanish blanket, bur, cane, etc. See ★*blanket*, etc.—**Spanish cat.** Same as *tortoise-shell* ★*cat.*—**Spanish château,** a castle in Spain, or in the air.

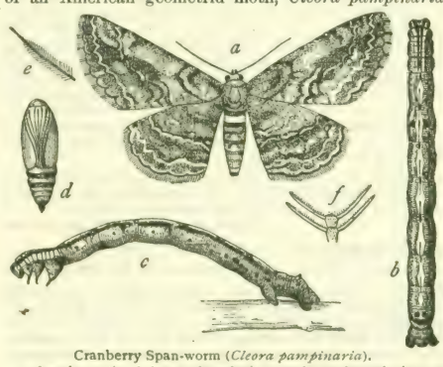
In short she 's the pink of perfection, you know;
And she lives like a queen in my *Spanish Château!*
J. G. Saxe, My Castle in Spain, st. 2.

Spanish reef. See ★*reef*2.—**Spanish wild cherry.** Same as *islay.*

Spanish-American (span'ish-ą-mer'i-kąn), *a.* and *n.* **I.** *a.* Of or pertaining to the parts of America settled or controlled by Spaniards or their descendants, and where Spanish, more or less modified, is the vernacular.

II. *n.* An American of Spanish blood; a citizen of a Spanish-American state.

spank-stick (spangk'stik), *n.* A flat stick with which the operation of spanking was performed. [Dial.]



"Do you remember your Uncle Tree's *spankstick*, Phœbe?"
"Shall we perhaps change the subject?" said Miss Phœbe, with bland severity.
L. E. Richards, Mrs. Tree, viii.

spanner, *n.*—**Clyburn spanner,** an adjustable spanner wrench the movable jaw of which is adjusted by means of a screw with a knurled head.

spanopnœa (span-op-nē'ą), *n.* [NL., < Gr. σπάνιος, rare, scarce, + -πνοια, < -πνοος, < πνεῖν, breathe.] Abnormal slowness of respiration.

span-wire (span'wīr), *n.* A tightly stretched wire attached to the trolley-wire of an electric road and used to hold the latter in its position above the track.

span-worm, *n.*—**Cranberry span-worm,** the larva of an American geometrid moth, *Cleora pampinaria,*

Cranberry Span-worm (*Cleora pampinaria*).
a, female moth; *b*, larva, dorsal view; *c*, larva, lateral view; *d*, pupa; *e*, male antenna; *f*, enlarged joints of same: all enlarged, *e* and *f* more so.
(Chittenden, U. S. D. A.)

found commonly in the Massachusetts cranberry-bogs.—**Elm span-worm,** the larva of an American geometrid moth, *Ennomos subsignarius.*—**Gooseberry span-worm,** the larva of an American geometrid moth, *Ania limbata* (formerly called *Nematocampa filamentaria*). The larva lives on plum and strawberry and other rosaceous plants, and bears on its back four long curved fleshy horns, two curving forward and two backward.—**Pine span-worm,** any one of several geometrid larvæ which feed on pine-leaves, as the *pine-measuring-worm*, larva of *Paraphia subatomaria*, the *redhead inchworm*, larva of *Macaria bisignata*, and others.—**Strawberry span-worm.** Same as *horned* ★*span-worm.*

Moth of Elm Span-worm (*Ennomos subsignarius*).

spar[1], *v. t.*—**To spar-down,** *naut.*, to seize oars, or short pieces of light timber, across the shrouds preparatory to rattling down the rigging.

spar[2], *n.*—**Flaky-spar,** cleavable calcite. [Local, Eng.] —**Greenland spar.** Same as *cryolite.*—**Zinc spar,** smithsonite or calamin, native zinc carbonate.

sparadrapier (spar-ą-dra-pēr' or -drap'i-ėr), *n.* [F. *sparadrapier*, < *sparadrap*, sparadrap.] A machine for spreading antiseptic paraffin or other medicating compound upon thin linen, cotton, or other fabric to make surgical bandages or plasters; a spreading-machine for coating cerecloth.

sparassodont (spa-ras'ō-dont), *a.* and *n.* **I.** *a.* Having the characters of or pertaining to the *Sparassodonta.*

II. *n.* An individual of the suborder *Sparassodonta.*

Sparassodonta (spa-ras-ō-don'tą), *n. pl.* [NL., < Gr. σπαράσσειν, tear, rend, + ὀδούς (ὀδοντ-), a tooth.] A suborder proposed by Ameghino for the large carnivorous marsupials of the Santa Cruz formation of Patagonia. According to its author, the *Sparassodonta* are neither creodonts, placental carnivores, nor carnivorous marsupials.

sparer, *n.* 2. That which spares; specifically, in metabolism, a substance which through its own destruction will curtail the destruction of other material: for example, carbohydrates are sparers of the tissue albumins.

The great power as proteid *sparers* which the carbohydrates exercise. *Buck*, Med. Handbook, V. 564.

sparesome (spār'sum), *a.* Economical; careful of money; somewhat close. [Colloq.]

Sparganiaceæ (spär-gā-ni-ā'sē-ē), *n. pl.* [NL. (Agardh, 1858), < *Spargani*(*um*) + *-aceæ.*] A family of monocotyledonous plants of the order *Pandanales*, the bur-reed family, containing only the genus *Sparganium* (which see).

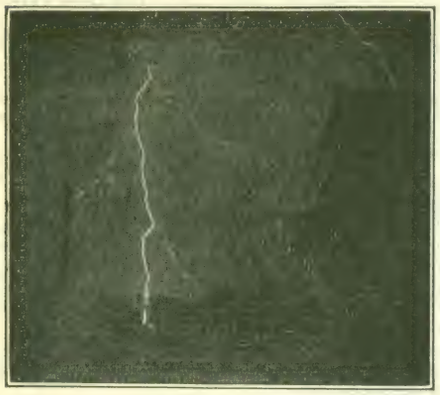
sparge (spärj), *n.* [L. *spargo*, a sprinkling, < *spargere*, sprinkle, spray.] In *brewing*, the spray of heated water which is thrown upon malt in the preparation of 'wort.'

One may note the temperature at which the "*sparge*" is applied; 170° is frequently exceeded, and the use of stirrers in wash stills by no means universal, especially where small stills are employed.
Nature, May 1, 1902, p. 2.

Sparisoma (spar-i-sō'mą), *n.* [NL., < *Sparus* + Gr. σῶμα, body.] A genus of scaroid fishes including many species, most of them found in warm and tropical parts of America.

spark[1], *n.*—**Active spark,** in an experiment described by Hertz, an electric spark the ultra-violet rays from which are used to influence a second, simultaneously produced, spark called the *passive spark.*

The efficiency of the *active spark* is not confined to any special form of it.
H. Hertz (trans.), Electric Waves, p. 66.



Advanced spark. See ★*ignition*, 5.—**Electric spark,** the passage of the electric current between two

High-voltage alternating arc, and spark which started it (150,000 volts).

terminals, at high voltage, by mechanical disruption of the insulating medium between the terminals. In the electric spark, the medium filling the space between the terminals or electrodes carries the current, becoming temporarily conducting by disruption by the electrostatic stress of very high voltage, while in the electric arc a bridge of conducting vapor of the electrodes carries the current. The spark therefore starts spontaneously as soon as the voltage is sufficiently high to disrupt the insulating medium, while the arc has to be started by forming the conducting vapor bridge. The voltage re-

quired to produce a spark between two terminals usually is many hundred times greater than the voltage required to maintain an arc. If the supply of current is sufficient, an arc usually follows the spark. In air the spark is

sharply defined, of irregular shape and intense brilliancy, while the arc is more diffused. The light of the spark shows the spectrum of the material filling the space between the electrodes, the light of the arc the electrode spectrum. See *electric* ★*arc*.— **Jump-spark.** See ★*jump-spark*.— **Mercury-spark,** an electric spark discharge the spectrum of which shows the bright lines characteristic of the metallic vapor of mercury.—**Passive spark,** in an experiment described by Hertz, an electric spark which is subjected to the ultra-violet rays from another, and simultaneously produced, spark called the *active spark*. (See above.)

The susceptibility of the *passive spark* to the action is to a certain extent dependent upon its form.
H. Hertz (trans.), Electric Waves, p. 66.

Retarded spark. See ★*ignition*, 5.— **Side-spark,** in *elect.*, the spark in the air-gap of a Hertz's receiver.— **Wiping-spark** or **wipe-spark,** an electric spark obtained by bringing into contact two terminals which are in a circuit of sufficient potential difference and then separating them. There is usually more or less sliding or slipping of the terminals past each other while in contact, whence the name. Distinguished from a ★*jump-spark*, in which the electrodes are permanently separated.

spark-arrester, *n.* 2. Spark-arresters are required when the fuel is wood or shavings even with natural or chimney draft, but with forced or mechanical draft, as in locomotives, they are needed for coal fuels also. In chimneys for wood-fires the spark-arrester may be a cage of galvanized-iron wire netting in the top of the stack; or the stack may be enlarged in cross-section near the top and a gauze grating placed at the largest section; or the arrester may be a deflecting cone, or several of them, by which the sparks or cinders are caught and their motion is stopped while the current of gas passes around and so out. These deflectors have usually spark-pockets or receptacles in which the cinders accumulate and from which they may be removed. In locomotives this catcher has often been in an annular cavity, the stack being double, or one tube within another, the sparks passing between the tubes. The more modern practice, with locomotives, is to put the spark-arresting netting below the base of the stack and in the extension-front smoke-box. The sparks then accumulate in the smoke-box below the netting, and are washed out or removed by spark-ejectors when convenient. In this method, the exhaust steam does not have to work through the meshes of the netting. The accumulated cinders and sparks in the smoke-box are emptied through a gate-valve in the bottom into a hopper at the top of a short tube called the *spark-hopper*, the tube discharging into a pit between the rails at the roundhouse or terminal.

spark-balls (spärk'bâlz), *n. pl.* The spherical metal terminals with which electrical apparatus for the production of the disruptive discharge is commonly provided and between which the spark-gap lies.

spark-box (spärk'boks), *n.* Same as ★*spark-arrester*, 2.

spark-break (spärk'brāk), *n.* The breaking of an electric circuit at a point of usual contact, so that an electric arc or series of sparks jumps across the gap until the space between the terminals is too great for the tension of the current to overcome the resistance offered by the air or other medium through which the current would have to pass: used in igniting charges in internal-combustion motor cylinders in the make-and-break system.

The trip is worked by a vertical rod which moves up and down, and its end raises or lowers the trip and thus operates the *spark-break*. *Elect. Rev.*, Sept. 10, 1904, p. 386.

spark-catcher (spärk'kach″ėr), *n.* Same as ★*spark-arrester*, 2.

spark-coil, *n.* 2. A coil of many turns of insulated wire on an iron core, used for producing a spark by opening the circuit of the coil, for electric gas-lighting, igniting the charge in the gas or gasolene engine-cylinder, etc.

spark-deflector (spärk'dē-flek″tọr), *n.* See ★*spark-arrester*, 2.

spark-gap (spärk'gap), *n.* The open space between the terminals of the secondary circuit of an induction-coil, or the similar space in any electric circuit, across which the disruptive electric discharge in the form of a spark takes place.

spark-hopper (spärk'hop″ėr), *n.* See ★*spark-arrester*, 2.

sparking-plug (spär'king-plug), *n.* See ★*spark-plug*.

sparking-point (spär'king-point), *n.* In explosion-engines, the terminal of the spark-producing device for ignition.

It [electric reigniting device] consists of a spark-producing device contained in a cylindrical metal case, five inches long and three inches in diameter. Projecting from the upper side of this case is a stem surmounted by platinum *sparking points*, one of which is automatically movable. *Hiscox*, Horseless Vehicles, p. 404.

spark-instant (spärk'in″stạnt), *n.* The time or period, in the stroke of an internal-combustion motor, at which the spark which is to ignite the combustible mixture in the cylinder is caused to jump the gap between the terminals of an electric circuit in that cylinder. *F. R. Hutton*, Gas Engine, p. 219.

spark-knobs (spärk'nobz), *n. pl.* The knobs or balls with which the spark-gap of induction-coils, or other machines for the production of the disruptive discharge, is usually provided.

sparkle, *v. i.*— **Sparkling waters,** waters containing or charged with carbonic acid gas.

spark-lead (spärk'lēd), *n.* See ★*ignition*, 5.

spark-length (spärk'length), *n.* The distance traversed by the disruptive discharge in passing the spark-gap of any electric circuit. The spark-length affords a measure of the difference of potential between the terminals.

spark-lever (spärk'lev″ėr), *n.* The lever or handle by which the period at which a spark passes between terminals in an internal-combustion motor is controlled: used especially in motor-cars and motor-cycles, where such control of the instant of ignition is very important, as the resistance to be overcome or the desired speed may vary. Spark-levers are usually on the steering-post of motor-cars, and on the handle-bars of motor-cycles.

spark-micrometer (spärk'mī-krom″e-tėr), *n.* See ★*micrometer*.

spark-plug (spärk'plug), *n.* In internal-combustion motors, the apparatus which carries into the combustion-chamber the electric terminals, properly insulated, by which the charge of carbureted air or gas is electrically ignited at the proper time. It is a tube of non-conducting material, such as porcelain, inserted into a screwed bushing or plug fitting a threaded hole in the cylinder. The electric conductors are attached to platinum wires insulated in this tube and with their points projecting inside the cylinder, with a small air-gap ($\frac{1}{16}$ inch) across which the spark will jump and fire the mixture. If these points are foul or are too far apart, or if the current is of too low electric tension, the spark does not pass when the contact is made by the commutator, and the ignition fails and the motor stops.

Instead of the usual *spark-plug*, a mechanical break is made in the cylinder head. This is carried out by using a contact piece which is fixed inside the cylinder.
Elect. Rev., Sept. 10, 1904, p. 386.

spark-spectrum (spärk'spek″trum), *n.* The spectrum of the light produced by an electric spark. Spark-spectra are usually bright-line spectra the character of which depends not only on the gases in the spark-gap but also upon the nature of the terminals: thus the spark between terminals of zinc, tin, cadmium, etc., gives a spectrum which contains the lines characteristic of the vapors of those metals.

spark-telegraphy (spärk'tel″ē-graf-i or -tē-leg'ra-fi), *n.* Same as *wireless* ★*telegraphy*.

Sparnacian (spär-nā'shian), *a.* and *n.* In *geol.*, noting a division of the Lower Eocene Tertiary in northern France and Belgium, lying above the Thanetian or Thanet sands.

sparrow, *n.*— **Ipswich sparrow,** *Ammodramus princeps*, a species much like the well-known savanna-sparrow, but larger, without the yellow markings, and of a more rufous cast. It was named from Ipswich, Massachusetts, where it was discovered. It is restricted to the New England coast and immediate vicinity, breeding on Sable Island.— **Oregon sparrow.** See *Oregon song-sparrow*.— **Sea-shore sparrow,** *Ammodramus rostratus*, a species common on the Pacific coast.

sparrow-bottle (spar'ō-bot″l), *n.* A bottle or jar made to hang on a nail in a wall and serve as a nesting-place for house-sparrows: a device resorted to by farmers in certain districts of England in order to save their thatch roofs from the inroads of nesting sparrows.

sparsioplast (spär'si-ō-plast), *n.* [Irreg. ⟨ L. *sparsus*, scattered, + Gr. *πλαστός*, formed.] A colored elæoplast found in certain diatoms. It is variable in number and position. See ★*stabiloplast*.

spar-varnish (spär'vär″nish), *n.* A superior make of varnish which is not affected by salt water, steam, soap, grease, or ammonia fumes. It is used as a coating for spars and all outside or exposed work where natural wood (unpainted) is found, such as boats, skylights, etc.

spasm, *n.*— **Malleatory spasm.** Same as *malleation*, 3. — **Mimetic spasm,** involuntary convulsive twitching of certain of the muscles of the face.— **Mimic spasm.** Same as *mimetic* ★*spasm*.— **Occupation spasm.** Same as *functional spasm* (which see, under *spasm*).

Dr. James Putnam referred to the view that these continuous movements which hysterical patients sometimes carried on were the work of dissociated cerebral centres; they seemed to be performed without fatigue to the patient and differed from the "*occupation spasms*" (habit spasms) which occurred in some persons without any relation to hysteria, and which were brought on by work, and were attended with profound local fatigue of the affected parts. *Lancet*, June 25, 1904, p. 1810.

spasmophilia (spas-mō-fil'i-ă), *n.* [NL., ⟨ Gr. *σπασμός*, contraction, + *φιλεῖν*, love.] In *pathol.*, a tendency to convulsions from slight causes.

spasmophilic (spas-mō-fil'ik), *a.* [*spasmophil(ia)* + *-ic*.] Relating to spasmophilia; marked by a tendency to tetany and other convulsive disorders. *Med. Record*, May 30, 1908, p. 903.

spasmotin (spas'mō-tin), *n.* [Gr. *σπασμός*, contraction, + *-ot-* + *-in*[2].] A yellow amorphous principle present in ergot in very small quantity and claimed by Jacobi to be the specifically active substance. It is probably impure sphacelotoxin.

Spastic gait. See ★*gait*[1].

spatch-cock (spach'kok), *v. t.* 1. To kill and serve (a fowl) hastily, as a spatch-cock.— 2. To prepare (something) in haste for an emergency; in the extract, to insert hastily into a document.

As a matter of fact, the suggestion of surrender which he "*spatchcocked*" into one of his messages to General White was capable of an explanation not altogether discreditable to General Buller. *N. Y. Tribune*, Oct. 24, 1901.

3. *Milit.*, to punish by stretching upon the ground with arms and legs extended and fastened down.

Spathiocaris (spath″i-ok'ạ-ris), *n.* [NL., ⟨ Gr. *σπάθη*, a blade, + *καρίς*, a shrimp.] A group of organic structures having the form of oval or circular disks split at one end by a triangular cleft running from center to edge, composed of chitinous matter: originally described as phyllocarid crustacean carapaces and later as the opercula of cephalopods; their real nature is not known. They are found in Upper Devonian rocks.

spatialization (spā-shal-i-zā'shọn), *n.* [*spatial* + *-iz(e)* + *-ation*.] The act of rendering spatial; the act of giving a spatial character (to).

All forms of external experience are not alike calculated to awaken the mind to react with a *spatialization* of its objects. *B. P. Bowne*, Metaphysics, p. 209.

spatiology (spā-shi-ol'ō-ji), *n.* [L. *spatium*, space, + *-λογια*, ⟨ *λέγειν*, speak.] The science of space, spaces, or hyperspaces, Euclidean or non-Euclidean.

With the elliptic hypothesis (space finite) the Principle of Duality has full sway; in any theorem, points and straight lines, lengths and angles, being respectively interchanged, a new and true theorem results in the geometry of the plane. This is an æsthetic argument against the Euclidean scheme of *spatiology*.
W. B. Frankland, Euclid with Commentary, p. 13.

spatter-cone (spat'ėr-kōn), *n.* A subordinate volcanic cone formed at mildly explosive vents that throw out little dabs of lava. They sometimes arise from the lava-flows themselves. *Chamberlin and Salisbury*, Geol., I. 580.

spattle[2] (spat'l), *v. t.* [*spattle*[2], *n.*] In *ceram.*, to sprinkle or mottle with colored glaze.

spawning-brush (spâ'ning-brush), *n.* A brush used in fish-hatcheries when the fishes are spawned (the eggs are taken). *Philos. Trans. Roy. Soc.* (London), 1900, ser. B, p. 307.

spawning-place (spâ'ning-plās), *n.* Any place selected by fishes to deposit their spawn, as the rocky shores chosen by codfishes or the river-beds by anadromous fishes.

Some beds of this kind, in salmon-frequented rivers, have been notable from time immemorial as *spawning-places*. *Chambers' Encyclopædia*, IX. 114.

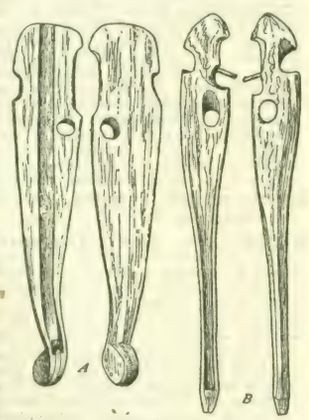
speak-easy (spēk′ē″zi), *n.* A bar-room or saloon where liquor is sold (illegally) without a license. Also used adjectively. [Slang.]

There are to-day, as then, in abundance, disorderly houses, "*speak-easies,*" saloons, or "clubs" where liquor is sold long after the permitted time, and tramps.
Josiah Flynt, in McClure's Mag., June, 1901, p. 116.



spear[1], *n.*—**Sucking spears,** in *entom.,* the coadapted mandibles and maxillæ, forming spear-like organs which are suctorial in function. These occur in the larvæ of the neuropterous families *Chrysopidæ, Hemerobiidæ, Myrmeleonidæ,* and *Coniopterygidæ. Cambridge Nat. Hist.,* V. 466.

spear-grass. 4. In Australia, any one of several species of valuable forage grasses, namely, several species of the genus *Stipa* and *Andropogon contortus.* The seeds of these grasses are sharp and covered with fine barbs so that they easily become entangled in the wool of sheep and frequently penetrate the skin, often causing the death of the animal.—**Creeping sea spear-grass.** Same as *sea* or *sea-coast* ★*spear-grass.*—**Sea** or **sea-coast spear-grass,** a slender perennial grass, *Puccinellia maritima,* with creeping rootstocks, found on the northern coasts of both hemispheres. It is a valuable element in the salt-marsh hay of New England and the Middle States.—**Southern spear-grass,** a grass, *Eragrostis Purshii,* with lance-shaped spikelets, common from the Middle States to Arizona. It has no agricultural value. Two woodland grasses, *Poa brevifolia* and *P. autumnalis,* have also been so called.—**White spear-grass,** the reed meadow-grass, *Panicularia Americana.*

spearing (spēr′ing), *n.* 1. The action denoted by the verb *spear;* specifically, in harvesting tobacco, the forcing of a pointed stick through the butts of several cut stalks which are to hang upon it while curing. For other methods see ★*pegging,* 6, and ★*splitting.*—2. A fish, *Trachinocephalus myops,* the ground-spearing, belonging to the family *Synodontidæ,* found in tropical parts of the western Atlantic.

spear-kite (spēr′kīt), *n.* See ★*kite*[1].

spear-thrower (spēr′thrō″ėr), *n.* An implement, usually of wood, used in throwing a spear so as to give it an increased velocity. Such implements are usually about two feet long, with a knob or notch at one end to engage the end of the spear, the other end being often provided with a special grip for the hand. They are found only in limited areas, such as among some Indian tribes of the coast of Alaska, the Eskimos, the Australians, in parts of South America, and in Mexico. Also called *throwing-board.*

Spear-throwers.
A, Ungava type; *B,* Yukon River type. (In U. S. Nat. Museum.)

specchia (spek′ē-ä), *n.*; pl. *specchie* (spek′-ē-ā). [It. dial., < L. *specula,* a lookout, a watch-tower. See *speculate.*] A kind of prehistoric stone structure found in southern Italy.

Special state. See ★*state.*

speciation (spē-si-ā′shọn), *n.* [< *species.*] The production of (new) species; the origination of new species. *Science,* May 27, 1910, p. 815.

speciegraphical (spē-shi-ē-graf′i-kạl), *a.* [*speciegraph(y)* + *-ic* + *-al*[1].] Of or pertaining to the scientific description or diagnosis of species.

speciography (spē-shi-eg′ra-fi), *n.* [L. *species,* species, + Gr. *-γραφια,* < *γράφειν,* write.] The scientific description or diagnosis of species. Also *speciography.*

species, *n.* 10. A former standard of currency in certain parts of Germany and in the north of Europe, apparently answering to the modern dollar of commerce.—**Agricultural species,** one of two or more plant types developed under cultivation from the same natural species and considered to be as distinct as natural species.—**Bipolar theory of distribution of species.** See ★*bipolar.*—**Doctrine of the immutability of species.** See ★*pre-Darwinian.*—**Elementary species,** a number of individuals, within the limits of a species, characterized by a distinctive and hereditary peculiarity, or by more than one.

What is a species, what is a new species? What is an *elementary species,* which has also been called a subspecies? *Pop. Sci. Mo.,* July, 1904, p. 217.

Form species, an apparent species which is only a form or stage in the development of a pleomorphous species.—**Superstitial species,** in *paleon.,* those species that survive into later geological periods and are hence found in formations higher than those in which they are normally characteristic or culminant.

species-cycle, *n.* 2. In *biol.,* the series of forms needed to represent the species in its completeness. The species-cycle is the same as the ovum-cycle or genealogical individual, except in cases where the sexes are separate or polymorphism occurs. See *ovum-cycle.*

The complete series of forms needed to represent the species . . . [is] the *species-cycle. Encyc. Brit.,* XVI. 843.

specific. I. *a.*—**Specific conductance** or **conductivity, refractivity.** See ★*conductance,* ★*refractivity.*

II. *n.* 2. A definite substance in the serum of an animal that gives rise to a special kind of immunity.

speciography (spē-shi-og′ra-fi), *n.* Same as ★*speciegraphy. Science,* Jan. 10, 1902, p. 61.

speck[1], *n.*—**White speck of tobacco,** a disease producing small white spots on the leaves of tobacco caused by the fungus *Macrosporium tabacinum.*

speck[1], *v. t.* 3. To stain or dot with ink small blemishes in (a finished fabric), so as to conceal or obliterate them.

spectacle, *n.* 8. *pl.* Signal-glasses of varying color, held in a metal frame suggesting spectacles, to be moved in front of the lenses of signal-lights at night: usually of red and green if there are two. Also used, in the singular, for one frame with its colored glass.

This calendar shows a miniature equipment of a complete signal system, presenting the arrangement of a universal ninety-degree *spectacle* for two positions, continuous light, lamp on top of post; also double ninety-degree *spectacles* arranged for two and three positions, and continuous light sixty-degree *spectacles* applied to a double arm for home and distant signals.
Elect. Rev., March 7, 1903, p. 356.

9. A frame with two bow-shaped handles for carrying well-boring tools.—**Bifocal spectacles,** spectacles having a lens of different focal distance, cemented to or replacing the lower portion of the main lens: a form of compound spectacles, usually distance and reading glasses combined in one frame.—**Pulpit spectacles,** spectacles with the upper part of the lens removed, enabling the wearer to look over them. [Colloq.]—**Skeleton spectacles,** spectacles whose lenses are pierced with holes for the attachment of the temples and the bridge-piece for the nose, instead of being held in a wire frame.—**To make a pair of spectacles,** in *cricket,* to make a score of nothing in each inning. *Hutchinson,* Cricket, p. 76.
